NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newspapers and Fishing Tackle Dealers in London and the Provinces. Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London. Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made. For One Year, post free to any part of Great Britain and Ireland ... 10s. 6d. " Six Months ditto ditto ... 5s. 4d. " Three Months ditto ditto ... 2s. 8d. To America and the Continent, annual subscription, including postage ... 12s. 6d.

Scale of Charges for Advertisements.

One Page ... 27 7 0 Half Page ... 3 15 0 A Column or Quarter Page ... 2 2 0 Half Column or Eighth Page ... 1 5 0 Small advertisements 4s. per inch of single column (4 cols. to page). The Life of every Advertiser and Subscriber is insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing. All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London. Telegraphic Address—"RIVSAM, London." TELEPHONE, No. 83 Holborn.

The Fishing Gazette

WITH WHICH IS INCORPORATED

ANGLING AND CLUB GOSSIP.

SATURDAY, JANUARY 7TH, 1899.

THE FLY FISHERS' CLUB.

A CORRECTION.

SIR SAMUEL MONTAGUE, M.P., will preside at the annual dinner of the Fly Fishers' Club, to be held at the Hotel Cecil on Wednesday, Feb. 8, not Feb. 2 as previously stated.

A DAY'S FISHING FROM JERUSALEM.

A DAY'S fishing from Jerusalem! I do not suppose there are many people now living who ever had one, and it is more than fifty years since I had one myself. Some months ago there was a short letter in the *Fishing Gazette*, telling of the fish in the streams which run into the Jordan, and it reminded me forcibly of very happy days spent long ago with gun and rod on the banks of some of those streams. At this season our thoughts naturally turn to that land of sacred memories. A land which might be one of the richest on the face of the earth, but is, at least for a great part of it, a desert. But the streams were full of fish, and on the hills French partridges abounded, there were woodcocks about the pools of Solomon, quails on

the plain of the Jordan, and wild boars in the jungle near Jericho. Jerusalem is, I hear and read, very much changed. Fifty years ago there was not a wheeled vehicle in the country, but now the train takes you from Jaffa to Jerusalem in a few hours, and I fear that before long the traveller's ears will be pierced with the shrill cry of the "Bethlehem 'Bus," or "change here for Jericho," when he arrives at the Holy City. No doubt the new state of things will be much more convenient to the average tourist of to-day. A Cook's ticket will take you to what are called all the places of interest in the Holy Land, but you will not see it as I saw it. You will be shown sites of sacred places, many of which are manifestly mythical, but of the scenery of the country and of the character of the people you will learn little or nothing. We had our own horses, our own tents, and our own servants, and wandered at our own sweet will wherever our fancy led us. So it came about that in the streams in Lebanon, specially those that ran into the head waters of the Jordan, I saw swarms of fishes. Being on a journey, and no tackle handy, there was no chance of fishing; otherwise, from future experience, I have no doubt that we might have killed big baskets of fish, from $\frac{1}{2}$ lb. to $\frac{3}{4}$ lb., with a possible pounder now and then. When we arrived at Jerusalem, where I lived for more than a year, I hunted up an old fishing book which held some tackle, which I had been accustomed to use in burn fishing in Scotland, and determined that I would be prepared if ever I came across another stream with fish in it. About the end of February, 18—, a proclamation was made that the whole family was to prepare for a picnic on the plain of the Jordan. It was to last for three weeks at least, and perhaps more. Tents were routed out and looked over, guns cleaned, and powder and shot (a very scarce article in those days) procured, and my old fishing book overhauled. One fine morning we made an imposing cavalcade—five or six horses, two donkeys, and many mules laden with tents and all manner of stores. Out of the St. Stephen's Gate we streamed in a long procession, over the shoulder of the Mount of Olives; and down the long defile, past the Castle of Blood, we wended our way to the plain of the Jordan. This is the road down which the traveller went who was robbed and left for dead by the wayside, where the Good Samaritan found and succoured him. It had an evil reputation in the days of which I write, but we passed through without adventure, and, reaching the plain, turned to the left, and pitched our camp close under what is supposed to be the site of the ancient Jericho. There was one large dining tent, four sleeping tents for ourselves, and one or two for the servants. Having made friends with one of the chiefs of a tribe of Bedouins that wander about that part of the country we had guides and guards supplied, and were in no way troubled or molested. Not far from our camp I found a great spring, the Ain es Sultan (possibly the "Diamond of the Desert" of Sir Walter Scott), rising just under a high mound, and spreading out into a considerable pool. In it were many little fish. To cut a reed from the bank of the stream below and tie a gut trace to it did not take long. But how about bait? No worms or grubs could I find, so making up a little paste, with some cotton wool mixed with it, I cast in my hook carefully covered, and we had fish for supper. They would not have weighed more than 2oz. or 3oz. apiece, but they were excellent to eat. The next day being Sunday, we went for a walk in the afternoon to explore our surroundings, and found a lovely stream rippling down from a deep gorge in the hills; its banks were in places lined with tall canes, and just where it emerged from the hills it was spanned by an old Roman aqueduct. As we walked up the bank the stream was sometimes hidden by bushes and clumps of canes, but we could see enough of it to show that if there were fish in it it would afford excellent opportunities for upstream fishing with bait. In fact, it reminded us of Scotch burns from which we had filled many a basket with lovely little trout. Suddenly round a sharp bend we came to a long, thin shallow, and as we watched the clear water

rippling over the stones, and making that music so dear to the angler, two or three fish started in hot haste to run up into the pool above. Having a good stick in my hand, I dashed into the shallowest part of the stream, and slew two fish that were struggling up with their backs out of water. My father, who had been a keen angler in his younger days, was much interested in the performance, and when I brought the two fish ashore, was, I firmly believe, on the point of complimenting me on my success, but suddenly calling to mind the fact that it was Sunday, he administered a rebuke instead. However, I noticed that he had no objection to taste the fish, which were cooked for supper, and pronounced them to be good. I was thereupon ordered to rig up some tackle for him and myself, so that on Monday we might go a-fishing, and it was decided that we were to make a long day of it, and that all the family were to meet at a certain spot near the old Roman aqueduct, and were to have a picnic luncheon together. We promised ourselves that we would fry, and roast, and boil, and cook in every conceivable fashion the fish which we thought we should catch, and have a feast such as I had often had before by many a Scotch burn. As soon as it was daylight I was off to cut canes for rods, and managed to get two beauties about 9ft. long each. A piece of old line was soon tied to each, and two or three lengths of gut put to soak. But how about bait? A diligent search under stones, and much digging with a pointed stick (which was a weariness to the flesh), produced nothing in the shape of a worm. Suddenly I bethought me of grasshoppers, which I had heard were used as bait in heathen lands. Grasshoppers there were, no doubt. But did you ever try to catch a Syrian grasshopper? The sun was up, the vegetation was rank, and the grasshoppers displayed a phenomenal agility. After a few minutes of exciting work I found myself with the perspiration running off my nose and with only two grasshoppers, and those crushed out of all shape by the snatch which I had made at them. There was nothing for it, therefore, but to use paste, so having made up a good sized lump, with plenty of cotton wool mixed with it, I made for the breakfast tent and reported all preparations for fishing complete. When we reached the bend in the stream where I had killed the two fish the day before, my father elected to fish downstream and I was to go up. We agreed to meet at a certain tree, which stood a little way back from the stream, in two hours' time, and report progress. I began to fish, taking the utmost care to keep out of sight, hiding behind bushes and crawling carefully where there was no cover, and I soon had a few nice little fishes, but nothing over $\frac{1}{2}$ lb. The part of the stream where I was fishing was shallow and rapid, but just round a bend I saw above me a pool with a little fall at the head of it. I got well back and dropped my bait just over the edge of the bank. It could hardly have touched the water before I got a vigorous pull, that suggested something bigger than I had yet caught. Keeping a tight line and walking downwards, I got my fish out of the pool and landed a nice $\frac{1}{2}$ -pounder. Returning to my old place, I dropped my line again just over the edge, but instead of reaching the water it got caught on something. I could not get it free, so was obliged to go forward to the edge. It was very vexing, because I had counted on a harvest from that pool. It was difficult to free the line, the hook had caught on a root near the water, and I had to lean over and reach down—tackle was too scarce to risk a break. There, below me in the clear still water, were lots of nice fish swimming about. They had all seen me, and would not therefore take a bait, so I thought, and standing up on the bank looked at them with the intention of coming back and trying for them later on. There were some among them which looked to me to be up to $\frac{3}{4}$ lb., and while I looked, it struck me that they also were looking at me, not as a Scotch trout would look before he fled beneath his accustomed stone, but with an expression of gentle curiosity in their gaze. One of them, in fact, came up and almost smiled at me. To reward him for his evident sympathy, I dropped my bait to him, which he instantly took. Having deposited him comfortably in my make-shift basket, I presented my bait to another fish, who

seemed to have a look of expectancy on his countenance; he took it at once. And so it went on till I had cleared the pool of all the good fish in it; some of them would, I think, have weighed $\frac{3}{4}$ lb. In pool after pool, as I fished on upstream, the same performance was repeated. I stood up boldly on the bank and looked down at the fish. The fish looked up at me, and accepted my bait with a smile. The basket got heavy, so I tackled up, and found my father waiting for me under the appointed tree.

His experience had been much the same as mine. The rest of the family arriving with all sorts of pots, and kettles and pans, I was set to gather materials for the fire, while my father cleaned some of the fish, and we had a royal feast. The fish were good, at least we thought them so, and with other good things which my mother had brought with her, lest we should catch no fish (the dear old lady had little faith in fishermen), we made a not-soon-to-be-forgotten luncheon.

How many fish we had caught I do not exactly know, but twelve dozen would be under the mark. What they were I do not know. They were not trout or grayling. In shape they were like a trout, and all I can say of them is that they gave us one of the most charming few hours' fishing and delightful luncheon that I can remember.

Next day I thought to repeat the experience, but a change had come over the spirit of the fish, suspicion had taken the place of confidence. They refused my bait with scorn in the water which I had fished the day before. I was driven to hide behind bushes, and crawl and squirm on the bank, and then got only a few. So we turned our attention to partridges and quail, and had some very fair sport.

As I headed this paper "A Day's Fishing from Jerusalem," let me add that it would be quite possible for one who was young and strong to start at sunrise and be back in the city by sunset. A three hours' ride would easily take him to the stream. Four or five hours' fishing ought to give him as much as he would care to carry, and leave him four hours for the home journey.

I do not suppose a line has ever been cast in the stream since we were there, and I hope that the next angler who tries it may find the fish as numerous and as confiding as we did.

C. HEVIT (Hon. Chap. F. G.).

FISHING AND FISHERS.*

THIS is a pleasant little book of angling gossip by an enthusiast, very attractively illustrated, and bound in a cover on which figures a burly keeper with an enormous landing net. It is not half a bad idea, because any angler seeing this cover must at once be impressed with the great size of the fish the author is in the habit of catching if such a gigantic landing net is necessary.

In his introduction to Mr. Taylor's volume, "Red Spinner" divides angling writers into the practical and the poetical. After referring to several of the former school, he says: "To the accepted instructors above mentioned there have succeeded a procession of writers bent apparently upon entertaining rather than lecturing and teaching. They sketch and plead rather than expound and argue; they lay more stress upon the incidental charms of angling than upon the technicalities of either its sport or the manifold mechanical preparations of tackle. . . . I hope the author of 'Fishing and Fishers' will not be offended if I invite him to place himself in this category, content to know that the giving of pleasure is not less praiseworthy than the imparting of knowledge."

We certainly think Mr. Taylor need not be offended at thus being placed among those who amuse rather than instruct—for our part we think there is far more room for amusement than instruction, the latter branch of the literature of the subject having been considerably overdone of late years.

As a specimen of Mr. Taylor's book, we give his short chapter entitled, "On Houghton Water," especially as many of our readers know the spot well.

Although it is rather startling to be awakened by the first strokes of a water-mill, instead of an alarm, the

noise, when you begin to recognise it as a familiar friend, is rather soothing than otherwise; and had I slept many more nights in the old mill-house at Houghton perhaps the sound of the wheel might merely have served as a pleasant reminder that there was no train to catch.

Most men on the first morning of their sojourn become suddenly virtuous, as far as early rising is concerned, and find themselves, long before breakfast is ready, strolling up or down the river, with an eye for "rises."

The downward excursion could be only for a few yards, as the water belonging to the Houghton Club extended but a short distance in that direction, and its main point of interest was the mill-tail and pool. In these were lots of good grayling and a few trout, and the very few "duffers" the club contained are rumoured to have taken most of their fish from these troubled waters. My friend did not suggest that I should try this spot; and this was, I suppose, a compliment, though ill-deserved and unwished for.

It was near here a celebrated north-country grayling fisher took his record bag of giant grayling with worm, by special permission.

It was not till after a leisurely breakfast and a quiet walk of a quarter of a mile up the river that any fishing was so much as thought of. Nor would a fly have been cast perhaps till afternoon had it not chanced to be an early-rising day, so that feeding fish were soon visible, and could be attacked in true orthodox fashion. From the first to which I was formally introduced I failed to get a rise. Indeed, I "put him down"—so much was he scandalised at my style of casting. Perhaps the next had received a less finished education, for he took my delusive snare most sweetly, and after some exciting play was fairly under control and nearly in the net, when the hold gave, and he was free!

After this I tried to admire the scenery for awhile, and watch my companion, who, contrary to his usual habits, was actually fishing in a steady and persistent manner, and

secured by many a noted angler, from "Red Spinner" downwards.

Trying this corner, I kept rising dace, and, perhaps unwisely, soon abandoned it. Big roach are also taken sometimes here, and pike, alas! are only too abundant, though well looked after, both with wire and bait. It is seldom they are left to reach a heavy weight, and while very small they do comparatively little harm. Big trout are far worse than little jack. When a trout outgrows his proper 4lb. weight he soon becomes a cannibal, and if such fish were taken out no river would be equal to the crystal Test.

In Chapter XXII. a brief account is given of the Fly Fishers' Club, of which the author was the first hon. sec. "Within this club," he says, "are found every variety of the genus fly fisher, from the ancient veteran who looks down upon us all with tolerant superiority, to the callow youth, who, in his raw enthusiasm, would pull the whole affair about our ears to model it afresh. Every sort of fly fishing has its representative advocate, from the head centre of the inner brethren, who thinks it almost profane to speak disrespectfully of the dry fly, to the reckless advocate of crude whipping with three formless insects on the tumbling waters of a Devon stream."

His chapter "The Lessons of a Diary" show that Mr. Taylor has had a long and varied experience as an angler—he is very modest in recounting his captures, but there are very few indeed who can quote from their diary the entry of a perch of just under 4lb., for instance. He gives an excellent piece of advice where he quotes (p. 198)

THE WELLAND, ST. JAMES' DEEPING, NEAR PETERBOROUGH.

curiously enough without much ultimate success, though I saw him hook three good trout in a few minutes.

This was on a wide shallow, and the fish were rising all around and often taking, when properly covered. Yet only one fish came to bank all day, and that fell to my companion's rod, and weighed about a pound and a half; not large for this grand water. We had some undersized fish also which were not counted. I remember that towards evening we met the late Mr. Marryat, and afterwards "The Major," and the last had taken some nice grayling, which he showed us; but I saw no other trout.

Next day was very sunny, and we fished but little; and once more I had to be content to return my fish, for all were small. The show of fish in the bright sunshine was most tantalising. All along the river, by sedgy deep, bright rapid, or spreading shallow, trout, and big trout, were lying plainly visible, but not in rising mood; and to throw over them, even when they seemed to touch the surface, is not orthodox.

In other circumstances I am not by any means a purist, but in these I naturally conformed to the very virtuous sentiments expressed by my respected host as to the injury done to trout streams by those reckless men who will insist on casting over sulky fish and making them still sulkier.

The worst of it is that I fear my host is partly right, and that the best way for a man always on the spot to secure a good proportion of big fish in a season is to cast only over rises. It is far otherwise with a visitor. Yet it is only right that he should conform to the same rule, and take his chance.

In the Hampshire fisheries comfort reigns supreme, and in the wettest weather (of which, indeed, we had a little) we could keep dry clothes by means of the charming little huts dotted about at many a noted spot upon the banks. I don't remember one at the famed "leg of mutton swim," where such heavy grayling have often been

advice sometimes given to him: "I am often advised, before casting for a big fish, to consider the possibility of landing him; but I sometimes cast first, and consider afterwards, if necessary. It seldom is. Very often a large trout in a difficult position has had little experience, and, when he is hooked, acts in some unexpectedly foolish way, and enables you to overcome difficulties which seemed insuperable."

We quite endorse what Mr. Taylor says on this point. Our maxim has always been to give the fish the chance to take the fly or other bait if possible, and then land him if possible. Not to attempt because the odds seem all against the angler is probably to leave the fish for someone with more pluck. None but the brave deserve the big fish. To have, perhaps, a fortnight of really good fishing in a year, and to hesitate about trying to catch a 2lb. or 3lb. trout, or other good fish, for fear of breaking your cast or your rod is ridiculous.

Opposite p. 192 Mr. Taylor gives us a picture on the celebrated Lion Hotel water, on the Darent, in Kent. We remember it as it used to be in the time of Phelps, the actor and angler, who loved the place. At that time the river divided in the lower meadows, and spread out into wide, shallow streams, where now it runs sharply in one. Mr. Taylor's picture reminds us of many a delightful first of May spent on the Red Lion Hotel water in the sixties and seventies.

* FISHING AND FISHERS. By J. Paul Taylor. With an introduction by "Red Spinner." Illustrated. London: Ward, Lock, and Co., Ltd.

We quite agree with our author when he says that "Among modern angling verses I have seen none to surpass those contained in a little work published by Horace Cox, and called 'Lyra Piscatoria.'" The author writes under the name of "Cotswold Isis," but it is an open secret that these poems are by the Rev. Richard Glover.

On p. 159 our author says: "Next to Frank Buckland, Francis Francis was certainly the most powerful popular advocate of fish culture, and his book still remains one of the most useful works."

Yes; we wish some modern advocates of stocking great rivers by means of a few pounds spent on a hatching apparatus, would take the trouble to see what was done in the endeavour to re-stock the Thames with salmon and trout between 1850 and 1890.

Mr. J. Paul Taylor writes so sincerely and modestly, that while one may not by any means agree with all his views, yet we think few anglers who light a cigar or a pipe, preparatory to reading it, will not agree with us that in addition to having quite a pleasant little style of its own, it

Had he been born a rich man, he might have made for himself a name as a keen and famous sportsman; but he was born a simple and poor peasant of the Government of Kazan, and his name was never known much outside his own village and the small circle of sportsmen for whom he used to act as gillie on their shooting and fishing expeditions to the lakes near which his native village was situated. He was a great favourite with most of them, though some objected to his remarks when they happened to cripple a bird and did not at once stop shooting until they had retrieved it; he did not care much as to how his remarks were taken, but would quietly say: "Well, I think we ought to find that bird, and put it out of its pain; we are sportsmen, not knackers!" and go for that bird, and follow it till he found it, little caring for his employer *pro tem.* and his ruffled sentiments.

So you see he had the true spirit of the sportsman in him. This did not, however, prevent him from using pretty freely such appliances for catching fish which, in the eyes of an "up-to-

shooting, some on angling—had struck their camp on the banks of Long Lake (Dólgoye Ózero) something like half a mile from Ivan's village; Ivan had been sent for at once, and towards evening he might have been seen busily engaged in setting his favourite "forks" and other engines of the "take care of yourself" kind. Among the party encamped on the bank of Long Lake there happened to be two amateur photographers with their cameras, and they made up their minds to play old Ivan a trick. Late in the evening, when all were busy round the "samovar" refreshing themselves with good caravan tea, one of these two gentlemen managed to absent himself for a few minutes, and to return as unnoticed as he had disappeared. But even if his absence had been noticed, it would have been difficult to suspect him of anything mischievous, so perfectly guileless was the expression of his countenance.

In the morning Ivan had to accompany a party of sportsmen to the duck-shooting grounds, where they remained till about nine o'clock; the anglers, who had been devoting the early part of the day

EXPECTATION.

REALISATION.

contains many useful hints and pleasant memories. As we said before, the illustrations are most attractive. By the kindness of the publishers we are able to give a specimen—a pretty view on the Welland.

"EXPECTATION" AND "REALISATION"; OR THE PIKE WHICH OLD IVAN POACHED.

SOME time ago, in rummaging through a lot of "odds and ends" referring to old fishing days, I came upon the two photographs accompanying the present sketch, and bethought myself of giving the readers of the *Fishing Gazette* an account of one of the most amusing fishing incidents I had the good luck to witness.

Ivan Petroff, better known under the name of "Old Ivan," in order to distinguish him from his nephew, who rejoiced in the same name and patronymic as his uncle, was quite a character.

date" disciple of Izaak Walton, would appear unorthodox, to say the least of it. Thus he was very partial for set lines for pike, his pet "engine" being the time-honoured "fork," a very simple yet very killing device, consisting of a forked branch on which the line—baited with a live fish—is wound, being held at a convenient distance from the bottom by jamming it in a cleft of the said fork. This device is sufficiently well known all the world over, so as to render a more detailed description of it superfluous; in England it is considered, as far as I know, a poaching instrument, but is in pretty general use among Russian fishermen, the very advanced ones excepted. Old Ivan most decidedly did not belong to the latter category, but some of his patrons did; and their attempts to bring him to see the wickedness of set lines and "forks" were a sore trial to the poor man, driving him at times into fits of sulkiness (which, however, never lasted long).

One fine day about the end of August a number of sportsmen—some intent on duck

to roach fishing (Long Lake being famous for the size and the remarkable beauty of its roach) also put in an appearance at the camp towards that time, and the whole company fell to too a copious breakfast with an appetite born of a pure conscience, early rising, and inhaling the bracing, crisp air of the country. Ivan took a very prominent part in the proceedings, his special line being the disposing of numberless glasses of scalding hot tea with an elegant ease that made the uninitiated stare; those familiar with Ivan knew the performance well, and generally designated it as "Ivan's scalding of his innards."

After having gone through his usual feats in that direction, Ivan began to gather himself for an effort of some kind, as could be plainly seen by the way in which he was stretching his long limbs. The two photographic fiends seemed to be taken with a sudden emulation of Ivan's doings, and also began to pull themselves together, with the most innocent facial expression which they could assume. But there was a very "Mephisto-feline" smile playing round

their mouths—and there were both their cameras standing ready for action on their tripods. Slowly Ivan wended his way towards a reedy nook of the lake, thoughtfully scratching the back of his head, as he used to when solving some piscatorial problem. Then he disappeared in the thick growth of reeds fringing the lake, and after a few minutes emerged out of them on its bank. A look at the nearest of his rods told him that something was “on,” and a delighted grin spread over his face. He lifts the rod cautiously—strange how dead the pull of the fish feels—he must have taken the bait at dawn, gorged too deep, perhaps damaged the gills, and died in the water, or he has run the line under a root and sticks fast there. The second rod is instantly got out of the water, so as not to interfere with the killing of the fish—if the fish should happen to want killing still—“a long pull and a strong pull,” and up he comes—an old linden-bark shoe worn by the peasants, and known as “lapot” (plural “lapti”). The face of Ivan was a study—the “realisation” did not come up to the “expectation!”

But when Ivan ought to have been photographed—that’s when he was shown his “counterfeit presentment” taken under such distressing circumstances for his piscatorial *amour propre*; he swore some, you bet! And long after that if one wanted to send Ivan off in a fit of hard and systematic cussing, he only needed to ask him how much the big pike weighed which he had so skilfully taken on Long Lake.

BARON PAUL TCHERKASSOV.

St. Petersburg, Dec. 17, 1898.

FLY FISHING.

BY SYDNEY BUXTON, M.P.

[THE following short extracts are from a long and pleasant article (more than twelve pages) on fly fishing in the January number of the *Nineteenth Century*, which we recommend to the notice of all fly fishers.—ED. F. G.]

Why is fishing such a fascinating sport? There are many reasons. In it anticipation, the pleasures of hope, play an exceptionally large part—man seldom is, but always to be blessed. Then, there is no sport in which the unknown has so obvious and so fascinating a share; no bounds need be, nor indeed are, set to the imagination. The pleasure does not even largely lie, is certainly not entirely dependent, on the killing. Fishing is fishing, even if you catch no fish. And a blank day’s fishing—unless due to human or Satanic agency, a broken rod, rotten casts, over-tempered flies, weed cutting or yellow floods—may be open to regret, but is never detestable. All day long the fisherman has been exercising his skill and his intelligence; and if, for once, the fish have got the better of him, there are always a thousand good reasons for his want of success.

One of the chief charms, however, of fly fishing lies certainly in the knowledge that the sport depends on, and is a fair contest between, the fish and the man. That is much. And further, and that also is much, one cannot tell what the day will bring forth. Your purse or your host may provide you with a river, and a river with salmon or trout in it; but no human being can foretell what your bag will be—a blank, a record, a betwixt and between.

Some dry-fly fishermen enjoy, I know (in books), a blustering downstream wind, and can throw as easily against it as with it. I know I cannot; I know that such a wind is bad for my temper, and largely destructive of my sport and pleasure. The ideal day for trout fishing is a day fine, still, warm, and fleecy. Such a day is physically delightful. Such a day enables one the more easily to see, and the better to observe, the fish and the whole performance. On such a day, moreover, the fly usually hatches the best, and consequently the fish are more likely to rise.

It is all this, and much more, which, in spite of the strain involved to brain and eye and hand, makes a day’s fly fishing, snatched from the worry and scurry of life, the most fascinating of pleasures, the truest of recreations, the greatest of rests.

As regards trout, there is fly fishing and fly fishing—there is chalk and there is cheese. There is loch fishing. There is the downstream fishing

of the northern streams, the “chuck and chance it” system, where you flog along with a couple or three flies on your cast in the blind hope that a fish will be there and will hook itself on. There is the more scientific “wet”-fly fishing, with one or two flies, casting upstream. Finally, there is the newest and the most skilled system—fishing with one fly, always floated dry on the surface, and only presented to a fish on the feed. In this case the “wet” fly is confined to its legitimate sphere, a tailing fish, rough shallows, hopeless days—when it also will probably not catch fish.

Frederic Halford is the Izaak Walton. George Dewar is the Charles Cotton of dry-fly fishing—and I would that they had lived earlier, or preached sooner. For one recalls, with something of a sigh, the fishing days in years gone by, before dry-fly fishing was. Delightful as they were, how much more delightful they would have been if one had fished with a “dry” fly instead of with a “wet” fly, had fished the rise instead of whipping the stream, had always, instead of only occasionally, fished at a fish instead of for a fish.

How Kingsley and Froude would have loved the dry fly had they but known of it. The rhapsody over the Alder (as a wet fly fully deserved) would have been nothing to the pæan of praise that Kingsley would have melodiously poured forth over the floating Quill Gnat or Olive Dun, if only he had written his Chalk Stream Studies in this year of grace instead of forty years ago. And twenty years later the charm of Cheneys would have been much enhanced to Froude if, instead of knotting his March Brown and “never failing Red Spinner” to the same cast, he had fished the lovely Ches, by the home of the Russells, with a single well dried, well cocked fly.

Cheneys: what delightful memories it recalls! There, some fifteen or twenty years ago, I went, on more than one occasion, with Matthew Arnold to enjoy with him his three days’ annual Whitsun fishing—days which to him were of peculiar delight. How well I remember the quaint old inn, the quiet, tree-shaded, well ordered village, the limpid stream, the rising trout; and the evenings spent with the most genial and delightful of men. His preference, when fishing, was for numbers rather than size, mine for size rather than numbers. So he cast line for choice in the swift and gurgling streams below the mill, while I fished the deeper and stiller waters above where the two and three-pounders lay.

INDEX TO VOL. 37.

As a supplement to the *Fishing Gazette*, we this week (Jan. 7) publish an index of articles, illustrations, correspondence, &c. It will be found in the centre of the paper.

THE FLY DRESSER’S LIBRARY.

BY VAL CONSON.

BOOKS on the subject of fly dressing fall under three heads, viz.:

- (1) Those which contain mere catalogues of flies, with particulars more or less elaborate of their component parts.
- (2) Those which deal merely with entomology, with or without particulars of the dressings of imitations of flies.
- (3) Those which contain instructions in the mechanics of fly tying, either with or without entomological information, catalogues of flies, and particulars of component parts.

To enumerate all the works which deal in one form or another with fly dressing would involve such large drafts upon the catalogue which is due to the patient labours of Messrs. Westwood and Satchell, that these gentlemen might justly complain. It is the purpose, therefore, of these papers to trace briefly the history of the subject, and to touch upon such writings as constitute landmarks in the history of the art, and to indicate the books which the amateur who is desirous of having a sound working library of the art should not fail to acquire.

It is necessary to premise that the art of dressing trout flies is not so modern as the literature of the subject in the English would at the first blush lead one to believe. The first reference to

fly fishing is to be found in the frequently quoted passage in *Ælian*, in which he gives, from the point of view of a stranger to the art, a lively picture of angling for a fish, from his description surprisingly like trout, with a fly called Hippurus, strongly resembling a Soldier Palmer.* It is not too much to infer that the Macedonians did not confine themselves only to the use of the fly described by *Ælian*, but that *Ælian* saw no other used.

Ælian wrote about the end of the second century of our era, and with the exception of a reference of his cotemporary Oppian to the practice of fly fishing for a sea fish called the *Scarus*, there is no literature on the subject until the year 1496, when Wynkyn de Worde issued from the press in black letters Dame Juliana de Berners’ Booke of St. Albans, on Fysshynge with an Angle.

Dame Juliana was a sporting abbess, and she sets out with some *naïveté*, and no attempt at minute description, a list of trout flies for the months from March to August inclusive, of which the following is a fair specimen:

MARCH.—The Donne Fly: the body of donne wolle and the wynges of the pertridge. Another Donne Fly: the body of blacke wolle, the wynges of the blackest drake, and the jay under the wyng and under the tayle.

Incoherent and difficult to follow as this is, it is evident that a good deal of experiment with various feathers had been tried, and a good deal of observation of natural flies had been had to arrive at these results. They are written rather as memoranda of things well known than as novel information for the reader.

Nearly another century elapsed before the next recorded work appeared, viz., Leonard Mascall’s “Booke of Fishing with Hooke and Line.”

Mascall’s book is in black letter. It contains a list of twelve kinds of flies, with very insufficient descriptions of the materials composing them.

For reasons which seem to have been foreign to his merits Mascall appears to have had a lengthy reign as an authority, for though Izaak Walton, in his first edition of “The Compleat Angler,” published in 1653, gives without much variation a transcript of the instructions which appeared in Barker’s “Art of Angling” in the year 1651, he falls back in his second edition (1655) on Mascall, and copies his instructions verbatim.

It is true that Gervase Markham, in 1635, produced “The Pleasures of Princes or Good Men’s Recreations,” with a list of flies and particulars of their materials, but they are almost as primitive as Dame Juliana Berners. Yet the book ran through several subsequent editions.

Venables (“The Experienced Angler,” 1662) gives no list of flies, but gives some serviceable directions on the subject of materials and dressing. He is as insistent as the most modern authorities on the necessity of accurate observation of the natural fly, and the dressing of the artificial from it, and not from set rules.

Izaak Walton, in his first edition, names a short list of flies, some of which are recognisable, others not, and he goes on to give some instructions for the dressing of a winged fly, which the expert will find no difficulty in following, but which, like all, or almost all, of the books of instruction which appeared until the latter end of this century, prove very difficult of comprehension to the tyro. Then he gives directions for dressing the “May

* The Macedonians who live on the banks of the river Astræus, which flows midway between Berea and Thessalonica, are in the habit of catching a particular fish in that river by means of a fly called Hippurus. A very singular insect it is, bold and troublesome like all its kind, in size a hornet, marked like a wasp, and buzzing like a bee. These flies are the prey of certain speckled fish, which no sooner see them settling on the water than they glide gently beneath, and before the Hippurus is aware, snap at and carry him as suddenly under the stream as an eagle will seize and bear aloft a goose from a farmyard, or a wolf take a sheep from its fold. The predilection of these speckled fish for their prey, though familiarly known to all who inhabit the district, does not induce the angler to attempt their capture by impaling the living insect, which is of so delicate a nature that the least handling would spoil its colour and appearance, and render it unfit as a lure. But adepts in the sport have contrived a taking device to circumvent them; for which purpose they invest the body of the hook with purple wool, and having adjusted two wings of a waxy colour so as to form an exact imitation of the Hippurus, they drop these abstruse cheats gently down the stream. The scaly pursuers who hastily rise, and expect nothing less than a dainty bait, snap the decoy, and are immediately fixed to the hook.

fly" and the "Oak fly," and some references to the dressing of the Hawthorn fly, and others.

In 1676 Charles Cotton's contribution to the book known as "The Compleat Angler" was published. He gives a number of flies for each month, but maintains that "the Green Drake and Stone fly are the matadors for trout and grayling, and in their season kill more fish in our Derbyshire rivers than all the rest, past, to come, or the whole year beside."

In later editions of "The Compleat Angler" the list of flies is greatly extended, and that of Samuel Baxter (the seventh edition) contains a very considerable selection.

Jas. Chetham, of Smedley, published in 1681 "The Angler's Vade Mecum," with a list of some twenty flies without dressings. Then, changing his mind, he gives a list of sixty-six flies (February to September) with their dressings, as well as some incidental patterns. There is a very good artificial "cod bait" of "shammy leather" or beeswax with a black silk head. The book is very well arranged, bright, and interesting. The author is strong on good imitation. He is the first to recommend starling wings as superior to drakes. He advises the dressing of Duns with yellow silk, and Browns with red silk, and in September the use of silks of violet and horse-flesh colour. Beyond this there are no directions for tying. His Palmer fly reads much like the Sanctuary. It is dressed with the "whirl of a partridge feather and a red hackle of a capon."

In 1714 appeared, anonymously, "The Whole Art of Fishing," with a list of a dozen flies apparently borrowed from Walton, and a brief page of instructions for dressing.

In "The Compleat Fisherman," by James Saunders, 1724, occurs the first mention of silk-worm gut. Except successive editions of Walton and Cotton, there is little of permanent value in the fly-dressing literature of the eighteenth century till we come to Richard Bowlker's work of 1758. This was a great advance on anything in this direction which had gone before, and was reprinted many times. The 1758 edition was issued by Richard Bowlker, at Worcester, as "The Art of Angling Improved in all its Parts." In 1766 it was reprinted in London, with some additions, as "The Universal Angler." The second edition, printed at Birmingham in 1774, was claimed by Charles Bowlker, and was called "The Art of Angling and Compleat Fly Fisher." Other editions followed in 1785, 1786, 1788, 1792, 1806, 1814, 1826, 1829, 1839, &c., and up to quite a recent date reprints of this work were being advertised by some one of the name of Bowlker in the angling press. The 1826 and subsequent, and perhaps earlier, editions contain some creditable coloured representations of trout flies, with a list of thirty-six patterns, and careful instructions for dressing them.

In 1766 came Sir John Hawkins' edition of "The Compleat Angler," with a greatly extended list of flies. In the same year Richard Brookes, M.D., published "The Art of Angling," containing a new art of fly making. This work also, though distinguished by wholesale conveyances from Chetham—perhaps because of it—ran through numerous editions till the early years of the present century. It gives two lists of flies, each of great length, one called "Cotton's list," the other a modern catalogue.

In 1784 Thomas Shirley published "The Angler's Museum," treating, in Part V., "Of Fly Fishing and the Preparation of Artificial Flies." This list of flies is directly cribbed, apparently without acknowledgment, from Bowlker.

Three years later Thomas Best published his "Concise Treatise on the Art of Angling," with a frontispiece, on which some six artificial flies are illustrated, all tied on eyed hooks, and apparently by the jam knot. He gives an elaborate list of trout flies for each month of the angling year, and then, beginning all over again, he describes a series of twenty-one natural flies, and gives brief dressings of each. Successive editions of this work followed every three or four years, until the thirties.

In 1795 Ralph Cole published "The Young Angler's Companion, including . . . the art of making artificial flies, &c." This work went through a second and a third edition in 1813 and 1816.

In 1800 Samuel Taylor's "Angling in all its Branches" appeared, containing, "thirdly, a list

of artificial flies"; and (to quote the modest words of the author) "the whole forming a work of real ability . . . and of a very different nature from those insignificant little pamphlets hitherto published, which treat chiefly of angling in the Thames, the New River, and other waters of equal consequence about London." The list comprises twenty day flies (several of them dubbed with fox fur) and three night flies.

In the same year comes George Scotcher with "The Flyfisher's Legacy," "containing accurate descriptions of all the principal natural flies that frequent the water, laid down in such familiar manner that the angler may readily distinguish them: together with the most successful method of imitating them, forming the fisherman's grand desideratum, a long wished for instructor." It is a rare local work, which preceded Bainbridge (1816), Carroll (1818), and Ronalds (1836).

(To be continued.)

FISH CULTURE IN NORTH DEVON.

BUCKLAND FISHERY, BRAUNTON, NORTH DEVON.

THE yearling fish offered for sale this season are of exceptional size and quality. Rainbow yearlings are grown to a length of 11in., and trout yearlings to 9in. It is believed that these large yearlings will be found suitable for many of the purposes to which two-year-olds are commonly applied.

TIME OF STOCKING.—In most south country waters stocking in autumn or early spring is recommended, except when a short length of water only is to be stocked. When trout are to be turned out in late spring into the lower waters of rivers holding salmon, stocking should be deferred until the seaward migration of kelts is completed.

VARIETIES OF TROUT (*S. fario*).—Three varieties of *S. fario* are for sale: 1. Best fitted for swift waters rich in food. 2. For large waters with many still deeps. 3. For small barren streams and waters on high ground. 1 and 2 are of different blood; 3 are reared under somewhat different conditions from 1 and 2.

RAINBOWS.—Rainbows are especially suitable for waters which from their polluted condition, high temperature, or deficient oxygenisation do not give the best results with trout. They are particularly recommended for small ponds and reservoirs.

The following natural foods can sometimes be supplied. Prices on application: Pond snail, fresh-water limpet, planorbis, fresh-water shrimp, Cyclops quadricornis, larvae of Alder Fly, March Brown, Blue Dun, Stone Fly, caddis worms.

RAPID GROWTH OF RAINBOWS.

An instance of quick growth of a rainbow may be of interest. This fish was hatched in May of last year, and on Nov. 19 measured 9½in. in length with a weight slightly exceeding 4oz., his age being a fortnight over six months.

F. G. RICHMOND.

FISH CULTURE AT MALVERN WELLS.

THE following notes about this establishment are from the circular and price list of Messrs. Wm. Burgess and Co.

"It is hardly necessary for us to give a detailed description of the Malvern Wells Fishery, as it has been established so many years, and is now so well known to the public; suffice to say that it occupies one of the best possible sites for bringing fish into existence by artificial methods, and extends over many acres. The water supply is obtained in plenty, and from untainted sources. Before reaching the hatcheries it is adequately filtered, so that it comes to the ova in suitable condition. The water in the ponds can be regulated according to the requirements of the fish, be they fry, yearlings, or matured fish, or it can be drawn from the ponds when it is desired to empty them, for the purpose of sorting or dispatch. One series of ponds is provided for fry, another for yearlings, and another for older fish, some of them having a depth of 10ft. The brooks which supply our fishery come direct from the Malvern Hills, the water is very rich in insect life, which form the natural food, and it is no doubt partly owing to this that our fish grow so fast and thrive so well. We have a number of ponds specially set apart for breeding and rearing perch and other coarse fish.

"To prevent disappointment, orders should be given as early in the year as possible. During cold weather less water is required, and the cost of carriage is much lighter.

"It is highly important that a suitable conveyance (on springs) should meet the train by which fish arrive, as delay at railway stations is often fatal, owing to the water not being kept in motion, otherwise we cannot be answerable for any loss that may occur.

"A book containing much useful information on fish culture will be forwarded on application."

SALMON ANGLING RENTALS.

WITH the advent of a new year comes the near prospect of the opening again of the salmon angling season. The spring angler begins to feel a new interest in life, and longs for the opening day, when, freed of all legal fetters, he can again grip the rod, wend his way to the river, tie up a Jock Scott or a Silver Doctor, or a gaudy Gordon, and, sending it out over the "mill pool," or the "kelpie's hole," feel the electric shock of an eight or ten-pounder tugging at his line; and, after a battle royal, often fought from a bank of slush and snow, land the "first blood" of the angling season.

The popularity of salmon angling, if we may judge from the rentals paid for salmon waters in recent years, is steadily on the increase, and evidently high-water mark has not yet been reached.

This may be evidenced from the rental just paid for the lease of the Ballater Invercauld water of £1575, which was formerly let to the lessee of the Ballater Hotel at the (which must now be considered moderate) sum of £175. A rise of £1400 on the same stretch of water must indicate some initial and drastic change in the demand.

Really good salmon water is priceless, and where there is a guarantee of sport the figures will rise. The quantity of good waters is very limited, and where improvements have been established, rents are bound to rise. Salmon angling is truly the rich man's sport, and he will give any amount for a good reach of spring or autumn water. The Glentana Dee water let last year for £1500 for three months of the spring.

It was the only really good bit of early spring water, and on the principle that a good thing is never too dear, or, put otherwise, that a bad thing is dear at any price, the Glentana waters were well worth the money after all. It was a matter of simple arithmetic to compute that almost every cast cost one shilling and sixpence, yet when compared with the six hundred odd fish grassed during February, March, and April, it was not so dear as the cost of waters lower down, which cost about sixpence, or even less, per cast, and yet produced scarcely a fish per week, or little beyond a score for the season.

These waters are bound to carry old figures, if they are not already let at higher ones; and those determined to have a good finger well into the spring pie of Scotch salmon angling are quite prepared for the increased demand. There is a tendency in other quarters to retain waters which are beginning to lose, or have already lost, cast, and bring them up to date by having them well fished, either by putting on local fishermen or letting the beats at moderate rents to anglers of known repute. We hear of two such transactions where arrangements have been made to fish the water, on the one hand by the proprietor and his friends, when every day every pool will be effectively covered, and every chance made the most of. In the other instance the water has been let at half last year's rent to a well-known angler, rich enough and of good social standing, but who works on principle, and never gives more than he can help to get his rod on; and so £35 a month is his fixture for the coming spring, whereas it was £70 or thereabouts last year and the year before. All over there is a downward tendency of about from twenty to twenty-five per cent. on last year's rental, and where, except a lease can be got and a syndicate formed, it is pretty evident that for ordinary salmon waters the market will be considerably lower than has been the case for years back. Of course one swallow does not make a summer, neither does one or two transactions in salmon waters fix the salmon waters' market; but, on the other hand, straws show how the wind blows, and this is the first tendency of the New Year arrangements which cannot but have been anticipated by those looking sensibly back on the

disastrous results of the past few seasons, and especially on those of last year and the year before.

On the other hand, the New Year brings considerable activity to enlarge the area of improved salmon angling waters. This has to be hailed with delight. The Tay syndicate have now a considerable reach of the nets which formerly belonged to local tacksmen. On the South Esk and Deveron permanent arrangements have already been effected there which will hold good for all time coming, and the Don proprietors are moving in a similar direction. On the Sluie water, which is in the market, and the Ballogie and Aboyne sections, new huts and bank and river improvements have been in active progress since the close of last angling season.

G. MACKAY.

A. BANK HOLIDAY OUTING.

MID all the joys and pleasures of Christmas, I could not, as I took a morning stroll in the warm and springlike weather of Sunday, unseasonable as it was to those hardy folk who delight to see ice 3in. or 4in. thick and a coating of snow covering the face of the ground, help saying to myself, "What a magnificent day this would have been for roach fishing!" Nor could I forget, and indeed oft-times have I felt half inclined to say ditto to the somewhat impious lament of the Scotch gillie anent fine "days of rest." This man was a strict Sabbatarian, but long years of observation had brought to him the discovery, which every angler is said to make sooner or later, that the best atmospheric conditions for sport more often than not obtain when one is forbidden to go a-fishing. The gillie, in fact, was apt to regard the seventh day as a necessary evil to be tolerated with as much patience and philosophy as possible. "Mon," he would murmur to himself when a propitious morning broke, "a' wudna wunder but what yon's anither gran' day for the feshing just suckit up by the Sawboth. Aye weel, it's the wull of the Almighty, but 'tis the third He's grabbit this spring already!"

Without endeavouring to prove statistically the truth of this declaration, I will only say that I did hope again and again that the fair wind and fine weather would hold, and that good sport would accrue to the many anglers, myself included, who wetted a line on Boxing Day.

It is needless to state that I was up on Monday ere the sun rose. I donned my long boots (which, by the way, I discovered still hanging to the rails of the cots of my bairnies two, having been improvised as receptacles for the good things Santa Claus is credited in the infantile mind with bestowing upon deserving childer) as a precaution against possible rain, and sallied forth.

After an uneventful and cheerless journey by rail I reached my destination—the banks of the famous Colne. It was only just daylight, and a slight shower of rain seemed to portend an uncomfortable trip. The wind, too, whistled ominously amongst the branches of the trees, indicating pretty clearly that long-corking, by which means the heaviest bags of fish are creeled on the stretch I had permission to visit, would be almost out of the question. To make matters worse, the wind blew in strong gusts right up the river. There was very little stream on, and in places it was so low that it was easy to walk from one side to the other without getting up to one's knees in water.

I had no great hope of doing much, although, as I knew nearly every inch of the fishery, I had little fear that I should obtain a wooden spoon as my reward. Moreover, I had come to fish, and fish I intended to, let it blow, rain, or even snow as much as it liked.

7 Selecting the calmest and most sheltered spot I knew of in the mile and a quarter of river, where, had the latter been at anything like its normal level, I could have counted upon getting amongst roach, dace, and perhaps a portly chub to top the basket, I began operations. This swim was, nevertheless, a curious one to tackle. It was close to the bank, and extended less than a couple of yards out, being 3ft. deep. There was just the suspicion of current, but the head wind neutralised the effect of it. There was a clear run down of 10yds., at the end of which the bottom had silted

up, causing the stream to make a detour at right angles towards the centre of the river, in the direction of a certain hole.

I felt almost convinced that if by long corking I could manage in any way to get my bait out to, or near, this hole I should find the roach at home if they were to be discovered at all. Two or three small knobs of ground-bait were deposited quietly close to the edge, and as I knew the depth to an inch, there was no necessity to use the plummet. For bait I tried crust, employing drawn gut and No. 11 Crystal hooks. I got as far away from the water as I could, and made the initial cast. The float sailed along a few yards very slowly, and then stopped. Thinking I was hung up, I proceeded to make things clear, but found I had hooked a fish. This I held for an instant, but lost it—if one can lose what one never possessed. I opined from this that the roach were biting very gingerly, and for another ten minutes I had not a touch. I "pelted" the float at short intervals with marbles of ground-bait. Then the peculiar stopping again occurred, but I was wide awake this time, and a 1½lb. roach fell a victim to his inquisitiveness to see what the brownie white cubes were like. Within the next hour I had four others of about a similar weight, when all of a sudden, try what I would, I could not get them to take either crust, gentles, paste, or "small reds." I accordingly decided upon prospecting, and journeyed to a deep eddy, out of which I have never yet failed to extract a chub or two. Being more exposed, there was quite a miniature sea on, so I baited with gentles to see if any of the loggerheads were within hail, knowing their preference for the "wrigglers" *vis-à-vis* to the sober crust. The float performed extraordinary gyrations on the top of the mimic waves. It was difficult to keep anything like a straight line on to the tell-tale, or to induce it to travel downstream as one could have wished. However, after saying all sorts of hard things about the wind, the float made an unexpected sky-rocket like movement towards the bank, denoting that a chub had attacked the lure. The fish was hooked, and its first rush led me to think I had got hold of a big one, but it only just turned the scale at 1lb. 12oz. when landed and placed upon the steelyard. However, a fish of this size was not to be despised, and I started afresh. For half an hour I worked the swim, but the result was purely negative. I made, therefore, yet another shift, putting up a long roach rod to reach a hole under the branches of some willows on the opposite shore; but I pretty soon had to discard the pole, for the pressure of the wind upon it was so great that I found it impossible to wield it with the slightest degree of comfort. I secured another chub and a small roach here, but neither was large enough to retain, and both were promptly returned. Other pitches I negotiated, but to no effect, until in sheer desperation I decided to return to my first love—the swim I began at in the morning—when the roach came on to feed at three o'clock, and by dint of hard work I took a dozen and a half fish, six only of which I kept, ranging from 1½lb. to a 1lb. each, together with the aforementioned chub. It was not a great catch certainly, but taking into account that there was a strong upstream wind blowing all day (a kind of prelude to the violent south-westerly gale which followed next day), that there was a great dearth of water in the river, and that what there was was as transparent as glass, my sport cannot, I think, be regarded as otherwise than fairly satisfactory.

H. A. ROLT.

THE LOWER AND MID-THAMES: WHERE AND HOW TO FISH IT.

(Continued from page 526.)

BY F. H. AMPHLETT.

BARBEL.

"The barbel is an evil fyashe to take, for he is so strongly enarmyd in the mouth that there may be no weake harnesses holde him."—JULIANA BERNERS.

Of all the coarse fish in the Thames the barbel affords the most exciting sport, and a large fish, when hooked, will give the angler considerable trouble and pleasure to land, especially if he be using fine tackle. Barbel are very numerous in the Thames, but it is necessary to be acquainted

with the weir pools and deep holes, where these fish congregate, in order to attain good sport. I have in the earlier chapters endeavoured to direct the angler to the best swims between Kew and Great Marlow, but to succeed in capturing barbel there ought to be a considerable amount of ground baiting beforehand, and the angler must be gifted with a fair share of patience. The latter quality is absolutely essential, because the Thames barbel appear only to feed by fits and starts, and although a well-known swim be carefully fished, the angler may not reap the reward until some days afterwards. When they are on the feed, however, the best of sport will be enjoyed, for there is no Thames fish, with perhaps the exception of trout, that are so full of fight. They are exceedingly strong, somewhat crafty, and, after being hooked, make desperate efforts to escape by running under banks or into large beds of weeds, and at times stubbornly keeping at the bottom of the river, which is termed "boreing." Barbel are game to the backbone, and consequently prized by numbers of Thames anglers, some of whom are sufficiently enthusiastic to devote their whole spare time to this branch of the gentle art. I have already given instances of barbel being hooked foul, and now quote an authority showing how this sometimes happens. "The Angler's Guide" (1825) says: "Barbel are frequently caught foul, that is, hooked in some part of the body instead of the mouth without their biting; for when they are swimming or floating about the ground bait, &c., their fins, body, or tail often strike against the lower part of the angler's line or hook, which moves the float like a bite; the angler, supposing it to be so, strikes, and generally hooks the fish. The chance of this way of taking barbel is increased by putting two hooks on the line, about 8in., 10in., or 12in. apart." The latter suggestion I would not recommend any angler to adopt, because from practical experience I have found that in fishing for roach, dace, barbel, or chub it is preferable to use only one hook. The best months for barbel fishing are August, September, and October, though they are caught at the commencement of the season. The average size of those taken from the Thames is from 3lb. to 6lb., though a 9lb. or 10lb. fish is occasionally landed. One angling authority states that a barbel weighing over 19lb. was caught at Shepperton in 1800, but one of this size is never taken now, probably because there are more anglers who fish for them, and the fish are caught before reaching that weight. Barbel, when once well hooked, seldom break away, because they are leather-mouthed fish, and are usually taken in the Thames on ledger tackle. It must be finely constructed, but strong. It may be scarcely necessary to describe a ledger line, but, as I am writing for the benefit of those but partly initiated, I may say that it consists of 1yd. of fine but stout gut, with a number seven round bend hook, and a bullet or flat lead, which is placed about 9in. below where the gut is joined to the line. In order to prevent this bullet from slipping further down the line, a little shot should be nipped on to the gut. Some professional Thames anglers dispense altogether with the length of gut, and join the line, which should be very fine, to the gut mounted on to the hook. They then use the ordinary sized bullet, but the hole in the centre of it is much larger, and is kept about 36in. above the hook by means of the match-trick, *i.e.*, making a slip-knot, passing half a wooden match through, then drawing the line tight. I am inclined to think this is the best way to ledger for barbel, as it allows the line to run more freely through the bullet when the fish first takes the bait. The running line ought to be of plaited silk, and 80yds. in length at least. If a large fish is hooked, he will probably run 70yds. of it out. When the fish pulls the line, which it will do on taking the bait, it must be struck sharply. Before commencing to fish, throw in plenty of ground-bait, which should consist of soaked greaves, bran, and clay when using greaves as bait. If fishing with a lob worm, a large quantity of worms chopped into pieces, mixed with bran and clay, should be used as ground-bait, and, where practicable, should be thrown in a night before. In fact, unless considerable pains be taken to effectually ground-bait a swim, the sport will probably be poor. Particular attention should be paid in putting

the worm on the hook, so that the skin may not be perforated by the barb. If the worm be previously dipped in bran it can be held better, and in using the round bend hook no difficulty should be experienced in properly threading it. Be careful that the point of the hook is not exposed, or the fish will detect it. I always take as much pains in baiting a hook as in "playing" a fish. When the worm is dead, discard it and use a fresh one, for it is absolute waste of time to endeavour to entice fish with one that is dead.

The poet Gay, alluding to worms, says:

Cleanse them from filth to give a tempting gloss,
Cherish the sullied reptile with damp moss,
Amid the verdant bed they twine, they toil,
And, from their bodies, wipe their native soil.

(To be continued.)

NOTICE OF REMOVAL.

MR. J. RICHARDSON (late of 111, Judd-street, King's Cross) wishes us to state that to-day, Saturday, Jan. 7, he has entered into possession of his new premises, 123, Euston-road.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—Rain and wind—miserable and disagreeable weather—has not only closed in the old year, but the new one has commenced under similar circumstances. There is an old saying when the New Year's Day falls on a Sunday the following twelve months always goes on well. I would therefore hope, amongst other things, our dear old Thames and its preservation societies will find at the end it has been a good year for them; and the oldest one, as the parent of all, with which I enjoyed so long a connection, has largely increased in its strength of financial support and encouragement. When I have referred to that lengthened period I have had no desire to make it understood I have the credit of having done all. There are many names who without their assistance and influence all would not have been achieved that has been done, and, although they have now gone to their final rest, their names will never be forgotten; and those who are still living and their hearts still in the work have secured to themselves a name which will ever be associated with the work of Thames preservation. I am writing this on Tuesday with, I hope, some little chances in the improvement of the weather, and the only letter I have received is from the veteran William Milbourne, who gives a very gloomy description of the river in his neighbourhood. I have a few lines from Mr. W. McBride, of Teddington, in explanation of the absence of reports from him last week. It appears he had been away with one of his respected clients to some private waters and doing a little there, and he had a happy time of it, and thoroughly enjoyed himself. When I was over at Twickenham this morning, I was told both by Mr. John Spong, of the Two Sawyers, and Mr. F. J. Ogden Smith, some good roach and bream had been taken by the anglers both in the Thames and in the Crane. Mr. Davis selected two of his best, weighing 1lb. 14oz. and 1lb. 10oz., which he has given to Mr. Ogden Smith for preservation, and for the same purpose three more are in his hands, the largest 1½lb. I am glad to find that Mr. Ogden Smith is doing a large business as a taxidermist, and all the fish entrusted to him have given the greatest satisfaction.—B.

—(Hampton Court).—William Milbourne reports: "Owing to the heavy rain it has quite spoiled the fishing in the Christmas holidays. The water here rose about 3ft., and was very thick, and is still rising. The weirs are all drawn, and there has not been any punts out. The bank anglers are getting the best of it, and have been catching some fine roach. The large roach which have been caught in Hampton Deep there is no doubt are those that were turned in the river from the Grand Junction Waterworks reservoirs. I have been fishing for the last fifty years, and I have never seen finer roach caught in the Thames before."—B.

—(Henley).—Jan. 5.—The river is showing signs of fining down this morning, and a strong stream is running. Should the rain keep off it may be right for bank anglers by Sunday, but am afraid the quantity of snow in the river will prevent the fish from feeding.—STANLEY MEAD.

—(Kingston).—The only report of angling in this district is that John Johnson has been getting some roach and bream.—B.

—(Lechlade, &c.).—Tempestuous weather has prevailed during the past week, and on Monday night it blew a perfect hurricane throughout the district, doing considerable damage. It has been a bad time for anglers, but here and there some fair sport is reported with pike and perch. A big pike is reported from the Hart's Weir waters. The Coln and Leach are very much swollen by the heavy rains, but the rivers are just about as they should be for the time of year, but the water is sadly discoloured from the heavy hill storms. Several restockings of trout waters are about taking place in these

streams, but there is a nice show of trout already for the coming season. This is notably the case where the ducks have been kept off the water for a season or two, as has been done at Fairford. Jack fishers have been busy on trout streams, and several have been cleared out.—PAN.

—(Richmond).—The report from the fishermen is their customers have been creeling some roach, dace, and bream, the roach running of a good size.—B.

—(Sunbury).—Messrs. T. and A. Stroud report they have not had a punt out, owing to the absence of anglers and the state of the river.—B.

—(Teddington).—The push of water has had the effect of bringing up a few lampreys to the weir. Mr. W. McBride says he has had no results worth reporting, but hopes next week, if the river is anything like, to have something to say of the success of his clients, and to show his portion of the Thames is well stocked with fish. One thing, he knows where they are, and can pilot his numerous clients amongst them.—B.

—(Twickenham).—Mr. Carter, fishing with C. Browne, has creeled 14lb. of roach (the largest 1½lb.) and six bream in one day. J. Draper, fishing with a client, in one of Mr. Spong's punts, in three days caught 20lb. of roach and dace and a few bream. Mr. Wright has taken thirteen bream, the largest 3½lb. Mr. F. J. Ogden Smith was out for a short time one morning, and creeled four or five nice bream. He also informs me that Mr. Carter has banded to him for preservation three of the largest roach from his reported take, the largest being 1½lb., as stated; and that Mr. Davis has also given him two fine roach for the same purpose, the fish weighing respectively 1lb. 14oz. and 1lb. 10oz.—B.

—(Windsor).—The river is still very thick, and I think is likely to remain so for the next week or ten days. Very few anglers have been out. Good roach should now be had by fishing all the quiet places under the boughs and eddies. Anglers should watch for the first clearing of the water, when good sport should be had with the jack.—CECIL HOWLETT.

Ancholme District.—The conditions for winter angling remain in a very favourable state, and sundry baskets of decent pike, roach, bream, and perch have been taken of late; but very few visitors put in an appearance now.—THOMAS FORD (Caistor).

Arun (Pulborough).—There is nothing to record for the 1st, owing to the flood. At the time of writing (Wednesday morning) the water is rapidly sinking, and, providing we have fine weather, bank fishing will be possible on the 8th inst.—W. G. HOLLMAN.

Bure (Wroxham).—After wild and stormy weather, gales, frost, and rain, we have again to-night (Jan. 1) relapsed into fog, south-east wind, and steady rain, rendering angling miserable and profitless. The roach and bream are off feed, although a few were taken this morning, one about 1lb. Pike fishing is fair, but I have heard of nothing sensational. Roach fishers should give Coltsball a trial; some decent sport was had there in the foulest weather lately, and favourable conditions should result in really excellent sport there. This morning the frost had rendered the river exceedingly clear, but it will now thicken somewhat. Prospects at present are not very good, except, perhaps, for pike fishing on Broad.—C. H. TAYLOR.

Exe and Canal (Exeter).—Unfortunately for the holiday anglers the weather was anything but propitious, and comparatively few cared to face the music. Among the plucky ones were Messrs. Gibbard, Roberts, Graf, and Theeuwissen, who accounted for several pike, but all of the small order. I hear of an angler on the Canal also securing nine fish at one outing. Following the deluge of rain which ushered in the new year the river is now in state, and will be out of ply for the next day or two.—RED PALMER.

Fen District (South Lincs. and Cambs.).—Since last writing the waters of this district suffered to a large extent by the downfalls, which really began on Christmas Day. It is only here and there we hear of sport worth mention. At Surfleet, on the Glen, a number came down for the holidays, and are stated to have done fairly well with roach, but later sport has fallen off. Pike fishing on the Forty-foot and the Welland has not been very remunerative.—LIMPET.

Idle District (North Notts).—Sport in the Idle district received a check last week from the rough weather. On one or two days several anglers returned from Scrooby and Mathersey without any fish. At several other points small success was reported. The weather is again mild, and, should the waters fine down, sport will be resumable towards the end of the week. A few heavy roach are reported from the lower lengths.—L.

Lea.—The river has undergone another flushing, and this (Thursday) morning prospects are good for week-end anglers. The river is in nice colour for the roach, of which there is an excellent stock, and favourable weather prevailing some nice baskets should be obtained with worm, white paste, and bread crust, the latter to be used where there is stream. The past week has been a very bad one for fish catching. In addition to heavy gales of wind, rain, snow, and sleet have all fallen in the Lea Valley. However, at some stations fair-sized roach and dace have been brought to bank, and the capture of perch and pike is also reported. At Cheshunt roach up to 1lb. have been landed, and some decent roach have been had at Ware and Hertford. Last week a local angler took 26lb. of jack in the Hertford district, one of the fish scaling 11lb. The tributary Stort has been flushed, and the thick water has since fined down. There was a good colour for roaching when I last heard from the river. Roach up to 1lb. 4oz. are notified from Bishops Stortford. Few anglers have been out lately.—IZAACK WALTON.

Lugg and Arrow (Leominster).—Both these noted grayling streams have been running very high and

muddy, and continue to run bank full owing to the very changeable weather we have had during the past week, when there has been falls of rain and snow, followed by frost at night and sunshine during part of the day, and there has been no angling done in either streams this week, or will be until the water goes down again. The present weather would not be so bad if the water was in order and good fish would be landed. The Pinsley is running high and coloured.—G.WYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers quite three parts bank high of stained water. Weather very variable, including gales, fierce storms of rain, sleet, and snow, frost, and at times as mild as April. Fishing quite out of the question at present, and this (Wednesday) evening no prospect of amendment.—R. T. WILLIAMS.

Nene (Peterborough).—The vagaries of the weather in the course of a day or two put a very different complexion upon matters affecting angling pursuits, as evinced by the now swollen condition of our river, which in some parts of the district is running over its banks and submerging the adjacent land. Since my last report a grand catch of pike was made between Tansor and Oundle by Mr. Beckett, of Peterborough, he landing six fish, which weighed 42½lb., the largest turning the scale at 11½lb. Mr. Ream also caught several at Caistor, which weighed from 3lb. to 6lb. each.—E. A. S.

Onse (St. Ives, Hunts.).—River again cloudy for piking, excellent for roaching, and, if no more rain, will be good all round by Friday. On Thursday, Feb. 9, we fish our genial friends, the N.A.P.S., our usual annual match; and no doubt it will be as happy and enjoyable a day as those in the past have been, and may the best team win. Happy, healthy, and prosperous New Year to all jolly anglers and tight lines is the wish of—E. COLLINSON.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—A great disappointment was in store for the numerous visitors who spent their holidays in this neighbourhood, and very little sport could be obtained by anglers owing to the very unfavourable weather. The heavy rain last week caused all these streams to be flooded to a greater extent than for several years past, and the stormy weather still continues, with cold winds and rain and sleet, so that the rivers are still much swollen and out of condition, and the little sport anglers are having is confined to the capture of a few pike and coarse fish in the Severn and Vyrnwy.—VYRNWY.

Sussex Rivers and Chichester Canal.—With adverse weather angling has not been a success, as all rivers are very high and thick. Pike fishing is out of the question, but roaching may be looked forward to by the 9th should rain hold off. Chichester Canal remains in good order, and several good pike and perch have been secured. Mr. Gilmore, of the Park Tavern, has taken four pike averaging 4lb.; and fish, varying from 3lb. to 4½lb., have been obtained from the lower reaches. A fine fish, computed at 14lb., may be seen feeding below Donnington, but up to the present has refused all lures. There are good perch in the lower reaches. A member of the Brighton Anglers' Association, fishing in the Donnington reach, secured a nice perch, weighing 2lb. 4oz. Local anglers have taken perch of 1lb. 14oz., 1lb. 8oz., and 1lb. during the week.—G. F. SALTER.

Teme (Ludlow).—The Teme in this part is now running high and coloured, and quite bank full, and there is a good volume of water going down at present. The weather has been changeable and miserable, and rain, snow, and sleet has been had, and it has been impossible to do any fishing. To-day (Wednesday) the water is clearing, but is not lowering, and by the beginning of the week, if the weather holds fine, a few fish may be taken with maggot and worm, but the weather is so changeable. At the end of last week, when the water was so high, the fish traps at Castle Mills were put up, and they found in it a fine pike, which, when taken out, scaled 13½lb. It was sent to a fishmonger to sell, but it failed to find a customer. Several pike have been taken in these traps, which shows there are some fine fish in the Castle Pound. Salmon have been making their way upstream in good numbers of late, the high water being a great assistance for them to get over the weirs. The Ony, Corvie, Clun, and Ledwyche are all running high and muddy, and out of order, and will be for some time.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part has been visited with some very bad weather of late. Rain, sleet, and snow have been had, and the water is still running high and coloured. At the end of last week the water was higher than it has been for some time. It has now begun to go down and clear, but it will be some days before any kind of fishing will be able to be done. The weather is so changeable, frost one day, then rain and snow, followed by bright sunshine. Salmon have been going up the stream of late in good numbers.—WORCESTER.

Witham, &c. (Mid-Lincolnshire).—Fishing in the Lincolnshire waters of this district has been interfered with by wind, rain, and snow. Many who came down last week for the holidays were disappointed, and even this week things are not much better. The Witham is in semi-flood, and so also are its tributaries. A few roach are reported from odd places. From the Sincil Dyke, for instance, fair baskets were reported, and some also from the Bain. A few pike have been obtained from the lower waters, but nothing of any account. If water runs down things will be better for the week-end.—LUCI.

Yorkshire Rivers.—YORE, SWALE, WHARFE, NIDD, OUSE, &c.—These rivers have been in good order for fishing some days, but at the time of this despatch (Wednesday, Jan. 4) there is a lot of snow on the Yoredale, Swaledale, Wharfedale, and Niddersdale range of hills, and, with a rise in the temperature to-day, it is finding its way into the rivers. The wretched weather which prevailed at the end of last week, and at the commencement of the present,

prevented many anglers from getting to the water-side; but twenty-three members of the Stockton Angling Club faced rain and sleet, and had their annual New Year's competition in the river Swale, in the neighbourhood of Morton Bridge, on Monday, in spite of the adverse meteorological conditions and the presence of snow water. The match, which was conducted on the "go-as-you-please" principle, was very successful, and some fair baskets of chub, roach, and dace were caught with preserved wasp grub, maggots, and the little red worm. There are not so many grayling in the neighbourhood of Morton Bridge as there are in other parts of the river, and two or three of the members angling for this fish failed to catch any. The principal prize takers were Messrs. Isaac Dew, Featherstone, and Clayton, the largest fish caught being a chub of 1½ lb., but some larger fish have been taken here recently, Mr. Ingledew, of Stockton, basketing a chub of 3½ lb. We very seldom hear of the capture of eels with the rod and line at mid-winter, but the other day a Thornaby angler caught one weighing over 2 lb. Few grayling fishermen have been out in the Upper Yore, and Messrs. Blades, Miller, Collinson, and others who have been fishing have had bad sport, the unsettled weather being against them. For the same reason reports from the Wharfe, Nidd, Derwent, &c., are, with very few exceptions, bad; and as far as the Ouse is concerned, the best sport to my knowledge has been obtained by Mr. Wood, of York, who, on Saturday last, caught a lot of roach, &c. None of them, however, were large, but they make capital pike baits for—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAM.—Heavy rain storm and high south-westerly wind have prevailed on the hills and moorlands during the last twenty-four hours, and all our rivers are running high with thick snow water. At Hawes (the Yore) Dr. Richardson and Mr. Moor had very nice sport with grayling on Saturday, Monday, and Tuesday, Mr. Moor getting a basket of twelve exceptionally fine fish. Owing to a large influx of thick water in the lake, pike fishing at Hornsea has not been so good as usual. On Monday, Mr. Schroeder, of York, with snap tackle, landed three pike, weighing 14 lb., returning other four fish, being under the standard length of 26 in. No gorge hooks or gaff is allowed. The fish are landed into the boat with large landing nets, and anything under 26 in. carefully returned to the water as quickly as possible. HORNSEA.—Mr. Wilkinson, of Oldham, fished the mere on Saturday, Monday, and Tuesday, but owing to the flooded state of the mere and thick water he only caught seven pike, five had to be returned. Two retained weighing 19½ lb.—J. E. MILLER, Northern Angler's Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

North-East of Scotland.—By another week the first batch of Scotch salmon waters will be thrown open to the early spring angler. The Thurso, Naver, Loch Naver, and Brora open on the 10th and 12th inst., and the Tay and Loch Tay on the 15th inst. The weather has hitherto been favourable for fish running, but till the fly be put over the best judges can form but little opinion as to the season's prospects. The bulk of Scotch waters do not open until Feb. 11. Dee salmon waters are being rapidly picked up, and many old favourites are booked for their old quarters early in the season, and have made arrangements to be in at the opening, if the weather is at all suitable. Mrs. and Miss Pickering come to Kincardine Lodge, and Mrs. Wm. Farnell Watson to Woodend water.—G. M.

Tweed, Teviot, and other Border Rivers.—All the Border rivers during the past week have been in good volume, and to those who prefer to go bait fishing the streams were in good trim for such angling. As it is, however, not many now in the Kelso district care to go out trouting during the winter months, when the fish are out of season, and the more so that all the legitimate trout anglers there are members of the Kelso Angling Association, which imposes a rule on their members that they must not fish after Nov. 30 in any year, until Feb. 1 following the year gone by. Pity it is that all the Border angling associations were not of the same mind. Of course, where there is so much free water on the Tweed and Teviot in the Kelso district for trout fishing, you cannot expect every disciple of the rod and line (who are not members of the association) to hold aloof until the time appointed by the local association when it is time to begin trout fishing; at the same time, however, the all-the-year-round so-called anglers are slowly beginning to find out that it is for their own good to stop fishing until the early spring, when the fish are in good condition.—MAXWHEEL.

IRISH REPORTS.

Killarney.—Angling opens here on Jan. 17. Prospects are very favourable. Spawning is practically over, and waters are now in good order.—T. J. D.

Lough Currane, &c. (Waterville, co. Kerry).—Spawning is now nearly over in the Waterville district. The angling opens here on Feb. 1, and the prospects appear to be good.—T. J. D.

SEA FISHING.

The following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, Jan. 13. Spring tides.

STOP PRESS.

WEATHER REPORT.

By TELEGRAPH.—FRIDAY, JAN. 6, 9.40 A.M.

DEAL.—Smooth; S.E.
DOVER.—Smooth; S.E.
RAMSGATE.—Smooth; S.E.
MARGATE.—Smooth; S.E.
HASTINGS.—Smooth; S.E.

Deal (The Pier).—The first fish caught upon the pier this year was a plump little 6 lb. cod, taken by Mr. Chapman at 12.30 on Sunday morning. Mr. Lowe had hooked and landed one of 8 lb. on Saturday evening. Visiting anglers on Sunday comprised Messrs. Minchin, Gareau, Upton, Carter, A. B. Smyth, Jno. Smyth, and Jno. Astley. Most of these gentlemen realised capital sport, the best bag made being fifty-seven whiting, most of them of large size. The weather on Monday was not conducive to good fishing, and the major portion of the day's catch consisted of very large poutings. Mr. Chapman had a 4½ lb. cod, and Mr. Jefferson a heavy bag of pouting. Rev. R. Culley and Mr. Andrews put in an appearance on this day, but were not very successful. The pier patrons on Tuesday included Messrs. Tavenor, Camps, Russell, Zaehnsdorf, jun., Lever, and Chapman. The day's catch was not at all bad, though the whiting ran rather small. Mr. Tavenor had a 7 lb. cod; and Mr. Chapman two, of 5½ lb. and 4½ lb. respectively. The fishing deck was fairly crowded on Wednesday, the weather being bright and mild; but the fish did not feed well, and poor results were obtained. Mr. Williams had an 8 lb. cod, and Mr. Lancaster one of 6 lb.; but the total day's catch fell much below the average.—J. RICHARDSON (B.S.A.S.).

Deal.—The very stormy weather of late had nearly put a stop to boat angling, and made the water very thick. However, to-day (Wednesday) the weather delightful, and fine light air, westerly, water smooth, and local fishermen bringing in grand takes of cod, codling, and very fine whiting. One local fisherman landed as many as fifty cod and codling and some whiting; another fisherman landed thirty cod and codling and two score and a half of whiting. If weather keeps moderate, in all probability there will be sport.—EDWARD HANGER (Agent, B.S.A.S.).

Dingle.—Angling has not been resumed in the bay, owing to rough seas. The gales have passed away, after continuing for many days.

Plymouth.—We have had some very rough weather during the week, and the fishermen have had a poor time of it, and very little fish has been taken at any time. Some fine grey mullet have, however, been taken from the piers, and some very large blain in the pit near Drake's Island. The bass have not been so plentiful. We generally expect in this month the whiting to be in their prime, and they are very plentiful along the coast. They are not caught so much by the hook and line boats as they are by the trawlers, because the latter can get further out to sea. We usually get, in this month and in next, fair catches of ling. They are in good condition previous to their spawning, which they do early in the spring. The list of edible fish for January are as follows: Atherine (smelt), tub, piper, red gurnard, mackerel, dory, skate, sharp-nosed ray, Homelin ray, sprat, anchovy, eel, ling, cod, whiting,

haddock, pouting, coal fish, and all shell fish.—WILLIAM HEARDER (B.S.A.S.).

Valentia.—No anglers have been out since last report owing to a heavy ground swell.—T. J. D.

Waterville.—No sea angling doing at the Waterville side of the bay, the weather being still wild. In sheltered windings of the shore, however, fair sport is being had at various fish on the Ballinskelligs side.—T. J. D.

Angling Fixtures.

January 8.

Anchor and Hope: Match at Datchet.
Blackfriars: Outing to Bures.
Brothers Well Met: Match on East Coast.
Camden: Match at Bourne End.
Dibdin: Outing to Slough.
Drayton Park: Outing.
Boxton Brothers: Outing at Rye House.
Izaak Walton: Prize outing.
Original Alexandra: Match at St. Margaret's.
St. Alban's: Match on the Arun.
Wellington: Competition at Datchet.
White Hart: Match at Ware.

January 9.

Camden: Visit.
Piscatorial Society: Paper by Dr. Patterson.
Queen's Piscatorials: A.B.S. concert.
Wimbledon Piscatorials: Outing to Weybridge.

January 11.

Holloway: Reading by Mr. Stevens.
Izaak Walton: Open competition.

January 12.

Anglers' Benevolent Society (Windsor Competition): Distribution of prizes.

January 13.

Society of Caxtonian Anglers: Pike competition at Marlow.

Jan. 15.—Amicable Waltouians: Outing to Amberley.

„ 15.—Battersea Friendly: Match at Cookham.

„ 15.—Battersea Piscatorials: Match at Wraysbury.

„ 15.—Clapham Junction: Outing to Amberley.

„ 15.—Clapham Strollers: Match.

„ 15.—North-East Brothers: Outing.

„ 15.—Holloway: Reading by Mr. Stevens.

„ 15.—Prince of Wales: Outing Bourne End.

„ 16.—North-East Brothers: Concert.

„ 16.—Piscatorial Society: Annual meeting.

„ 16.—Prince of Wales: Visit.

„ 17.—North London: Visit.

„ 17.—Stockwell: Supper.

„ 23.—Crown and Buckland: Rivers Preservation concert.

„ 25.—West Green: Supper.

„ 30.—Piscatorial Society: Smoking concert.

Feb. 5.—Islington Brothers: Match at Cookham.

„ 7.—Mildmay: Annual dinner.

„ 9.—St. Ives (Hunts): Annual match.

„ 12.—Seymour Brothers: Match at Goring.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The next finance committee meeting will take place on Monday evening, Jan. 9, at 7.30, and the general committee at 8.30.—R. GHURNEY.

Anglers' Benevolent Society.—The next committee meeting will take place on Friday evening, Jan. 13, at 8.30.—R. GHURNEY.

Anglers' Association, (WESTERN DISTRICT) Visiting List.—The next visit will take place on Jan. 16, at the Prince of Wales A.S., held at the Windsor Castle, Church-street, Edgware-road, when I hope to see a good muster of angling friends.—J. HARRIS.

Anglers' Benevolent Society.—The distribution of prizes won at Windsor on Nov. 27 takes place on Jan. 12, at 8.30 p.m. sharp, at the Queen's Arms, 1A, Chapel-street, one minute's walk from Edgware-road Metropolitan Railway Station. I must also remind all competitors who have prizes to take to show their privilege tickets; also to the unattached who have not sent me their correct names and addresses, number of ticket, and weight of their respective takes of fish, to do so at once, to save delay. Several have complied with my notice in previous issues of the *Fishing Gazette*, and several have not. After this notice it will not be my fault should there be any delay in the prizes which they have to take not being handed over. All outstanding cash for tickets not paid in by Monday will also cause delay if any of same have prizes to take.—BEN ABRAHAM.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On Jan. 1 members met with poor sport. Mr. C. Osborne weighed in roach, dace, and chub; and Mr. A. Carey, roach and dace. Mr. A. Smith had fish, but did not weigh in. Chairman for this month, Mr. Inkesole; salesman, Mr. J. Allwright. Will members come up next week, as there is an important question to bring forward as regards time of going away on Saturday.

"WHAT CANNOT BE CURED MUST BE ENDURED" need not be said to those who suffer from the effects of bad legs, scorbutic and scrofulous sores, as Holloway's Ointment and Pills are splendid specifics for these distressing afflictions. The earnest gratitude of thousands who have experienced the wonderful influence of these remedies, so that they have been raised from a position of prostrate helplessness to one of independence and comfort, is being constantly expressed, both personally and by letter. Their value is known throughout the world for every form of disease. In cases of indigestion, ague, fevers, and disorders of the stomach and bowels, the pills are an infallible remedy. For gout, rheumatism, neuralgia, &c., the Ointment is a blessing to thousands of poor sufferers.

Allason United Brothers' Angling Society, Dnke of Sussex, Uxbridge-street, Notting Hill Gate.—The usual weekly meeting took place on Jan. 4, Mr. E. Jackson in the chair. The report of our auditors was accepted, and our club is in a good position. The new year cards, 1898-99, are ready for issuing, and the secretary hopes every member will introduce a good lot of workers.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portsmouth Place, Lincoln's Inn Fields.—On Jan. 1 several members were out, the following being successful: Messrs. Drew, jack, roach, and dace (7lb. 13oz.); Montgomery, roach; and Utting, roach.—J. CHAMBERS.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—On Jan. 1 Messrs. Shurry, Munn, sen., Lambarth, and Hutchings had roach. The next outing will be to Amberley, on Jan. 15.—BEN ABRAHAMS.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—We fish our match for the January prizes at Datchet on Jan. 8, when I hope to see a good muster. Return from Datchet by the 5.5 p.m. train.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Our next match will take place on Jan. 15, between the lock (cutting included) and Bourne End Railway Bridge; jack harred. Members to go down on the morning by 8.40 train from Paddington (saloon on). Mr. H. V. Wilson was elected a working member. Ten shillings was voted to Rivers Re-stocking Fund.—A. JENKINS.

Battersea Piscatorialists, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Since my last report few of our members have been out, but returned with poor sport. We fish a match at Wraybury on the 15th for a series of prizes; to go by the 8.27 a.m. and return by the 5.10 p.m.; kits to be examined at the Green Man. Will members note that next week will be quarterly night, when the books ought to be cleared.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—The members of the above will fish a competition for their January series of prizes on Jan. 15, at Henley-on-Thames, it being optional for members to leave London on Saturday night. Mr. J. Hobbs was the only member to weigh-in on the 1st, saving the club from a blank with 5lb. of roach.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Several members out on Jan. 1 with very poor results. Mr. G. Howard, roach and dace (largest dace, 12oz.); Mr. Kobell, jack. We have arranged to fish our January prize list at Bures, on Jan. 8; roving; to start by 9 a.m. Liverpool-street. I was rather surprised at not hearing or seeing any gentlemen in answer to my inquiries, through *Fishing Gazette*, concerning the tench taken at Hampton Court. If any brother angler knows that this fish was not caught by rod and line, why not come up and let the Blackfriars member defend himself?—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Jan. 1 Mr. C. Davis weighed-in roach, 3lb. 2oz. On Jan. 4 Mr. F. S. Pavett weighed-in roach. Wednesday next, Jan. 11, will be quarter night, when all members are requested to attend.—T. PATERNOSTER.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—On Jan. 1 Messrs. A. Field, 4lb. 13oz. of roach; H. Edale, roach, largest, 1lb. 7oz. On Jan. 8 we fish a match on the East Coast.—H. V. TAME.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—Our Christmas prize distribution was a grand success, forty-four prizes being weighed out on Dec. 23. Some very good talent was present, and a most enjoyable evening spent. I wish to return thanks to Messrs. Radburn, J. Ince, G. Kimberley, G. Boddy, C. Drawbridge, and many others for their services. On Jan. 1, Messrs. R. Hubbard and C. Hazard with jack, and J. Baines with roach, started the new year well. I beg to remind members that last Tuesday, Jan. 3, was quarterly night, when there was a good attendance of members, and hope to see a full muster next week to discuss a prize outing.—P. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—We have a match at Bourne End on Jan. 8 for jack (one rod only). We have our return visit on the C.D.V. List on Jan. 9, when brother anglers and friends will be welcome.—E. BOXALL.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Our next day's outing will take place on Jan. 15, at Wraybury, for six prizes; boundary from Old Bell Weir Lock to Albert Bridge (tow-path only); all to start by signal; train from Clapham Junction 8.27, return by the 8.55; all members to cease fishing by five o'clock. Any member losing the first train and coming by the second, will be eligible to fish in same on reporting himself to one of the committee.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Our next match takes place on Jan. 15. Will members please attend on Tuesday next to arrange place and conditions for the same.—T. PASMORE.

Clerkenwell and District United Visiting List—The next visit on the above will be to the Camden A.S. at their new quarters, The Locomotive, James-street, Camden Town, on Monday, Jan. 9. They are one of our best visiting clubs, and will be well supported.—F. CARTELL.

Clissold Angling Society, The Cricketers, North-wold-road, Stoke Newington, N.—On Jan. 8 a roving competition takes place, and I should like to see a good show up in the evening. On Tuesday next a special meeting, when all members are requested to attend punctual at 8.30.—T. FAULKNER.

Cobden Angling Society, Kensal-road, W.—On Dec. 26 the following weighed-in: Messrs. J. Barnfather, E. Baxter, T. Twyman, and A. Howland. A. Howland won the Boxing Day prize for the largest roach (weight, 1lb. 7½oz.). On Jan. 1 the following weighed-in: Messrs. E. Baxter, A. Howland, J. Barnfather, T. Twyman. I hope members will attend next Tuesday, as last Tuesday was quarterly night.—T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—The following weighed-in during the week: Messrs. Jarrett, Turner, Ball, and Parnwell, some nice roach and dace from the Thames; also Mr. Boyd, perch and roach. Mr. Green was elected auditor. Mr. Jarratt retains his office as chairman; Mr. Downs elected for the vice-chair. Members are requested to attend at the clubhouse on Wednesday next, so that they may be made clear on the books.—G. FORD.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—On Jan. 1 H. Haines and W. Long showed roach. At our last meeting Mr. Alf France and Mr. F. France were elected working members. A general meeting will take place on Wednesday next, when I hope that all members will attend at nine o'clock sharp.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—Since my last report there has been nothing doing. On Tuesday, Jan. 3, in consequence of so small an attendance there was no business done. Members are requested to attend on the 10th, to elect an auditor and decide where the prizes in hand shall be competed for.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—At our annual general meeting there was a poor attendance. Time for outing on Jan. 8 was settled for nine o'clock train from Paddington for Slough, to fish Slough Canal. Mr. W. Elton was elected chairman; Mr. J. Edwards, secretary; and Messrs. A. Edwards and A. M. Ansell, jun., as the delegates to Anglers' Association. A hearty vote of thanks was accorded to retiring secretary and chairman, H. Brock and J. Edwards. Our host, Mr. Dewdney, after receiving nine months' *Gazette* money due to him, returned the same to the fund of the club. This piece of good fellowship was received amid acclamations. Next Monday we visit the Camden.—JOHNNY EDWARDS.

Drayton Park Piscatorialists, Stanley Arms, Landseer-road, Holloway-road, N.—Outing on the 8th.—GREG.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—On Dec. 18 the following weighed-in: Messrs. Crump, Renshaw, Pheasey, Balam, Hoadley, and Wells. On Dec. 21 we distributed our Christmas prizes. Messrs. Crump, Wells, Pheasey, Renshaw, Hoadley, Horne, Balam, and Biggs were amongst the prize winners. Chairman and vice-chairman's healths were enthusiastically drunk. The rest of the evening was passed with harmony. On Jan. 1 the following weighed-in: Messrs. Crump, Pheasey, Horne; Mr. Crump coming in for the fortnightly, transferred from Christmas Day.

Firm and True Angling Society, Prince Regent, Beresford-street, Walworth.—On Jan. 1, considering the wretched weather, we had good sport, some very fine roach and dace being weighed-in. We take our return visit on the South L.U.V. List on Tuesday, Jan. 10, when I hope to see all old friends. Mr. George George, of the St. Thomas' Angling Society, has kindly consented to take the chair.—T. ROSSER.

Greenwich Angling Society, Morden Arms, Circus-street, Greenwich.—Our annual general meeting will take place on Wednesday, Jan. 12, and all members are particularly requested to attend. Election of officers and alterations of rules will necessitate a full attendance of members.—J. DRYDEN.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—Several of our members went out on Jan. 1, but did not have much sport, only a few roach being the result of the day.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Messrs. Smith had a show of roach and bream; and Jeffries, roach. Will members please attend next Wednesday, as it will be quarterly night? Mr. Wood has been elected a working member.—C. SMITH.

Hatcham Brothers' Angling Society, Queen Victoria, Pomeroy-street, New Cross.—The balance-sheet of the Christmas prizes given by the following gentlemen were taken in the order as under: Sucking pig (gift of Mr. A. Mead), taken by Brother Thurston, from Selham, by a handsome jack; a goose (gift of our worthy chairman, Mr. Furnivall), taken by Brother Winter, also from Selham, with nice show of dace; lastly, 20lb. of beef, full weight and over (the kind gift of Mr. Levein, of the Central Association), taken by Brother Woodhouse, from the club's private water, with three roach, weighing over 2lb. Re Brother Shorey's benefit, the secretary begs to acknowledge receipt of additional contributions from the Ormonde A.S. (through Mr. Holbrow) and the Greenwich A.S., and also Mr. Bird, which formed a seasonable Christmas present. Wishing the editor and all angling friends a Happy New Year and tight lines.—W. TARRY.

Highbury Angling Society, Globe Hotel, Upper Tollington-road, N.—We had an important meeting on Wednesday, when a new rule (proposed by Mr. J. B. Close) was adopted. It was also decided that trout caught dapping with natural fly should not rank with trout caught on the artificial fly. The Rivers Re-stocking and Preservation Fund was again under consideration, and the

meeting saw no reason to depart from their last year's decision: "That though thoroughly agreeing with the object aimed at, have, after taking into consideration the apathy of the majority of London clubs, the greater number of which send nothing, decided not to subscribe to the fund again until the London angling clubs made a general effort towards enporting the same." The hon. treasurer announced that he had received the sum of £2 5s. for the netting Fund of the Anglers' Association. Some capital fish have lately been recorded: Messrs. Shaw, eleven roach, two dace, 9lb.; G. and J. Parsons, dace up to 8½oz.; G. West, two roach (selected), 1lb. 13½oz. and 1lb. 8½oz.; E. Wymer, ten roach, 12lb. 5½oz. (largest 1lb. 12oz. and 1lb. 10oz.), and a chub 3lb. 9½oz.; W. D. Hall, eighteen roach, 18lb. 3oz. (largest 1lb. 15½oz. and 1lb. 8½oz.); Burton, two roach from Ivel, 1lb. 3½oz. and 1lb. 2½oz. Sea fishing has also been practised, Mr. Salmon heading the list with a cod of 16lb.—E. W.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—At our usual weekly meeting on Dec. 4 Messrs. Stevens and Clayton reported having been out during the holidays, the former on the upper reaches of the Thames and the latter in Bedfordshire, but sport was rather poor. Mr. Stevens had several good roach and perch. Mr. Caines will give a reading on Jan. 11 entitled "Pike Fishing Fancies."—A. CLAYTON.

Hoxton Brothers Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On Jan. 1 Messrs. F. Newton weighed-in roach; G. Nicholls, roach; J. Wiltshire, roach; and H. Bailey, jack. Members please note that we fish for special prizes at Rye House on Jan. 8; leave London by 9.8 train.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—During the holidays the following weighed-in: Messrs. Searl and J. H. Herbert, roach. Others were out, but had poor sport. On Jan. 1 Mr. Burwash had roach from the Thames. We fish a roving match at Cookham on Feb. 5 for several prizes.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—We compete for three specials on Jan. 8 on any part of the Lea or Thames (private waters barred). There are also three specials to be fished for on Wednesday next, 11th inst., competitors being allowed to choose their own fishing waters (private waters barred).—H. B.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville.—On Jan. 1 a few members were out: Mr. Johnson, a nice show of roach (5lb. 9oz.); Messrs. Bowley, White, and Cook also showing roach and dace. Mr. W. Watling and Mr. Baker weighed-in a few roach during the holidays. A special meeting is called for Wednesday next, Jan. 11, to arrange special prize outing. I hope to see a good muster on this occasion.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—The rough, wet weather has quite put a stop to angling, as rivers are in flood; and really the winds have been strong enough to blow a fisherman into the water. Our quarterly meeting is Jan. 12, when all subscriptions are due in advance. We had a good meeting last week, Dec. 29, and several prizes were put down for the competition on 19th. We intend to do a lot of fishing in 1899.—RD. WOOLFALL.

Maldon and Heybridge Angling Society, White Lion, Fullbridge, Maldon, Essex.—Although the water has been of a good colour during the past few days, sport has not been really good. Mr. W. Wyatt and Mr. Jackson, pike fishing on Dec. 30, secured three fish scaling over 15lb. (the best fish weighed 8½lb.); Mr. Turner, of the Caledonians, had some good sport with roach in the Langford waters on Dec. 30, several scaling over 1lb. each. He also had some good roach on Dec. 3, seventeen fish scaling 14lb., two fish 1lb. 6oz. each, and four over 1lb. each. Mr. Ben Lees (of the Brunswick A.S.) has kindly given a silver plated cup to the M. and H. A.S. for competition amongst the members. The cup is to be fished for on four consecutive Saturdays, from 2 p.m. to 5 p.m., peg-down match, and for roach and dace only, the member taking the heaviest gross weight during the month wins the cup. There were several anglers here on Jan. 1, and sport was only moderate. The time of high water at Beeleigh for Jan. 8 is at 8.32 a.m., only suitable for those who come Saturday night. We have a good number of day tickets at 1s. each to fish the Langford waters, and anglers cannot do better for specimen roach than fish these waters.—F. KEEN.

Mildmay Angling Society, Clarendon Hotel, Mildmay Park, N.—The half-yearly meeting of this society was held on Tuesday last, Jan. 3, and, although the attendance was somewhat smaller than usual, the enthusiasm of those present fully atoned for the shortcomings of the absent ones. After the ordinary business had been disposed of the election of officers took place. Mr. J. A. Strachan was unanimously elected president. A very hearty vote of thanks was accorded Mr. Harold W. Lane (the retiring president) for the valuable assistance he has given the club during his year of office. The election of delegates, auditors, and the re-election of treasurer and secretary followed. Several prizes were offered during the evening for specimen fish, and it was suggested that the club should offer a challenge cup for competition. This matter was, however, left over for future discussion. Our annual dinner has been fixed for Tuesday, Feb. 7.—A. E. HENDON.

North-East Brothers' Angling Society, Star and Garter, Green-street.—Our distribution of Christmas prizes took place on Dec. 24. The following were winners in rotation: Messrs. E. Lamb, W. Smith, Richards, jun., Daycock, Barrett, C. Lamb, jun., W. Moore, T. Elam, Thorne, Auvache, Carter, Hart, and Richards, sen. Jan. 15 outing; Jan. 16, concert.—A. LEWIS.

North London Angling Society, Tap House, Holloway-road.—On Jan. 1 Mr. Pink was the only member to weigh-in, he having a decent show of roach and bream from the Lea. The next return visit on the Central List takes place at the above on Tuesday, Jan. 17, when I hope to see a good muster. A good evening's entertainment will be provided.—H. STRECH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Jan. 8 we fish for the prizes left on hand in the Lea. Boundary from St. Margaret's Bridge to Hardmead Lock. Fish to be shown at the Railway Hotel at 5.30.—E. BROCKETT.

Phoenix Angling Society, The Tavistock, Stibbington-street, N.W.—On Jan. 1 Mr. Austin a show of roach from the Thames. Mr. Hart's jack prize has been won by Mr. E. C. Sherlock.—R. C.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—Sport during the holidays has only been moderate, Mr. Haynes and Mr. Robins being to the fore. Our quarterly night, on the 2nd, was not quite so well attended as expected, owing no doubt to the inclemency of the weather. We take a return visit on the A.A. list on Jan. 16; we also fish for a series of prizes, given by our host, at Bourne End, on Jan. 15.—W. B.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On Jan. 1 the following weighed-in: Messrs. C. Brett, G. Reeve, W. Shepherd, C. Strayton, J. Gillson, and J. Winsby. At our weekly meeting on the 3rd inst. we were at last able to transact a little business, W. Shepherd being re-elected sub-secretary, E. Maltou presiding for another quarter in the chair, and Keene and Brett being delegates as before.—GEO. KEENE.

Royal George Angling Society, Queen's Arms Hotel, Bateman-street, W.—On Jan. 1 only one member returned with fish, viz., Mr. Bardöt, who, not only showed a nice tray of fish, but had the satisfaction of saving the club from a blank. Last meeting night we were well attended.—J. GIBBONS.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington Cross.—We fish a match on Jan. 8 at Fulbore. Members can leave by first or second train; all to return by 5.55 train. We have no fish to report on Jan. 1, although several were out. Quarterly night Jan. 11.—H. ALLAN.

St. John's Angling Society, The Empress, St. John-street-road, Clerkenwell.—We had a grand show of roach, dace, and perch on Jan. 1, taken by Messrs. Heath, Musgrave, J. Johnson, Hardy, and Podger. Other members were out, but drew blanks. The conditions of the January match can be seen at the clubhouse.—F. THORLING.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—On Jan. 1 the following weighed-in: Messrs. W. North, roach, 2lb. 15oz.; one tench, 2lb. 10oz.; and S. King, roach and dace, 2lb. Our next outing will be to Goring, on Feb. 12. One rod only; bank only.—W. ALDIS.

Stepney Angling Society, Bee Hive, Rhodeswell-road, Stepney.—On Jan. 1 the following weighed-in: Messrs. G. Chamberlain, a nice show of roach and perch; L. Ehern, roach; J. Shum, roach; and A. Shum, roach and dace.—C. TATNALL.

Stockwell Angling Society, Old Queen's Head, Stockwell, S.W.—Since my last report a few of our members have been out, with poor results, owing to the condition of the river. The date of our supper has been fixed for Jan. 17, at 9 p.m. Tickets 2s. each, to be obtained at the clubhouse and of—THOS. LUCAS.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—Since my last report the following members have weighed-in fish: Messrs. F. Bates, a brace of jack; J. Race, roach; T. Sandilands, roach; and J. Grande, a good show of dace and roach.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith, W.—During the past week several members have been out, but only one weighed-in, Mr. Holt, with roach. Mr. C. Bice had a nice show of roach, but did not weigh-in.—C. E. LOCK.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Although Wednesday last was quarterly night, we were poorly attended. Mr. J. Brixey was re-elected chairman, and Mr. Baker assistant secretary. On Jan. 1 Mr. J. Brixey weighed-in perch, largest 1lb. 8oz.—C. WAKE.

Wellington Angling Society, Prince George, Hillingdon-street, S.E.—We fish for three prizes on Jan. 8, at Datchet, from the bridge to the lock, both sides of the cutting. Fish to be shown at the bridge at four o'clock p.m. Messrs. Jenkins, Gordon, Papworth, and Willett weighed-in during the week.—F. WESTOBY.

West Green Angling Society, Black Boy Hotel, West Green-road.—We have a tupper supper at headquarters on Wednesday, Jan. 25, at 8.30 p.m.; tickets 1s. 6d. All members are requested to attend. Mr. Anderson weighed-in two jack (largest 4lb.), three perch (largest 1lb. 6oz.), ten roach and dace (largest 13oz.); Mr. Teare, one jack, 2lb. 11oz.; Mr. Quartly, one jack, 1lb. 11½oz.—A. G. HILL.

White Hart Angling Society, The Volunteer, Obesnut-road, Tottenham, N.—On Dec. 21 we distributed our Christmas prizes, the following being the winners, in rotation: Messrs. H. Walton, T. Dunford, W. Butler, D. Knight, W. Bragg, Siefried, A. Langton, S. Claridge, W. Bastock. The same day I had 3½lb. of roach, and on Dec. 28 I had roach and bream. On Jan. 1 D. Knight, jack; H. Walton, bream. We fish a pegged-down match at Ware on Jan. 8—boundary from the Brickfield Cottages to the Engine House—for Mr. Croxson's prize; all fish.

Wimbledon Piscatorials, 28, Alexandra-road, Wimbledon.—At Tuesday's meeting the following reports were received: Mr. C. Floris, a pike of 8lb. from the Thames; Mr. J. Fumage, chub and roach from the Thames; Mr. H. Golding, perch from club water; and Mr. H. A. Rolt, chub and roach from the Colne. An outing takes place on the 8th inst. to Weybridge. Train, prizes, and conditions as usual. The match on the day after Boxing Day was an absolute blank, no competitor getting a single fish.—HON. SEC.

Tottings by the Way.

A PAPER entitled "Flat Fish" will be read before the members and friends of the Piscatorial Society, at the Holborn Restaurant, on Monday evening, Jan. 9, by Dr. C. S. Patterson. Chair taken punctually at 8.30. I hear that the genial doctor will lecture before the members of the Camera Club on Thursday evening, Jan. 12, on "The Photography of Sea Angling."

A BROTHER Greshamite (Mr. E. J. Chambers) writes: "Chertsey fishing is looking up a bit. Fishing from the bank (Thames) on Saturday last my best pike weighed 6lb. 12oz. On Jan. 1 my best pike weighed 9lb. 12oz. Hackett knows of many good fish here. I accepted his advice where to go on the above occasions."

To the already long list of attractions arranged for the holidays at the Royal Aquarium, the addition will be made of a very talented Spanish singer and dancer. With the exception that the performances will commence at 10.30 instead of 10 a.m., and the world's great show at 2.10 and 7.10 p.m. daily, the Christmas programme will continue in its entirety. Great preparations are being made for the seventh annual yachting exhibition, which will open on the 1st prox.

OUR F. G. ALBUM OF ANGLERS.

No. 31 (New Series).

MR. A. E. HOBBS

Is the hon. secretary of the Henley and District Fisheries Preservation Society, and is doing excellent work on behalf of the Thames in that section of the river. He is a hard worker, being full of energy, and is very courteous to all anglers whom he meets when pursuing his sport. He is an angler of no mean qualities, having taken over seventy-three Thames trout, a Thames pike of 11½lb., and a very large number of specimen barbel. His best day's take was between 80lb. and 90lb. He took over the duties of the hon. secretary of the aforesaid association from Mr. C. H. Cook, and has regularly protected perch spawn in the close season, and has placed large quantities of fish in the Henley reaches. He is the neatest angler on record for method in keeping rods and tackle, of which he has a large supply, and in which he takes great pride. He has just been appointed by his association as a delegate to the Thames Re-stocking Association. The above photograph has been kindly lent to us by the editor of the *Thames Angling News*.

THE January (or New Year's) number of the "Thames Angling News" is to hand, and right worthily does it maintain its prestige. It contains an article from the pen of Mr. Charles Hussey, entitled "Angling in the Salt Water Reaches of the Thames," and he knows what he is talking about, and writing about. The veteran W. H. Brougham (the author of the "Massacre of the Infants"), discourses volubly and knowingly on the "Early Days of Thames Preservation." "Red Palmer" tells in a few words "how we stand" with regard to "Thames Impurity and Salmon." In fact, the T.A.N. is a very interesting little brochure.

THE following is (sculled—I mean dragged—from the same source (I fancy I can hear the editor say "What sauce!"). No matter. "J. O. E. sends me the following pars., which he terms 'New Year's Greetings.' He says: 'I am preparing my net; I mean my bass-net. Although I have been married very nearly three years, I hope shortly to be rewarded for patience, which every true fisherman should have. You may wonder what this has to do with fishing. Well, some time ago a man made an appointment with a friend for a day's fishing, and to start early. The friend was late, so his companion started without him. When he turned up he explained that he could not come sooner as his wife had presented him with a fine baby boy, 8½lb. Laugh! he said; that's nothing, hardly the weight of the bait I am fishing with. There were big jack in those parts.' Then he says, 'Much has been said about angling. How often have I seen fishers—bank fishers, I mean—with boxes, &c., as much as they could carry! Then do I remember the old words:

'Arm'd cap-d-pic with baskets, bags and rods,
The angler early to the river plods;
At night his looks the woful truth announce—
Of luggage half a ton, the fish—an ounce.'

THE new year of *Scribner's Magazine* opens in the January number with several features of great distinction. The place of honour is given to Governor Roosevelt, who will contribute not only his continued story of "The Rough Riders," but other articles on the caval preparations, the strategy and other important subjects growing out of the war with Spain. The frontispiece of the number is a drawing from life, by Charles Dana Gibson, of Col. Roosevelt, and it is a most satisfactory interpretation of the salient qualities in the face of the new Governor of New York. The first chapter of "The Rough Riders" is entitled "Raising the Regiment," and from the very start it reveals those qualities of vigorous description that have become associated with Col. Roosevelt as an author and speaker. It has been said that he knew almost every man in his regiment, and this article is filled with the Colonel's anecdotes of notable men from east and west who composed the most picturesque body of fighting men of modern times. The illustrations, which are to be a feature of this serial, have been chosen by the Colonel himself from many hundreds of photographs. The completed narrative will be the most striking book of the year, written by a man holding one of the most exalted positions in the government of his country.

AN angler who was fishing on the Dover promenade pier recently, had an extraordinary "catch." Having obtained a bite he noticed unusual resistance, and had some difficulty in hauling his line up. When he did so he found, that in addition to having a small whiting on his hook, he had fished up the iron vane of a lighthouse which was lost several years ago when the pier was collided with by a large sailing ship, and the lighthouse knocked overboard. After taking the bait the fish, in its struggles, must have entangled the line round the vane, thus enabling it to be hauled up. Now, did this "angler" really fish in rain?

THE following letter has been received from our old friend "Ichabod" (late of the T.A.P.S.). Writing from Cardiff, he says: "Dear 'Drag,'—I am delighted to read in the *Fishing Gazette* the splendid gift of large trout to the Thames (dear old river) by Mr. Corrie to Mr. R. B. Marston, and more so as they were marked, and let us hope, each carefully weighed and recorded. I have very many times wondered what became of our late friend James Forbes' trout, which I marked and put into the Thames at Chertsey Weir. There were over 100 of them, but only one has since been heard of; that was caught at Bell Weir, it having travelled from below Chertsey Weir to Bell Weir in fifty-eight hours. What price this for Shepperton Weir next April? We have been busy here spawning trout for our hatchery, and have a magnificent lot of ova laid down. It was taken by your humble servant from the best fish in the Llanishen Reservoir, the water having been run off for the purpose of cleansing the bottom.

"I ONLY wish you had been with us to have seen the netting. Speculation ran high as to the weight of the largest trout. I need not remind you of the old adage, 'The heaviest fish is always lost,' for so it proved. This time it had broken lines, traces, cast, rods, &c. The weight was supposed to be anything from 10lb. to 16lb., and this by those who had hooked and lost it. A 'Kitchen' of cast, traces, &c., was supposed to adorn his upper lip. The water getting lower and lower, excitement was at concert pitch when the first net was swept round. Six to four was the ruling price, i.e., he went 10lb., and even money he went over 15lb. Alas, for our numerous brothers who had hooked him! for, after letting the whole of the water off, the largest trout weighed 4½lb.—a long, male fish, 'tis true, and might, if in his best condition, have weighed 6lb. If anyone wants a fight, ask any member the weight of the trout he lost at Lisvane Reservoir, when the fat will be in the fire, for they do not even try to make an excuse. Moral: 'Do not guess the weight of the fish which breaks you up.' Wishing you tight lines and a prosperous New Year."

LIZZY: "Please, sir, will you open the gate for me?" Short-sighted Old Gent.: "Why, my little girl, you can open it for yourself!" Lizzy: "Oh, sir, please do open it." Short-sighted Old Gent.: "Very well. There! Now, tell me why you couldn't open it for yourself?" Lizzy: "Please, sir, 'cause the paint's wet!"

DRAUGHT.

PISCATORIAL SOCIETY.

ANGLING news was somewhat at a discount on Monday evening, the gales and storms of the past week having militated against sport both in sea and river. There was, however, a goodly company present, Mr. R. Clay taking the chair, and one and all were gratified at being able to shake hands with Mr. E. Foreman, the esteemed hon. treasurer of the society, and to express the very great pleasure it gave them to see him amongst them again after his long bout of illness. Mr. Harden, who had been on the best grayling water in England; Mr. C. H. Bywaters, at Newbury; and Mr. F. G. Bridgman, at Yarmouth, had done nothing at all. Mr. J. W. Zaehnsdorf had stopped at Deal for some ten days, but had only fished four hours altogether, which will show what sea fishing generally had been like. The chairman had visited the Waveney, but his creel was nearly empty. Mr. A. R. Matthews, however, had taken roach and perch; and Mr. Horace H. Brown, five jack in fifteen minutes—quick work that—spinning with a Wagtail. Mr. Frank Ward and Mr. W. G. Fletcher, who had been to Newbury, brought up a bag of pike, chub, roach, and dace, which graced the table. Mr. Ward's catch was a pike of 7lb. 14oz. and a 2½lb. chub; and Mr. Fletcher's share of the spoil, a chub of the same size and several good roach and a fine dace. Mr. Ward mentioned that the old Nottingham winch he had exhibited at a previous meeting had been offered to the society by a relative of his, an announcement which was heard with gratification, and the donor was thanked for his kindness in presenting the relic. Mr. Neville Davis had had fair sport at Deal, having taken some very large whiting up to 2½lb. 8oz. Mr. E. J. Walker gave some interesting particulars of his fishing on the Avon, when he made the big bag of fine fish shown at the last gathering of the society. Everyone hoped that this popular gentleman would have carried off the handsome piece of plate, subscribed for privately by some of the members; and, indeed, until the very last moment Mr. Walker's success seemed absolutely assured. But "there's many a slip," &c.; and Dr. Head, who alone had to be reckoned with, won right on the post, and becomes the proud possessor for a year of the coveted trophy. Mr. Walker, although he was naturally disappointed at the manner in which Dame Fortune had frowned upon him, warmly, and like a true sportsman, congratulated his opponent on the energy, perseverance, and skill which had brought about his victory. Mr. E. Foreman was glad to find such a feeling pervading the minds of the members, and although he was against prize giving by the society itself, everyone, himself included, favoured such competitions as that under notice, inducing, as they did, members to go out fishing, and promoting also a healthy spirit of rivalry and emulation between the best anglers. Mr. Foreman, amid laughter, added that if he had been in the doctor's place, he would have allowed Mr. Walker to carry off the prize, for the latter would most assuredly have been the very first to have offered a still bigger piece of plate for someone else to capture! Mr. Walker afterwards mentioned that worm fishing was now no longer allowed on the Hampshire Avon. Next Monday Dr. Chas. S. Patterson will read before the members a paper on "Flat Fish," in lieu of the one previously announced, entitled "Perch and Pike." The chair will be taken at 8.30 p.m.

M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting of this society was held on Wednesday, Jan. 4, at 8 p.m., Mr. F. W. Norman in the chair. Mr. Minchin reported fair sport with whiting from Deal, and further drew attention to the capture off Walmer of a 52lb. cod on a long line, which is nearly a record for the district. Mr. Graham stated that the pier at Southend is temporarily repaired. Resuming the discussion on wire lines, Mr. Tinker brought up as a visitor, Mr. Ormiston, the manufacturer of the phosphor bronze wire lines, who gave some most interesting particulars regarding the forms of wire lines that it is possible to make or have made. Mr. Lane drew attention to an interesting article in *Cassell's Magazine* on the uses of fish skins. Mr. Edwards stated that for lacing engine belts the skin of the conger was a splendid material. Dr. Brunton gave his angling experiences at Deal in a S.E. fresh breeze, taking 108 whiting and nine cod. He complained of the cold, which he found it impossible to keep out in spite of "guernsey, jersey, and eark," besides other garments. An interesting discussion took place on shore marks and the importance of having local knowledge. Mr. Minchin spoke strongly on the unfairness of giving away marks that had been gained from local fishermen, as it is the fisherman's living, and such knowledge is handed down from father to son, and is jealously guarded from other fishermen. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON (Hon. Sec.).

GRESHAM ANGLING SOCIETY.

WE had a very good attendance at the first meeting of the society this year, when Mr. C. Bentley occupied the chair. Mr. Close reported cod, whiting, and pout from Deal; Mr. Chastaney, from Yarmouth, codling; Mr. Connellan, from Deal, two score whiting, ray, and several codling; Mr. Maul, cod, of 7½lb. and 6½lb., and two and a half score of whiting from Deal; Dr. Brunton, large quantity of whiting, and several cod from 9lb. downwards. Several members had been out, but could not get afloat owing to the rough weather. Various matters of interest were discussed. Mr. Gibson reported whiting pout and dabs from Deal. I wish every member of the Gresham a very happy and prosperous New Year. A vote of thanks to the chair and the usual toasts concluded a very busy evening.

ALEX. WRIGHT.

SUTTON'S ANGLING ASSOCIATION.

THE nineteenth general meeting and prize distribution of the above society was held in the reading room at Messrs. Sutton's on Dec. 23. Mr. M. H. F. Sutton presiding. The chief item on the credit side of the balance-sheet, as rendered by the hon. secretary and treasurer, Mr. R. Bowsher, was a handsome subscription of ten guineas from the firm, which, together with that of the president, Mr. Martin Hope Sutton, and a special prize donation by Mr. A. W. Sutton, constituted more than half of the receipts. The debit side was chiefly occupied with disbursements for a most comprehensive series of prizes, amounting in all to £18, in which figured a score of anglers out of the seventy members forming the association. It is hardly necessary to report the fact that a balance-sheet of this pleasing nature was passed without demur, or that the president and vice-presidents, whose liberality ensures such a satisfactory result, were unanimously and with acclamation re-elected. The committee, with the substitution of Mr. W. W. Albury for a retiring member, as also the hon. secretary and treasurer, were again reinstated. Mr. Sutton distributed the prizes, consisting of fishing tackle and furniture of every description; hag and baskets, creels and cruet, watches, time-pieces and teapot, jewellery and cutlery, reel and landing net. Ultimately the assembly dispersed after a most hearty vote of thanks to Mr. Sutton for his able chairmanship, and to the Messrs. Sutton generally for their substantial support of and undiminished interest in the association, tendered through Messrs. Farmer and Kinchin. Mr. Sutton cordially responding and assuring the meeting of the firm's unabated interest in all matters pertaining to sport.

Amongst the prize-winners were Messrs. S. Warrilow, W. R. Smith, G. Critcher, D. Cooper, W. H. Stacey, J. Sadler, W. H. Chalk, E. Tufnail, F. J. Plumer, W. W. Albury, O. Cooper, C. A. M. Morris, H. Belcher, H. Church, H. Swain, senr., W. T. Bartholomew, F. W. Carter, and E. H. Leaver.

THE FAMOUS TERRAPIN.

WITH the chill November blast comes the terrapin, that savory, delicate thing of the mud, noted for its age and its price. Nov. 1 is the appointed time for placing this peculiar aquatic product on the menus of the ultra-fashionable hotels and cafés. The terrapin never ruins its constitution by over-eating or rapid growth. It takes about seven years, in a congenial environment, to attain the standard size of 7in. It has never been known to kick on account of short rations. It is never put out of countenance over the quality of its diet. It is very grateful for a supply of crabs or shrimp, but if these are not forthcoming it is never too proud to root for a living.

To enjoy a terrapin, it is first necessary to catch it, or buy it, which is much more convenient if you are afraid of getting wet feet. Then the cooking is a very delicate, artistic operation. Many who have successfully cooked corned beef and cabbage have been known to fail when they tackled a terrapin. A terrapin has gall, and if that is tampered with you might as well serve up cod with quinine sauce. A sensitive liver is also a characteristic of the beast, and the cook will do well not to monkey with that organ.

There is a well-defined race distinction among the terrapin family. No self-respecting denizen of the Chesapeake Bay tribe will associate at table with what are called the Carolinas or Mississippis. As in many other things, money makes the distinction. The Chesapeake Bay terrapin bring from 45 dols. to 75 dols. a dozen, while the other class bring from 10 dols. to 15 dols. a dozen. There is a colour distinction, also, with the preference in favour of the black. The Chesapeake aristocrat is called the black diamond, and the others, of a lighter colour, are considered by epicures as the "white trash."

Recently a man on the east shore of Maryland had about 2000 dols. worth of terrapin in a pound, which he tended carefully and fed regularly; but one night the entire herd was stolen, and he has no means of identifying his property.—*American F. G.*

FIGHT WITH A DEVILFISH.

CAPT. CONRAD, the local diver, has recently returned from a voyage to Central American waters. During the month of August the fruit ship *Oteri* went ashore on the coast of Ruatan, in the tropical sea. Other divers tried to float the ship and failed. He was engaged, and started for the dangerous coast. There was a choppy, mean sea running all the time, which made work difficult. The vessel had gone ashore head on. The stern was in deep water, and just aft of midships the coral reef showed itself. At that point she was hard aground, with a hole stove in her. The keel was broken in three places, and the ship was really in a bad way. However, he went to work, put the patches over the holes, and began the pumping. The vessel was soon pumped out enough to almost float her. It was evident that the effort would be successful. One evening the ship began to leak again with renewed energy. The leak came from a point about midships and near the keel, just under the bilge. It was a bright summer afternoon, about four o'clock, and he realised that the hole would have to be stopped at once. He called his assistants, and they anchored the diver's boat with the apparatus. Everything was got ready for the work, and it was evident that it would be a task of hours.

As he reached the surface of the water his attention was attracted to the beautiful colouring of the coral and the thousands of fish swimming round among the reefs. Tropical waters usually give a weird and beautiful light to the surroundings, for these waters are so blue and clear. That day the picture seemed exceptionally enchanting,

and the diver gave himself up to its enjoyment and thoughts of things which happen away down in the blue sea, out of sight of the world.

Slowly he approached the ship, thoroughly pre-occupied, and he was getting down under the bilge near the point where the work was necessary, when a long, dark arm shot across his face glass. He had been in tropical waters before, and knew the sign. He realised he had the fearful devilfish to fight—the real octopus, which is feared by all divers, and given a wide territory whenever met. The attack was so sudden, and the sight so vivid, that the diver lost his courage for a moment, and gave the danger signal. He was entirely unarmed, and was pulled to the boat as rapidly as possible.

When once on the small boat he removed the big brass helmet for air. He was as white as a sheet and perfectly exhausted. His attendants crowded round to know the cause of this sudden flight.

When restored to his usual strength, for Capt. Conrad is a man of magnificent physical endurance, he quietly told of the submarine enemy.

He thought over the situation. The ship was leaking badly, and could not be allowed to remain overnight without assistance and careful attention. The work had to be done, and done at once. He called for a heavy harpoon, which was on board the boat, and cut the handle, making the weapon about 3ft. in length. Armed with this, he went down into the sea again.

This time he had but one object in view, a fight. The fight was necessary to continue the work. He was very careful. He did not pay much attention to the varied and exquisite colouring of the coral and fish, and the way the wonder-stricken tribe watched his every movement. He was looking for a foe, and one of the most dangerous the sea divers know. Slowly he approached the ship and the spot where the octopus was hidden under the bilge of the vessel. It was still there, and was also watching him carefully. As he approached the animal moved from under the vessel, gathering itself for the attack.

There were but 4ft. or 5ft. between the coral reef and the vessel at this point, and Capt. Conrad settled himself for the battle. It was not long in coming. The snake-like creature moved forward, and reached out with one of its long arms, only to be met by a vigorous blow from the harpoon. The sea creature was quick and avoided the blow, and touched the diver on the hip, but lost the arm at once, one cut severing it clean.

Then the fight began in earnest. One or two blows were given with but slight effect, but fortunately the harpoon was driven deep into a vital spot. When injured, these creatures discharge a dye which colours the water perfectly black. When hit this time immediately the water became inky, and having his vision cut off, Capt. Conrad rushed for safety. He managed to get beyond reach with but little difficulty, and again gave the danger signal.

For a long time he remained on board the tender boat, and the colouring discharged by the octopus came to the surface. Within a few minutes it had cleared away, and again Capt. Conrad went down to resume the battle. The devilfish was dead, however, but remained close under the hull of the vessel, just at the point where work was necessary. The harpoon was driven deep into the body, but the animal weighed more than the diver could move. A rope was attached to the harpoon, but those on the boat could not pull the fish away.

Capt. Conrad, while speaking of his remarkable adventure, stated that the octopus was about 3ft. broad, and its body was twice that length, while its arms extended some 8ft. or 10ft. When there was no longer danger from the octopus he resumed his work, and lay on the back of the animal when driving home the rivets over the hole in the hull. The work was completed that evening, and next morning the body of the animal was gone. That was the first and last experience he ever had of the kind, and he sincerely hopes there will be no more.—*New Orleans Picayune.*

Notes from the North.

THE New Year season has considerable interest to the angler north of the border. It brings him within touch of another salmon angling season, and points the way to new triumphs. In another fortnight the early spring angler will be again at it on the Tay, Loch Tay, and some other highland streams which open among the first in the north.

The appeal made on behalf of the widow and family of Constable King, deliberately shot the other week by the Nethy Bridge poacher, McCallum, is being met with a hearty response. The Inverness County Commissioners are also moving in the matter, and there is the chance of a fairly large sum being collected all round.

Mrs. Wm. Farnell Watson has retained the Woodend water, rented for so many years by her late husband, and is expected down early in the spring to fish it. She has secured the services of John Mortimer as her gillie, and John has been busy during the close season putting things to rights.

If the present spell of open weather continues fish will be found well up into the middle and upper reaches by Feb. 11, when the season opens all round.

The Ness never freezes. It is a deep running stream, and angling can at all times be attempted on its waters at least. Not so the Dee, Don, Spey, and kindred shallow rivers. A night's hard frost or so closes them up, and

then the angler has to stand by till a thaw comes. It is seldom that the rivers are so closed that no angling can be got, and often in a stiff storm a cast can be got towards afternoon.

As a rule, very large flies are requisitioned at the opening of the season, but, of course, much depends upon the temperature. Three-inch irons are, however, about as big as there is any need for, although last season it was a common order to ask tackle makers for the biggest possible; and Mr. Garden, Aberdeen, had some irons specially made for more than one customer. The pity of it was that there was so little need for them, big or little, and it is to be hoped that the new year just begun will bring more luck with it.

Lord Semple, Craigievar, has just made his annual distribution of game to the guards and drivers on his section of the line, per Mr. Taylor, Lumphanan. This happy custom was inaugurated some years ago by the Marquis of Huntly, and now, from the Duke of Fife downwards, all the Deeside sportsmen remember their rail officials.

We often say a word for the gillie at this time. He feels the pinch more just now than at any other time, and a little gift will go a long way when there is nothing else coming in.

Many gillies are paid off at the end of the season, others are kept on at half-pay, and given some odd job to attend to. There is always plenty of work on a fishery, and the system of keeping the man on the ground all the year round is a good one, and ought to be encouraged. It tends to interest the men in their work, and, although they may not herd salmon like grouse, yet there are lots of ways of improving a fishery in the close season.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The *soirée* in connection with the Birmingham Anglers' Benevolent Society was brought to a successful issue on New Year's eve at the Camden-street Board Schools. A splendid entertainment was provided, and every satisfaction was given to those who honoured the affair with their patronage. The large school-room, which was handsomely decorated for the occasion, presented quite an animated appearance when the dancing was at its height, as near upon 400 ladies and gentlemen were to be seen joining in the giddy waltz. The anglers did not turn up in such numbers as were expected, but the outside public made up for the deficiency. The dancing commenced at eight o'clock and was carried on until twelve. The infants' school was set apart for the concert, when Messrs. McKay, Vale, Lines, and Workman, together with the three Sisters Ryder, contributed to amuse those who were unable to participate in the dancing. The whole of the committee, under the direction of Mr. J. Rahone, acted as stewards, and did their utmost to make the *soirée* a success, which, I am glad to say, it was. This is the first venture of the society in this direction, and I have reasons to believe that another ball will be held between now and next March. In past years it has been the custom to hold a concert at one of the halls in the city. These concerts were a great benefit to the society, but it will no doubt be found that more money will be made out of the ball room than the concert hall. Comments have been made in several of our local papers about the Vine Unity Society giving up their Trent water at Armitage on the grounds that it has been unproductive of sport, a number of the best anglers in the club have paid

numerous visits to the water, but sport on the whole has been of such a character that the weight of fish taken during the last nine months has not been as many pounds. This, together with the fact that no Sunday trains run to Armitage, and that the cost of the water amounted to about £12 per annum, shows that the club have done wisely in abandoning the water. This club is on the look out for fresh water, and are not particular as to price so long that it will provide sport for the members. Some few anglers went out during the holidays, and in one or two instances were rewarded by taking a few decent fish. The most lucky person was Mr. W. Osborn, who succeeded in capturing a nice pike at Stourport, in the Severn. The fish was in good condition, and weighed 17½ lb. It is being set up by a local taxidermist. The heavy rains that we have had of late have made the Trent, Avon, Severn, and other small rivers in the Midlands unfishable. The water in low-lying districts is out on the fields, and it will be some time before they will be fishable. Under the circumstances, the canals and pools will be the only waters fishable. Subscriptions are coming in for the Coles' testimonial fund, which will remain open for some time yet so as to enable the clubs to get the consent of the members to forward donations. This will be far better than leaving it to just a few of the members to subscribe, as donations taken from the funds of societies places all the members on terms of equality. A general meeting of the Birmingham Angling Association will be held at the headquarters on Thursday, Jan. 12, for the purpose of electing the working committee for 1899. An auditor will also be elected from the general body of delegates, and at the first meeting of the new committee they will also appoint one from their body.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

The Fen waters have recovered rapidly from last week's rainfall, and angling has again been resumed. The weather, however, is very capricious. At the time of writing (Wednesday) the air was exceedingly mild and balmy, more characteristic of spring than of winter; but two days before that frost and snow were the prevailing elements. Visitors continue to patronise the district, several of whom have lately disported themselves on the Glen, where, in the Surfleet district, some nice baskets of roach have been captured. Worms and paste have proved the best baits, and some rods have accounted for as much as 12 lb. and 14 lb. Local fishermen have principally wielded the trolling rod. On the Market Deeping lengths of the Welland capital sport has been had amongst the pike; and the Forty-foot reaches, north and south of Donington Bridge, have also yielded well. The best sport on the Witham is mentioned from the Bardney and Tattershall districts, where individual rods have accounted for as many as five brace of fish in a single day.

FROM HULL AND DISTRICT.

The atmospheric conditions during the Christmas holidays in this district were so very unsuitable to the angler that only the most enthusiastic fishermen ventured out to face the elements, and the river Hull and its affluent streams being in such a flooded condition owing to the heavy rains, very few fish were met with by those who did traverse the streams, although I hear of a fair catch of roach on Boxing Day from the tidal waters at Hull Bridge, and a few decent sized pike from the Market Weighton Canal in the Newport district. But although our local anglers have not been able to follow their favourite pastime during the day owing to the inclemency of the weather, yet they have been provided with plenty of entertainment in the evening to sooth their sorrows with, for annual spreads, presentations, and smoking concerts have been of almost nightly occurrence at the various anglers' rendezvous in the city, some of the affairs being of a most enthusiastic kind, one of which was the annual gathering of the Alexandra Angling Association, which took place at the Sportsman's Hotel, in East Hull,

on Boxing Night. Mr. Patrick J. Robinson occupied the chair, being supported in the vice-chair by Mr. W. H. Barker, the president of the Hull Amalgamated Anglers' Association; the large club-room was tastefully decorated with the usual angler's paraphernalia, and not the least attraction of the evening was the exhibit of a nice catch of roach caught by Mr. W. H. Barker that day from the neighbourhood of Hull Bridge, and some fair sized pike from Newport, caught by Messrs. H. Hart and J. Siddons. During the evening Mr. H. Wharram was the recipient of a silver cup (given by Mr. Robinson) and also the society's gold medal for most points during the past season. The society's silver challenge cup was also presented to Mr. F. Scarborough. Special prizes were also awarded to Messrs. J. Ackland, B. Clarke, J. Skelton, and W. Tuxworth. The members of the County Angling Society dined together the other evening at the Ordnance Arms, in Drypool, Mr. J. Helm presiding, when the aggregate and other prizes were awarded; Mr. J. Coates being presented with the club's gold medal for most points in the club matches, the second prize falling to Mr. H. W. Woollock. On Monday evening next the members of the Tigris Angling Society have a spread at their headquarters in High-street. The Derringham A.S. have removed their headquarters from the Polar Bear Hotel to the Botanic Hotel, Spring Bank; and the Waltonian Angling Society have also removed to the Station Hotel, at Stepney. At the annual meeting of the Osborne A.S., Mr. Otto Matthews was re-elected president; Mr. A. Bell, treasurer; and Mr. E. Conrad Naewiger to the secretaryship; and the annual prizes were presented, Mr. Robert Goodin being the winner of the club's gold medal for most points during the past season. Prizes were also presented to the winners at the recent match at Hull Bridge, Mr. J. Bartlett taking the first with 2 lb. 3½ oz.; Mr. J. Haysam, second, with 1 lb. 12½ oz.; and Mr. J. Anderson, third, with little short of 1 lb. A splendid tea service was also presented to the secretary, Mr. Nsewiger. The Izaak Walton A.S. also held their annual meeting at the Elephant and Castle, on the Holderness-road, when the secretary's balance-sheet showed the society to be in a flourishing condition, with a nice balance in hand to commence the season with. Mr. W. Ellison was elected to the presidential chair; to be assisted in the vice by Mr. J. Waldron; Mr. J. Dales, treasurer; and Mr. Charles H. Haldenby, secretary. The George and Dragon A.S. will hold their annual dinner at headquarters on the 16th inst.

FROM THE LAKE DISTRICT.

With the advent of the New Year inquiries naturally crop up amongst anglers as to the nature of the spawning season, the condition and number of fish in the rivers, and prospects for the forthcoming season. This year it will be somewhat difficult to arrive at a fair estimate of the number of fish that have been on the spawning beds. Since the beginning of the close time rivers have been mostly high, and frequently in heavy flood. This condition of things, while affording protection to the fish from poachers and other enemies, is also apt to result in damage to the redds, many of which are utterly ruined during flood time in rapid streams. So far as can be gathered, however, there does not seem much ground for complaint. Many rivers held a good head of large fish, and these were enabled to reach higher lengths of ground than in drier seasons, owing to the heavy rainfall in autumn; and such as have already accomplished their mission found no obstacle in dropping back again to the deeper water.

FROM LANCASHIRE.

The annual report of the Bolton Anglers' Association is printed and circulated, and forms, as usual, a most interesting pamphlet, and clearly demonstrates the efficiency of its executive. It is regrettable that the membership has fallen off a little, but this is accounted for in the severe and prolonged labour troubles in that

LIVE FISH FOR STOCKING.

BOOK AT ONCE FOR EARLY SUPPLY.

The Price List (gratis) contains the Largest Variety of British and Foreign Fish offered by any dealer in the world. It includes Trout (all the leading kinds), Salmon, Grayling, Char, Pike, Eels, Goldfish, Tench, Carp (sundry strains), Orfe, Perch, Roach, Dace, Bream, Chub, Rudd, Gudgeon, Burbot, Minnows, &c., &c. The Best Weekly Paper for the Family Circle is the

WESTMINSTER BUDGET.

32 Pages of Letterpress and Pictures.

PRICE 3d.. by Post 3½d.

THE WESTMINSTER BUDGET is an Illustrated Weekly Newspaper that can be read and enjoyed by the senior and the younger members of the household.

IN THE WESTMINSTER BUDGET the Week's News is epitomised in a concise and readable form, accompanied with Illustrations.

Special Articles on current topics.

Cartoons by the popular caricaturist "F. C. G." in every issue.

Illustrated Reviews of Books are given weekly.

A page is devoted to Dress.

"Dumb Things All" are dealt with.

Short Stories and Chess are always provided.

The Stage, the Church, and the Law are also regular features.

There is a Page for the Children.

THE WESTMINSTER BUDGET is specially suitable for sending to friends abroad or in the provinces.

PRICE 3d., by Post 3½d.

May be obtained of any Newsagent, Bookseller, at the Railway Bookstalls, or from

The WESTMINSTER GAZETTE Office: TUDOR ST., E.C.

town, and doubtless in 1899 the old total will be reached and probably exceeded; as it is they have nearly 900. Space forbids anything like a detailed notice of the general report, and some dozen tables and balance-sheets. Altogether they have close on a score of fishing resorts, upon which there has been no stint in stocking, &c. and favoured by a private hatchery, in which some 100,000 ova (various) are to be treated, great results are to be expected. The lists of fish winning the association prizes are particularly interesting, some of the weights in classes are very close, and point to a keen contest. The Phoenix Angling Society, Oldham, is going strong; up to now the roll-call has reached forty, and still they come. It is proposed to set aside a special prize for the largest specimen caught in home fishing. It is pleasing to note that Liverpool are waking up, and aspiring to a local general association. Tired of being governed by others, they think they can govern themselves. Certainly they can, and should never have tried any other jurisdiction. Manchester, Bolton, and other centres, e.g., Wigan, Staleybridge and district, and several smaller ones have long since seen the wisdom of such a step. Why go to Birmingham or any other place for your privileges? Liverpool has wealth, influence, and brains. Use all, and get what you want. Some interesting news is promised from Liverpool about sea fishing in that district, and when it arrives it shall appear in these notes.

FROM MANCHESTER.

Arrangements are now complete for the lantern lecture on the 11th, at the headquarters of the Buckland Angling Society, Queen Adelaide Hotel, Chancery Lane, Ardwick, by Mr. F. Bibby. Eight o'clock is the time, and a good muster, please. The slides to be used depict scenes in Ireland visited by the lecturer and his friends during various fishing excursions; the very last in 1898 was to Ballintra and district. How many angling hosts can boast of fifty-five years residence in the same house; yet this is what Host Johnson can do, and may he see many more. The *Fishing Gazette* will be represented some time in the evening, and sample the October brew. The Kingfishers hold their annual business meeting on the 10th at headquarters; the agenda includes report, balance-sheet, election of officers, &c., and various other but private items. The Moss Side Socials, at their last meeting, had a rather delicate bit of business on hand, viz., balloting for three candidates to fill a similar number of vacancies, the applicants being much in excess of the vacancies. The following, strange to say all juniors, were declared elected: J. H. Hall, jun., J. Reavy, jun., and H. H. Jenkins, jun. But after this date no one under the age of twenty-one years will be eligible. The annual meeting is to be held on the 9th to discuss of the usual agenda, report, balance-sheet, and election of officers. Mr. W. C. Hawkins is declared winner of special prize for heaviest fish from club waters. A good report is to hand from the Ardwick Angling Society. They have wound up a good year and started well for a good year in 1899. They have elected officers, &c., as follows: President, Mr. Lattimer; vice-presidents, Messrs. S. Wells and J. Ibbotson; chairman, Mr. J. Mitchell; vice-chairman, Mr. R. Burgess; treasurer, Mr. A. Turner; secretary, Mr. J. Newton; delegate, Mr. F. Heaton; committee, Messrs. J. Hall, F. Heaton, J. Brysant, J. Herd, and R. Smallshaw. The Duke of Cambridge A.S. have just concluded a good season and started strong for another, and elected officers as follows: President, Mr. W. Hulley; treasurer, Mr. E. Kenny; secretary and delegate, Mr. H. Berry; committee, Messrs. J. Mellor, J. Hall, and D. Haynes. This society is one of our oldest, and contains some veteran fishermen.

FROM NORFOLK.

Sport during the past week has been unusually bad for this time of year. The weather has been splendid, but it has tempted very few anglers to go out, and those who have been have done next to nothing. One angler got two dozen small pike on a piece of private water in one day, but not one of the fish was large enough to kill. Others have had a few small fish only. The whole of the waters in the district are in good condition, and why sport is not better is a mystery.

FROM NOTTINGHAM.

Angling pursuits have been a comparative blank since the despatch of my last report. Gales have raged, and the Trent has undergone a rapid succession of changes, all more or less adverse to the taking of fish. On Wednesday the river was bank full, and indications pointed to further meteorological disturbances. During the day roach fishermen patronised the Wilford and Clifton lengths, which are handy for the city, and those using the cockspur worm and plain bread paste succeeded in capturing a fair quantity of fish. Roach, needless to remark, are now in grand condition, and fight hard when hooked. Nothing has been attempted at Shardlow, and scarcely a member has been out at Kelham, Staythorpe, and Averham. In the closing days of the pike season at King's Mills some good fish were run and landed, amongst others, by Messrs. Froggatt, Danby, Ashton, and Couby. The recurring floods must have driven plenty of fish into the various backwaters, and as soon as the waters fine down sport ought really to be the best of the season. Those getting first turn will secure the heaviest baskets. News at the clubs is extremely quiet, and quietness will reign pending a decided change in the condition of the river.

FROM SHEFFIELD.

The anglers of Sheffield, in common with others, have been terribly disappointed during the holidays because of the wretched weather which has prevailed, and which has prevented them from having a few days' sport. At Christmas the weather was bad enough in all conscience, but, being a little philosophical, fishermen consoled them-

selves with the thought that it would probably be better for the New Year. The New Year did, indeed, bring about a change, but if anything it was for the worse, and, consequently, the number of fishermen who went out to try their luck was very much smaller than would have been the case had the weather been more propitious. The Trent has been running exceedingly high; in fact, practically at flood height. Before the waters rose pike afforded a good deal of sport in the neighbourhood of Kelham, anglers finding live bait very efficacious. The Boxing Day match of the Notts Anglers' Protective Society at King's Mills was rendered unsuccessful on account of the strong winds. Roach anglers have not fared very well during the last few days in the Trent, and only here and there have a few fish been caught, Dunham Bridge having provided a moderate quantity of fish, which have fallen victims to maggots. The heavy rains have been rather welcome in the Witham, which was too full of vegetation to allow of the best sport. The heavy rushes of water have cleared away a lot of this, and made matters better. Several Sheffielders have done very well in the Glen, at Surfleet, where nice conditioned roach have been caught with maggots and worms. In the Boston district the drains have been kept at a low state in order to cope with the floods, and the result has been that fishermen have occasionally had a few days' sport amongst roach. The Christmas rains spoilt the sport in the Wye and Derwent, and as the weather proved worse during the last weekend very little sport has been obtained owing to the height of the waters, the river being bank full, and not until the end of this week or the beginning of next will there be much fly fishing obtainable. Coarse fish anglers have secured a few fish in the ponds and canals.

FROM WORCESTER AND DISTRICT.

A lot of rain has fallen in this district during the last few days. The water in the rivers was falling fast three days ago, but is now rising rapidly, and is higher than it has been for two or three years, the Severn in parts has overflowed its bank and flooded the meadows, therefore all fishing is off for some time. The Montgomery and Shropshire members of the Severn Fishery Board have for a long time been grumbling that so few salmon reach their portion of the river, and in turn have suggested alterations of the weirs, extension of the close time, &c., to enable the fish to get up the river. This season we had a beautiful water in October, and again in November, which enabled the spawning fish to pass the weirs without any difficulty, and just at the proper time, and now, with the big water we have, a lot of clean run fish have passed over the weirs, some of them very large, and if they don't get salmon in the upper reaches of the Severn this year why they may take it for a verity that they never will again. Lampern fishing this season so far has been a failure; eighteen baskets were taken up out of the river a few mornings ago by one fisherman, and there was but one solitary fish in the whole of the baskets. I am sorry to hear of the taking of a great quantity of trout from private water at Belbroughton, in this county, sufficient, I was told, to fill a pot hamper. Of these, thirteen fine, large fish were brought by a lady to Hampton Lovett, by Droitwich, who did not know there was any harm in taking them. The fish were slaughtered by a party of men, who had the privilege of shooting in the neighbourhood, on the Thursday after Christmas, and who, I presume, call themselves sportsmen. I do not give their names, as I believe they will shortly figure in the police-court; but if they are not more sportsmanlike among the fur and feathers than they are among the finny tribe, it is to be hoped they will not be allowed to set a foot on any land, and in this case, I hope, will have to pay a severe penalty for their misdeeds. The annual meeting of the Worcester and District Angling Association was held at the Bull's Head Inn, High-street, Worcester, on Friday evening last, Mr. L. F. Higgs (vice-president) in the chair. A number of delegates from the thirteen affiliated clubs were present. The secretary (Mr. R. Wingfield) gave his report, touching on the prosperity of the various clubs and their excellent management. Not a single member had been reported for fishing in the close season or the misuse of his railway travelling privileges. The past season, he stated, was the worst fishing season on record in this district. The smoking concerts set afloat by the association had been very successful, and from the various clubs he had collected £14 11s. 2d in aid of the wife and small children of E. Gummery, a brother angler, who died on his fishing basket on Teme side some short time ago. He presented the balance-sheet for the past season, which was considered very satisfactory, Mr. W. Bridges, the auditor, testifying to its accuracy, and it was submitted to the meeting and duly passed. Mr. Martin Perkes, the much respected president, sent in his resignation, which was accepted with regret. Mr. L. F. Higgs, the worthy vice-president, was elected to succeed him; Mr. W. Bridges, vice-president; Mr. T. Prosser, treasurer; and Mr. R. Wingfield, secretary. The matter of the testimonial to Mr. T. Coles, the unpleasantness resulting from the quarterly issue of G.W.R. travelling cards by the Provincial Angling Association, were duly considered, the rules of the association were revised and alterations made in some of them, and the machinery put in motion for the coming season. A lot of business was transacted, and the meeting terminated with the usual votes of thanks.

TO SPORTSMEN.—Burberrys, of 20, Haymarket, London, are now offering, at half price, their 1898 model and stock sporting garments, in gabardine, combination, and rain-proofed tweed; shooting coats, 26s. 3d. and 31s. 6d.; breeches, 15s. and 21s.; Burberry capes and long overcoats, 31s. 6d.; farmers' overcoats, 15s.; Scotch stockings, 2s. 9d. Sent on approval on receipt of cheque covering.

FROM YORK AND DISTRICT.

The close of the week showed neither good results nor bright prospects for anglers on account of the state of the rivers, many of which were flooded, and all more or less discoloured. Nor has the outlook improved to any appreciable extent with the New Year. If the streams ran down to an ordinary level and resume their natural colour, grayling anglers may yet have enjoyable sport before the close of the month, when the season on most Yorkshire waters ends. Grayling anglers had fair sport on the Rye, Nidd, Swale, and Ure just before the rains, but little has been done during the holidays. Visitors who visited favourite haunts along the banks of the Derwent returned with very moderate baskets, mostly of pike and roach. The Ouse and Foss have yielded but indifferent pastime to York coarse fishermen lately, owing to the rapid current and the muddy water. None of the reports to hand on the 31st ult. disclosed doings of any consequence in the district.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

INDIAN SILKWORMS.

DEAR MR. MARSTON,—I wrote to some friends of mine in Bangalore and in Assam, which are two of the great bead centres of the silkworm industry, regarding the class of silkworm for gut. I am afraid that too little is known out here about the manufacture of gut from the worm for anyone, except an expert, to be able to say whether our worms out here would produce a good strand or not. The worms themselves are fine in appearance, and produce good silk, and I see no reason why they should not produce good gut also. Since hearing from them, I wrote to the Assam about it, but have not heard. Another friend, who goes to Cashmere every year, has promised to make inquiries, there, and, from what he says, I fancy that is the most promising spot to turn to.

Silkworm culture is very largely carried out up there, and they have most beautiful groves of mulberry trees all along the river banks. So much so, that the mulberry is almost the deadliest bait that can be used for fishing up there, both for *Schizothorax esocinus* and also for the *Orienus richardsonii*, the two best river fish up there, both called trout, the latter better known perhaps as the Kumaon trout. These fish rise freely to a fly; but as the natives don't often use fly, they are more often than not taken with a mulberry. Two friends of mine lately killed between 700 and 800 in about eighteen fishing days, taken chiefly on a March Brown and a large Claret Spinner. I hope to go there myself some day.

I ran for more than half an hour and eventually lost, about three months back, while out for bahmin, a fish which, when he leapt out of the water, looked to be about 7ft. long, and estimated by Mr. Jardine, the Presidency Rest, who was with me, to be between 70lb. and 80lb. in weight. Probably a tunny or large seer. Hard luck, was it not? I will send you another article soon on the Andaman Islands. Kind regards.—Yours sincerely,

F. O. EADSDEN.

FORMALIN AS A BAIT PRESERVATIVE.

DEAR SIR,—Referring to Mr. F. Napier Sutton's interesting letter in your last issue, I fear that gentleman is sighing for the unattainable when he suggests that it might be possible to discover some means by which the tissues of fish preserved in formalin could be kept soft and pliable, as the preservative action of formalin depends on its chemical power of tanning animal tissues into what is practically leather. If an ordinary photographic plate coated with gelatine be taken, and one half of it be immersed in formalin, diluted with six or seven times its bulk of water, for five minutes, and then the plate be immersed in boiling water, it will be found that while the portion of the gelatine on which the formalin has not acted is instantly dissolved, the portion which has been treated with it is absolutely insoluble, even with prolonged immersion, and is, as I said before, practically leather. Formalin acts in this way, more or less, on all animal tissues, alive or dead; hence the danger in its use, which I and others have more than once pointed out in these columns. I would suggest to your correspondent that he should try sprats pickled in dry salt, or, better still, perhaps, a mixture of salt and powdered boracic acid. They will keep good for some weeks at least preserved in this manner, and while the sprats are more pliable than those pickled in formalin, a rinse in water will remove most of the preservative agent. The fish should be quite dry, and packed in layers with an intervening layer of salt.

It is not quite correct, by the way, to speak of a solution of formalin. Formalin is itself a forty per cent. aqueous solution of formic aldehyde, and has been in use for years for various purposes. Whatever interested parties would have us believe, it is no more a proprietary article than methylated spirit or sulphuric acid.—Yours faithfully,

CHARLES HUSSEY.

CARTER'S TROUT AND SALMON CASTS.

SIR,—I have used Carter's trout casts at 6s. per dozen for over twenty years, and have always found them first rate. On May 17, 1895, I hooked a salmon 12lb. in Glen Lake, co. Donegal, when trout fishing, with one of Carter's finest undrawn casts, at 2.45 p.m., and, having no gaff or net large enough, did not kill him till 5.30 p.m., which was a pretty good test of the gut. I have used Carter's 4s. salmon casts for the last ten years, and never wish to use better ones.—Yours truly,

D. J. W. EDWARDS.

Co. Donegal.

THE IMPROVED NORWEGIAN HOOK.

DEAR SIR,—We beg to forward specimens of our improved "Norwegian" hook, in which the shank and eye are altered so as to remove all risks of pricking one's fingers. This is, as you so kindly suggested, a decided improvement.

The temper and rust proof qualities are the same as in those we submitted to you some time since.—We are, dear Sir, yours faithfully, OGDEN AND SCOTFORD.

19, Leicester-square, W.C., Dec. 28, 1898.

[This is now one of the best eyed hooks we have ever seen. We should advise Messrs. O. and S. to get some Limerick-shape salmon hooks, and also sea hooks made with the same eye, as it is very strong and smooth.—ED.]

"REGULATION OF FRESH-WATER FISHERIES."

DEAR SIR,—In the letter under this heading in your issue of Dec. 24 reference is given to the statute of 1 Eliz. c. 17, which was "an Act for the preservation of spawn and fry of fish." That Act, passed in 1558, was by no means the earliest Act for the regulation of fresh-water fisheries. There were, in fact, at least twelve earlier Acts, the first of which, passed in the thirteenth year of the reign of Edward I. (1285), imposed "a penalty for taking of salmon at certain times of the year." All these Acts, with many subsequent ones, were repealed (those passed prior to the Act of Elizabeth entirely, and the remainder in part) by the Salmon Fisheries Act 1861.

Perhaps this explanation may prevent some of your readers assuming that the Act of Elizabeth was the earliest Act dealing with this subject, although the writer of the letter I refer to did not state that it was.—Yours, &c.,

LEX.

METAL SEA LINES AND PULLEY END RING.

DEAR SIR,—As the matter of twisted or plaited copper and phosphor bronze lines for sea fishing is at present attracting interest, we have pleasure to enclose you a few samples. No. 1 is plaited phosphor bronze, composed of nineteen strands, breaking strain, 40lb. It is very soft and pliable, and has no more liability to kink, if so much, than an ordinary dressed silk line. This line is sold at 1½d. per yard in all lengths up to 100yds. to order. Nos. 2 and 3 are composed of eight strands, each of copper wire twisted, the breaking strain being about 10lb. This is a much less expensive article, the price being 1s. 3d. per score. The plaited we have tried, and we think a good many others have also tried and approved of, so that it will, we feel sure, take its place among sea lines. The twisted is now on its trial, and, although it may not be so good as the other, it will answer the purpose well where very heavy leads are not required.

To Dr. Patterson, Mr. Parker, and other members of the B.S.A.S. belongs the credit of introducing these lines, our share of it being simply to test and introduce them to the market. We enclose you one of the newest forms of our registered "Hope" oscillating pulley and ring. It is very light and effective, and can be supplied either to our rods or separately at usual price.

We would add that it is advisable, after using these lines, to wash them in fresh water, dry, and then rub with fat of some kind. Pulley end rings and joints should also be kept well oiled.—Faithfully yours,

HARDY BROTHERS.

London and North British Works, Alnwick.

[There is, of course, nothing new in the use of plaited or twisted wire of all kinds for fishing lines both for fresh and salt water. Fourteen or fifteen years ago we fished with excellent plaited and twisted wire. The samples Messrs. Hardy send us are very nicely made, and we much prefer them to gimp for pike fishing. If Messrs. Hardy can stain them a dark colour it would be an improvement. We have found some of the many forms in which copper and other wire is done up for holding pictures very useful for fishing purposes. The pulley end ring sent by Messrs. Hardy is one of the strongest and best we have seen.—ED.]

HUCHEN (DANUBE SALMON) FISHING IN BAVARIA.

DEAR SIR,—Mr. Theodor Schwann informs me that he recently, in four days, caught 256lb. weight of these fish (the two largest 35lb. and 29lb.) from the river Iller, near Munich. They are fished for with live bait, as we do here for pike. There are no boats, so the four miles of fishing, over rough ground, requires an agile light weight, which my friend, Theodor Schwann, has the gratification of possessing. He has kindly invited me, but age and weight prevent me. Part of the river is canalised, which means that the tow-path has destroyed the bushes and usual haunts of these fish. They are very much like salmon in appearance. The smaller fish take a rough-made fly, the larger spinning or live bait. Mr. Theodor Schwann sent me a specimen in 1893, which weighed 22lb. It has been used at the expense of the Piscatorial Society, and now adorns the wall of our club-room at the Holborn Restaurant. This specimen is well worth a visit, to view its silvery salmon like appearance.

They are only met with in the Danube and tributaries, which flow into the Black Sea. The Rhine, which is near, on the contrary, discharges into the German Ocean, is noted for *Salmo salar*. I caught one of 16½lb. at Schaffhausen once, and pike-perch from the Elbe. These latter fish also abound in the Danube.—Yours truly,

T. R. SACHS, F.P.S.

THE GOLDEN DUN AND "FLIGHT'S FANCY."

DEAR SIR,—"Observer," in your last impression, refers to Wm. Shipley as being the first to give the name and dressing of this fly. He certainly did include it in his book (or rather Fitz-Gibbon, who afterwards wrote under

the *nom de plume* of "Ephemera," did it for him); but as for having first dressed it, it has been an established fact for sixty odd years hereabouts that "Billy" never invented anything. "Billy's" book, for instance, is about ten pages out of every twelve quotations!

"Ephemera" was new at the work; in fact, it was the first attempt he had made at angling literature, he having been a schoolmaster at Nottingham until he earned his first £50 note by putting together Shipley's book! Shipley was the mentor, and he proved to be a bad one so far as that first work was concerned. The work was published by subscription, but a part of the first and only edition is still to be had, and we can supply this at 2s. 6d. per copy. The original published price was, I believe, 10s. 6d. The author of "The Scientific Angler" (which work, by the way, was originally published at 6s., and is now worth 10s. 6d. per copy of the original edition), the late David Foster, had a squabble with Mr. Shipley about this very fly, and it ended in our sire challenging Mr. S. to a fishing match, "he, the said David Foster, engaging to kill three fish to the said Wm. Shipley's one!" This challenge appeared in the *Derbyshire Advertiser*, but it was not accepted. As a matter of fact, Shipley never did claim the thing as his own creation; he merely had "put it in," with other matters, without any sort of acknowledgment—hence the squabble.

The dressing has been known as ours simply because it was the first Dun our predecessor ever made on his then new plan of dressing a Dun, viz., with hackle put on under the wings, which latter were split by the silk being passed between them, which were thus made split and upright. We never, however, put our name on the fly, but our customers have done so for us, and it has been known as Foster's Golden Dun, as we said in our last letter, for the best part of a century, and it is surely rather late in the day to attempt to reverse this verdict, especially when the writer, who rushes in with this one solitary aim, fails to find courage to put his name to the foot of his letter.

Our object in combating Mr. Flight's claim to the fly was not because we laid claim to it; anyone will see that who will refer to the "Scientific Angler" in the last edition, viz., the seventh, in which the matter is dealt with in a way which has created such a storm in a teapot! We therein laid down no claim to the dressing, but we naturally objected to anyone else doing so after, as we have said, having had the credit of the invention for so long a stretch of time. The thing is everybody's, and, therefore, nobody's. No one person in particular, therefore, has a right to claim it and put his own surname upon it, since it is an old standard general fly and no proprietary article, and there is the whole matter in a nutshell. Apologising for again troubling you,—I am, Sir, yours obediently,

Ashbourne. W. H. FOSTER.

[Mr. Foster in his previous letter said "about sixty years," which is not the same as "the best part of a century." "Flight's Fancy," as already pointed out, is not the same dressing as the Golden Dun.—ED.]

SIZES OF THAMES TROUT.

DEAR SIR,—With reference to the above matter I have read the remarks in your paper in favour of reducing the takable size of Thames trout from 16in. to 12in. with surprise and regret. Personally, I should rather see the standard slightly increased, as it always seems a pity to take a fish so small even as 16in., when in a year or two it would be so much a grander capture and give so much more sport; also, I may say, that baby trout, fished for at a certain place at the proper time with minnows, gentles, or worms, are no trouble to catch, and what sport is there in it?

We have gone to an immense amount of trouble and expense putting in trout 8in. to 12in. long up and down the river, and if they are to be caught directly they are in—well, at the least, it's a waste of money. On the other hand, putting in smaller trout does not give good results, as they cannot look after themselves against their many enemies. I do sincerely trust that we may look for and expect every assistance to protect the trout in the Thames, and to further the good work of preservation that we have always strived to do.—I am, dear Sir, yours truly,

J. B. G. HOLLOWAY
(Member and Auditor Henley-on-Thames
Fisheries Preservation Association).

SIR,—Allow me to thank you for your footnote to my letter, published last week. As undeniably the correct thing to do before carrying the suggestion to the proper authorities for consideration is to thoroughly study the pros and cons of the matter, may I ask you to give publicity to the following notes on your footnote? No distinction being made on p. 505 between the Upper and Lower Thames, it was only reasonable to conclude that the Thames as a whole was referred to.

Perhaps my experience is unique, but it is a fact that appeals made for funds solely for purchase of, and preservation of, coarse fish have met with no greater response than general appeals, including trout as well as coarse fish. Prior to 1893, when the fishery bye-laws were altered, 12in. or 11lb. trout were retainable, and there was no real protest against the adoption of the 16in. standard.

If large trout—and by this I mean 8in. to 12in. stock fish—are no more secure from the depredations of pike than small trout, then I must admit that money has been misspent, and the theory that a large trout is better able to take care of itself than a small one is incorrect; but, whereas perch, chub, and barm, as well as pike, are capable of devouring, and do devour, small trout, the three former fish are distinctly "out of it" if larger stock fish are used. The matter of "time" to catch trout over 16in. in length is given considerable stress; but those who are anxious to catch even 12in. trout legiti-

mately will find that "time" is by no means the sure and only road to success.—Yours obediently,
A. EDWARD HOBBS (Hon. Sec. H.F.P.A.).

ANGLERS' ASSOCIATION NETTING AND RE-STOCKING FUND.

DEAR SIR,—I beg to acknowledge receipt since last report of the undermentioned sums with thanks:

	£	s.	d.

	2	10	0

Yours faithfully, ALEX. WRIGHT (Hon. Treasurer).

THE HARDEN DRY-FLY ROD.

DEAR SIR,—Replying to Mr. Chamberlain's letter in your issue of last week, we may explain that the registering apparatus lately designed by us is not intended to establish data for correct balances, but simply to register the peculiarities of any particular rod which gives satisfactory results, in order that it may be reproduced exactly. Therefore it is unnecessary for him to await any further development in this direction.

If by some process of calculation lines could be laid down on which to build a perfect dry-fly rod, then there would be no further need for manufacturers to make so many different balances. At present we make no less than four typical rods for this work which are absolutely different in action, and yet all are approved by different people, the greatest difference being twenty vibrations per minute.

No doubt any really good performer could make decent work with any of these, just as a really clever shot can shoot decently with any gun, whatever its length and bend of stock may be. On the other hand, there are men who can neither shoot nor fish well, and never will.

The "Harden" rod might not suit Mr. Chamberlain even if made in greenheart, in a quality to suit his requirements.

He seems to us to be in the position of a man desiring knowledge and yet refusing to accept it. We have offered to examine his rods and report on them for him free of any charge, and we much regret he does not accept it. Why, it is difficult for us to see if he is really desirous of the information he pretends to seek.—Yours faithfully,
HARDY BROTHERS.

London and North British Works, Alnwick.

PIKE FISHING IN THE WINTER MONTHS.

DEAR SIR,—A great deal has been written, and rightly and most usefully, concerning the chances of sport or otherwise being dependent on that most fickle of creatures our English weather when fishing for salmon, trout, and other fish not described as "coarse" fish. But I think that more results as to success or not, when angling for pike, especially in the winter months, according to the weather, would be of general interest to anglers. Certainly the writer would be very grateful if any of your readers would give him their opinions as to how the weather in our winter affects pike fishing.

There are, I believe, some well known general rules, such as a rough day is good for spinning, a calm, still, frosty day for using a paternoster, &c.; but more detailed particulars would be, I think, of great use. For instance, should the weather be considered as an important factor or not? Does extreme cold affect some waters more than others? And are the chances equally applicable to, say, a river like the Thames or Itchen (which holds large pike) as to a piece of non-running water such as a large reservoir or canal?

I was out fishing in Berkshire on the day of the last great gale! It certainly was not a day one would have chosen to fish on, and we were literally driven from the water by the tremendous force of the wind and the drenching rain. Besides which, branches of trees were coming down in a manner which might have been highly exciting, but did not add to the enjoyment (?) of our fishing. In spite of this, the fish were on the feed, and we caught one nice one of 5lb., and lost two double the size, it being impossible almost to keep a proper tight line when striking, in the short time (about two hours) we were out. I have since fished the same water most carefully, in fairly quiet weather, and have never, as yet, succeeded in again running the fish we previously lost. If any experienced pike anglers would kindly give their opinions on this subject, and you will kindly allow their insertion in the *Fishing Gazette*, I shall be very grateful.—Yours truly,
W. H. C.
Newbury, Berks.

THE Society of Caxtonian Anglers will hold a pike competition on Friday, Jan. 13, at Marlow. Competitors are to assemble at the Fisherman's Retreat, near the church, Marlow, at ten o'clock, returning not later than six o'clock. The usual rule as to examination of punts will be observed, and no member will be allowed to compete unless his subscription for the current year be paid. It has been arranged that competitors draw lots for punts and fishermen, so the hon. sec., Mr. W. H. Cate, will be obliged to hear as early as possible of the intention of those wishing to compete, so that the required number of fishermen may be in attendance. Several members have arranged to go down to Marlow on the previous Thursday evening. Those who would care to join them, and will let the secretary know in good time, will have beds ordered for them.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
" Six Months ditto	5s. 4d.
" Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	£7 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0

OPENING OF THE SCOTCH SALMON ANGLING SEASON.

SALMON angling opened in the North of Scotland during the present week. The Sutherlandshire streams, some five in number, including the Thurso, Borgeie, Naver, and two others of smaller note, threw off their legal fetters once more; and the song of the reel commenced again on Wednesday and Thursday last, when, in fine open weather and good round waters, the first blood was drawn. What success has met the first essays of these far north anglers has not, as we pen this, yet reached our ears; but, judging from past experiences, and comparing the odds *pro* and *con*, the chances are that really good sport will be got should sufficient rods be forward to fully cover the various waters on the opening days. The Tay and its majestic arteries follow on Monday, and all these may be classed together as forming the first group of early salmon rivers available to the salmon angler. The Tay district is down for the 15th inst.; but as that date falls on a Sunday, it will be dawn on the 16th before angling is legally available in the Perthshire valleys. The prospects all point to a good opening at least, whatever like the rest of the season may be. The rivers have been running high for

months, and have got a good scour out, so that the waters will be clear of *débris* and the bottoms of the pools and lies sweetened by the successive floods. A slight snowstorm, succeeded by frost, has been experienced in the uplands; and this is all the more favourable as it will bring the pools down to their normal level, and permit of more waters being fished. The only danger of protracted frost is the formation of flotsam overnight, which makes it always an hour or so later before a cast can be had with safety to the top-piece. Flotsam, or "grue," as the Highland gillie calls it, accounts for many a broken top.

From all accounts from rivers along the east and north coasts of Scotland, fresh fish have been running inland since the middle of December; and the appearances on the coast, from observations by experienced salmon fishermen accustomed to read the signs of the times, confirm the impression that fresh spring fish are forward in bulk, and will be found well into the streams where angling has commenced, and well into the upper reaches where the opening days are correspondingly later on.

On the whole, therefore, everything now depends on the continued favourable auspices of the weather, and should no great storm check the progress of events, not only may a good opening be anticipated on the streams where angling has just commenced, or is about to commence, but also on the Dee, Spey, Ness, and bulk of Scotch waters which open on the 11th proximo, or later on.

The fish got on the Tay, Loch Tay, and main tributaries, bar the Earn, are usually of heavy calibre. They not unfrequently scale over 25lb., and from 18lb. to 20lb. are common enough weights on this magnificent salmon river basin and loch. Those on the Earn and kindred streams, however, are lighter fish, and resemble the seven, eight, and ten or twelve-pounders got on the Dee, Spey, and Beaully. The Ness and Thurso group of streams yield mostly heavy fish, resembling the Tay fish rather than the lighter beauties of the Dee and Spey. The fact is that these heavier fish are really winter fish yet travelling to the spawning grounds, which, of course, is the ultimate aim of all migrating fish, while the lighter weights are the true spring beauties, and generally considered last year's grilse.

The difference between an early and a late river is determined by the early or late appearance of spring fish in its waters. The Dee and Spey are early rivers compared with the Ythan, although the latter stream literally lies between the former two. The temperature of the water no doubt determines the time of ascent of the fish. Where the waters are warmed in a long, shallow basin there is an earlier run of salmon than where the stream runs deep and sluggish over a cold bottom, even though their sources may all spring from the same mountain range. And in like manner there is an earlier clearance of spent fish in the river with the higher temperature compared with those having a lower register.

The kelt must always be reckoned with more or less during the early spring months, and on the lower and middle parts of the river more so than on the upper parts.

In a season like the present the kelt pest is likely to be reduced to its minimum. The spawning season was a very early one with the far inland fish, and these have been falling back to the sea ever since the close season commenced. True the spawning operations on the lower and middle waters were considerably interrupted by floods during November, and these may result in a superabundance of baggots or partially spent fish which have been separated from their mates, or otherwise hindered in the work of parturition.

Thus, although many more baggots may naturally be met with than in a normal year, the chances are that "kelt sport" will be practically conspicuous by its absence. Instead of one clean fish to half a dozen or so kelts, it is more than probable that the reverse will happily be the order of the day.

Sea trout reaches are also sharing in the same favourable auspices which presently deign to countenance the early salmon reaches. What favours the one favours the other; and although the spring run of sea trout is but a small and short lived one at the best, even on such streams

as the Ythan and Ugie, the Findhorn and the Beaully; the run is all the more prolific and certain in clear waters with a normal temperature than in streams of snow broth.

The early spring angler has many difficulties to face and many hardships to endure; but with a conscious assurance that the conditions hitherto have been all in his favour, and that a certain amount of sport awaits his efforts, as far as the result of human observation and knowledge can go, he may hopefully look forward to an enjoyable time of it should the present weather conditions hold good.

The case would be otherwise had the winter set in with the early severity it threatened in the early days of November. No doubt it would have been better for the season later on. But "sufficient for the day is the evil thereof," and the early spring angler has only to think of himself, his sport, and his personal comfort. There has practically been no protracted winter weather in the north of Scotland as yet. The temperature has been above the normal, and on one occasion at Heathcot Hydropathic Fishery, Deeside, the record maximum December reading of observations carried on during the past thirty-five years was broken when the thermometer stood at 105 in the sun, the former record being 102.

The indications are all in favour of a genial spring, and although some curling stones and brooms have been out in the higher glens about Braemar and such altitudes, the ice as yet has been thin and the game short lived.

Whatever they may be later on, the prospects for the present of the opening of the Scotch salmon and sea trout angling season are of the most auspicious, with scarcely a cloud to darken the horizon.

G. M.

SOFT CRABS.

In the *Fishing Gazette*, Nov. 12, 1898, "Nemo" tells of using soft crabs for bait, and I am tempted to say a few words on this subject, telling what we use on this side of the pool. We have several species of crabs, but not your big one, although on our Pacific coast we have the *Cancer magister*, measuring 2ft. across. Our favourite eastern crab is the blue crab, which grows to be about 7in. across, and is one of the swimming crabs. In the hard state, when boiled, it is superior to the big European, or to the Californian, crab. It prefers muddy, weedy bays, and would be an addition to the European fauna.

While this crab comes to our markets in great numbers, and retails for a shilling for one or two dozen, it is as a soft crab that it is expensive. Then they retail for 2s. or 4s. per dozen, according to size and supply. Fried soft crabs are to be had in every hotel, restaurant, and even on the market-stands cold. They must be freshly shed, so that the skin can be eaten. The stomach, or sand-bag, and the gills are the only parts rejected. I write these particulars because I have heard that fried soft crabs are a luxury unknown in England. The blue crab in the soft state is in season from June to October. When the waters get cold we have a small "rock crab"—a crawler, with stumpy claws, which is soft in winter, but is not plentiful.

Our salt-water anglers seldom use soft crabs for bait; they prefer them a day or two before their shells are cast, and then they are "shedder crabs," and are selected by tapping the shell with the finger and noting the sound. "Nemo" tells of a man who threw away a lot without waiting to "see if they would peel." We think "shedders" the best, and so does "Nemo," who tells how to use them.

I have no knowledge of European crabs further than a boiled one, about a foot wide, which I ate in a London restaurant, but found it tough. The experiment was a success; all experiments are, no matter how they turn out—my curiosity was satisfied. Your correspondent says: "The green crab is a nuisance when in good health and spirits, but a useful scavenger." He does not say in what manner he is a nuisance; perhaps he steals bait, but that is part of his duty. No doubt the green crab is edible if large enough to bother with. All the crabs on my visiting list are, and I would boil and try it if opportunity offered.

If "Nemo" or any other of your readers wish to know how to prepare a soft crab for the frying pan I will tell them, and if soft crabs are an un-

known luxury in England, as I have been told, then I will be proud of introducing them into that land famous for good living, but which has no terrapin, canvas-back duck, nor frogs of real edible size. When the crab—our crab—sheds, and is fried, there is a delicate sub-acid flavour and a tenderness unknown at any other time.

FRED MATHER.

FISHERMAN OF THE DOVE (YORKS.).

JOSEPH DUCK, farmer, was born in Farndale, a valley situated a few miles north of Kirbymoor-side, through which the river Dove flows for many miles. He used to speak of Farndale in his younger days, when it consisted of a few farm-houses and large strays of open moor. "Joe," as he was called, early took to fishing, making his own rod and flies, and became quite an expert in the noble art. Fly fishing was his favourite pursuit, and proud was he when called upon to furnish trout for the numerous sportsmen when occupying the shooting-boxes in this and the neighbouring valleys. On one occasion the writer met him in old age, watching a party of fishermen who had driven over twenty miles for a day's recreation in this now well wooded and cultivated valley. On this occasion a few hours sufficed for procuring two well-filled panniers of trout. His son William succeeded his father, and I can speak, from comparing baskets (when meeting him accidentally on the Dove), of his similar success in the gentle art. His grandson, Joe, now over thirty years of age, is a noted minnow fisher, who also looks like keeping up the record as to age. The present rules and small restrictions have tended to reduce the number of these Dale fishermen, who still keep in memory their 1lb. 9oz., 2lb., and 3lb. trout captured. On one occasion Duck, assisted by his son William, were both employed in landing a fish of over 4lb., which, on being prepared for cooking, contained another fully 6in. in length. Such was the love of sport that when over ninety years old, Joe was found in a recumbent position, still tempting these cute customers, by dishing with short line (not being able to throw a long one); a child, however, stood a distance apart, watching lest he fell into the river. The present Mayor of Scarborough and many other young sportsmen were initiated by him into the principles of the gentle art. Old Joe was fond of shooting, being the only one in the dale to possess a game licence (costing then £4 a year). He also became huntsman, and in one season nineteen and a half brace of foxes were killed, but he regretted being unable to make it twenty. It was recorded in a local newspaper that at one time hares were so numerous that his hounds had to be employed to thin their number, during a fine day's hunting no less than 100 being killed. Eventually a broken thigh, caused from a fall, led to the death of "Old Joe," who otherwise might have lived a few more years. His landlord, the Earl of Feversham, took a great interest in "Joe," and kindly sent a wreath to be laid on the coffin at his funeral in Farndale, where he died on Dec. 15, 1890, aged 102 years.

Tickets are now issued by the Earl of Feversham for these streams at a nominal charge of one shilling a week. J. C. FRANK.

A FISHING TOUR IN SWEDEN.

FOR many years my chief desire had been to pay a visit to some of our northern rivers for fishing, and last year a couple of friends of mine and I made up our mind to go for a trip up along the Luleå waters. Everything was all right, the journey planned, maps procured, the waters and falls well studied, fishing tackle prepared, plates for our cameras packed, &c., but in the last moment my two fellow travellers broke their promise, having got "lawful excuse," as they called it. And there I was alone with my longing for these new unknown waters and grand scenery. All seemed to come to nothing, as going alone, no doubt, offered but poor pleasure compared with going with some jolly fellows of the same mind. For a fortnight I was in a miserable state of mind, cursing such terms as "lawful excuse," and was prepared to stop at home like a good boy, when all of a sudden I received a letter from my old

friend Professor L., in Stockholm, a keen sportsman and an excellent fisherman, asking me to join him on a similar trip as I was about to do. I did not keep him waiting long for my answer, and after some few messages by telephone, everything was settled. Some few days after we find ourselves on board one of the steamers plying between Stockholm and Luleå, and after three days' pleasant voyage we land in the harbour of Luleå. We came just in the nick of the time to catch the train for Murjeck Railway Station,

as the horse station is situated a couple of miles from the railway station.

At Storbacken, Koskats, and Jockmock you can get pretty good food, but for the other part of the journey you must arrange for your own provisions, as the only food you can get from the people living further up along the Luleå water is bread and butter and milk. Another way from Luleå to Storbacken is to go by steamer up the river. It is a splendid passage, with lots of beautiful views, but it takes more time than

A REST ON THE BANK.

AT THE KAJTUN FALLS.

where we had to leave the rail and drive by road about thirty-six miles to Jockmock, crossing the Luleå river by ferry at Storbacken, a pretty good little inn, where we exchanged horses, and then passing Koskats, another little inn, where we also got fresh horses. Before leaving Luleå, wire or send a post-card to "Skjutsanstalten i Murjeck" to meet you at the railway station with carriage and horses. This will save you some time,

the other one by rail and road. If you can read a bit of Swedish, buy a copy of "Svenska Turistföreningen's resehandbok II.," where you will find this latter way fully described, and which little book will give you some good information for the whole journey.

Well, after a rather rattling and shaking drive in one of these most uncomfortable carriages in which you have to drive in this part of the

country, we arrived at last at Jockmock, a little village, where we made acquaintance with the doctor of the place and his wife. They invited us to a little picnic to the grand waterfall, Kajtum, close to the village. The water looked rather fishy, but we were told it was not much use to try fishing, as the timber sailing down in masses had spoilt the fishing. Meanwhile Kajtum and the fall above Akatsch were grand sights. Here I exposed a plate of our company taking *caffé* and *punah* along the river, but could

the bank to next lake, and there take another boat, and so on. "On a bright summer morning we pursued our way, as happy as a robin when he trills his lay," and had our first rowing on the lake Varkijaure. Now and then a ripple from a rising fish was to be seen on the calm surface. In the distance we heard the murmur of a waterfall, where we arrived after an hour's rowing. The streams and eddies looked rather inviting, but it was at noon, and we had an almost roasting sun, so we did not make any fishing attempts. We

PARKIJAU FALLS (LOWER PART.)

ON THE SAGGAT.

not get in the chief fall owing to the sunlight not being in a favourable direction.

Next day we left Jockmock and our agreeable acquaintances and set out for about sixty-five miles' rowing up the waters for Kvikjock. From Jockmock the Luleå water does not form a river, but rather a series of smaller and larger lakes, with falls between them. The falls are not passable with boat, and you have to walk along

went ashore, and walked up to the next lake, had another boat, and arrived in the evening at the grand fall at the Parkijaur. Here we had made up our mind to try fishing in earnest. The waters were said to contain lots of beautiful trout—big lake trout—grayling, and coregonus. The very first evening we rigged up our rods and went on. It was agreed the Professor should try trolling from a boat in the lake just above the

falls, a place where, as a rule, you will meet with the biggest fish, at least, this time of the year. We were now in the end of July. I myself had to try my luck from the bank, in the rapids and eddies. My first cast was a couple of medium sized lake flies, and after some throws I got a bite. It was a grayling, and then another grayling, and so on. I exchanged my fly for a light spoon—outside silver, inside gold—and got a pretty good trout and some more grayling. But that big trout, always in my visions, I did not hook. Sometimes I had a look at the Professor on the lake, and he seemed to be very busy. When he came ashore he had a nice basket—a couple of lake trout (respectively 6lb. and 7lb.), a dozen large grayling (averaging 1½lb.), and one coregonus. All these fish he got on a 2in. Devon Spinner. This was the first time I saw a coregonus taken on a Devon. I never heard they would take any bait in the shape of a fish. With small flies, however, they offer sometimes very good sport. Particularly in Finland fly fishing for coregonus is often practised. The middle of June is the best time, and you throw your flies in that yellowish white foam just below a perpendicular fall. There they congregate, and readily take the fly.

The following days, or, rather, nights, we landed lots of fish, mostly grayling, but also many a fine trout, as a rule from 5lb. to 8lb. in weight. We got only one grand fish, that took down my 15lb. steelyard to the bottom. Probably it weighed 16lb. or 17lb. The people living here told us that much bigger trout were taken by trolling (from 20lb. to 25lb.) about the end of August. This is also my experience *vis-à-vis* the big lake trout. You seldom find them near, or in, the rivers before that time. I suppose that about the end of August they commence feeling the approach of the spawning season, and gradually go up or down in the rivers. Then you will have a chance of finding them in shallow waters, among the rocks and in the eddies, where they will take the fly, or any suitable bait, some weeks before they commence spawning. It was a pity we could not stay till the end of August, to see whether it proved true. Now we could do nothing but trolling up in the lake if we expected to catch a big trout. If you are satisfied, however, with fish up to 2lb., you have the best opportunity you can wish both in the streams and on the flats between the streams, using your single-handed 11ft. trout rod and ordinary trout flies. The fish seemed to prefer dark flies: March Brown (male fly), Dark Coachman, August Brown, and similar. A little fly, with dark claret worsted body, gold ribbed, Coch-y-bondhu hackle, and brown mallard wing did well. As for hackle flies I used Orange and Partridge (very good), Coch-y-bondhu or Marlow Buzz, and Zulu dressed in Palmer style and silver twisted. The Zulu was the best fly for grayling. Almost all my grayling when fly fishing were got on the Zulu, although I had some other standard grayling flies on the same cast, such as Red Tag and Fern Fly. It was marvellous how fond they were of that little black fly. Sometimes I had three Zulus on, and very often hooked two or three grayling at one time. In our southern rivers the Red Tag is the fly "par preference" for grayling. The flies were not dressed on small hooks. A No. 4 eyed sneck Pennell hook seemed to be a good medium size. You have to wade out among the stones, and, with your little single-handed rod, throw your flies up or across the current. On the edge of the main current you will find the best fish.

(To be continued.)

THE AMENITIES OF ANGLING, AND FISHING AS A FINE ART.

I WILL begin my subject with this truism, that "Courteousness should always be observed amongst anglers." It is seldom that I have met with anything but civility, and in many instances with kindnesses, from true lovers of the sport. My first acquaintance with the late Francis Francis and George Selwyn Marriott was (on different occasions) made at a river's side. They, as I had not the fly trout were taking, generously spared me a few of theirs, of which, by the bye, they had not many left. A true fisherman never hurries along a river in advance of a companion, "skimming"

the water, thus disturbing and "putting down" the fish, but he angles fairly, carefully, and quietly, taking the river by sections in turn and turn with his friends, and when moving to another place keeps some distance away from the river bank, so as to give others every chance of having sport. When the fishing has ended, a true angler shows no greed for the best and largest fish, but is content with a fair division, or with those he captured himself. In one instance, on a recent occasion, my experience was otherwise. The fish captured were perch, of which some of the largest, including two 3½lb. and 3½lb. each, were caught by myself. My companion offered to separate and pack the fish while I was assorting and packing the tackle. My fine specimens he exchanged for much smaller ones, and conveyed them to his home. I never recovered them, for he had them "set up" in a glass case as his own captures. A true angler will observe, as a very strict rule, that when he is introduced to private water he is not to solicit that fishing for himself, on the sly, and without his friend's knowledge. Such conduct is unsportsmanlike and reprehensible. I regret to say that thus I have thrice been treated by people I introduced to private fisheries; but they were not anglers in the true meaning of the word. The whisky flask, tobacco pouch, and sandwich case should be always at the service of a brother fisherman, who may have forgotten to bring either with him; and the veteran, who possibly is a past master in the art of angling, should be ever willing to give instruction to beginners, and impart information to any others who may be making their first visit to strange water, and thus help them to obtain sport.

Looking at the text of my subject, it seems to me that the deduction to be arrived at by the words fishing "as an art" is that it means practical skill guided by rules and methods in accomplishing certain things, and, as a matter of fact, the angler reducing his observations and experiences to everyday practice. Having thus, and perhaps imperfectly, sketched that which, to my idea, forms the basis of an art, I will try to show how that word may be applied to the recreation beloved by most of my readers by dealing with a few branches of the angling art from a practical standpoint, but adding thereto certain thoughts and some experiences of my own.

I need hardly dwell on the antiquity of angling. Those of my readers who have found solace in the "sweet friendship of books" know that the Egyptians were catchers of fish, and to a certain extent were skilful in the use of the angle; also that Homer, Pliny, and Oppian each added his quota to the history of the craft, bearing witness that they knew of certain "fools," who were content to sit at one end of a pole, and dangle a thread and hook with a worm at the other.

Shakespeare tells us how that Cleopatra, addressing her royal lover, Antony, said, "Give me mine angle—we'll to the river: there, my music playing far off, I will betray tawny-finned fishes"; and, "as I draw them up, I'll think them everyone an Antony, and say, 'Ah, ah, you're caught.'" The "dusky jade" howled Antony as clean as a whistle, and fairly captured him. This was her mode of fishing, and from her point of view I venture to think that her performance was part of the art of angling. I can conceive nothing more delicately artistic than the outfit of a really skilful fly fisher. His rod, with its perfect balance, its power, its spring, and capacity of "give and take," delicate as the wrist of a high-born woman, which at will can become rigid as a thin bar of steel, giving way and breaking by brute force alone. Look at the perfect make of his plaited silk running line, and his reel with just so much tension on the "check" as will prevent the line overlapping with the rush of a game and determined trout. Examine his taper gut cast, the end or point strand of it fine as hair from his lady's tresses; and his artificial flies, the "cream" of perfection; and if by the use of artificial imitations of any of the great variety of insect life used as lures by the angler, he has with a few feathers deceived the wary, keen-sighted trout, and made it believe that the imitation is a natural fly, and he prevails on it to seize the imitation, then I maintain that artificial fly fishing is beyond comparison the most elegant and skilful of all branches of the angler's art, and is *par excellence* the science of angling. Let

us for a moment consider the trout spinner, whether of the Thames, Kennet, Avon, or any other river, as he stands behind the buttress of a weir, or shelters himself as much as is possible behind the paddles of the rymers. Below him thunders an avalanche, a torrent of glistening, ever changing, foam flecked water. The surface of the weir pool is one dancing mass of tumbling waves, save where the eddies seem subtly to glide back towards the weir head in oily, black streams of trembling water.

Here lies a grand *furio*; and just imagine, if you please, under such circumstances, the fierce rapture of a run. With one upward dash, swift as that of a bolt from the clouds hanging purplish-blue overhead, and shadowing the water, the great trout has seized your tiny bleak, and firmly fixed it in his jaws. His first move will be to dash under the sill of the weir, and, once under, recollect the victory is not yours. You must hold on like grim death, withal the touch of an angel. If you defeat his little game, he flies upwards, and leaps out of the water, and then if he does not break you by falling over the line, he goes down the pool at the pace of an express engine. Do not forget that the angler all this time has a couple of feet only, in the breadth of the weir beam, between himself and eternity. He has to kill that grandly game fish with a torrent roaring and boiling beneath him. So that, I take it, is part and parcel of the art of angling. It is strange, but none the less true, that eight or nine out of every dozen of the anglers of London, and probably other large populations, are wedded to the pursuit of roach fishing. Every Lea "roachist" has a long 18ft. rod in its jean case, and with this is tied up the handle of his landing net. With his rod over his shoulder, and slung from the butt, but resting on his broad back, is the well-known square basket or box seat, without which the true roach fisher never sets out. I may tell those of my readers who possibly have never seen roach fishermen on the Lea, something about the manner in which they set to work. In the first place the rod, which (as I have already said) is 18ft. in length, is built of the very best white Carolina or West India cane, as free as is possible from burrs and knots, the canes being specially picked for the manufacture.

Stiffness, with pliability throughout their entire length, is one great thing that is always looked for; and yet they have an immense amount of give and take in the very fine, though short, top joint and the immediate connecting joint. They taper beautifully from the butt to the slender top of split cane or lance wood; are light as possible in the hand, with no superfluous weight attached in the shape of rings or heavy metal fittings, and are altogether perfect weapons, suited for a very perfect branch of the art of angling. A trout rod should be a trout rod, and nothing else; a pike rod, a pike rod; and a roach rod should be equally distinct.

Observe the "roachist's" delicate line of single hair, possibly pulled from a bay stallion's tail; take notice of his float, so exquisitely shotted that the mere drag of a floating leaf, or the clinging touch of a bit of weed, instantly pulls it under; the shot placed in perfect symmetrical order; while his fine wire hook is not much thicker than an eyelash plucked from his mistress's azure orbs, or eke of jetty hue.

How has this result been obtained? Because thinking minds have applied themselves so closely to this special branch of angling, that roach fishing has become an absolute art in itself. As to the question of baits for roach fishing, they are few in number and very simple, and without touching upon the merits of pearl barley, wheat, wasp grubs, &c., I may say that one of the best is the inside crust of a loaf, cut into very small cubes to fit the hook; or a paste made of stale crumb of bread just moistened, and well worked up in the palm of a cleanly hand.

Gentles are capital bait during winter, or the tail of a lobworm in either summer or winter, when floods have caused a rise in the streams, and probably coloured the waters. In ground-baits the roach fisherman seldom uses anything but a stiff paste made of bread and bran. He soaks his bread overnight, and next morning squeezes the surplus water away, and then adds a quantity of bran, working it up in his hands until he gets a paste tough as putty, and with this he baits his swim with pieces about as large

as a good sized walnut. A practice uncommonly good at those times when roach are exceedingly shy, and will scarcely feed to the hook-bait under any condition, is this: If using gentles or paste on the hook, take a little of this tough ground-bait and nip it on to the two shots which are usually put on the hair or gut about 5in. above the hook. When the float is thrown gently upstream the extra weight causes it to sink, but the angler lifts it carefully along until it reaches the spot or place where the roach are supposed to be, and the whole way it comes down the stream this little bit of bread and bran keeps flaking off in small particles, which are wonderfully attractive to the roach. Both practice and experience prove that the fish will then feed better than they have been doing previously, when only the bait itself had been floated time after time down the swim. This is not only a "wrinkle" worth acquiring, but is, I conceive, pertaining to the art of angling, and the man who discovered or invented the use of the little bit of bread and bran over the hook-bait, was not only a philosopher and an artist, but a benefactor to his fellows of such an extraordinary calibre, that he was deserving of a tomb in Westminster Abbey.

ALFRED JARDINE.

SOME TIPS BY A VETERAN CLEAR-WATER WORM FISHERMAN.

(Continued from page 460.)

ASHTON SMITH, the great fox hunter, used to hold that any fool could ride. It took a horse-man to know how to fall! And in illustration of his meaning (it is some thirty-five years since I read his book) he averred that in his county (Leicestershire, I feel almost sure, and with the "Quorn") there was not a fence of any size in any of the four sides of a field in the district that he had not had "a fall" at. This seems tall talk, but a reference to his work would soon settle the point; and if I lie, 'tis not with my good will.

Now, I would not like to make out a parallel case in fishing. Indeed, it would not be possible. But just as most huntsmen try to clear their fences well, and regard "a spill" as a thing to be avoided, so do most clear-water worm fishermen regard what are called unorthodox methods with distrust. I have already alluded to the class of men who would never put a shot on the line, be the wind ever so high, or the stream ever so rapid or deep, or both, and who lose accordingly on the occasions when a shot is indicated. But there are circumstances which favour the introduction of so-called unorthodox methods. I can recall the head of a stream on the Deveron, not far below Turriff Bridge, where, in low water, the whole volume of the river ran between rocks, and was deep and strong, with a deep eddy on the further side. I used to fish it up first in the orthodox fashion, but generally did little or nothing when I came up to the neck, which was narrow.

I used to lie as low as possible, and not disturb the water needlessly on the way up.

When I came to the top, or nearly so, and the place was apparently fished out, I then sat down on the gravel bed, with my waders and legs in the water, and gave the place a short rest, eating my sandwich, or taking a nip out of my flask. Then, putting on one, or even two, shot, I prepared for action, as I impaled a bright worm on the "Stewart" tackle.

I fished the eddy at my own side first. Then I tackled the centre current, and then the deep eddy at the further side, and I generally added three or four really good-sized trout to my basket, which would never have even seen the worm if I had confined myself to orthodox methods. I fished near the bottom, where the large predatory trout lay. I maintain that it is folly to pass such places over, or to fish them without a sinker.

Once on the same fine river, when the streams were fished to death by the orthodox worm fishermen, I was sauntering up the river rather listlessly, and I do not know what instinct tempted me to do so, but I tried a place which ninety-nine out of a hundred clear-water worm fishermen would have pronounced useless. Above was a smooth, deep pool, and it emptied itself into the next pool so gently that there was no "stickle"—no stream with a gravel bed, but a kind of smooth surfaced glide, running over some sunken rocks and stones, with a good deal of weed, and all of

uniform depth, just deep enough for wading, and with eddies and "swirly hits," caused by the resistance of these large submerged stones.

I waded on very carefully, and fished up every yard of water with a fine cast and one small shot. Note: I could see almost every stone. It was experimental, very. All the same, I got quite a fine lot of trout out of that place, another instance that "the gangin' fit's aye gettin'," i.e., the going foot is always getting (something), even if it be only some new experience.

Poor old "Black Willie" used to say on the Tay, when he was anxious for me to get a run, "Oh dear, sir, try another flee, there's naethin' beats a trial!" And I would recommend all young and intelligent anglers to try at times unlikely places and methods called unorthodox, and to remember that "there's naethin' beats a trial."

At other times (and here a shotted line is especially contra-indicated, and must not be thought of) there is occasionally some very pretty fishing to be had in smooth parts, notably weirs and "cauld pools," with just a gentle current, if that. In tributary streams sometimes a cauld pool will afford capital sport to the advanced worm fisherman, but not unless the trout are moving about near the surface looking for flies, and finding one now and again. There is no prettier fishing with the clear-water worm than this, but it only comes off occasionally: only when it does come off, it leaves a memory behind it full of delight, for it is difficult fishing, yet pretty sport. Take any tributary of the Tweed, such as Manor Water, Gala Water, Leader Water: or the Kale, or, better still, the Jed, that most charming but overfished stream, both tributaries of the Teviot.

It is getting on in the season, say, July 20, and the trout in the rapid streams are shy from over-fishing. The fisherman has arrived at the bottom of a certain cauld pool or weir, with a cliff at the further side overhung with trees. A gentle summer zephyr is passing upwards, creating a series of tiny wrinkles on the surface. The sun is shining, but is tempered by a few dark clouds, which occasionally obscure it.

A slight hoil in the centre of the river and one near the further side indicates that the breeze has shaken a few flies from off the branches which overhang the pool.

The angler smiles, and his heart is glad within him. He may not bring back a huge basketful of trout, but every trout he takes will be worth a Jew's ransom, for nothing but skill can command success under such circumstances.

To a 3yd. cast of fine drawn gut is attached a Stewart tackle, No. 2 hook, and a tiny moss worm, beautifully pink, or, even better, a blue-headed worm, with its pink tail in the pink of condition, is duly impaled (no shot), and the fisherman, armed with his fly rod, say, one of Mr. Forrest's, 11ft. in length (from that to 11½ft.), is ready.

It is absolutely essential, first, that he do not show himself, and that the sun is not at his back. If he is young and active he can kneel, or even crawl, if he sees a good trout rising at his own side; but when he begins to enter the water, under no circumstances must he wade rapidly, for a wave sent across the pool will "put down" every rising trout. This cannot be too much impressed on the tyro. It is all very well in a full water in early spring when trout are famished.

At last he is within reach of a rising trout. The line flies out perfectly straight, and the small worm lands close to, and a little behind, the fish, whose pale form he can just perceive above him. At times this cast behind the trout is deadly. He turns, and before he has time to make a careful inspection, he has taken it in his mouth. The point of the rod does the rest, and in no time number one is secured. Another trout is seen rising close to the sandstone cliff, on the further side, but a tree interferes with the freedom of the cast. The knowing angler wades gently up and across till he is within easy casting distance. Then, grasping his gut line a little above the Stewart tackle, and holding his rod almost on a plane with the river (line and rod of about equal lengths), he makes his rod bend like a bow, and then, releasing the tension sharply, the line skims sideways over the surface, and very neatly sails under the overhanging bough. Of course, this is no place for the duffer, and it is no wonder that the trout has

that worm like a flash; for even in rivers open to the public such spots are but seldom fished. Reason why! He is a good trout, 1½lb., and gives a good bit of sport, and in due course is placed in the creel. And so the day goes on. He who deems worm fishing to be beneath his dignity should have one such experience, and I think he would be a convert.

Early in the season it is useless, for trout have not yet taken to feeding on the worm, and if you cast a worm at a trout rising at the fly on an April day you are seldom rewarded. The artificial fly then will kill far more trout.

In my own opinion, this particular form of clear-water worm fishing (in a low hright water in July, and more so in August) demands a higher amount of skill than does fly fishing upstream with three flies in the early spring months, and infinitely more than what Mr. Harvie-Brown describes so aptly as "Flailing downstream." Doesn't Mr. Brown give them "sauce"—Harvie sauce forhye—these "failers!" I thank him for expressing my feelings, and though I occasionally am obliged to cast downstream more or less, I know exactly what he means to convey. I am not a slave to any one's teaching, and always try to adapt myself to circumstances.

I may just add that it is not always necessary to place the worm (in a still pool) behind a trout; indeed, it is very difficult to do; but I have found that if the first throw is just in front of a trout's nose when he is thinking of seeing a fly, he very often turns tail and bolts downstream. His reasons I have yet to discover. The sudden though trifling splash, as the worm alights (splash is not the word—it is too severe), or the fact that "the unusual" has alarmed the timid—as is often the case with hipeds—or that Mr. Trout does not like his dinner almost dropped into his mouth, but prefers to seek it; the result is the same—he bolts! Whereas, if thrown on either side to begin with, or near his tail, if he won't turn round you can try a throw in front, but I hold it is safer not to commence with this throw.

Of course every hovering trout should be tried, whether rising at the fly or no. I remember one old friend describing such a day, and I am sure he will never forget it. It is a rare event to find rising trout in a pool keen on the worm, but when it comes off it is a thing to be remembered.

THE LOWER AND MID-THAMES: WHERE AND HOW TO FISH IT.

(Continued from page 7.)

By F. H. AMPHLETT.

BARBEL.

"JOHN BICKERDYKE" gives some very good instructions on the manner in which loch worms should be scoured. He says: "A good-sized earthenware pot should be two-thirds filled with damp moss, sphagnum is the best, and the worms put on the top of the moss. They quickly work through to the bottom. The moss should be kept damp, and changed every two or three days, and dead worms removed. In changing the moss it is not necessary to pick out all the worms. The plan is to turn out the old moss and worms on the ground, half fill the pot with fresh moss, and put the old moss and worms on the top. The live worms work down into the fresh moss, and the old moss containing the dead worms can be easily removed. The pot should be kept in a dull place. A little milk poured over the moss is supposed to hasten the scouring process. In three days the worms are generally ready for use. Need I say, that the cleanest and most lively ones, especially those without knots in them, should be placed on the hook, and the coarser ones thrown in for ground bait." Barbel can be taken by using float tackle, but this method is seldom adopted on the Thames, though they are often caught when roach fishing. In "roving" for harbel, the angler, having found what appears to him as a suitable swim, throws in some ground bait, and after taking two or three fish, moves to another likely spot. Mr. J. J. Manley, speaking of the pleasures of barbel fishing, says: "The nervous excitement of the most pleasurable kind which the barbel angler

experiences is better felt than described, as it transcends that elicited by the bobbing of a float at the nibbling of a fish, and may even be compared to that produced by the splashing rise of a salmon or lusty trout at your fly, if it does not actually exceed it. Indeed, it is a piscatorial sensation, partly mental and partly bodily, which penetrates *ad ima medulla*, and as the Devonshire folks say, makes one 'cream' from top to toe."

CHUB.

"A fish of quicker sight than the chub does not swim in English waters."—CHOLMONDELEY PENNELL.

With the exception of trout, no fish that swims in the Thames gives the angler greater hopes or causes him more disappointment than the chub. It is essentially a shy and wary fish, but nevertheless a voracious hiter when he sees no danger ahead. Walton says he is "the fearfulest of fishes," by which, of course, he means the most timid; and he will sink down towards the bottom of the river "if even a hird flies over him and makes the least shadow on the water." In semi-clear water, or even if the flood is rolling thickly down, he will seize any toothsome morsel which comes in his way. But if the stream be perfectly clear, the sun warm, and the chub in a lazy mood, then it requires the utmost skill to catch him. Watch a school of chub basking in the sunshine on a summer's afternoon under some favoured hush, from which occasionally a fat caterpillar drops into the water. The splash caused by its falling perhaps induces the largest fish to turn and suck in the insect. But these fish have learnt a certain amount of wisdom, and if the "gentle art" is tried upon them, the probabilities will be that the school of fish will disperse. Even the shadow of a rod will send them into the depths, and an hour may elapse before they return again to the surface. Vibrations on the bank are also fatal to sport, and it therefore behoves the angler when in search of chub to be very cautious how he approaches the water he intends to fish. If he is fortunate enough to take two or three fish from one swim he should be satisfied, and move to another, as the water becomes disturbed, and the other fish consequently take fright. Roving for chub is very profitable, and the best places to fish are under the houghs, overhanging banks, or some quiet eddy. If float fishing, the Nottingham style—fine and far off—should be adopted, and the baits in the warmer months should consist of either a bit of cheese, tail of loch worm, a ball of paste, or a prawn. A winter bait of pith and brains is irresistible, and the following rules, suggested by T. F. Salter, the author of "The Angler's Guide," should be useful: "Take some pith of the hackbone of an ox, and cut it into small pieces, nearly the size of a cherry, to bait the hook. The hulloke's brains are to be chewed, and spit out of your mouth into the water, as ground-bait to entice the chub. Plumb the depth, and fish close to the bottom; you may kill some at mid-water or a little lower, but more at the bottom. This method is practised during the winter, when chub retire to deep, still holes, where you must angle for them, and fear not taking very heavy fish, for at this season chub are immoderately fond of the above bait. Note.—Chewing and spitting out the brains into the water for ground-bait is called 'blowing' of brains; but as many anglers feel great objection or antipathy to the chewing of raw brains, when that is the case they should prepare them as follows: Take as many hullokes', cows', or calfs', or sheeps' brains as will nearly fill a quart pan, cut them into small pieces with scissors (and if you pound them in a mortar afterwards it will be better); now mix the brains carefully with bran and some house sand, and cast it into the water in small quantities; repeat it occasionally whilst you are angling." If cheese is used for bait, the parings should be thrown in first, and be followed by the float carrying the bait. In fishing near the houghs, which is, as a rule, the best place to catch chub, no rypeck or weight should be used to secure the boat or punt. If there is anyone accompanying the angler, he should catch hold of a twig or bough, otherwise the boat should be fastened by the painter, taking care that none of the branches are snapped off. This method ensures a certain amount of quietude, and is consequently not likely to startle the fish. The angler then throws in his ground bait, and commences to fish. Let the float swim close to the hushes, and allow the

line to run easily through the rings of the rod in order to prevent any dragging or jerking of the float. After the latter has travelled as far, say, as 25yds. (in clear water), gently wind up the line, and repeat the operation, if not successful after seven or eight efforts pass on to another likely swim. It is a very good plan to engage a boat, and then prevail upon some passing launch to tow you upstream. All the boughs can then be fished on the return journey in the manner just described. In the months of July and August fly fishing for chub is successful if one can make a long cast well in under the boughs, or over the shallows. The best flies are the Marlow Buzz, large Red or black Palmers, or the Coachman, and if tipped with a gentle, often induces the fish to take the bait. It requires a certain amount of knowledge as to the whereabouts of the fish before making a cast. A large bunch of gentles (for chub are fond of a large bait), if thrown as a fly, will often succeed during the warm weather when all other efforts fail, but never stand in the boat whilst making the cast. Another method of catching chub is by using dead frogs as bait. They should be cast as in jack fishing, and the bait should be worked after the "draw and sink fashion." Crayfish tail is also an especially fascinating bait. Immediately after a chub is hooked care must be taken to prevent it from rushing among the weeds, as there is no fish more likely to attempt to escape by getting the line hitched into some obstacle than the chub.

(To be continued.)

THE ENGLISH EMERSONS.*

It is something indeed to say of a family that in all its branches, and in all its history, it has never yet included a single member who has dishonoured the name. But that is the proud boast of Mr. Emerson in his preface to this genealogical history of his kith and kin. "Sacrificing everything for freedom to worship God in their own way, they have ever maintained that independence of mind, chivalrous honour and courage which first started them in a small vessel across the great, stormy, and comparatively unknown Atlantic Ocean, in 1638, to settle in the wilds amongst blood-thirsty, cunning, and brave savages." The author modestly estimates that the book can be of value only to the members of the family and the few antiquaries who care for such things, but in one particular at least it is of the deepest interest to literary men both in England and America. This is the detailed history of the discovery of the English connections of Ralf Waldo Emerson, now poet and essayist. It took three years of hard and unrelenting work to trace the connection, and at last, after passing every English county, and Scotland and Ireland, "through a coarse-meshed strainer, as it were," the goal was found at Bishop Stortford, whence the family connections migrated. Pictures are given of the town, of the church, and of property held by Thomas and his father before his emigration to Ipswich, Massachusetts; as well as a short pedigree of the family, and a suggestion as to the origin of the Virginian Emersons. This is all new material, and not contained in Professor B. K. Emerson's "Emersons in America." Bishop Stortford, then, is the home of the Ipswich Emersons, and Dr. Emerson presumes that it will in future be added to the list of shrines which American visitors to this country never miss. The first chapter of the book will also appeal to many other families besides the Emersons proper, the etymology of such names as the Emerys, Empsons, Emsons, Emetsons, Emotsons, Embertons, Emertons, Amorys, Emays, Ems, Eminsons, and Amysons being discussed. The appendix of authorities, too, is valuable, and will prove, with its references to thousands of other names than that of Merson, of endless interest to antiquaries and geologists. Not the least interesting feature of the work is the fully illustrated biographical sketch of the writer's career. One important point remains to be added. All the copies of the book are

* The English Emersons: a Genealogical Historical Sketch of the Family from the earliest Times to the end of the Seventeenth Century, including various modern Pedigrees, with an Appendix of Authorities. By P. H. Emerson, M.B., B.A. (Cantab), distinguished in literature and art, a keen sportsman, and old contributor to the F. G.

numbered and signed, and the edition is strictly limited. If any surplus remain at the end of the present year, the author announces his intention of withdrawing them from the market, the moral of which is that would-be buyers must not wait "for a fall."

This very nicely got up and illustrated work is published by Mr. David Nutt. We hope to refer to it again, and possibly give an illustration from Dr. Emerson's life on the Broads.

MR. WHITTY'S ILLUSTRATED PRICE LIST.

WE have received a copy of the new price list of Mr. Henry Whitty, of 15, Bassett-street, Liverpool. Mr. Whitty is the successor of Edmondson's well-known fishing tackle business, established in 1819, and we are a little surprised to find that he has not got among his flies the "Edmondson," which figures as a prime favourite in so many angling books as a good killer, especially in Wales. If Mr. Whitty has not the dressing, we shall be happy to give it to him.

Mr. Whitty's list is well and fully illustrated, and we notice that he is making a special feature of split cane rods, with and without steel centres, and has a capital assortment of rods and tackle for every description of angling. At the end of the price list he gives a diary for booking weights of fish taken.

It may interest some of our amateur and professional rod-makers to know that Mr. Whitty imports East India canes and various kinds of seasoned timber for rod-making.

THE FLY DRESSER'S LIBRARY.

(Continued from page 5.)

BY VAL CONSON.

IN 1806 came "The Driffield Angler," by Alex. Mackintosh, "with full directions for baits, and the manner of making artificial flies for every month in the season, &c." He has a list of thirty-five artificial flies, and gives a brief description of how to dress them, which is now somewhat obsolete.

In 1808 Thomas Fredk. Salter produced his "Hints to Anglers," which, under the name of the "Angler's Guide," ran through some eleven editions, of which two bear no date. The last dated edition is the result published in 1841. He says in the 1830 edition: "The artificial flies sold at the fishing tackleshops are principally made from the directions given by Bowler, of Shrewsbury, and perhaps have been but little improved during the last century"; but he quotes with approval Capt. Williamson's "Angler's Vade Mecum" and Bainbridge's "Flyfisher's Guide." He gives "concise directions for making an artificial fly," which, however, run to fourteen or fifteen pages. His list of flies only comprises a dozen, and he rather neglects the Ephemeræ.

The same year (1808) produced Capt. T. Williamson's "The Complete Angler's Vade Mecum," a work of some originality. Other editions appeared in 1822 and 1825. Only a small section of its 300 pages is devoted to fly dressing. The list of flies he gives is small, and among the patterns are some not precisely novel. They are divided into classes, and careful directions for making are given.

T. F. Salter is not to be confounded with R. Salter, who, in 1811, published "The Modern Angler, being a practical treatise on the art of fishing, &c.," in a series of letters to a friend. He gives dressings of twenty-nine patterns, and recommends that they should be dressed on No. 9 or 10 hooks for rapid streams, but for slow, deep streams on No. 5 or 6.

George Cole Bainbridge, to whom reference has already been made, published in 1816 a work entitled "The Flyfisher's Guide, illustrated by coloured plates, representing upwards of forty of the most useful flies, accurately copied from nature," and it is remarkable as containing the first attempt at illustrating the natural flies in colours. As was only to be expected, the plates are not all that is claimed for them on the title page, being somewhat to seek both in drawing and colouring. But still, they mark a distinct advance in the literature of the subject. The first edition is highly valued, and always com-

mands a good price in the market. The instructions for fly dressing are brief, but they are illustrated by a plate, which, though it cannot be called a success either of draughtsmanship or colouring, was no doubt of material assistance to the tyro.

Wm. Carroll followed hard in 1818 with "The Angler's Vade Mecum, containing a descriptive account of the Water flies, &c. The whole represented by twelve coloured plates." This work contains no less than 195 flies, most comically drawn, having a most curious resemblance to the tubby, straight-bodied flies built nowadays for dry-fly fishermen, so that one could almost imagine that the artificial had been the model from which the artist had evolved his presentment of the natural. The length and the helplessness of the legs attributed to the insects depicted are very comical. He says naively: "The advantage of a work like this must be obvious, not only in forming a selection, but in dressing the flies. From the difficulty there must be in trusting to the memory for their various tints, every attention has been paid in that respect, as the flies were painted from when in the full perfection of their colours. There are twelve plates, etched and coloured by hand in order to bring them the nearer to the natural tints. Various names are given to the water flies in different parts of the country. I have therefore taken the method of numbering them as I took them off the water." But the descriptions of the flies show much better observation than the dressings would lead one to suppose. There is an immense variety of Midgees given.

About dressing these flies nothing is said by this author. He merely gives a brief catalogue of the feathers required for the art, and leaves the matter there.

"The Angler," a poem by Thomas Pike Lathy, in ten cantos, with "Rules to make Artificial Flies," is probably not a very serious contribution to the literature of the art. It appeared in 1819.

Sir Humphrey Davy's work, "Salmonia," contains some references to fly making, and a brief dissertation on the fly dresser's entomology as then understood; but it contains little to bring it within the catalogue of fly dresser's books. He identifies the Dun Cut as the Yellow Fly. He mentions, in addition, the Red Alder (Welshman's Button), White and Brown Moths, Willow Fly, Cowdung ("chiefly for grayling"), Grannom, Blue Dun, July Yellow Dun, Brown Fly (March Brown), and the Red Spinner.

The Rev. Jas. Rennie produced "The Alphabet of Scientific Angling for the Use of Beginners" in 1833. It gives dressings of some twenty-one flies, and names a number of others, without either describing them or their dressings. Other editions followed in 1836 and 1849.

In 1835 came Thomas Tod Stoddart's "Angler's Companion to the Rivers and Lochs of Scotland." He devotes a chapter to fly dressing, and another to flies. But his treatment of the mechanics of dressing, like that of nearly all writers, though intelligible enough to the initiated, would never enable a beginner to dispense with other help. He takes so much for granted instead of assuming that his reader knows nothing, and he only describes one process. He is one of the very few writers who gives a life-like illustration of a really good cock's hackle, but he neglects the hen hackle, which, for the wet fly dresser, is really more important.

The next work is perhaps the most important in the whole history of the literature of the subject, "The Fly Fisher's Entomology," by Alfred Ronalds. With it modern fly-dressing literature may be said to begin. It contains a brief description of each of the natural insects, and of its artificial imitation, with a coloured representation of both. If it cannot be affirmed of the plates of natural flies that they are scientifically accurate, they are at least quite the best pictures of the natural insect that have ever been produced, and are sufficiently accurate for all practical purposes. The book holds its own to this day. A second edition, with an additional plate, appeared in 1839. Other editions followed in 1844, 1849, 1856 (revised, with additions by "Piscator"), 1862 (for which new plates were prepared), and 1877. This is a book which no fly fisher should be without. It is not difficult to obtain a copy, but the first edition fetches some 25s. The fly dress-

ing instructions are by no means exhaustive, being limited to one method of dressing a winged fly and one of making a double hooked Palmer. They are eked out with a plate of illustrations less creditable to the artist than those of the flies.

Ronalds haunted the Dove and the Blythe. In 1838 we have another work from the same neighbourhood, the "True Treatise on the Art of Fly Fishing, Trolling, &c.," as practised on the Dove and "on the principal streams of the Midland Counties, applicable to every trout and grayling river in the empire," by Wm. Shipley; edited by Edward Fitzgibbon, Esq. From the preface it will be seen that the work is written by Mr. Edward Fitzgibbon (who afterwards wrote as "Ephemera") from the notes of Wm. Shipley's father (then eight years dead), with the assistance of Wm. Shipley. It contains an elaborate series of rules for dressing different kinds of flies, with comparisons with the methods of Best, Cotton, and Bainbridge. There is also a long list of patterns from January to September, the March patterns being recommended for October, and the February patterns for November; while for December the author invites the angler to give the river a rest. The patterns are by no means stereotyped, and are well worth attention. The book is a good one, and it is somewhat strange that no subsequent edition was ever issued.

This was a prolific period in angling literature. In 1839 the "British Angler's Manual" came from the pen of Mr. T. C. Hofland, the godfather of Hofland's Fancy. It is a beautifully illustrated book with a list of some forty-six artificial flies, of which the author of "Recollections of Fly-fishing for Salmon, Trout and Grayling" says, "I found about fourteen good for general use. The others might now and then kill a fish. So would any fly." There are no instructions in the mechanics of fly making.

A second edition appeared in 1841, and a third, revised and enlarged by E. Jesse, in 1848. The third appears the most popular edition. It contains some perfunctory instructions in fly dressing, which are attributed to Capt. Richardson, probably a periodical writer.

The year 1839 saw also the publication of Capt. Clarke's "Angler's Desideratum." This book is a little one of some forty-eight pages, being quaintly arranged. There are directions for dressing winged flies, illustrated with some rather comical but highly instructive cuts. This list of flies is

short—five in number. The author seems to have been accustomed to fishing with seven flies at a time, but he recommends, for bright weather, a single fly dropped into the ring of the rise. His "rapid stream tackle" is ingenious, and, according to his account, most successful.

In 1840 Messrs. Blackwoods published, in Edinburgh, John Younger's work "On River Angling for Salmon and Trout," of which I have been unable to see a copy. John Younger was a shoemaker at Kelso, a famous local angler and fly-dresser. Reminiscences of him occur in Henderson's "My Life as an Angler."

In 1840 came Blaine's "Encyclopædia of Rural Sports," including angling. It contains a considerable list of flies, with an attempt at entomological classification. In 1858 a new edition, revised and corrected by the industrious "Ephemera," was given to the world, and yet another in 1870.

In 1841 Theophilus South (Edward Chitty) brought out "The Flyfisher's Text Book." It was reissued in 1845, with additional woodcuts and twelve engravings, as "The Illustrated Flyfisher's Text Book." It is charmingly illustrated with steel engravings, but it does not carry the fly dresser forward at all.

In 1842 Wm. Blacker published his "Art of Angling; and Complete System of Fly Making and Dyeing of Colours. Illustrated with plates showing the different processes of the fly before it is finished; giving the angler a perfect knowledge of everything requisite to complete him in his noble art."

At the end of the same year (1848) the author reissued the book as "Blacker's Catechism of Fly Making, Angling, and Dyeing," which is curious, but of no great practical value.

In 1855 the author republished his work as "Blacker's Art of Fly Making, &c.," revised and re-written. "The work," says "The Bibliotheca Piscatoria," "is a strange medley of practical usefulness and rhapsodical extravagance. The instructions for fly making are peculiarly precise and clear." This is a sound judgment. The earlier editions are said to have specimens of the flies wafered to the page, but I have never seen these editions. The 1855 edition illustrates detached bodies lying under the hook, both on winged and hackled patterns. The illustrations are elaborate, and of some value.

From 1842 there was a short lull in the production of new books; but in 1846 "Palmer

Hackle" (R. Blakey) published "Hints on Angling," with a short but excellent list of patterns, which includes the Coachman. His description of fly dressing and his list of flies are (omitting Hofland's Fancy) identical with Hofland's, who owns to having taken them from Capt. Richardson.

There was a second edition, improved and extended, in 1848; a third, with further corrections, in 1853; and a fourth in 1865.

In 1846 appeared the second edition of G. P. R. Pulman's "Vade Mecum of Fly-fishing for Trout." The first edition, published in 1841, contained no instructions for fly dressing. The second edition, re-written and greatly enlarged, contains some excellent instructions for dressing flies, and the letterpress is aided by some clumsy but useful woodcuts. The work also contains a good representative list of patterns. It is not a bad book for a beginner to teach himself upon. A third edition appeared in 1851.

(To be continued.)

BLACK GNATS VERSUS BEETLES.

MAY has often been called the fly fisher's month because of the splendid takes of trout that can sometimes be made in that month when fishing with fly. Yet, even in this month, there are occasions which are a great source of vexation and annoyance to the fly fisher. He arrives at the waterside and finds his favourite stream running at a splendid level, the atmosphere pure and clear, and the trout making the water appear to boil, so fast and thick are they rising. They appear to be on the feed in earnest, as, indeed, they are—coming up and sucking in some tiny morsel or other, and making a swirl on the surface every time they do so. This raises the angler's hopes to a degree which no one but a fly fisher can imagine. He gets his rod and tackle ready in nervous haste, and prepares for the coming fray. After wetting his cast line he carefully sends a fly or flies over the nearest rising fish, and no answering twitch at his line repays him for the trouble. He then tries another, and then others, all with the same result. His hopes now begin to fall, and inwardly he blames the fly dresser, the tackle, the weather, the water, the trout, and everything else, and thinks that it is time he discovered what the matter is. Perhaps he changes his cast of flies and tries all his old reliables or fail-me-nevers, and gets a fingerling or salmon fry for his trouble. He is not satisfied with this, and sits down to ruminate. By and bye he will look at the water, and then—he thinks he has got at the root of the trouble now; he perceives that the surface of the water is almost black with tiny midges and gnats. Out comes his tackle book again, and he triumphantly extracts therefrom a tiny Black Gnat with scale wings and almost true to Nature, and really a masterpiece in the art of fly dressing. He carefully fastens this to a cast of gut nearly as fine as gossamer, and then launches it forth on its errand of destruction. He now begins to get a few trout, generally losing the best fish through the very small hooks breaking out of their hold, and thinks all the while that the Black Gnat is the fisherman's curse indeed. It certainly is, or at least some of its species, on account of the wonderful power it possesses of making any honest and self-respecting angler so far forget himself as to make a few cursory remarks regarding these little pests. They find out all the exposed parts of the person, and begin to settle down upon them, and make themselves felt very soon, even although the angler smears himself over with Antimoustique, or any other like preparation. The above mixture certainly helps a great deal at this season of the year, and later on too, but when folks are fishing they cannot be continually rubbing themselves over with preparations which dry off quickly, and likewise one cannot smoke and fish comfortably at the same time. The Black Gnat is certainly a curse in the above respect, but some others have gone so far as to state that while the Black Gnat is thick upon the water the trout will not take the artificial insect. That may be all right at certain times, and I have no doubt that there are such times, although I have never experienced them yet. But how is it that trout will take the same fly later on or earlier and yet refuse it when it is presented along with

GOT A BITE!

the fly it is intended to represent? Anglers can always get fish when trout are feeding on any other fly, provided that they are furnished with a good imitation of the insect that the trout are feeding upon at the time. I think that there has been some slight misunderstanding as to what the trout generally feed upon at this time of the year, and that, instead of taking the Black Gnat as they appear to be doing, they are often really feeding upon very small beetles, which are to be found on the banks of any stream by turning over stones. I dissected a number of trout taken on different days, about May and June, from the river Ayr, and emptied the contents of their stomachs into clear glass vessels, and examined them. I found that they had been feeding principally upon small black beetles, and that their stomachs were distended with the same. True, I did find a great quantity of small black midges and a few fresh-water shrimps and remains of creepers, but the principal item of diet was beetles. These beetles must come upon the water, by some cause or other, in great quantities, judging from the amount of them I have found in the stomach of an individual trout. The only imitation that came near the beetle, when I found this out, was a fly dressed with a black ostrich herl body, full near the tail, and wound round at the head with a turn or two of black hackle. This came near what was wanted, and did pretty well; but I thought that it could be improved upon, and set to work to make one which would do better. I noticed that the most of the beetles I got in the trout were about the same size, namely, about $\frac{1}{16}$ in. long, although there were different species of them. I chose a convenient size of hook, for I consider that the size of any insect or lure should be copied as carefully as the shape and colour. After selecting a proper hook I commenced to bind on the gut, beginning near the bend, and whipping along towards the end of the shank, and then cut a slip from the black feather of a crow, and laid it along the whipping with the points of the fibres in the same direction as the shank of the hook. I then pinched the fibres together at the bend, and warped the thread over them, going towards the bend, and took three peacock herls and wound them tightly over the place where the fibres were tied in, so as to form a bulky looking foundation for the body of the beetle. Rolling a few turns of the waxed silk over the herls after the fashion of a trellis or net to keep them in their place, I made a hitch fastening, and cut off the spare ends of the herls, and bent the fibres of the crow's feather towards the head, and fastened them down over the herls so as to form the glossy black wing cases or shards. After this, and a short distance up the shank of the hook from where the herls were fastened in, I gave a turn or two of a glossy black cock's hackle, and then brushed the crow's feather over with varnish, and likewise the head of the beetle. It was finished, and made a passable imitation of the little beetles which may be seen swarming among the sand and gravel on some river banks on any bright sunny day. My first attempt at making an artificial beetle was far from perfect, yet I was so far convinced of its efficacy the very first day I tried it that I resolved to make more. I became a little more proficient in the art of making them, and gave one or two away to a few angling friends, who tried them and were delighted with the results. I have great reason to believe that it is owing to their resemblance to beetles that such flies as the Coch-y-bondhu, Zulu, Alexandra, Black Spider, and Black Palmer are so deadly at certain times. These so-called flies, when wet and sodden, look more like a small beetle than a fly. However, it ought to be a well-known fact by this time that beetles form a considerable item in the diet of the trout and other fish. The well-known Coch-y-bondhu is a fly which has proved itself a killer when other patterns of flies were of no good whatever; and it, I believe, is the only attempt that has been made to copy the small beetles found on our rivers. There is another little insect of a brownish colour, and shaped like a beetle, which is to be found under stones in the water, and may frequently be seen whirling about and performing strange gyrations on the surface in the summer months. I think that this little creature has been called the whirligig beetle, from its peculiar motions. I do not remember finding any of these

in the stomachs of trout, but I have no doubt that they will feed on them at times. Nevertheless, I would never think of going to fish for trout or grayling at certain seasons without a small black beetle on my cast, and, although May and June are the principal months in which the trout generally feed on these insects, I have found that they will take them during the remainder of the season. Indeed, one day in October, when fishing the river Ayr, I had splendid sport among the grayling, and it was the small black beetle that they were taking. I had three flies on my cast on that occasion, or, rather, two flies and a beetle. I got twenty grayling and eight trout that day, and of these twenty-one took the beetle, five Wickham's Fancy, and two Red Spinner. On another occasion, in May, I got thirteen good trout in a mill lade off the same river in an evening's fishing. Eleven of these took the beetle, and the other two took the Black Gnat. This last lot furnished capital sport, as they were, without exception, between $\frac{1}{16}$ lb. and $\frac{1}{8}$ lb. each, and all were in the pink of condition. On another occasion, when fishing Loch Doon, I used a larger beetle than the ordinary size, along with the recognised killing patterns for this loch, and I am sure fully three-fourths of my total catch were taken on the beetle. This occurred in the month of June. The above three experiences are only selected from a number of like occurrences, and I give them to show that anglers might have better sport, if provided with beetles, than they usually get at certain times. When trout are rising at beetles they come up in a very deliberate and business-like manner, and do not at all seem to be in a

ACTUAL SIZE OF BEETLES AND STEWART TACKLE.

hurry and splutter, as they sometimes are when feeding on flies. The reason of this may be that the beetles must lie heavier and deeper in the water than flies, and sometimes I am inclined to think that they are frequently drowned, and float along under the surface, so that this may account for the tiny dimple made on the surface of the water when trout are feeding on such food. By this article I do not want to condemn the use of the Black Gnat. It is a most useful and deadly little fly at times, but when the trout will not take the artificial gnat then try the beetle, and if made and used properly I can safely guarantee good sport, as at the time of year when these two insects come on the water in numbers all the trout are prowling about or feeding near the surface. At this time of the year I usually fish with three flies if the water is coloured, and if clear I diminish the number to two. The gut should be of the finest. Rather risk a breakage or two and use fine tackle and get fish, than use coarse tackle and only get small fry and no fish worth keeping. No one can expect to get good fish in clear water unless they use the finest material procurable—that is to say, in waters where trout are often fished over. A good plan is to arrange the cast of flies as follows: Fix a beetle at the tail of the cast, then a Black Gnat as first dropper, and leave the place for the third dropper blank, so that you can fix on your favourite fly or any other insect which may be on the water at the time, and to which the trout may occasionally turn for a change. Then cast up the stream and recover your line, as the flies float down to you, either by raising the point of your rod, or, better still, by drawing the

line through the rings with your left hand, and placing the coils in the hand that holds the rod. Be very careful not to drag your flies any faster than the stream, if you can help it, and make your casts as straight as possible, and you will secure far more fish than if you allow the line to fall in slovenly wrinkles on the water. When fishing a rapid run of water this method is not so suitable as others, on account of the frequent casting it entails; but once acquired I believe the angler will come to like it better than any other; at least, that is my experience, though there are sometimes differences of opinion as to what the best method is. There are certainly no hard and fast rules in fishing, and the fisher has sometimes to make methods for himself. But when fishing a smooth, gentle run or still water, I would advise the fisher to use one fly or beetle only, certainly not more than two, unless the water is dirty. Make a trial cast behind the fish rising, and then lay your fly down as near to him as possible, and it is ten chances to one that you get him if you go about it properly. In closing, I would like to impress one thing upon the fisher—do not run away with the idea that trout are feeding on flies because they are rising to the surface. There are other tiny beings, such as beetles, caterpillars or grubs, ants, and spiders, which will float on the surface or near it almost as well as flies; and there are times at which trout will devote the whole of their attention in securing such gentry as these.

BLACKBEETLE.

THE NAVY LEAGUE MAP OF THE WORLD (Published under the auspices of the Navy League).—This capital map illustrates British naval history, and is dedicated to the children of the British Empire. The size, 72 in. by 63 in., gives ample scope for the work to be boldly treated so as to be effective even in a very large room. The map shows distinctly: The British Empire boldly coloured in red, naval stations named and outlined in red, wealth and social condition of the British Empire, European navies and commerce, facts relative to British territory, principal British trade routes and steamship lines, strength of principal European navies, distances between various important ports, list of 112 naval engagements, from the Spanish Armada, 1588, to Alexandria, 1882; price, on cloth, stained rollers and varnished, £1 1s. The publishers are Messrs. W. and A. K. Johnston. We hope the Navy League map will be a great success.

CREWE FREE ANGLERS.

THE above society held their annual dinner at the Star Hotel on Saturday evening last, when about 100 members and friends sat down to a substantial repast provided by host Maddocks. After dinner the remainder of the evening was spent in a convivial manner. Mr. W. Smith (the chairman), in the absence of Mr. E. S. Woolf (president), presided, and amongst those present were the secretary and chairman of the Crewe No. 1 Angling Society (Mr. R. Cole and Mr. E. Evans), and the secretary and chairman of the Izaak Walton Angling Society (Mr. S. Maxon and Mr. W. Wood). Letters apologising for unavoidable absence had been received from the following gentlemen: Messrs. Wilmot Eardley, J.P., Wallace Lumb, J.P., T. Marriott, W. Needs (Minshull Vernon), J. Walker (Marbury Hall), J. Edwards (Marbury), C. H. Kynaston (Wem), G. Mottram (Nantwich), and others. After the usual loyal toasts had been duly honoured, the chairman, in the course of an interesting address, alluded to the good feeling which existed between the various angling societies in the town, and he hoped this was a state of affairs which would exist at all times. He also addressed some congratulatory remarks to the prize winners; and, coming to the balance-sheet, stated that the receipts of the year amounted to £59 8s. 8d., while the expenditure was £51 6s. 10d., which left a balance in hand of £8 2s. 10d. He regarded that as entirely satisfactory, and expressed a hope that the society would still continue to prosper. The following toasts were also honoured: "The President," "The Society," "Visitors," "Host and Hostess," "Kindred Societies." Mr. R. Cole responded to "Kindred Societies" in a very appropriate speech, with good advice to young members, and the benefits received by the bracing air at the riverside after being closely confined in the works of the great railway centre at Crewe. The following are the prize winners for the year 1898: T. Bates took the champion prize presented by the society for the best perch (a copper kettle), also Mr. Manley's sealed competition, available from June 15 till Dec. 24, known only to the donor, which fell to the best perch. W. Conquest, first and third for roach, second for dace, also a special prize for the best basket of fish taken from canal. T. W. Bateman, first for pike, also special prize for 10s. for pike. H. Sinclair first and second for chub, first for dace, second for perch, also winner of special prize for the best basket of fish taken from anywhere (this

basket of fish was taken from the river Severn at Welshpool, in his catch were four chub, which weighed 12½lb., the largest going 4lb. 1½oz., second 3lb. 10½oz., which he has had set up. Miles Bettley, first, for trout, and third for dace. J. Coleman, first and third with bream and gudgeon, second for rudd, and third for trout, also winner of special prize for bream and gudgeon. Other prize winners were: T. Farrington, J. Baker, G. Emerson, R. Ankers, W. Joinson, G. Brookes, T. Carron, and E. Davies. The musical programme was of a varied and entertaining nature, and amongst those who contributed to its success were Messrs. W. Townley, F. Dingley, G. Hoole, W. Jones, R. Cole, E. Evans, T. Nowell, T. Evans, G. Capel (violinist), C. Clowes (oboe), E. Palmes (mandolin), and B. Bailey (pianist). The arrangements for the gathering were carried out by the secretary (Mr. H. W. Price) and committee, and a very pleasant evening was spent, and all joined in singing the National Anthem. G. CAPEL.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

30 min. for Chelsea.	55 min. for Kew.
40 " " Putney.	75 " " Richmond.
45 " " Hammer-smith.	80 " " Twickenham.
50 " " Barnes.	85 " " Teddington.

EXAMPLES.—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 2.25, or 55 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Jan. 14	3.25	3.47
Sunday, " 15	4.10	4.31
Monday, " 16	4.56	5.18
Tuesday, " 17	5.39	6. 0
Wednesday, " 18	6.21	6.43
Thursday, " 19	7. 6	7.30
Friday, " 20	7.58	8.29

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, Jan. 14	4. 3	4.27
Sunday, " 15	4.50	5.13
Monday, " 16	5.36	5.58

These times show high water at Houghton Bridge, Amberley. Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—The death of His Grace the Duke of Northumberland removes from the T.A.P.S. one who was at the head of its list of vice-patrons, and this will give me the opportunity of explaining how the society became possessed both of its patron and the list of vice-patron. It was indebted to Sir Edward Birkbeck, Bart., the pioneer of the Great International Fisheries Exhibition of 1883, and I believe about the year 1881, for securing H.R.H. the Prince of Wales, K.G., as patron, and the Duke of Northumberland, the Duke of Buccleuch, the Duke of Roxburgh, the Earl of Ducie, Lord Lorraine, Lord George Hamilton, and Sir W. Hart Dyke as vice-patrons. The society has not received much in the way of pecuniary help from them, but the late Duke of Buccleuch was not only a donor, but, with the Duke of Roxburgh, two of its oldest annual subscribers. The Earl of Ducie has been a donor, and also Lord George Hamilton, the latter having been an annual subscriber, and presiding at one of the annual banquets at the Star and Garter, Richmond Hill. An effort was made to get the Prince of Wales to preside at the jubilee dinner of the society, and the following letter was sent to the secretary (Mr. W. H. Brongham) from Sir D. M. Probyn in reply: "I have received your letter of the 10th ult., and the memorial contained in it from the members of the Thames Angling Preservation Society praying that the Prince of Wales should consent to preside at the jubilee dinner of the Society. Having laid the memorial before the Prince, I am directed to ask you to have the goodness to convey to the society His Royal Highness's great regret at being unable, owing to his many engagements, to accede to their request. At the same time, His Royal Highness desires me to assure the members that he still continues to take great interest in the society, and wishes it all success." Some few years back I wrote to the Duke of Northumberland for permission to fish in the private waters at Lyon House, and in reply His Grace stated that he was not giving any permission to fish there, but owing to the work I had done for the Thames he would make an exception, and granted me the desired privilege, and I remember, with my friend and neighbour the late Mr. John Graham, we got some fine pike. It was to the late Duke of Buccleuch I had the unlimited permission to fish at Ditton Park with friends, and many a happy day have I spent there with Mr. Alfred Nutball, Mr. R. B. Marston, Mr. S. W. Searle, Mr. M. H. Blamey, Mr. J. Elsdon, Mr. Alfred Jardine, Mr. T. R. Sachs, and many others.—B.

—(Datchet).—At time of writing, water rising down all right for jack and chub, but the heavy rain to-day will upset calculations. I have been doing a bit of roach fishing up river; have had some fine fish. On Jan. 5 I had six fish over 1lb. each, and one 1½lb.; on Jan. 6, four fish over 1lb. and one 1½lb., a good few other respectable fish.—G. LUMSDEN.

—(Hampton Court).—William Milbourne writes on Tuesday: "Owing to the state of the water there has not been anything done, and scarcely any one has been

out. One of the private boats in Hampton Deep had a take of three dozen of fine roach, one of the fish weighing 1lb. 10oz. The river, with two or three fine days, would be in good condition, but they are shutting in all the weirs."—B.

Thames (Henley).—Jan. 11.—The water, which was just getting in good condition and sport improving, is again thickening, owing to the heavy rain of the last two days. I should say it would only be fit for roach fishing by the end of the week, when bank anglers should have the best of it. Patrons of J. James and G. Arlett have been taking roach and perch, and some jack up to 7lb.; and local anglers have had several up to 5lb., and some heavy bags of roach, the best roach scaling 1½lb. Jan. 12.—Heavy rain has fallen during the night, a strong stream is running, and the river rising slightly, but at present it is not a bad colour for roach fishing.—STANLEY MEAD.

—(Kingston).—John Johnson during the week has been getting some fine roach up to 1lb. each, and a few bream.—B.

—(Richmond).—The principal sport for anglers has been with the dace and bream, and some fair results have been made.—B.

—(Sunbury).—Messrs. T. and A. Strond report they have not done anything this last week, but with an improving water they are prepared to give their clients some good sport, as there are plenty of fish.—B.

—(Teddington).—W. McBride says: "The water is getting in fine order, and by Saturday it ought to be in splendid condition. Have been out one day with a customer, who landed eight bream; and another day, with Mr. Loftus, in two hours, four jack, the largest 5½lb. The boat anglers have been getting a few bream and roach. I have caught about fifty lampreys this week after the flood water."—B.

—(Twickenham).—The Brentford Piscatorialists have had a competition, and punts engaged from Richmond, Twickenham, and Teddington, with no very great results, several of the punts not having creeled a single fish, and the first prize was secured by Mr. Pike with 12lb. weight of bream. The successful angler was formerly a member of the Acton Piscatorial Society, who I had the pleasure of meeting at its annual dinners. That society, I am glad to learn, is getting to its old strength again, and holds a competition for two days at Twickenham at the end of this week, for which Mr. Spong, of the Two Sawyers' Hotel, is under orders. The water when I was there on Tuesday appeared to be in nice condition, and amongst the reports I received there, Mr. F. J. Ogden Smith told me of a fine perch of 1½lb. being taken by Mr. Riches out of the Deep, in addition to some nice bream. Mr. Ogden Smith, fishing one day, landed a bream of 3lb., a few perch, and three dozen of roach and dace; and C. Browne had a take one day of nine dozen of roach and dace. The reports from the Two Sawyers were: John Spong, in two days, 25lb. of roach and dace and a few bream (the largest roach, 1lb. 2½oz.; and the angler was Mr. T. W. Gomm); R. Spong, one day, 10lb. of roach and dace; J. Draper, in two days, 22lb. of roach and dace; and H. Spiers, in one day, 17lb. An attempt is being made to form an angling club at Twickenham, with every prospect of a good start, and there are some good anglers there who are well able to bring it to a successful issue. I heard of "Otter" Hone, of Staines, being at Twickenham on Monday evening, and with no satisfactory reports of Staines fishing, and he had been principally higher up the river with an old member of the Richmond Piscatorial Society.—B.

—(Windsor).—The river is still very thick, and likely to remain so for some days. Mr. H. A. Manning braved the tempestuous weather on the 10th, and succeeded in creeling four jack in about two hours; Mr. Colville also had a brace, about 9lb. Mr. Paice has been baiting some swims with lob, with the result that he has had some good perch, and roach up to 1½lb. I was out with a friend, attended by James Bunce, at some private water on the 9th, and landed ten jack and one perch weighing 35lb. I often have anglers call on me and ask if I can recommend them a good fisherman to take them out. "This is not always an easy matter at a few minutes' notice, but I shall be glad to assist your readers at any time by sending them a wire informing them of the state of the water, or to engage the services of a fisherman for them should they require one, if they drop me a line."—CECIL HOWLETT.

Ancholme District.—A few anglers have been out during the fine weather which prevails now coarse fishing about Brigg and Brandy Wath. They have had good average takes, consisting of pike, eels, roach, bream, and perch. The spawning season has not been a very good one for trout, owing to the excessive lowness of springs. These conditions have been very favourable for herons, which make sad havoc amongst the fish.—THOMAS FORBES.

Arun (Pulborough).—The river on the 8th inst. was full and thick, owing to recent floods. The St. Alban's Club fished a match here, and so far as I could ascertain, only two members took fish, viz.: Mr. H. Allan (the secretary), one bream and one roach; Mr. Leighton, two small roach. Mr. Wilson (Battersea Friendly) took 15lb. roach, largest about 2lb.; Mr. Saafield (Silver Trout), a bream of 4½lb. and 3lb. roach; Mr. Dent (same club), 3lb. roach. At the time of writing (Tuesday night) the river is in fair order.

LATER (Thursday, noon).—Owing to almost incessant rain since Tuesday night the river is very full and thick, and there is every probability there will be another flood or the 15th.—W. G. HOLLMAN.

Devonshire Streams.—The weather continues most unpropitious for anglers, with heavy rains and hail showers. All the streams are in heavy flood, and the recent sport with pike has been but trifling, fish running somewhat small.—DEVONIAN.

Exe and Canal (Exeter).—Weather still wet and wild. To-day (Wednesday) the river is running high and coloured, and will not fish for a couple of days to come at least. Prior to the flood a few fair sized pike were secured, the best brace I have heard of being a 12lb. lot, which fell to the rod of Mr. Smyth. Mr. Calladine has tried the perch once or twice, scoring a few moderate ones of ½lb. each.—RED PALMER.

Fen District (South Lincs. and Cambs.).—Sport on the Cambridgeshire side is not so good as prior to the Christmas holidays. At Surfleet, on the Glen, roach fishing is falling off, and so it is also about Wisbech; but pike fishing here has improved. Fish up to 12lb. have been obtained from the Middle Level Drain. Roach fishing is very fair about March. From the Welland good pike fishing is now reported from Market Deeping. Some good pike have also been obtained from the middle lengths of the Forty-foot.—LIMPET.

Idle District (North Notts.).—Some very fair sport is returned from the district about Retford. The Stockwith Canal is now yielding better sport than the river, though that is nothing to complain of. The other day an angler got over 20lb. of roach from the canal, just outside the town. Many fish scaling 1lb. each. Others on the same water have done similarly. It is rumoured in this district that the Sheffield Anglers' Association have leased a portion of this canal, and, if this is so, Sheffield anglers are to be congratulated on having secured some really good fishing within a few miles of home. Roach, dace, chub, and grayling have all come from the river within the last few days.—L.

Lark (Lackford and Flempton).—The recent rains have done much to improve the river, which has been in poor condition for some time past. Water now clearing, and in good order for roach and dace fishing. Several of the latter were taken last Thursday (Jan. 6), weighing 7oz., at Cherry Tree Lock, with worm, by Mr. Skinner and friend. Also a few pike have been killed, spinning with sprat, by Mr. H. Palmer.—A. E. KEMP.

Lea.—The stormy, unsettled weather has again interfered with angling operations in this river, and there is little to report in the way of captures as a result. One fine catch of roach (20lb.) has to be recorded, but the district is not given. It was made by Mr. H. Short. At Angel Road some roach have been landed, also at Cheshunt and Rye House. At Enfield Lock a few nice jack have been secured, one landed by Mr. Leadbeater scaling 6lb. The Hoxton Brothers fished at Rye House early in the week, but I hear they met with very poor sport. The Stort has varied in condition, and little has been done with the roach. If we get much more wet weather the two rivers will again be running very thick.—ISAAC WALTON.

Little Ouse (Brandon).—The river is in good condition for pike fishing. Mr. T. J. Church, of Catford, caught on Monday, Jan. 9, 64lb. weight of pike, eleven fish in all, and there is every prospect of more good bags being made. Boats and bait can be had on applying to—I. ROLPH, Ram Hotel, Brandon.

Lugg and Arrow (Leominster).—Both these streams have been running bank full and muddy, owing to the heavy falls of rain last week. Rain has been had this week, but it has not altered the state of the water, and it is now going down and clearing nicely. The weather has been very cold, and nasty fogs have prevailed, which have been against anglers going out. Sport has been at a standstill; but with some frost sport should be good with worm and maggot and paste.—GWYNNE.

Nene (Peterborough).—The swollen state of the river has put everything out of condition during the past week, and at present there are no indications of any improvement. It will be a period of waiting, at all events for some days, as this (Wednesday) evening, at the time of writing, we are having a drenching downpour of rain accompanied by a high wind, which renders anything out of doors far from pleasant.—E. A. S.

North Staffordshire Rivers.—In consequence of the changeable character of the weather recently the rivers have been very unsettled, and but occasional fishing has been possible. In point of sport, piking has paid best, and some good fish have been captured—up to 12lb. weight. The Sow has been the chief source of these, though a few have been taken in other waters. Grayling fishing has been stopped by the heavy waters, but frost would enable us to try again with swimming the cockspur for them.—F. W. DALE.

Old Welsh Harp (Hendon).—The following fish have been recorded during the last fortnight: Messrs. Bashford and Windover, four jack, 19lb.; Roit, one, 9½lb.; Horzog, one, 10½lb.; A. Plumton, one perch, 2lb.; Stormer, two jack, 8½lb.; Cox, four, 17lb.; Shilty, three, 14lb.; Cramp, one, 5½lb.; Vincent, two, 9lb.; Aldridge, three, 11lb.; Cooper, seven, 36lb.; Adams, two, 9lb.; Palmer, three, 12½lb.; Evan Hillick, three, 19lb.; Palmer, three, 12½lb.; Adams, 37lb.; Fayer, two, 7lb.; Nabby, two, 10lb.; Bashford and Windover, three, 30lb.

Ouse (Great Paxton, St. Neot's).—Water in perfect condition for jack fishing. Some good fish have been taken in the neighbourhood. Good bags ought to be made now as the weeds are gone. Roach are feeding well at gentles for bait.—W. DUCKER.

Ouse (St. Neot's, Hunts.).—The water, which has been very thick of late, is returning to a nice colour again.—W. N.

Severn Vyrnwy, Tanat, and Cain (Llanymynech).—Owing to these rivers having been in a more or less swollen state during the past week anglers have had but little sport, and that principally with pike, chub, perch, and other coarse fish. The Severn is still very much above its ordinary level, and only a few pike taken from it for some days past. The Vyrnwy has afforded better sport, as in addition to pike a few coarse fish have also been captured. The Tanat is not much above its

proper height, but only a very few grayling have been had from it this week. The weather is very wild and stormy at present, with much rain and stormy south-west winds, so that another large flood is only too probable.—**YERNWY.**

Stour (Bures, Suffolk).—The water has been in good order for both roach and pike fishing during the past week, but both classes of fish have been feeding wonderfully shy, and small catches have been the order of the day. A few good roach up to 1lb. 4oz. each have been taken, but I have heard of no heavy bags being made. A large number of small jack have also been taken, but I have not seen any over 5lb. each. Should the weather become more settled some good bags ought now to be made.—**W. T. BAINBRIDGE.**

Sussex Rivers and Chichester Canal.—The weather has been treacherous during the week. Our rivers are lying down nicely. Visitors to the Ouse have had fair sport among the roach in the tidal water below Barcombe. Several fish of over 1lb. have been taken with worm. Mr. Worcester hooked a big pike, but did not succeed in landing it. A brace of 4lb. fish and one of 4lb. were taken with live snap in the Fletching water. A few bream and roach are notified from the Cuckmere. All waters should be in good trim by the 14th; rain holding off. A visitor to the Rother on Monday secured a nice pike of 5lb. and a perch of 2lb.; then had a smash up with a big fish, losing top joint and some yards of tackle. Chichester Canal is high and in good condition. Pike have fed well in all reaches. Two brace, averaging 3½lb. each, were taken below lock on Monday. Perch are feeding. Fish of 1½lb., 1lb. 2oz., and several smaller have been killed with worm; but the best fish of the week was a fine perch of 2lb. 15oz., taken by a member of the Brighton Angler's Association, who was also accredited last week with the record. A few bream up to 1½lb. and roach up to ¾lb. have been secured, principally with paste.—**GEORGE F. SALTER.**

Teme (Ludlow).—The Teme in this part is still running high, and there is a stain on it, owing to the continued heavy falls of rain had at the end of last week. The weather has been very uncertain, and frosts, rain, fogs, and sunshine have followed one another in close order, which has been against anglers going out. But the water is now going down, and if we get no more rain it should be in fair order for fishing by next week. A few anglers have tried bottom fishing with worms, maggots, and paste, and have secured a few coarse fish. Fly fishing has been at a standstill; but the fish move between eleven and one o'clock on the fords, and with fine weather sport will be good with grayling. Pike have been moving fairly well, and sport should be had with live bait. Salmon have been seen going over the weirs on their way upstream. The Ony, Corve, Clun, and Ledwyche are all running high and coloured, but are clearing, and little sport will be had for some time.—**S. LUDLOW.**

Teme (Tenbury).—In this district the water is still running high and muddy, and not in order for fishing. The weather has been very changeable, and heavy falls of rain have been had, but it has not changed the colour of the water, and during the last few days the water has been clearing nicely, and if it continues will be in fair order for worm, maggot, and paste by the end of the week, but will be rather high. If we get fine weather sport should be had next week.—**WORCESTER.**

Witham, &c. (Mid-Lincolnshire).—Anglers have been busiest about Bardney. The banks there are lined often with Lincoln experts, and both from the river and Sincil Dyke some capital bags of roach have been made, many running to 1lb. each, and one nearly 2lb. Some good roach have also been obtained from Stixwold. The drains about Boston have been improved by finching from the Witham through Anton Gout's Lock. Fishing there should improve. The flush on the Bain is also said to have removed the flannel weed. On the latter roach up to 1½lb. have come to hand. Pike fishing on the lower lengths is prosperous, and fishes 10lb., 12lb., and 14½lb. are among the best reported.—**LUCI.**

Yorkshire Rivers.—Very few anglers have been seen on the banks of the Yore, Swale, Nidd, Derwent, Wharfe, Rye, Aire, or Ouse during the past week, thick fogs and consequently miserable weather acting as a deterrent rather than an inducement to even keen piscators to visit any of the favourite resorts for either pike, grayling, or roach fishing, consequently I have little to report; the best dish of grayling I have seen caught in the Upper Yore was one shown to me by Dr. Murphey, of Bolton, on Monday last, caught in the Yore at Danby. He was very proud of the dish, and, indeed, the ten exceptionally fine grayling, nine of them caught with the brandling worm in a thick fog and a high water, were worth seeing, and if there had been light enough for a photographer to have taken them we should have had a picture worth having! The Rev. Father Murphey and other anglers have been out during the week, but with only indifferent success. To-day we have had a glint of sunshine, but only of a very transient character; and the sharp white frost of the morning gave way to snow, sleet, and fog. While the sunshine did last, I and Collinson had fair sport in the neighbourhood of Jervaulx, killing some ten grayling and half a dozen dace in an hour, but the wretched weather soon drove us home again. Of anglers visiting the Wharfe none have had better sport than Mr. Pickersgill, of Leeds, who had eleven good grayling, caught at Collingham, on Friday last, and his son, seven nice fish, the water being very high. Sport higher up the river does not call for any special comment; and anglers visiting the Swale, Derwent, Nidd, and other rivers have only met with moderate sport. To-day more snow has fallen on the hills, and showers of snow and sleet in the valleys. It is this unsettled weather that makes

angling so very uncertain at present.—**JOHN E. MILLER,** Northern Angler's Depot, 19, New Station-street, Leeds.

By TELEGRAM.—J. Blades, the well-known Wensleydale professional angler, writes me that in spite of big waters and snow broth he has had good sport with the grayling in the Hawes Association waters, he killing from six to eight fish in a couple of hours daily; and Mr. Moore, schoolmaster of Hardrow, has made several very heavy baskets. The high waters have been against pike fishing, and little has been done anywhere; but at Hornsea on Monday, Mr. Selke, of Newcastle, landed five fish, weighing 23lb.; and on Tuesday the same number of fish, weighing 34½lb., the largest fish weighing 10lb. The weather to-day is very wild and wet, and it must moderate considerably before we can expect good sport. There is a lot more snow on the hills this morning.—**J. E. MILLER,** Northern Angler's Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Tweed, Teviot, and other Border Rivers.—We have had one or more floods since my last notes, and many anglers have been out during the past ten days, and a few baskets of trout have been killed by these all-the-year-round fishers. The takes, however, have not been heavy, the baskets weighing from 2½lb. to 4lb., while one exceptional basket of 4½lb. was killed on the Eden, three and a half miles from Kelso. On the Teviot some small takes of about 2lb. to 3½lb. have also been killed by the same description of anglers as those above mentioned. The fish killed by these so-called piscators were of a very poor class, being thin, and most unseasonable for the table. One angler on the Tweed had a sea trout of 3½lb., in very good condition; while another had seven grayling, weighing 3lb.; and on the Teviot one gentleman had to-day (Wednesday) five grayling and four trout, one of the former fish weighing 1lb. 1oz. The season is most open for the time of year, and if we only had some genial weather, which we can now scarcely expect, trout would begin to improve in condition, as they would get better feeding; but by the time that the legal trout fishing begins (according to the Kelso Angling Association Rules, Feb. 14) they should be in fairly good condition providing the weather is favourable, and this is all that can in the meantime be said of it. I have had information from one of the Tweed Commissioners' superintendents to-day to the effect that there have been a good many fish in the river since the close time began, and that there was also a great number of spawning salmon seen on the various breeding redds, many of these being of large size; while at the same time there has been an absence of sea trout, or, as some call them, bull trout, these latter fish being a scourge to the river, as they devour the spawn of the salmon as soon as possible after it is laid down by the gravid fish.—**MAXWHEEL.**

IRISH REPORTS.

Irish Notes.—We are now within measurable distance of the opening of the season of 1899, as on the 1st prox.—seventeen days hence—angling will commence on the Boyne, Bnsh, Moy, Suir, Shannon, Lee, Bandon, &c. So far as the weather is concerned the outlook is very good, but there is plenty of time yet for frost and snow. The season in contemplation will be a poor one, indeed, if it do not better than the past one. On Saturday last a meeting of the committee of the conference of Irish Fisheries Conservators met in Dublin, under the presidency of the Earl of Mayo. Some nineteen resolutions were drawn up for submission to the conference on the 21st inst. The resolutions deal exhaustively with the decay of the fisheries and schemes for their improvement. They will finally be submitted to Earl Cadogan.—**J. A. B.**

Shannon and Lough Derg (Killaloe).—Judging from present appearances, I incline to think that the river will be in perfect trim by the opening day of the coming angling season, Feb. 1. For nearly three months we have had nothing but almost constant downpours of rain, so that I am in hopes that the spring floods will not be so heavy this time as they were in 1897 and 1898, to the great disappointment of salmon fishers, because many of the best reaches were rendered unfishable owing to the swollen state of the river. Of course I will keep my English angling friends acquainted, through your columns, with the prospects of sport during the early spring, when the heavy cavalry, otherwise the big freshly-run salmon, will be giving "at homes" under and above the weir wall, in the Mill Pool, and adown the upper and lower meadows, the Castle, and Bon-a-voy beats. In consequence of wet and stormy weather the big pike have been enjoying a respite on Lough Derg for some weeks, as none of us could venture out on that magnificent expanse of water.—**S. J. HURLEY.**

Waterville (co. Kerry).—Spring salmon are coming up very slowly, though the weather and other conditions have been favourable. A dozen salmon only were had at the weir on Waterville river during the first four days of the season. The heaviest fish weighed 17lb., and the average weight was about 12lb. They were all in fine condition. Only a few late fish remain on the spawning beds in the different rivers, and spawning may be considered at an end.—**T. J. D.**

The Monthly Delegate Meeting of the Anglers' Association will take place on Monday evening next, Jan. 16, at Foresters' Hall, Clerkenwell.

TO SPORTSMEN.—Burberrys, of 30, Haymarket, London, are now offering, at half price, their 1898 model and stock sporting garments, in gabardine, combination, and rain-proof tweed; shooting coats, 26s. 3d. and 31s. 6d.; breeches, 15s. and 21s.; Burberry capes and long overcoats, 31s. 6d.; farmers' overcoats, 16s.; Scotch stockings, 2s. 9d. Sent on approval on receipt of cheque covering.

SEA FISHING.

THE following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, Jan. 20. Tides decrease daily.

Brighton.—A boat angler caught about six score whiting about a week ago, since which we have had stormy weather and high winds from the S.E. and S.W., and at time of writing (Jan. 11) the sea is very rough and the weather unsettled.—**H.**

Castletown.—No anglers have been out since last report, owing to strong winds and a generally rough sea. The fish usually taken at this time are reported to be numerous on the inshore courses.—**T. J. D.**

Darbyne.—Anglers during the past few days have had good sport at whiting and pollack in the direction of Coomaconclane. A large shoal of mullet approached close inshore last week, and seventy-five were had by a trammel net.—**T. J. D.**

Deal (The Pier).—The visitors on Jan. 8 included Mr. and Mrs. Igglesden, Mr. Gareau, and Mr. Inskip, and during the earlier part of the day each experienced good sport, but the later hours of the morning and the afternoon yielded scarcely anything. Forty-five boats were afloat, and everyone brought ashore a heavy catch. Mr. H. Edwards and Dr. Patterson had seven score seventeen whiting and fifteen cod; Messrs. Zaehnsdorf, Gordon, and Wood, fourteen score of whiting and four cod; and Dr. Brunton and Mr. Blyth, nine score whiting and one cod. Monday's pier anglers were Messrs. Gilbertson, Gareau, Humphreys, Walters, and G. Wood, but the morning's catch proved few and small, and the afternoon yielded nothing. One local boatman had a grand catch of whiting and several cod, one of the latter scaling over 20lb. The pier was poorly patronised on Tuesday, and the day's results were also poor; but to-day (Wednesday) a splendid lot of whiting, codling, and dabs were caught, many of the whiting ranging between 2lb. and 3lb. The mildness of the morning brought out no less than twenty-three anglers of both sexes, and one and all were highly successful, the heaviest take being made by Mr. Gilbertson. Good sport may be expected during the continuance of the present spring tides.—**J. RICHARDSON** (B.S.A.S.).

Deal.—Thursday, 5th January, light air, westerly; water smooth and in good condition; and a large quantity of cod, codling, and fine whiting, landed by the local fishermen along the beach, in fact, I believe it is the red-letter day this season; I don't remember ever seeing such a sight at this time of the year before. One buyer sent by luggage train for market over 1 ton cod, codling, and fine whiting. 6th, wind, S.E.; fine, water smooth and very clear, and very poor sport obtained, save a few boats which landed fair takes the latter part of the day, and several anglers came down. 7th, sport only medium, as the weather was unsettled and only a few boats out. Mr. Edwards, with Larkins boatman, took seven score whiting and two cod; and others doing fairly well. 8th, wind S.W., fine, and warm; water smooth, and a large number of anglers out; Messrs. Taylor, Tautz, Symonds, and others out in B.S. Angler, and took twelve score whiting, eight cod, the best 9lb., one conger, 6lb.; Messrs Edwards and Dr. Patterson took fifteen cod and seven score whiting; and Master Taylor, with his father, hooked, played, and landed a cod of 8lb.; Mr. Mallet and friend, twelve score whiting and two nice codling; Messrs. Glassingtons, Leeks, Perks, and Andrews, twelve score whiting and seven codling; while a great many other anglers scored up well. 9th, wind, S.S.W., with fine clear sky, and warm; sport fair. Messrs. Hall, the Rev. Brackenbury, and another gentleman landed about seven score whiting (one weighing 4lb.), one cod of 8lb., and two smaller ones.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening**. Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly delegate meeting will take place on Monday evening next, Jan. 16, at 8.30.—R. GHURNEY.

Anglers' Association, (WESTERN DISTRICT) Visiting List.—The next visit will take place on Monday, Jan. 16, at the Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road; two minutes' walk from Edgware-road station (Metropolitan).—J. HARRIS.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate.—On Jan. 11 Mr. E. Jackson was chairman. Several members had fish: G. Barker over 6lb. of roach; George Prouten, dace; Ben Dare and H. Slack, roach and dace. We fish a jack sweepstakes competition in A.A. waters, Langley, Vetch's pound; one rod only; members can take own baits. Entrance fee 1s. Takes place on Jan. 29. Full particulars next week.—BEN ABRAHAMS.

Alma Angling Society. Coach and Horses, Portsmouth Place, Lincoln's Inn Fields.—On Jan. 8 the following weighed-in: Messrs. Drew, chub, roach, and perch, 4lb. 12oz.; Hopping, roach and dace, 2lb. 11oz.; Utting, Black, Montgomery, and Dyer, roach and dace. On Jan. 24 the members sit down to a leg of mutton supper, provided by our worthy host at 2s. per head. Any friend wishing to join us will be made welcome.—J. CHAMBERS.

Alma Piscatorials, 261, Seven Sisters-road, N.—The first outing of the season will take place on Saturday, Jan. 21. Members requiring punts, swims baited, or live bait provided should notify the fact, not later than the 18th inst., to Mr. Cartwright, who has kindly arranged and who will be in charge of this outing.—W. KOMLOSY.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—On Jan. 8 the following members had good shows of fish: Messrs. Lamharth, roach and dace; Millin, a fine show of roach and dace; Hutchingson, roach; Payne, roach; Nunn, sen., roach and dace; and Brelsforth, roach and dace. The next outing of the above takes place on Jan. 15, at Amherley, for six prizes.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—On Jan. 8 we competed at Datchet for the January series of prizes, the following being successful: Mr. H. Mallett, sen., 3lb. 4oz.; Mr. J. Farmer, 3lb. 3oz.; Mr. W. J. Wade, 2lb. 2oz.; several others having fish. On Jan. 6 Mr. B. C. Booth weighed in dace, 1lb. 13oz., one dace weighing 1lb. 2oz., which is being preserved by Mr. J. Jones. A lecture by Mr. T. Crumplen (our president), entitled "Fishing in the Eastern Counties," illustrated by oxy-hydrogen views, will be given at the society's spacious room on Jan. 30, to be followed by a smoking concert. This being our first concert under our new landlord, we shall be pleased to see all friends rally round us on this occasion.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—On Jan. 8 Mr. W. Thomas weighed in roach; Mr. J. Hudson, a fine take of bream and roach, five of the latter scaling 5½lb. (heaviest 1lb. 12oz.) Absent members are informed of match at Cookham on Jan. 15. Trains: Paddington, 8.40; and in conjunction, Vauxhall, 7.40; Queen's-road, 7.43; Battersea, 7.46.—A. JENKINS.

Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Since my last report the club was saved from a blank by Mr. T. Tringham, who weighed in some nice bream and roach. We fish a match at Wraybury on the 15th; to go by the 8.27 a.m. and return by the 5.10 p.m. Our visit on the S.L.U.V. List takes place on the 30th, when I should like to see the clubs in force.—T. TRINGHAM.

Bermudey Brothers' Angling Society, Woolpack, Bermudey-street, S.E.—The members of the above will fish a competition for their January series of prizes on the 15th, in the river Arnn, not in the Thames, as stated last week. Members to be allowed to book to either Pulborough or Amherley, and not to start until the morning. The following members weighed in on the 8th: Messrs. J. Hobb, 17½lb.; J. Smith, 15lb.; and J. Martin, 14lb. of roach. On the 11th Mr. G. H. Shepherd weighed in a fine show of roach and chub from the Thames (35½lb.).—ALEX. CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Our January series of prizes was fished for at Bures on Jan. 8, Mr. J. Foster being first; Messrs. Kobelt, J. Wheelhouse, Whiley, and Howard being the other successful competitors, but with small takes. In reference to my inquiries as to tench unfairly taken by our member, Mr. W. Farmer, it has turned out just as our society expected; but still, we, the members of the Blackfriars, bears no animosity to those gentlemen that gave us what they had heard about said fish. We, the committee of the Blackfriars, are done with the affair, and don't want to hear any more about it.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Jan. 8 Mr. H. Davis weighed in roach and dace, 2lb. 7oz. (one roach weighing 1lb. 4oz.); Messrs. T. Davis and J. Taylor, roach and dace; Mr. C. Davis, roach. Wednesday next, Jan. 18, will be limit night, when all subscriptions must be paid without fail.—T. PATERNOSTER.

Brompton Angling Society, D'Oyley Arms, Marlborough-road, S.W.—Members are requested to attend in force on Wednesday next to settle final details of match for supper kindly offered by Mr. Cowper, which it is proposed to fish on Jan. 29.—C. A.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—Our outing on Jan. 8 to the east coast was somewhat a failure, only about 14lb. of fish being taken. On the same day, Mr. H. Bodsen weighed in two jack and 8lb. of roach from our water at Bures; also Mr. E. Gardner, roach. On the 22nd we fish for a series of prizes at Bures.—HY. TAME.

Burlington Piscatorial Society, Burlington Hotel, Burlington-road, Westbourne Park, W.—A meeting will take place on Wednesday, Jan. 18, at 9 o'clock. Kindly attend this meeting to settle what prizes for the outing to Langley on Jan. 29.—P. LAVINGTON.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—We had a successful visit on the C.D.V.L. last Monday, sixteen clubs being represented. Mr. Mysteria gave us a clever ventriloquial entertainment. We have a roving match at Henley on Jan. 22.—E. BOXALL.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—The following weighed in on Jan. 8: Mr. J. Bowry, roach and dace; Mr. J. Tanner, roach and dace. Our next match takes place at Henley on Jan. 22. Usual conditions: signal to be given at the Anchor.—A. C. QUICK.

Castle Fields Angling Society (Shrewsbury).—The annual general meeting of the above society was held at headquarters, the Dog and Pheasant, on Thursday, Dec. 22, and as a result of the audit of the year's accounts a dividend of 13s. 2½d. was paid to eligible members, carrying forward a substantial balance. The necessary officers were duly appointed, the chairman, vice-chairman, and treasurer being re-elected. The annual supper took place on Jan. 5, when a capital spread was provided by the host and hostess (Mr. and Mrs. Tipton), to which ample justice was done, and a very pleasant evening was spent, all those present having thoroughly enjoyed themselves.—D. T. JENKINS.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—On the 8th the following weighed in fish: Messrs. A. Bowater, H. Rinnegar, H. Moore, J. Thorne; the latter member had among his take one roach over 1lb. Members are requested not to forget our match on Jan. 15, at Wraybury; train from Clapham Junction, 8.27; return from Wraybury at 8.55.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—On Jan. 8 several of our members were out, Messrs. Wallace, Sandle, Lowrence having fish. We fish our next competition at Windsor on Jan. 15 for three prizes; all fish to weigh.—T. PASMORE.

Clerkenwell and District United Visiting List.—A successful visit on the above was paid to the Camden A.S. on Monday evening. Mr. Bob Marshall in the chair, faced by Mr. Fitter. The following seventeen societies were well represented, viz.: Great Northern Brothers, Lincoln, St. John's, Enstonian, Bloomsbury Brothers, Alma, North London, Camden, Phoenix, Royal George, Central Club, Queen's Piscatorials, Prince of Wales, Dibdin, Social Brothers, Brompton, and Original Clerkenwell. The next visit will be to the Phoenix on Monday, Jan. 23. The quarterly general meeting will be on Thursday, Jan. 19, at the Middlesex Arms. To meet at 9.15 p.m.—F. CASTELL.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On Jan. 8 several were out and all our prizes were taken as follows: Osment, one; Cokhold, two; Thompson, three; also Messrs. Eastwood, Hunt, and Jordan were prize-winners. On Tuesday we had general meeting, and arranged in a very satisfactory manner the late netting appeal. Members please note Rule 10.—T. FAULKNER.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—On Jan. 8 the following weighed in: Mr. Long, roach; A. Anderson, roach and perch; H. Haines, roach; and W. Leadbeater, a nice shaped jack of 6lb. We have arranged to fish for our remaining prizes during February. Date and locality to be fixed at our next meeting, which will be quarterly meeting night, when all members are requested to clear the books. On Jan. 23 we have a smoking concert on behalf of the Rivers Preservation Fund. Ladies invited.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On Jan. 10 there was a very good attendance, when it was decided that the prizes in hand should be competed for on Jan. 29. Full particulars to be obtained at the clubhouse. Members are requested to attend on Tuesday, the 17th, to hear the balance-sheet read.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—The outing on Jan. 8 was a grand success. The successful competitors were: Messrs. D. Ansell, jack; J. Edwards, jack; W. Elton, roach and bream; H. Brock, hybrid. Usual meeting on Wednesday. Mr. A. Coulman proposed as a new member. Balance-sheet for half-year read and passed.—JOHNNY EDWARDS.

Drayton Park Piscatorials, Stanley Arms, Landseer-road, Holloway-road, N.—Outing successful.—GREG.

Eagle Angling Society, Red Lion, Tottenham.—On Jan. 2 Mr. T. F. Barlow had a show of jack. On 4th, Messrs. J. Dyer and T. F. Barlow, about 10lb. roach, dace, and chub. On 8th, Mr. W. S. Price, roach and dace. On 10th, Messrs. W. Denton, G. Baynton, and T. F. Barlow, four dozen dace.—W. S. PRICE.

Elgin Angling Society, Blenheim Arms, Blenheim-crescent, Notting Hill, W.—Several members were out on

Angling Fixtures.

January 15.

Amicable Waltonians: Outing to Amberley.
Battersea Friendly: Match at Cookham.
Battersea Piscatorials: Match at Wraybury.

AMERICAN BOOKS.—A catalogue of American books in various departments of literature can be had of Sampson Low, Marston & Co., Limited, St. Dunstan's House, Fetter Lane, London.

ORIENTAL BOOKS.—Formerly issued by W. H. Allen and Co., now published by Sampson Low, Marston and Co., Limited, St. Dunstan's House, Fetter Lane, London, Publishers to the India Office.—A CATALOGUE of these Text Books, Class Books, Histories, and Indian Government Publications can be had on application.

Jan. 8, some of them having good shows of fish. Mr. Wilson and Mr. Bridge had the best. We fish a match on Jan. 22 for a number of prizes (roving), from Windsor Bridge to Surly Hall; all members to go by the 9 o'clock train from Westbourne Park.—G. KINE.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—The following members weighed-in on Jan. 8: Messrs. Pheasey, roach, dace, and perch, 5lb.; Wells, roach, dace, and perch, 5lb. 10oz.; Balam, roach, 3lb. 14oz.; Mr. Pheasey being the fortunate winner of the fortnightly prize.—W. LEFEVRE.

Firm and True Angling Society, Prince Regent, Beresford-street, Walworth.—On Jan. 8 several members weighed-in nice shows of roach and dace. On Tuesday night we held our return visit on the S.L.U.V. List, when twelve clubs were represented. We were represented with plenty of very good talent during the evening. The chair was occupied by Mr. G. H. Field, president of the S.L.U.V. List; Mr. George George, of the St. Thomas' A.S., and Mr. T. A. Veasey, our worthy host, occupied the vice-chair. I wish to thank those gentlemen and the whole of the artists for their kindness in coming to help us make this a great night for the opening of the new year.—T. ROSSER.

Forest Piscatorial Society, Rose and Crown, Hoestreet, Walthamstow.—Messrs. G. Beaumont and W. Davies weighed-in roach.—H. TISLEY.

Forest Gate Piscatorials, Forest Gate Hotel, Godwin-road, Forest Gate.—Since my last report the following members have weighed-in: Messrs. Creeke and Head, roach; Mr. J. T. Inman, jack; Mr. Willett, jack, 11lb. On the 1st inst. we fished for the two remaining prizes of Christmas competition, which resulted in Mr. Creeke taking first, with roach and bream, and Mr. Head second, roach.—H. F. C.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Mr. Thompson and Maybury brought in roach on Jan. 8. Mr. Jones had jack on the 10th. The members voted £1 ls. to the Netting Fund, also £1 ls. to the Preservation and Stocking Fund. I hope all societies will do likewise.—R. MURPHY.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had a very nice show of fish on Jan. 8, chiefly roach—there was one jack amongst them—the finest show of roach we have had during the season.—A. E. PAYNE.

Hatcham Brothers' Angling Society, Queen Victoria, Pomeroy-street, New Cross.—On Jan. 8 a record show of jack graced our tables. Mr. A. Mead came first with five jack, scaling 24lb. (largest 10½lb.), now being preserved; second, Mr. H. Bird, two jack, 11lb. (largest 6lb. 10oz.); and Mr. E. Furnival, with jack, 6lb. Mr. Furnival had also a good show of perch (largest over 1lb.), all taken from the club's private water. Mr. J. Winter had two roach from Pulborough, one over 1lb. A series of concerts are about to be arranged, the first of which will take place on Thursday, Feb. 2. Further particulars of which will be given in the *Fishing Gazette*.—W. TARRY.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Mr. Smith and Mr. Jeffries had a show of roach. Mr. Robinson was elected treasurer of this club co-jointly with Mr. Russell.—C. SMITH.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—At our usual weekly meeting, Mr. Caines delivered his reading on "Pike Fishing," which was much enjoyed. The next reading will be given by Mr. Steinhart on "Trout Fishing." Messrs. G. Johnson and A. Stevens, out on Friday at Hertfordshire, had several jack. Mr. Clayton, on Jan. 8, had a fine show of roach, several over 1lb. Mr. Caines, out on Wednesday, reports Colne very thick, and prospects of sport poor.—A. CLAYTON.

Hoxton Brothers Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On Jan. 8 the members

competed for special prizes at Rye House; all were taken, but with only small weights. The following weighed-in: Messrs. J. Wiltshire, J. Huntley, A. McGuinness, W. Smith, W. Bishop, E. Harris; also Messrs. F. Newton and H. Bailey weighed-in roach for monthly prizes.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—On Jan. 8 the following weighed-in: Messrs. Holder, roach; Howard, roach; J. H. Herbert, roach; Hecakford, roach; Burwash, dace; and Boys, dace. We met on Tuesday last, when it was settled to have our return visit on No. 2 Eastern District List on Tuesday, Jan. 31.—J. H. HERBERT.

Isaac Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—The members competed for three special prizes on Jan. 8, Messrs. G. Nunn, C. Hayward, and R. Hill being the winners. The three "specials" offered for competition on Wednesday last were not taken. Mr. C. A. Hayward weighed-in roach, and Mr. G. Rogers jack, on Jan. 8.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since my last report we have had two nice shows of roach weighed-in from the Thames by Messrs. Bence and Gilder. We fish a match on Jan. 15 from Cookham Bridge to Bourne End Railway Bridge; all fish to weigh; two rods; take your own live baits; first train down from Westbourne Park, or any subsequent train.—G. BENCE.

Lady of the Lake Angling Association, Swakeley Hotel, Shepherd's Bush, W.—In consequence of the lamented death of our secretary, Mr. A. B. Mason, the competition arranged for the 15th inst. is postponed until further notice.—W. J. JONES.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville.—On Jan. 8 the following weighed-in close on 40lb. of roach and dace: Messrs. Utton, Biggs, Johnson, R. Watling, Manly, W. Watling, Bowley, Bowdrey, and Cook. On Wednesday Mr. Johnson and Mr. Baker weighed-in some roach and dace. We have an outing to Bourne End on Jan. 22 for seven prizes; usual conditions.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—We had a fair attendance at our last meeting, and the members were in a business vein, and cleared everything off the board. Four members had been fishing in the Dee, and reported good sport amongst roach and dace, but the pike fishers had a blank. We are, in conjunction with the West Derby Club, taking the necessary steps to form a centre of the Northern Anglers' Association here, and a meeting is proposed by Mr. Redford at the Bee Hotel on Saturday afternoon next, to consider and decide the matter. We hope the new Central Club will come in, as this would materially strengthen the combination.—RD. WOOLFALL.

Liverpool East End Angling Association, Court House Hotel, Commutation Row.—The annual meeting of the above-named association, which has been an adjourned one for three meetings, owing to the great amount of work, was finally concluded on Monday last. During the meeting it has been decided to raise the amount of specimen prizes from 5s. first and 2s. 6d. second to 10s. and 5s. respectively. Also that specimens will only be eligible from free waters; that is to say, where each and every member can fish either by permission or by payment not exceeding 1s. per day, two members' names being sufficient to certify the weight of the fish. Fixtne cards will be printed, showing the dates and places where the matches will be fished during this season, both for week-day and Sunday matches. A hearty vote of thanks was accorded the officers of the society for the satisfactory manner in which they have managed the affairs of the association during the past twelve months. The election of officers to serve during the season of 1899 resulted as follows: President, Mr. Macmudron; chairman, Mr. G. F. Chantler; vice-chairman, Mr. G. Attwood; treasurer, Mr. Syl. Walker; secretary, James Reynolds; assistant-secretary,

Mr. J. Sharpe; auditors, Messrs. E. Bate and J. W. Wright; committee, Messrs. Isaac Smith, J. A. Porter, A. Laidlaw, T. C. Leger, J. Gilmore, J. Wishart, J. E. Pritchard, and J. Gardner. The annual dinner, which will take place this month, has not yet been put in form, but it is likely to be in a day or so. Tight lines and good luck to all the members.—JAMES REYNOLDS.

Maldon and Heybridge Angling Society, White Lion, Fullbridge, Maldon, Essex.—Since my last report some very good roach have been taken from the Langford, backwater by Mr. J. Freeman, T. Springett, S. Vince, Ben Bevers. The remaining Christmas prizes were fished off on Saturday last, the first prize being secured by T. Springett, followed by S. Vince, B. Bevers, R. White, H. Hutchinson. Ben Lees, of the Brunswick A.S., secured some very good roach on the 8th inst.—two fish over 1½lb. each and a bream 2lb. 12oz. The time of high water at Beleigh on the 15th will be at 3.12 p.m. This will allow for most of the afternoon in the tidal waters. The competition for the cup given by Mr. Ben Lees will be commenced on Saturday next, Jan. 14, at 2 p.m., and fish up till dark; all fish to be weighed-in at 7 p.m. each Saturday. The prize offered by Mr. C. Evans, of the Cambridge Heath A.S., will also be included in the competition commencing next Saturday, and will be continued on Jan. 21, Jan. 28, Feb. 4. The member taking the heaviest gross weight of roach and dace will receive the cup, and the other prizes will follow on.—F. KEEN.

Mildmay Angling Society, Clarendon Hotel, Mildmay Park, N.—The fourteenth annual dinner of this society will be held on Feb. 7, at 7.30 p.m. Tickets are now ready, and I shall be glad to hear from members as soon as possible as to how many they will require. Our next outing is to Pangbourne on the 21st and 22nd inst. Details to be arranged next Tuesday.—A. E. HENNON.

North-East Brothers' Angling Society, Star and Garter, Green-street.—On Jan. 8 W. Richards, sen., weighed-in roach. On Jan. 15, match at Burnt Mill; train, 7.20, Globe-road, or 8 o'clock Liverpool-street, Monday, Jan. 23, smoking concert.—A. LEWIS.

North London Angling Society, Tap House, Holloway-road.—On Jan. 8 Messrs. Pink and Black weighed-in roach from the Lea; Hayes and Adams, roach and dace from the Thames. The next return visit on the Central List takes place at the above on Tuesday, Jan. 17. Secretaries not receiving invitations kindly accept this as such, and oblige. Members are requested to attend next week to settle date of next outing.—H. STRETCH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Jan. 1 we had a fair show of fish—Messrs. W. Madgett, 9lb. jack; S. Orrow, 6lb. 10oz. roach; S. Dulieu, 3lb. 8oz. jack; R. Brockett, roach; J. Franks winning the last prize on our list with perch. Tuesday, 3rd, was our general meeting night. The balance-sheet was read and received, showing that we are in a good financial position.—E. BROCKETT.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—On Jan. 8 Messrs. Hill had a nice show of club (largest 3lb.), also a barbel 4½lb.; Atchison, roach; Widmer, roach and dace; Webster, jack. We have a match at Roydon on Jan. 15.—A. HILL.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Several members were out on Jan. 8: Messrs. Thompson, Pemberton, Coldwell, Stracy, Carter, Hopton, jun., Reitz, Hopton, sen., and Vyell, sport being bad, and only two weighed-in. Members are requested to attend on Tuesday next to settle date for the concert.—W. S.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On Jan. 8 Mr. Austin had 17lb. of good roach from the Thames; Mr. Carr, bream. The next return visit on the Clerkenwell and District List will be to us on Jan. 23.—R. C.

Tottings by the Way.

THE lecture on "Flat Fish" by Dr. Patterson, on Monday last, was most interesting and instructive. The Piscatorial salon was adorned by several large drawings of the various species (dabs, flounders, soles, plaice, turbot, &c.), and I really believe I could now distinguish a dab from a flounder. Mr. Hussey sent a nice basket of dabs to "Drag" Manion, and I was able to pronounce an opinion. "Them," says I, "is dabs."

I THINK it is in "Jackson's Upright Copybooks" that the line occurs, "A place for everything and everything in its place." We all know what a place is within the meaning of the Act; but it is seldom that a place is "spotted" in such a peculiar place as that which transpired at the Marylebone Police Court recently. The *Daily News* heads it "A Novel Chest Protector." A man who had served his master for seven years has now lost his place for that he did wilfully pilfer a plaice, valued at 4s. 3d., from the slab of Mr. Snell, fishmonger. Detective Andrews "saw the prisoner come from a yard at the rear of the shop, and noticing that he looked 'bulky,' questioned him. He professed to have nothing about him, but when searched the plaice was found flat across his chest under his clothes!" 40s. or twenty-one days for using a chest protector.

MR. J. RICHARDSON, of 123, Enston-road, has received for preservation a nice plump little 10lb. pike, taken while fishing off an island near Pangbourne. The captor (Mr. Sturgeon) is pretty well known amongst London anglers; but why, oh! why, does he go out without his landing-net? All the same, Mr. S., there is a little skill requisite to land even a 10-pounder without a net; the next time you go out you will take it, and perhaps get nothing.

A TERRIFIC gale, accompanied by torrents of rain, raged over London on Thursday. The wind wrought havoc amongst the chimney pots, and the rain has not improved the rivers, which, although a little fuller, will certainly be the wrong colour for week-end fishing.

A LESSON from the United States may possibly be taken as regards the increasing of the supply of fish. Amongst other instances, it is stated in the *American Field* that, "At the weirs, Lake Winnebago, N.H., the employes of the State Fish Commission are now busy netting monstrous trout and landlocked salmon for the purposes of propagation. The females are stripped of their eggs and the males of the milt, which is placed with the eggs in the hatcheries to fertilise them. The fish are returned to the water unhurt after having been utilised. The same process is in operation at Sunapee, Winnisquam, Newfound, Connecticut, and a dozen or more smaller lakes in the State. Millions of eggs will be secured, and will be hatched the coming spring, furnishing fry to replenish the waters of the State."

Also a short time ago "The United States Fish Commission's" No. 1 delivered at Farmington, Me., from the Green Lake Hatchery, a batch of 11,000 fingerling landlocked salmon, which were liberated in lakes and ponds in the vicinity of Farmington. Mr. J. A. Linscott, of the Franklin County (Me.) Fish and Game Club, recently received from the new hatchery at Winthrop 5000 salmon fry, which he liberated in Clearwater and Varnum ponds, near Farmington. Several thousands of fry from the State hatchery were liberated a few days ago in Gull Pond, in the Rangeley region, by Mr. Eugene Soule, of Rangeley."

AND again, "The United States Hatchery at Green Lake, Me., has furnished 25,000 young landlocked salmon upon the application of Mr. W. E. Berry, of Winthrop, in that State, for the purpose of stocking the lakes in the vicinity of Winthrop. Some 14,000 of the lot—fine, lively fish about 6in. in length—were delivered recently at Winthrop, where teams were in waiting to carry them to the lakes in which they were liberated. The anglers in that section are anticipating fine sport with these same fish after the lapse of two or three years, as this salmon grows rapidly."

"THE only specimen, it is said, of the polypterous or 'bichir' ever brought to America is now in the biological laboratory of the Columbia University, New York. It is a curious fish found on the African Coast, and was brought to America by Nathan P. Harrington, fellow in zoology, and Dr. Hunt, who, last summer, made up the Columbia zoological expedition to the Delta of the Nile. Their main object was to secure the eggs of the prolepterus, one of the three surviving kinds of lunged fish, for embryological study. In this they were unsuccessful, as, though specimens were found, they were unfortunately without eggs. The prolepterus, which looks something like an eel, is in the habit of diving into the mud and building a sort of cocoon for itself, within which it keeps during the dry season."

"Of all the methods of taking fish," says the *American Field*, "that which it is claimed is used by John S. Conaway, of Dillsboro, Ind., is the most singular. Fishes of ordinary size he catches and lands with his hands, but to the larger ones he attaches a rope and thus lugs them out. He claims he can land catfish of 75lb. weight, and that he has caught for years hundreds of

West Ham Brothers' Angling Society. Coach and Horses, The Grove, Stratford.—Since my last report the following members have weighed in fish: Mr. John Newton, roach; Mr. James Newton, roach; Mr. Weller, jun., jack; Mr. A. Kettner, jack; Mr. J. Noden, jack.

West London Angling Society. Dartmouth Castle, Hammersmith.—W. Cox, jun., weighed in for the cup on Jan. 8 (4lb. 9oz.), as also did E. Coomes (3lb. 14oz.). C. J. Carter had three specimen roach and some bream on the 1st inst., and also a fine show of dace on the 8th. Our next supper is fixed for Feb. 2. Our member, Mr. E. Street, has recently purchased Taylor's Restaurant in Richmond, and will be pleased to make his angling friends welcome.—J. J. HUNTER.

Westminster Angling Society. The Telegraph, Regency-street, S.W.—On Jan. 8 Mr. Eccarius made a good show with three specimen bream (largest, 4lb. 12oz.), two perch, and a tray full of roach. A special meeting will be held next Wednesday to arrange January match.

Ye Olde Clapham Rovers' Angling Club. The Windmill, Clapham Park-road.—Our prize outing on the 2nd, only one prize being taken, by T. Gloster, with roach and dace. A few of our members were out on the 9th, when N. Linden and Frank Taylor weighed in perch and roach. We had a large attendance on Tuesday, and got through some good business, appointing Messrs. Dean and Wyatt as auditors. We have a prize outing at Sunbury on Jan. 22; three prizes. Will all members please go in for this competition?—N. LINDEN.

AN OLD FLY-BOOK

MR. HENRY BRIGHOUSE, of Ormskirk, some years ago sent us an old fly-book. On one of the leaves is written: "Charles Jones, his book, June 26, 1792." Charles Jones evidently made his own flies, for the book contained odds and ends of fly dressing material—hackles, feathers, fur, silks, &c.; also gut and horsehair, the latter quite good, although more than 100 years old. In one of the pockets was this permit to fish:

"Mr. Jones, the bearer, has lease from Mr. Dicconson for a day or two's angling at Wrightinton and Scarisbrick. May the 26, 1800.

"THOS. TOMLINSON."

In another pocket was this receipt for taking fish:

Six pennyworth of polypody of the oke and wormwood. Rub your hands with wormwood wheel first to fish with.

2 pennyworth of oil spikenord;

2 do. pen. of oil of crane;

2 do. pen. of asp oil;

4 do. pen. of oil anell seed;

2 do. pen. of oil rhodium.

Put it in a botel and keep it milk warm for ten days.

Just tuch your bate.

£ s. d.

"This rect. cost mee 2 6."

STOP PRESS.

WEATHER REPORT.

By TELEGRAPH.—FRIDAY, JAN. 13, 10.40 A.M.

DEAL.—W. by W.; moderate; smooth.

DOVER.—W.; moderate.

MARGATE.—W.; smooth.

HASTINGS.—W.; rough.

SOUTHERN.—Friday Morning.—Violent westerly gale, but moderating. Fishing prospects good.—HUSSEY.

MR. J. W. HARRIS presided on Thursday night at the distribution of prizes won in the Windsor competition. The Queen's Arms had quite 200 (recipients and onlookers), when more than eighty prizes were awarded. "Ben" says visitors came from all parts—High Wycombe, Staines, Tottenham, Sunbury, Eton, Windsor, &c.; and he wishes here publicly to thank all those who have assisted in augmenting the funds of the A.B.S. Mr. J. Gibson (an amateur) lent his unique collection for the evening—plaster casts of barbel, roach, tench, carp, gold and silver fish, &c.—and needless to say, they were much admired. A committee meeting is announced for Thursday evening next, Jan. 19.

A ROACH competition in connection with the Kingston Piscatorial Society will be held in the Thames on Jan. 15 and 16. Only one rod allowed. Prizes will be awarded for the two heaviest fish. No professional fisherman to assist. Members may fish on one day only, and must intimate which to the hon. secretary, in writing, prior to the commencement of the competition. Weigh-in at the Sun Hotel between 8 and 9 p.m. each day.

ANGLING visitors to the pretty neighbourhood of Llanymynech occasionally find out to their sorrow how very rapidly the river Vyrnwy overflows its banks after heavy rain, especially when the rain is accompanied by a strong gale of wind from the south-west. Many anglers have arrived there overnight in expectation of good sport on the morrow, but next morning have been astonished to find the river, which on their arrival was only slightly swollen, had in that short space of time risen to about a mile in width. It, however, subsides nearly as quickly, and anglers have not long to wait for it to get again into condition. These sudden floods during the night have to be guarded against by the farmers, and a short time ago one of these—a fresh arrival—lost several valuable cattle, which were drowned and carried away before the morning. The village itself, although near to the river, stands on an elevation, and is not in the least affected by these sudden inundations.

Prince Albert Angling Society. Prince Albert Hotel, Woodfield-road, Harrow-road, W.—On Jan. 8 the following weighed in: Messrs. W. Fayers, a good show of roach (largest 1lb. 7½oz.); Derry, roach and dace; Grimwood, roach; and P. Britten, roach. Members are requested to attend on Thursday next, to arrange for next outing.—W. B. F.

Prince of Wales' Angling Society. Windsor Castle, Church-street, Edgware-road.—There was a capital show of roach and dace placed on the trays on Jan. 8 by Messrs. Robins, Wheeler, Haynes, Clist, and Whitford. Our return visit takes place on Monday next, when I shall be pleased to see old faces. Secretaries not receiving a post-card will they kindly accept this as an invitation. Members do not forget the match at Bourne End on the 22nd.—W. B.

Queen's Piscatorials. Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On the 8th inst. the following weighed in: W. Shepherd, J. Winsby, and C. Brett. The concert in aid of the A.B. Fund, on the 9th, was not the success that might have been anticipated, considering the cause. Still, the talent was very good, and those who did attend enjoyed themselves.—GEO. KEENE.

Royal George Angling Society. Queen's Arms Hotel, Bateman-street, W.—On Jan. 8 the following members returned with fish, viz.: Messrs. Davis and Bardot. The former gentleman showed an excellent tray of roach from the Upper Thames. Will members please attend next meeting night, to discuss the desirability of an outing?—J. GIBBONS.

Royal Oak Angling Society. Coborn Arms, Coborn-road, Bow.—On Jan. 8 the following had fish: Mr. G. Williams, roach; F. Pignatelli, perch. On Jan. 22 we fish a match (go where the members like on the morning) for six prizes; gross weight of all fish.—F. PIGNATELLI.

Seymour Brothers' Angling Society. King and Queen, 1, Foley-street, Fitzroy-square, W.—On Jan. 8 the following weighed in, viz.: Messrs. W. North, roach and bream, 15lb. 7oz.; G. Campbell, roach, 13lb. 13oz.; C. Smith, sen., roach, 5lb. 4oz.; B. Smith, roach, 5lb. 14oz.; S. King, roach, 1lb. 3oz.; and W. Aldis, jack, 6lb. 15oz. Our next outing will take place on Feb. 12, to Goring.—W. ALDIS.

Silver Trout Angling Society. Bedford Head, Maiden-lane.—On Jan. 8 Mr. Fletcher weighed in roach; Mr. R. Smith also had a nice show of roach, 7½lb., the largest just on 1lb.—PELICAN.

South London United Anglers' Visiting List.—A return visit on the above list took place on Tuesday last at the Firm and Trine A.S., Prince Regent, Beresford-street, Walworth, when twelve clubs were well represented. The next visit goes to the Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction; date next week.—ALF. PAINTER.

Stockwell Angling Society. Old Queen's Head, Stockwell, S.W.—Mr. F. Parton saved us from a blank last week with roach from the Thames. At our last meeting we made another new member, Mr. Parton, sen. An arrangement has been made for an outing on Jan. 15, at Teddington; 9.10 train from Vauxhall.—THOS. LUCAS.

Stratford Angling Society. Dorset Arms, Leyton-road, Stratford New Town, E.—We had a good show of fish on the 8th inst., contributed by the following members: Messrs. J. Grande, roach and dace; T. Sandilands, roach; F. Bates, roach; and F. Humphres, roach. Other members were out, but arrived home too late.—G. F. WEAVER.

Sundall Angling Society. Plough and Harrow, King-street, Hammersmith, W.—During the past week several of our members have been out, Mr. Parker having 13lb. 5½oz. of roach and jack (largest roach, 15½oz.; largest jack, 4lb. 11½oz.); Mr. Holt, roach and dace, 2lb. 3½oz.; Mr. Burnham, one jack, 4lb. 11oz. Members are requested to attend meeting next Tuesday, to arrange for an outing and other important business. The balance-sheet for the half-year was read, showing the club to be in a sound position.—C. E. LOCK.

United Brothers' Angling Society. Druid's Head Tavern, Deptford.—Several members were out on Jan. 8, but returned with blanks. The members will fish a match on the Lea on Jan. 22 for several money prizes and given prizes.—H. TYLER.

Victoria Brothers' Angling Society. Princess Victoria, Robert-street, Hampstead-road, N.W.—On Jan. 8 Messrs. J. Toothill, roach; W. Toothill, roach and perch; and F. Griffith, roach (a splendid show). Owing to resignation of Mr. Hooper, the post of secretary is filled by W. H. Bonfiller; J. Toothill, chairman.—W. H. B.

Waggoners' Angling Society. White Lion, Albert Embankment.—Since my last report we have had some fine shows of fish on our trays, contributed by the following members: Messrs. Clegg, G. Clayton, Allan, W. Powell, C. Pitts. On Jan. 8 Mr. Allan, roach and dace; Mr. Clegg, roach. I wish to remind members that the arrangements take place on Tuesday next for our next match. Members wishing to compete must bring themselves within limits.—H. C.

Walham Green and Chelsea Angling Society. Black Bull, Fulham-road, S.W.—Our meeting of the 11th was well attended. A new member was added to our roll. On Jan. 8 three members weighed in: Mr. Alder, a fine chub; Mr. Dungey, the heaviest roach of the season, 1lb. 13½oz.; Mr. Brixey, a brace of jack. I hope members will not forget our outing on Feb. 5. Mr. Sntehall is still unable to attend to his duties.—W. BATCHELOR.

Wellington Angling Society. Prince George, Hillingdon-street, S.E.—The result of our January competition at Datchett was Mr. Papworth first, with chub and dace; Mr. F. Westoby second, with dace and gudgeon; Mr. J. Westoby third, with dace. Members will please muster in force next Tuesday, as we have a lot of business to do before the close of the season.—F. WESTOBY.

them. Also that he has caught with his hands 500lb. of fish in one day. He feels carefully under stones and hauls out the fishes, sometimes going into water 10ft. deep, and when the fishes are not too large catching several before coming to the surface. He claims he has caught large numbers of snapping turtles by hand, by being very careful in his movements."

"B. F. MEEK," says the *American F. G.*, "known to fishermen throughout the United States and England as the inventor and manufacturer of the Frankfort reel, still works in his shop in Louisville, though more than eighty years of age."

"THE sea cucumber, one of the curious jelly bodies that inhabit the ocean, can practically efface itself when in danger by squeezing the water out of its body and forcing itself into a narrow crack so as not to be visible to the naked eye."

"SOME curious statistics have been lately worked out by a well-known scientific man as to the amount of salt held in solution by the oceans of the world. He reckons that 90,000,000,000,000 tons of salt exist in the water. These figures, of course, convey no impression, but it would be enough to cover all the land of the earth with a solid layer of salt 1000ft. thick."

An important paper by Mr. Walter Garstang, M.A., F.Z.S., the naturalist in charge of the Fishery Investigations of the Marine Biological Association, appears in the last number of the journal of that association, issued in November. It occupies sixty pages, and deals most exhaustively with the racial differences of *Scomber scomber*. The American form of this fish differs very considerably from those found in European waters; but, though constituting distinct varieties or races, there is no reason to doubt their specific identity. The establishment of geographical or local races of mackerel settle several disputed points concerning the migration of this fish. It is proved that the mackerel does not make long migrations, as once thought. Neither does it cross the Atlantic. There seems to be little doubt that the varieties found in the Irish seas do not wander in winter far from their summer haunts. The North Sea fish of this species appear to winter in the English Channel, returning northward in spring.

The individual who went fishing and went to sleep instead and caught a wild duck is well known to readers of the *F. G.* Well, a *Scraps* artist has discovered a companion for him. Poddles went rabbit shooting, but got no sport. "How they will laugh at me at home," he dolefully reflected. For consolation he called in at the Blue Pig, had a big drink, and got fuddled. In a dazed condition he was struck by what he considered a very happy thought. "Why not buy some game and say he shot it himself?" Dabbs, the fishmonger's shop, is handy. Done! "See the conquering hero comes"—with three whiting suspended from the barrels of his breechloader.

A CORRESPONDENT writes: "Fish, who not only need sleep like other creatures, but yawn when drowsy, and exhibit quite recognisable signs of somnolence, sometimes seek a quiet chamber to slumber in. This is obvious to any one who will watch the behaviour of certain rock-haunting species at a good aquarium. The lump suckers, conger eels, and rockfish will retire into a cave in the grotto provided for them, and there go fast asleep; though as their eyes are open their 'exposition of sleep' is only proved by the absence of movement, and neglect of any food which comes in their reach, and pike are easily snared when asleep."

"THE famous Roman bath," says the *Daily Mail*, "situated in the very midst of the city of Bath, and half enclosed from the outer air, is stocked with Chinese carp (the English gold and silver fish). Recently it was discovered that the fish which ornament the silent pool were diminishing, and the robber was found to be a kingfisher. Apparently he found the fish very tasty, for quite fifty have been carried away, and as the only means of stopping the robberies the bird was shot by an attendant. There are no local precedents for a kingfisher invading the busy haunts of man."

The following is sent by Mr. E. Tod (of Brighton), and it appeared in the *Brighton Standard*. "This morning my wife and I went out for a couple of hours' fishing in the boat *Little Willie*. We fished a spot about half a mile due south of the pier, where I was fortunate enough to hook, and, after a good twenty minutes' tussle, to land a fine codling (or should I say codfish) weighing 22lb. The fish measured 45in. from the tip of snout to tail. I was using an ordinary jack rod with fine tackle, and the bait I used was a piece of sprat. This was, strangely enough, the extent of our catch. The catch was weighed in the fishmonger's shop at the bottom of Preston-street, Mr. Ingarfield's, and the measurements were taken by Mrs. Montague, with whom I am spending a short visit. Should you think this of sufficient interest to those of your readers who are fond of fishing, I would be very pleased if you would kindly insert the same in your up-to-date newspaper.—J. A. H. SPOFFORTH."

THE Earlsfield Angling Society have arranged another outing for Jan. 15, from Chertsey Weir to Shepperton Weir; all fish to weigh.

THE newspaper man is popularly supposed "to know everything," and to be able to answer off hand the most abstruse questions on any subject from cookery to cock-fighting, but I confess a question which comes to hand this week is one too many for me. "Dear Drag," writes a correspondent, "why is the speed of a ship measured in knots?" I can only reply, "My dear sir, I do not know, but I suppose it is something to do with the tied." See?

HERE is another sample of what I have to put up with. A friend, whom I have hitherto considered fairly sane, writes: "When is a fish like a door? When it's a char." I am sure I have every reader's sympathy when I raise the corner of the curtain and show them a few of the trials which are bringing premature "balditude" upon me.

I do not know whether "other people's" barometers have gone wrong; at any rate, mine has got into such a mendacious condition that it could give even a gas meter a long start and a beating at bare-faced ntruths. It goes up, and we have a gale and much rain; it tumbles down as quickly as a pantomime policeman on a buttered slide, and forthwith we have a lovely day. I have given it notice that I provide it with board and lodging to tell me what the weather is going to be to-morrow when I want to go a-fishing. I can give a vague guess at what the day before yesterday's weather was without assistance, and that unless in future it tells "the truth, the whole truth, and nothing but the truth" (as head of the family, I can do all the lying that is necessary in my establishment myself), I shall sell it and buy a new one with part of the money.

OUR F. G. ALBUM OF ANGLERS.

No. 32 (New Series).

THE LATE MR. JOSEPH DUCK.
(See page 16.)

LORD BEACONSFIELD once called Southend "the Riviera of England." The other day when business took me there, Lord Beaconsfield's remark was fully justified, the weather was superb, and a large number of visitors were on the front listening to the newly-established town band. I wore the Queen's uniform for a good many years, so I fancy myself somewhat of a connoisseur in bands, and I am pleased to say the way in which they played would do credit to any regiment in the service.

Palmas qui meruit ferat. The excellence of this band is due in a very large measure, if not entirely, to the indefatigable exertions of Bandmaster Stevens. That he is not quite a beginner at the game is evidenced by his wearing the Afghan medals, and, above all, by that little bronze star, with its rainbow ribbon, rare even in the army, which tells all the world that friend Stevens was one of the handful of heroes who accompanied General Roberts on his never-to-be-forgotten march from Cabul to Candahar. A good fisherman is my friend, but, as he pathetically remarked, "You know, Dragnet, I have my hands so full now that even fishing has to take a back seat." I can quite believe it. The band fills a long felt want in the town, and it should receive the best of support from visitors and residents alike.

I HAVE recently come across a very old catalogue of Black Letter Ballads, temp. Elizabeth, and many of them are on most interesting subjects. No. XXIII. is entitled "The true description of the marvellous strange Fishes, which was taken on Thursday was sennight, the 16 day of June, this present month in the yeare of our Lord God 1568." Imprinted at London in Fleetstreet, beneath the

conduit, at the Signe of Saint John Evangelist, by Thomas Colwell. This is the identical ballad "of a fish" referred to by Autolycus as forming an item in his multifarious pack (see "Winter's Tale," Act IV., Scene 3). Autolycus was evidently an adept at fishing tales, but, of course, a little latitude must be allowed him in his anxiety to sell his wares.

AND then, of course, there is poetical licence to be taken into account; but there were, no doubt, wonderful fishes in those days, as Stow, the chronicler (to whom poetical licence cannot be allowed), says in his "Annales": "On the 11 of October (1568) were taken in Suffolk, at Downam bridge, neere unto Ipswich, eightene monstrous fishes, some of them containing eight and twentie foote in length, the other 24 or 21 foote in length at the least."

PERHAPS some do not know what 'poetical licence' is. I will tell them.

"Poetical licence means should he want it he Does what he likes with fact, grammar, and quantity."

MR. H. TISLEY sends the following: "Many anglers will hear with regret of the disappearance of a (to them) familiar figure in the person of J. Garne, who has for many years past been connected with the Higham Hill Fishery, who died on Monday afternoon last, after a painful illness of several months duration."

ANOTHER relic of ancient London—the old house, No. 17, Fleet-street, now in the occupation of Mr. John Carter, the hairdresser—will disappear in a few days. It is known as the old Palace of Henry VIII., and was built by command of Cardinal Wolsey. Workmen have begun pulling down the house. It is to be rebuilt by Mr. Carter, who proposes to turn the place into one of the finest saloons in London. The most interesting room in the house is on the first floor. It is gorgeously decorated, and contains some very valuable specimens of antique carving. In this room Henry VIII. and Wolsey met on several occasions, and there is still the chair in which the cardinal sat.

A SMOKING concert in aid of the Rivers' Preservation Fund (a most worthy object) will be given by the members and friends of the Crown and Buckland Piscatorial Society, on Monday evening, Jan. 23, commencing at eight sharp. Ladies are specially invited to be present.

"WILLIE JONES," said Mr. Grimface, the schoolmaster, sternly, "I am very much afraid from your behaviour you wish me to chastise you. Do you remember the old precept beginning, 'Spare the rod?' " "Yessir," said Willie. "Spare the rod and lose the fish."

ONE of the London daily newspapers is fast gaining notoriety for the frequency of its misprints, and appears to be possessed of a printer's devil of more than ordinary industry and ingenuity in the bad cause. His latest specimen is describing the effects of an explosion of gas at Coombe, in which "Three young people were knocked down, and all of them were very badly burnt about the servant's hall, which, like the other rooms, had the flesh torn off her face, and her eyes have been so badly injured that it is feared she may be rendered totally blind." It must indeed have been a very serious explosion to confuse things in this most extraordinary manner.

THE following oddities among many others reached a Vienna editorial office in 1898 (says the *Daily Telegraph's* Vienna correspondent): "The post-mortem examination showed that the unfortunate girl was a teacher's daughter."—"When the housemaid entered the bedroom at the usual hour she found her master already a corpse. Soon afterwards he withdrew altogether from the political arena."—"The gas-lamps, which at this time were not yet lighted, made the streets appear still darker."—"Death trod with rough hand this tender blossom."—"Upon the grave stood a cross rusted by the tooth of Time."—"The laurel wreath upon the head of Mr. Reimers has hit the right nail on the head."—"The new political current failed to take root in this district."—"The happy moment is not always seized to grasp the wheel of Time by the forelock."

"NEAR the child lay an old man standing by the edge of the grave."—"In this question the steps of the Government go hand in hand with the manufacturers."—"The hinges on which this affair turns are too transparent."—"When the doctor arrived he found the platform covered with blood—the passenger had been bruised on the forehead."—"Grüenthal was born at Schladen in 1853, and up to this time had been unknown to the police."—"Amid tears and sobs the coffin was lowered. The priest had opened an umbrella."—"The hall divided itself into two parties."—"Cupid's arrow flew from one end of the hall to the other, and lodged in the heart of a visitor, the butcher's apprentice, lodging at Emanuel Schwarz, No. 20, Johanna-street."—"So he hurried away, the cowardly murderer, with Cain's mark upon his brow, pursued by the Eumenides and two police constables."—"It is a unique specimen, of which an example is to be seen at the exhibition."

ONE of the leading officers with Kitchener in his Sudan campaign was Major Edward Stuart Wortley, who commanded the Arab irregular forces. He has written for the *January Scribner's* a stirring account of the operations carried out on the east bank of the Nile. DRAGNET.

PISCATORIAL SOCIETY.

ON Monday evening Dr. Chas. S. Patterson delivered a lecture to a large gathering of members (Mr. E. McFee presiding) on "Flat Fish." It is needless to say that the doctor gave an exhaustive and clear relation of the formation, development, life history, and peculiarities of the best known flat fish, telling his hearers at the same time the principal food on which they thrived, the best baits with which to catch them, and other interesting particulars too numerous to refer to in a *resumé* of a paper filled every line of it with matter demanding careful and attentive study. The flat fish dealt with were the most popular examples contained in the two great groups, viz., those with jaws equal and those with jaws unequal—those which have the eyes on the right side, and those which have them on the left side of the head. The fish referred to in the first category included the halibut, long rough dab, turbot, brill, Eckstrom's topknot, the sail fluke, and megrim, which are all distinct from the second group comprising the sole, flounder, dab, and plaice, which latter class was also fully dealt with. The peculiar construction of the jaw was explained, both technically and in a manner likewise easily understood by the non-scientific portion of the audience, by means of diagrams which the lecturer exhibited. The differences and similarities between the various forms were pointed out. The halibut, Dr. Patterson mentioned, was taken at great depths by long lines. It was not common on the south coast, but numerous in the north and off the Irish coast. It was most voracious, attacking almost anything that presented itself to it. As food it was excellent, and the species ran up to 100lb. and over in weight. The long rough dab was like a small turbot, but was distinguished from it by having fewer rays in the back fin. The turbot ("the pheasant of the water") was of a tabby shape. The position of the eye varied with the age of the fish. It grew at the rate of 1lb. per annum. The best bait for it was lamprey, which was extensively used by English and Dutch fishermen. It was highly esteemed as food, and the average weight was from 4lb. to 8lb., but specimens of tremendous weights—44lb. and above—had been recorded. The brill resembled the turbot in every other particular except that the front of the back fin was not sloped down as in the latter, but stuck up like a cockscomb. This also was good eating. The sail fluke, at certain seasons, rose to the surface of the water, curled up its tail, and got blown ashore. It was peculiar for its large eyes. In the second group of flat fish, those with unequal jaws, were flounders and plaice, in which they frequently found both right and left-sided specimens. Indeed, the doctor himself one day caught a brace of flounders of the same weight exactly in the same water, one being right and the other left-eyed. The flounder was the best known of all the flounder-plaice group, and it was interesting to know that a movement was now on foot to arrest inshore trawling during the summer months for the reason that the young flounders, plaice, and dabs sought the bottom about the middle of May, and remained in their territorial waters until August on the sand. The trawls sweeping through the water destroyed the young stock fish, which were really going to form the food of millions in years to come. If this trawling was stopped during the months referred to, the tiny fish would migrate at the end of August, grow, and become takable fish. It was mentioned that twenty tons of these mites were condemned last August at Billingsgate Market, the average length being not more than 2in. The flounder would take almost any bait, including even a dry fly, for Mr. Harden had actually caught one while fly fishing for trout! The doctor warned his hearers that flounders taken at the mouth of the Thames, if not cleaned as soon as they were killed, would be positively dangerous to eat. In weight, flounders did not exceed 4lb. The largest plaice came now from the Icelandic coast, and were mainly taken by trawling. Mr. Chas. Hussey had seen specimens of 13lb. at Farringdon Market, while a 14-pounder had been shown at Billingsgate. The dab and sole were next dealt with, instructions being given how to tell the true sole from the lemon sole. Dr. Patterson decried the eating of "slips." People consumed these immature soles, and to save their conscience called them slips. He would make it illegal to kill soles under 8in. or 9in. long. Soles were, of course, mainly captured trawling, but good specimens had been taken on very small hooks on the south coast by long lines. Allusion was made to the introduction of soles into Scotch waters as showing how sea fish even could be acclimatised. The variegated sole and the solonette had a word said about them, and in conclusion the doctor urged that if everyone would go into the study of fish as a plaything or for amusement, it would help them to add to the pleasure of their sport. An interesting discussion followed, after which a cordial vote of thanks was passed to Dr. Patterson for his able and valuable paper. The annual meeting of the society will take place on Monday next, the 16th inst., at 8 p.m. Amongst other important business to be transacted is the question of the acquisition of further trout and coarse fishing.

M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

MR. BRIDGMAN chairman. Mr. C. Handley reported poor sport at Southend. Mr. Wood reported excellent sport at Deal, having during a fortnight, on Jan. 4, four score whiting, several 1½lb., one 2lb., four cod, best 7½lb. Thursday, Jan. 5, a good quantity of whiting, nurse dogs, and dabs; with Major Gordon, Mr. Zaehnsdorf, and Cook (boatman), fourteen score whiting, three cod (about 6lb. and 7½lb.), a dab of 1½lb., and one nurse dog. Mr. Mallett, twelve score of whiting and three codling, largest about 5lb. Mr. Davis and brother, seven and a half score whiting and two cod, 7lb. and 8lb. Mr. Edwards reported four good days, the best fifteen score whiting and seven

cod, of good size. Mr. Moore, fishing with Mr. Humphreys, took nine score whiting, four nurse dogs, and five codling, largest 5lb. Mr. Bridgman gave some useful information as to the preservation of lugworms and mussels. Mr. Edwards mentioned a letter in the *Angler* on the same subject. Mr. Parker gave his opinions on the preservation of bait. Mr. Clarke showed a sample of wire line, which he stated to be very flexible, rustless, and strong. An interesting discussion followed on the advantages of large pulleys, particularly for wire lines, and on the different effects of dressing lines according to their construction. The usual vote of thanks to the chairman closed the meeting.

H. J. MOORE (pro. Sec.).

GRESHAM ANGLING SOCIETY.

AT our usual weekly meeting, on Jan. 10, Dr. Brunton occupied the chair. The auditor for 1898 accounts was duly appointed—a well known C.A. Five gentlemen were nominated for membership, which bids well for the coming season. Mr. Davies reported that he had, in company with Messrs. Close and Marshall, visited the society's waters at Chesham. The springs were running, and a good head of fish seen. The arrangements for looking after and preserving our trout are in good hands. Many trout have already been secured from the ditches and transferred to our own waters. We hope, in the next two or three months, to place several thousand trout ova in the waters, from which they will no doubt benefit. Mr. Hatton reported roach from Kelvedon on several occasions lately. The waters there are in splendid condition just now. Mr. Eldred reported fish from Kelvedon. Mr. H. Short had a good take of roach from the Lea this week; weight, over 20lb. Dr. Brunton, from Deal, with a friend, cod, six dog fish, and nine and a half score of whiting, in two and a half hours' fishing. Mr. James Tayler ("Red Palmer") will read a paper next Tuesday before the members, entitled "Rain and Rivers." I hope to see a good attendance, as every member well knows the character of the papers read previously by him. I should also be pleased to see any visitors, who are always welcomed at any of our meetings. The programme for the forthcoming year is now being prepared, and I should be glad of suggestions for the improvement of same from any member. The programme will include maps of our waters at Kelvedon and Chesham, which are being very carefully prepared by Mr. J. Lund, one of our members. The usual toasts and hearty vote of thanks to the chair concluded the proceedings. ALEX. WRIGHT, Hon. Sec.

WARRINGTON ANGLERS' ASSOCIATION.

THE annual meeting was held on Thursday evening last, at the Roebuck Hotel. There was a crowded attendance, Mr. J. Lyon Whittle presiding. The secretary reported as follows: "We may congratulate ourselves on our continued prosperity, and last year we enrolled eighty-nine new members. With reference to the river Gowey the weed cutting was repeated in the spring, but as regards the fishing results during the past year, we can only say that, with the exception of one or two brief flashes of favourable sport having been had, the results have been practically blank. As regards our Lymm water, discouraging accounts were reported at the beginning of the season, but with the latter portion of the year better things have prevailed, and catches made up to 11lb. The Old Quay Canal at Walton Arches continues in good condition. The further stocking will be continued as opportunity offers, and it is hoped that all members will render what assistance they can in this direction. It is expected that the Canal will be opened for general angling after the spawning time this year. The angling contests of the past season were fairly successful. We should like to see a large number of the members taking part in them, thereby showing their appreciation of the efforts of the committee in arranging these competitions. In future contests, every member must provide himself with the means of keeping all undersized fish alive (to be returned to the water after weighing). The conditions for free fishing in the Shropshire Union Canal has been maintained by the payment of the fees by the Provincial Anglers' Association. There has been established during the last quarter what is termed the Warrington Anglers' Supplementary Fund, the objects of which are to effect a complete federation of all anglers in the district. A juvenile branch has also been established. The income has been £105 6s. 7½d., and the expenditure, £95 9s. 5d. Mr. E. M. Grosfield was re-elected president, Mr. Peter Knight as secretary, Mr. F. J. Emson as assistant secretary, Mr. Alf. Taylor as secretary of the Benevolent Fund, and Mr. A. Cook as treasurer. The committee elected were as follows: Messrs. J. Lyon Whittle, James Bancroft, J. G. Bailey, Charles Mather, Henry Kent, Alfred Taylor, Thomas Boscow, Thomas Nixon, James Reynolds, John Mawson, James Mayhall, W. H. Proud, Ed. Gilbert, and Joseph Podmore.

FRED. J. EMSON.

NEW PISCATORIAL PATENTS.

THE following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

26,772. Alexander Melville Clark, Chancery-lane, London. Improvements in fishing reels.

27,217. Samuel Alcock, Standard Works, Redditch. Improved fish hook.

27,313. John Thomas Chippindale, Clifton-terrace, Otley, Yorkshire, relates to improvements in instruments used by anglers.

27,565. Thomas Evans, Colmore-row, Birmingham, relates to a new or improved fishing-rod holder or rest.

Notes from the North.

THE angling season opened in the far north under more favourable auspices than has been experienced for many years back, last year excepted. It is often weeks after the advent of the season before a line can be got out for frost and snow, and only some four seasons ago no less than five trains were embedded in snowdrifts on the Highland and Great North systems at this very time. May the most be made of present favourable opportunities.

The Aberdeen Town Council Sewage Committee have been asked for and granted the necessary guarantee that their operations to purify the Dee of pollution will not in any way interfere with the hatchery now being erected by the Fishery Board for Scotland at Nigg.

An heir was born to the Elchies estates the other day. As this is one of the best sporting and angling properties on Speyside, we may confidently hail the birth of another rodsman, and hope that in the future laird, as in the present, the angling interests of the Spey will occupy a chief place in his attention to estate management.

A huge bonfire welcomed the advent of the little stranger to the fireside of Mr. J. W. Grant, of Wester-Elchies. Mrs. Grant is a daughter of Lord Justice Smith, of the Supreme Court.

A sharp snowstorm was experienced over the middle range of the Grampians last week. Cnrlers were out in force in Braemar and Strathdon. The harder the weather the better just now, as the rivers and streams have been running mountains too high for weeks back.

Caskielean House, Donside, was totally destroyed by fire on Saturday morning, and the Hon. Mrs. Pirie and children had to flee from the burning building. Mr. Vernon Pirie, M.P., and family were in residence at the time, and the hon. member did all one mortal man could do, but it was of no avail. Mr. Pirie is a keen sportsman, as well as an energetic and enthusiastic M.P. His loss is about £300, chiefly in private effects. He was able to save the most of his effects, including some valuable guns, fishing tackle, and salmon rods. He only rented the house.

News was received in Dundee last week of the death of Mr. J. M. Keiller, of Mooven, Deeside. He died on board his yacht on a cruise to the West Indies for his health. His palatial residence on Craigendaroch, overlooking his famous stretch of the Dee, was only completed at great cost a year or so ago. He was next neighbour to the Queen on the north side of the Dee and an ardent and enthusiastic angler.

An old claim of some thirty years standing for foreshore rights on the estuary of the Dee was settled the other day, when the money lodged in court by the Harbour Board was uplifted.

On the occasion of the marriage of Miss Leith Hay, niece of Colonel Leith Hay, of Leith Hall, to Capt. M'Alpine, R.N., the servants on the Leith Hall estate were entertained to dinner yesterday by Colonel Leith Hay and Mr. Leith Hay. The function took place at four o'clock in the afternoon at the Home Farm, the dairy of which was converted for the nonce into a dining hall.

Mr. D. Smith, Feughside Inn, Banchory, has the letting of the famous Upper Blackhall Dee water for the months of May, June, and July, and is open to treat for any or all of these months. SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The last meeting of the old committee of the Birmingham Association was held on Thursday evening, Jan. 5, at the headquarters. Mr. T. Coles presided, and Mr. J. A. Dance occupied the vice-chair. The president, in opening the meeting, spoke of the harmony that had existed during the past twelve months of the committee, and hoped that the same good feeling would exist with the new committee. The progress of the association had been marked by a great increase of members, and the financial position was all that could be desired. He concluded his remarks by wishing all a prosperous New Year. There were two applications for affiliation. The first taken was that of the Invincible Society, which hold their club in Holloway Head. Opposition was raised by the St. Thomas's Club, and as the accommodation at the house was not suitable for a club the application was refused. Messrs. Coles and Hughes gave in a report of their visit to the Handsworth A.B.S. Society. This club is in connection with the Boulton-road adult schools. The report was of a flattering description, as several gentlemen of local standing were the promoters of the society. The club had thirty fully-paid members on their book, who intended to rent water for their private use. The club was admitted. The third application was that of the Hope and Anchor Society, held at the Hope and Anchor, New Canal-street. Messrs. Coles and Hopwood, as the appointed visitors, gave in their report. This club consisted of about fifty fully-paid

aggregate in the matches during the past season; also a silver teapot for the heaviest bream; Mr. R. H. Barlow being the recipient of the society's gold medal for most points during 1898. The annual dinner will be held at headquarters on the 25th instant. Much regret was felt by the delegates attending at the first council meeting this year of the Hull Amalgamated Anglers' Association owing to the resignation of the president, Mr. W. H. Barker, through pressure of business, who has so ably conducted the business of the association with untiring efforts during the past four years.

FROM LANCASHIRE.

The Central Anglers' Association lately organised in Liverpool is shaping well for soon becoming one of the most useful and successful societies in this city. The present headquarters are convenient, and no doubt will be permanent. Already suitable waters have been secured, and more are being negotiated for. The new society at Failsworth, known as the Anglers' Rest A.S., is progressing, the roll call amounting to forty-five, and more on nomination. Mr. F. Wilkinson, Oldham, has joined the gallant band who are devoting a lot of attention to Hornsea Mere, and although rather late on the scene, and somewhat after the best season, he has already grassed some fine fish. The County Palatine Angling Association, on the 9th received another fine lot of fish for their waters at Irlam and Cadishead. They consisted principally of roach, but included were a lot of large tench and bream some lbs. in weight. The Openshaw, Bradford and Clayton Angling Society are noted for an important meeting on the 18th at headquarters, an urgent, which has been sent out for a full muster; new members are rolling in. Stocking is rather a strong item this week; amongst others actively engaged, and in addition to the County Palatine Angling Association already noted, are the Kingfishers, Moss Side Socials, Buckland, and Levenshulme Angling Societies, and the Worsley Canal Fishery.

FROM MANCHESTER.

The Kingfisher Angling Society, Salford, held their annual dinner and business meeting at headquarters, Mr. Rouse's Temperance Hotel, on Tuesday evening last, 10th. A most excellent spread was done full justice to, after which the treasurer, Mr. B. J. Pickering, presented the balance sheet, which being of a very satisfactory character met with the ready approval of the meeting. The executive for the ensuing year is as follows (all re-elected): President, Mr. Greenhalgh; vice-president, Mr. Constable; secretary, Mr. Prescott; treasurer, Mr. Pickering; librarian, Mr. Prescott, jun.; committee, Messrs. Greenhalgh, Constable, and Pickers; auditor, Mr. Hodgkinson. The business being disposed of, a most enjoyable evening was spent, vocal and instrumental music being rendered by the members. News is to hand of "The Good Intent Angling Society," a club recently started, with present headquarters situate at 455, Rochdale-road, Manchester. The roll call already contains the names of several energetic piscators, and judging by the name given the society by its founders, there is some good work before them in the near future. The annual meeting of the Moss Side Socials was held on the 9th. The results of the past year are satisfactory in every way. The following is the new executive: Hon. president, Dr. Obapman; hon. vice-presidents, Councillor Sargeantson and Mr. A. Barnett; chairman, Mr. Harkness; vice-chairman, Mr. E. Tate; treasurer, Mr. Lattimer; secretary, Mr. Leigh; assistant-secretary, Mr. W. C. Hawkins; crnators, Messrs. J. Hammond, T. Cain, W. Ferguson, H. F. Jenkins; committee, Messrs. E. Roberts, J. Lund, W. Taylor, J. Bartley, G. Thornton, and J. Reavey; auditors, Messrs. A. Ormrod and J. Fisher; delegates, Messrs. W. A. Leigh and J. Birch. Last Tuesday 300 grand fish, averaging 1lb., were turned into their private waters, and there are 700 more to come.

FROM NOTTINGHAM.

The Trent has been falling and improving in colour, and, compared with the previous week, a larger number of anglers have visited the various reaches of the river. Sport has not, however, been over good. At Sbardlow, on the 5th, Mr. W. Gregory, of the Wellington Society, caught a brace of pike; and on Monday two or three fish were killed by Mr. F. Baker, of the same body. On Tuesday eight members and friends were out, and, although the morning turned out wet, the sun subsequently broke through, and an enjoyable afternoon was spent. Seven fish were run and landed. Mr. Harry Spray (hon. sec.) took two, Mr. T. Large had two, and Mr. F. J. Lindley secured three—all with the live bait. Coarse fishing has claimed few votaries at Sbardlow for weeks, but the period is fast arriving when the big roach, with which certain parts of the water abound, will doubtless be tempted to take the worm—the cockspur. A substantial bag of fine chub has been made at Holme Pierrepont, and there has been more doing amongst roach and small bream at Wilford, Clifton, and Beeston Bend. Pike have come from Kelham, and on Tuesday an encouraging haul was made at Stoke Bardolph. Hundreds of lamprey eels have been caught in the nets near the Rectory at Colwick. This season the fish have been most abundant, but they do not fetch the price of a few years ago. Then they were sent to the east coast, there to be used as bait for capturing cod.

FROM SHEFFIELD.

The past week has witnessed an improvement in the conditions for angling, but still the weather has not been of a most suitable description for outdoor pursuits, there having been too many heavy rainstorms to render the lot of the angler very comfortable. With such heavy falls of rain the natural consequence has been that most of the rivers have been running bank high, therefore rendering fishing nearly impossible. The Fen district has, how-

ever, been extensively patronised, visitors to the Witham turning up in large numbers. At Bardney some capital sport amongst roach has been obtained by the Lincoln anglers, of whom there has been a good many out. Special attention has been paid to the Sincil Dyke, and with worms as bait some very satisfactory takes of roach have been recorded, fish averaging in many cases 1lb. each, whilst a few heavier ones have also been caught. The middle reaches of the Witham have lately attracted more anglers to them, and during the past week or so there has not been much to complain about with regard to roach fishing, worms and yellow paste having proved very alluring baits. The heavy rains have considerably improved the condition of the drains in the Boston district, and the heavy flush of water has also brought about a much needed improvement in the Bain, the flannel weed having been swept away in large quantities from the bottom of the river, thus rendering conditions much better for bottom anglers. Roach have been taken in large numbers, whilst pike anglers have had a much better time than previously. The Wisbech district has also been the happy hunting ground of several Sheffield anglers, roach anglers faring the best, pike anglers doing very little. Very little fishing has been done in the Trent, but when the waters have run down more, anglers are looking forward to a good time amongst the roach. The Chesterfield and Stockwith Canal has yielded some first-class roach. Very little grayling fishing has been had in either the Derwent or the Wye, in consequence of the heavy rains and the attendant rise of the waters.

FROM WORCESTER AND DISTRICT.

Rain, rain, abundance of rain! The earth soddened, and the rivers on the rise again. To-day a great quantity of high coloured water is rolling down the Severn, and I fear it will be some time before either stream will be in fishing condition again. Committee meetings to arrange for coming season, for annual dinners, and the distribution of railway travelling cards is all that is being done among the various clubs, and all hoping for a spell of seasonable weather.

FROM YORK AND DISTRICT.

Mr. W. H. Asford, fishery officer to the North-Eastern Sea Fisheries Committee, will report to that body, on the occasion of the annual meeting in York on the 18th inst., that during the past quarter, through the whole of the district, there has been a considerable increase in the quantities of fish landed, and a corresponding increase in the value thereof. The total quantity of fish landed at the different stations, according to the returns of the Fisheries Department of the Board of Trade, for the district during September, October, and November reached the enormous total of 1,173,293cwt., of the aggregate value (including whelks, deep sea crabs, mussels, oysters, shrimps, and prawns) of £729,161; against 1,000,066cwt., of the value of £674,403, for the corresponding months of 1897. Several of the coast ports and fishing stations have shown increased landings of considerable value, and the fishermen, when the weather has allowed, have at these places landed better takes than have been reported for a long period. Grimsby and Hull, comparatively, show enormous returns, which may be attributed to the very great increase of tonnage put afloat during the year in steam trawlers, with all the latest and improved facilities for the capture of sea fish. During the quarter the usual bitter complaints were made as to the encroachments of steam trawlers, both by the fishermen and the coastguard. In the same period three persons were proceeded against for breaches of the Fisheries Act, 1877, for having in their possession and exposing for sale castor crabs. Local anglers are looking forward with pleasure to the 21st inst., when Capt. Key, a veteran angler, purposes to entertain at one of the hostelries the members of the York and District Amalgamation, of which he is president. Tables are to be laid for 180, and the company will, it is anticipated, include Mr. J. G. Butcher, Q.C., M.P., Lord Charles Beresford's colleague in the representation of the city. Angling generally in the vicinity of York and in the surrounding district, owing mainly to the flooded and discoloured state of the rivers, has not been productive of more than ordinary sport, and this, too, on a very moderate scale.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

"SALMON AND SEA TROUT."

DEAR SIR,—With reference to the illustrations on page 44 of the above work, which I presume are intended to serve as guides to anyone desirous of trying Sir Herbert Maxwell's fishermen's knots, I should like to point out that the left hand knot in fig. 13 is simply ridiculous, and puts one in mind of those ring puzzles. As this double knot appeared to be quite different from what I was accustomed to, I tried to tie it, using the right hand of illustration as a guide, and repeating same with the other end, and the result, if I may venture to criticise, was an extremely clumsy knot. Perhaps some kind reader would kindly illustrate the double fisherman's knot.—Yours truly,
Edinburgh.

[We cannot understand "Bohemian's" difficulty with the illustrations. The left hand knot in fig. 13 is not quite so clear as the right hand, but with the latter as a guide you cannot go wrong. As Sir Herbert Maxwell points out, it is not quite so neat as the single knot, but it is certainly, in our opinion, not extremely clumsy.—Ed.]

ANGLERS' ASSOCIATION NETTING AND RE-STOCKING FUND.

DEAR SIR,—Since my last report I beg to acknowledge receipt of the following amounts:

	£	s.	d.
Waltonian Angling Society	...	...	0 10 0
Good Intent	...	...	1 1 0
Highbury Angling Society	...	...	2 5 0
Yours faithfully,	ALEX. WRIGHT.		

GUT AND THINGS.

SIR,—Death has been here with me, or I should have written sooner. Even now one cannot write very clearly, for the darkness and sorrow flee not quite away with the morning.

I am much pleased to see that the gut question has been taken up, but I sincerely hope the discussion will not be disfigured with any wretched personalities, and that the real point at issue will not be lost sight of or obscured.

Perhaps you will kindly permit me to reiterate this briefly and as lucidly as I can within the limits. In regard to "good" or "bad" gut, there are, I fancy, a few points on which we are all agreed, and which admit of no question. Undrawn gut, for instance, is, other things being equal, better than drawn, because of its firmer and much more durable surface; thick gut is stronger than thin, and therefore, from the point of view of strength being the desideratum, may fairly be called the better, though without prejudice, as the lawyers say. Long strands, too, have their merits over short ones, I suppose; at least, they give fewer knots on the gut collar. Perfectly round gut is obviously superior to that which is flat, or otherwise blemished by attenuations; there may even be something in the straining, while, last of all, gut may be so badly treated by exposure to light, or other prejudicial influences, between its leaving the maker's hands and reaching those of the angler, that it may be good for nothing at all. Now, all this is perfectly plain and simple to the man in the street, and so far we all understand why some gut is and must be dearer than others. Undrawn gut, round gut, thick gut, and so on, are, under certain conditions, the better and more desirable, and as the supply of such is limited, competition arises, and hence big prices confront us, and in some cases quite overwhelm us. But, so far, we know what we are asked to pay the big price for, and if there were no wiseacres and pedants like that friend of mine on whose best corn I dropped that stone weight, I do not think the crucial question at issue would ever have arisen. But he and others like him maintain that over and above all this there is a certain special excellence in the body of the gut fabric itself which helps to swell the price of salmon casts, just as one brand of champagne differs in body from another, or the luscious garden plum from the wild sloe, and I find this conviction is rather widely entertained among anglers. There seems, in fact, to be an impression that certain silkworms are specially bred and reared to produce this *magnum opus* of the trade. They are not only pedigree worms to begin with, but are fed with nectar and myrabolams like Dingdong's sheep during infancy; are lulled into final unconsciousness on golden conches with soft music and lullabies; and are finally "guttled" by bigly-paid experts, lest any of the precious cut matter should be lost or improperly banded. Of course if this were so, no one would feel the slightest wonder at the high price of this specially-bred gut; but the truth is all gut is the same to begin with, just as all oxygen is, and, except where disintegration has set in, the difference between any two strands of gut is simply and solely mechanical, and nothing else under any circumstances whatsoever; and sweeping generalisation like this is, I know, always dangerous, so I shall qualify it as far as I can, though the utmost qualification amounts to very little I fancy. In the very best gut making a few worms will prove over-ripe, and a few under-ripe, but this is a mere trifle. The great body of the gut is sound, and though in the form of countless strands or fibres, which vary in length, stoutness, and even strict outline, is really, if we care so to describe it, one homogeneous mass of substance just as a school-boy's armful of snowballs is. Strictly speaking, therefore, the honest way to sell gut is by the pound, like butter; and were it not that a certain number, and a considerable number too, of salmon anglers will have the very longest and strongest going, it would be so sold; but, as it is, so many men want salmon casts that can haul out a sunken gunboat, and have but few knots on it into the bargain, that competition has driven the very limited supply of this sort of article up to half a sovereign or so each. I do not say this is too dear. Nothing which men desire, perhaps, is too dear if they only pay the lowest price at which it can be procured, and I have not the slightest quarrel with those firms which can only give me their strongest cast at a figure which I certainly consider enormous and prohibitive. What I do demur to is the contention sometimes made that expensive gut, such as this, has any other merit or excellence whatever, except that which is purely mechanical, over that which I buy at 6s. the dozen; and such, sir, is my conviction at present on this point of excellence in gut, and if it is erroneous I shall be very grateful to anyone who will set me right. If, however, I am right, one small question, and perhaps one only, remains to be asked: How is it men to whom money is at all a consideration give 7s. or 8s., or even more, for a casting line? You may say if they want it they can't get it cheaper, but what I want to get at is why do they want it? Some fifteen years ago I returned from India after a sojourn there of several years, and the moment my first annual holidays came around I started to do a little salmon fishing. It was my first experience of the like, and, let me also say, it was glorious. It was in the lovely Erne, near Belleek, but I only had a fortnight of it, nor, indeed, have I been able to manage more than that length at it each year since.

But the first morning I killed four nice grilse inside of an hour and a half, and before my holidays were over had about eighteen fish, and so went back to work in a whirl of delight. But, also, I have never worked since, nor could. Life for me theuenceforth meant killing salmon or thinking about killing them. Next year I went again, but only got one 19-pounder, my best fish on the Erne. But I pushed into the Donegal wilds, and had a few nice little fish before I left. Next followed a few nice Shannon fish, but I never succeeded in turning the corner of 20lb. And so year by year I have done a little, only a very little I admit, as becomes a poor man, and even this last year I managed to bank three small fish, and now the reader will probably ask, what does all this lead to? Well, simply this. I never gave more than 1s. for a salmon cast in my life, and have never been broken once. Of course no salmon cast is sold for 1s., but you must take the thing just as I put it. Call it what you like, but that was the price of it. My 19lb. fish I killed at Roscar. He was a savage brute, yet sulky on occasion, and it took me over half an hour to gaff him. I got him on a shrimp (I love to tell the truth). The 9ft. casting line I got him on cost me exactly 6d. at the stores, and I fished it the following season, too. But, perhaps, no man to whom money is an object ever bought a "fancy" casting line.

I must apologise for the dreadful length of this letter, and shall try to amend in future. I wanted, too, to say something about caddis, but it must wait.—Yours, &c.,

MONA.

[It is necessary to be clear what fly is meant by "May Fly," as the Stone Fly is at times so called. Its larva lives in a case or caddis. But the fly generally understood when "May Fly" is mentioned, one of the Ephemeroidea, has no covering of the kind in its larval state.—Ed.]

BAIT PRESERVATIVE.

SIR,—I see by Mr. Hussey's letter that even the introduction of formalin has not quite settled the preserved bait question. Long ago there were many suggestions in the *Fishing Gazette*, but none seemed to answer thoroughly.

Amongst them was that of glycerine, which, as I remember, was said to be excellent as regards the brightness of the preserved bait, but to render them soft and pulpy.

It occurs to me that this could be got over by the addition of a small quantity of tannin (tannic acid). Of course, this would literally tan the gelatine in the skin, and the firmness could be regulated by the quantity used.

I would make the experiment myself, and then write to you, but I am sorry to say my fishing days are over, through old age and bronchitis.

Perhaps five grains to the ounce would do to begin with, which could be increased if not sufficient. If any reader should try, and succeed, I daresay he would write you telling the quantity which answers best.—Yours truly,

W. P. H.

MATERIAL FOR FLY WINGS.

DEAR SIR,—I would like your opinion on the inclosed sample of material which I am using for wings of trout flies. They have been tried by several influential fishermen in the Lake District, who speak very highly of them. I am having some prepared by Messrs. Alcock for the coming season, and will send you some to try.—I remain, yours truly,

TRANSPARENT.

Barrow-in-Furness.

[Probably our correspondent is not aware that artificial flies have often been made with wings of transparent, thin, tough material like that he sends, but that they do not seem to take with anglers or with fish so well as natural feather wings. Still, the material he sends is more likely to succeed than some of the materials that have been tried. It is soft, pliable, and tough, and of the "blue" (i.e., blue-black) tint common in so many water and land flies.—Ed.]

REGULATION OF FRESH-WATER FISHERIES.

DEAR SIR,—If your correspondent "Lex" will turn to the *Fishing Gazette* for Dec. 3, he will find there an extract of the Act of Edward I., to which he refers.

The Act of Elizabeth was more general in its scope, and referred to other fish as well as salmon, while the earlier Acts seem to have been for salmon only.—Yours truly,

HENRY TISLEY.

BAIT FOR AMERICAN WHITEFISH.

DEAR SIR,—On several occasions through the columns of the *Fishing Gazette* I have received valuable information for which I am grateful. I would, with your leave, ask any of your readers who may understand the Canadian North-West Prairie waters if they know of any bait to catch the whitefish, as it is called there. It has a soft mouth, and something like a rudd in appearance, but with white fins. No earthworms are to be found in the locality in the summer months. One can see them rising to the flies in the evening.

Also, do any of your readers know of a good plan to cure pike-bass, and pickerel for winter use, caught about August or September, these fish being abundant in the (Y) Appelle Valley lakes?

I shall be very pleased if you can find space for the above in one of your future issues, and oblige—Yours truly,

EMIGRANT.

[We understand that the whitefish of the American lakes are very rarely taken with bait of any kind. We doubt if "Emigrant" will do much good, but if they take flies why not try flies? In Goode's "American Fishes" it is said that the whitefish (*Coregoni*) are "none of them of special interest to the angler."—Ed.]

INFORMATION ABOUT RAINBOW TROUT WANTED.

MY DEAR MARSTON,—I have not had time to read all the recent correspondence in the papers about rainbow trout, and would be grateful if you could tell me the names of any unfenced English waters where the rainbow has made a home.

I have a large number of rainbows in stock, and if I could fairly recommend them for stocking any waters but ponds, lakes, and reservoirs (and these securely fenced at outlets) I would be delighted.

I am encouraged to suppose that somewhere in this country rainbows have proved suitable to our rivers, because I learn that there is a scheme on foot to stock the Thames with rainbows.

Twelve months ago several thousand rainbows—6in. fish—were permitted to escape from one of my ponds into the adjoining river, and since then not a single rainbow trout has been seen between here and Southampton.

These fish were allowed to find their own way out of the pond into the river (the Itchen), and for a few days some would return (by some way as they had escaped) at feeding time, but very soon all disappeared. Thus you will understand the rainbows escaped into the river under the most favourable circumstances. They were not carted about by rail and road, neither did they experience a change of water. Yet, where are they now? Somewhere off the Isle of Wight, I expect.

Inside fences I do not hesitate to recommend rainbows as the best breed of trout to stock with, and will be very glad if you can encourage me to believe that they are suitable to English rivers.—Yours very sincerely,

G. VALENTINE CORRIE.

[We have no satisfactory evidence of rainbow trout having become established in any rivers into which they have been introduced in the United Kingdom. We should be glad to have satisfactory evidence of their success in such streams.—Ed.]

A FRENCH SEA FISHING BOOM.

DEAR MARSTON,—I send you herewith samples of French white wire booms for sea fishing, which I think simpler and more effective than the combinations of brass swivels and a—generally pendent—brass boom, which I saw at Deal lately, where I used these, and they were admired by some of the pier fishermen, standing out so very straight from the line or trace, to which they are easily affixed. They can be quickly and cheaply made by any worker in wire. The small light ones answer admirably for whiting and ponting fishing in clear water; the

larger and stouter for thick water and for boat fishing. I do not see that either swivels, or revolving booms, are at all necessary for sea paternosters, and can vouch for it that the slightest bite is felt when using these booms (*clipots* is the French name) properly.

Wishing you and all readers of the *Fishing Gazette* plenty of "tight lines" through 1899—Yours very faithfully,

CHAS. A. PAYTON.

Calais, Jan. 4, 1899.

[We are much obliged to Mr. Payton, and give an illustration of the capital French boom which he kindly sends.—Ed.]

EDMUND TAYLOR, FISHING TACKLE MAKER, OF LANCASTER.

DEAR MR. MARSTON,—The *Lancaster Guardian*, to whom I sent a cutting from *F. G.* of Dec. 31, has reprinted Betty Howell's rhymed fishing tackle advertisement, and adds: "Very little is known of Edmund Taylor. He was living in Lancaster in 1789, when he had the freedom of the borough presented to him. Nothing more is known of him till his death, which took place on Jan. 18, 1816, aged seventy-two years. His daughter, within a month of his death, issued the poetical advertisement given above. She married on Sept. 2, 1816, for her second husband, John Wilkinson, warehouseman, who also lent out burial palls. In the advertisement the 'warehouse' is described as 'behind St. Ann's.' The shop was in the first two houses on the east side of St. Ann's Place." "St. Ann's" is a Church.—Yours faithfully,

THOS. HARRISON.

DESTRUCTION OF TROUT AT HIGH WYCOMBE.

DEAR SIR,—Mr. Thurlow's letter recalls to my mind the pleasure I had in making his acquaintance some twenty years ago, when I visited High Wycombe in quest of trout fishing. Perhaps Mr. Thurlow (who was then secretary to the H. W. Angling Association) may recollect taking me on to a mill stream, which was a nursery for the fish, and, asking me for my rod (to show me what the trout were like), fishing deftly with the fly under some trees, landed in a few minutes a splendid 4lb. fish, which he also allowed me to take home with me. Later on, in the year 1881, there was a large quantity of these beautiful Wycombe trout killed by bleach, through the bursting of a dam, and Mr. Thurlow sent me a photograph of them, which I had framed, and which has ever since decorated

my home, forming a noble picture, but a sad record of destruction.

I see by Mr. Thurlow's letter that a misfortune similar to that of 1881 has again befallen the association water, and that a large number of fine trout are again sacrificed; but it is consoling to learn that these magnificent Wycombe trout are not all destroyed. Assuring him of my sympathy, and hoping to meet him again on the shining river.—Yours faithfully,

JAMES CALLAGHAN.

WIRE FISHING LINES.

DEAR SIR,—With regard to your remarks respecting wire lines in last week's *Fishing Gazette*, permit me to observe that wire traces were introduced about fourteen years ago, and were found to be too stiff.

No one appears to have tried the wire of which they were made as a substitute for hemp or silk running lines until about two and a half years ago, when I showed them first to Mr. Handley and then to Dr. Patterson.

I first tried fine ginger beer wire (iron wire tinned), then phosphor bronze, single and plaited. Phosphor bronze is scarcely acted on by sea water, and is less liable to kink than the tinned iron.

Single wires require some amount of practice to keep them from kinking, plaited wire lines completely get over this difficulty.

Flax and silk lines are not much heavier than sea water, while phosphor bronze is about eight and a half times as heavy. No wonder they sink so readily. The smooth surface of the wire offers very little friction to the tide, consequently by using wire running lines it is now possible to fish as comfortably in the sea as to paternoster for jack in the Thames. But it is necessary, in order to obtain the full advantage of wire lines, to have sheaves to guide the line from the winch, and at the top of the rod of at least the size of a sixpence—a shilling is rather better.—Yours truly,

A. W. PARKER.

[We do not know that they were used as reel lines before Mr. Parker so used them, but we do know that the so-called rust-proof wire, in 8 and 16-plait, was made by a London house at our suggestion many years ago, and noticed in the *Fishing Gazette* at the time, and we have often used them since in place of gimp.—Ed.]

WIRE SEA LINES.

DEAR SIR,—There is, as you say, nothing at all new in wire sea lines. They have been tried over and over again, and if you refer to some of our earliest numbers of the *Fishing Gazette*, you will find several letters and articles on their use.

You generally find, about every ten or fifteen years, some old invention that has been tried and discarded is rediscovered. If there had been at all any virtue or benefit in using plaited, twisted, or even single wire for sea lines, we should have adopted it years ago, when we thoroughly tested it. A superfine flax line is strong enough and fine enough for anything.

I enclose you a sample of our No. 25, and I should like you to try the strength of it with your hands; it will bear a steady pull of nearly 50lb., and is very nearly as fine as a wire line.

One of your correspondents was bold enough to say that he believed that before long all sea lines would be made of wire, because it was a well-known fact that they were using all wire rigging for vessels instead of hemp. This is amusing, and may suit the ears of landmen. It is the shrinkage in wet and the stretching in dry weather that makes the use of wire preferable for ship's rigging.

A flax line properly made is undoubtedly the best for sea fishing, but there are a common lot in the market which are made of inferior stuff that are coarse and stout. Therefore I do not wonder at fishermen trying to get something fine, as it makes such a difference when fishing in a tideway.

HEADER AND SON.

Plymouth.

[The line Mr. Header sends is of the same make as those used by American anglers for tarpon, tuna, blue-fish, and other powerful and large sea fish, and certainly we should prefer it to any wire reel line. It makes a splendid back line for salmon fishing, and costs less than a halfpenny a yard.—Ed.]

VASELINE AND KIDNEY FAT AS DRESSING FOR LINES.

SIR,—In your issue of the 31st ultimo, Mr. Amphlett gives directions for dressing a line with a mixture of vaseline and kidney fat, quoting from the late J. P. Wheeldon.

Would Mr. Amphlett kindly say, for the benefit of his brother anglers, whether he has tried the dressing himself; and, if so, give the relative proportions of vaseline and fat, which appear to have been left out in the article?—Yours truly,

JOSEPH HAINES.

THE seventh annual yachting exhibition, which will be held at the Royal Aquarium from Feb. 1 to March 2, promises to be one of the most successful of the series. Intending exhibitors should make early application for space, as allotments are proceeding quickly. The continuation of the holiday programme—brimful of sensations and with mirth provoking "turns"—is announced to take place daily and all next week.

A HOUSE BUILT UPON THE SAND cannot have a permanent foundation; and the same may be said of every undertaking in life. Success to have a permanent effect, must be built upon something solid, or it will crumble into ashes when seemingly within our grasp. The foundation of anything of value must be carefully laid, or it will soon become useless. This remark is particularly applicable in reference to our health, for it is not firmly established through the blood being pure and the stomach in regular order, we are liable at any time to be fatally attacked by disease. Holloway's Pills and Ointment lay a foundation of good health which will be permanent and strong as a rock.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newspapers and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to E. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
.. Six Months ditto	5s. 4d.
.. Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	£7 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The Life of every Advertiser and Subscriber is insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

ANGLING AND CLUB GOSSIP.

SATURDAY, JANUARY 21st, 1899.

DR. JOHNSON AND ANGLING,
AND WALTON.

WHEN people who are not anglers wish to be facetious about angling, they are pretty certain to quote Dr. Johnson as the author of the definition of angling as "a worm at one end of a line and a fool at the other."

As I have often pointed out in the *Fishing Gazette* and elsewhere, Doctor Johnson never said anything of the kind; he was a great admirer of Izaak Walton. In my little book, "Walton and some Earlier Writers on Angling," I say:

"It is interesting and significant of Walton's worth as a writer that the literary giant of the next century, Johnson, should have advised the publication of a new edition of 'The Compleat Angler,' when that work had been out of print for nearly a century, and also that he should have contemplated writing a Life of Walton."

Moses Browne, in the Preface to his edition of Walton's "Angler," says he undertook it "at the invitation of a very ingenious and learned friend (Mr. Samuel Johnson), who mentioned to me, I remember, in that conversation his design to write the Life of Walton. I wish he had performed it." So do we all. Boswell tells us

that Johnson "talked of 'Isaac Walton's Lives,' which was one of his most favourite books. 'Dr. Donne's Life,' he said, was the most perfect of them."

Since writing thus in 1894 I have seen a presentation copy of Walton's "Angler" from Dr. Johnson to a Col. Astle, in which the doctor had written the words: "A mighty pretty book, a mighty pretty book."

A good many years ago I published in the *Fishing Gazette* the name of the French author of the definition of angling, and to finally settle the question as regards Dr. Johnson, I asked Dr. G. Birkbeck Hill, the greatest living authority on Johnson's writings, if he had ever come across the definition in them, and he kindly replied as follows:

"DEAR SIR,—There is no evidence, I feel sure, for the attribution to Johnson of the definition of 'that which has a fly at one end of a line and a fool at the other.' It is mere chance to whom a witticism gets assigned. On Spurgeon, Sydney Smith, Johnson, or Swift good sayings are fathered at random—many sayings that can be traced back to the Romans or Greeks."

"Walton's 'Compleat Angler' is found in a list of books recommended by Johnson to be studied by a young man, Rev. W. Astle; see my Boswell, Vol. IV., p. 311, or any edition of Boswell under date of June 19, 1784. I am much interested by the inscription in his handwriting in the copy of 'The Angler' presented to Col. Astle."

"Does Moses Browne, in his edition of 'The Angler,' say that Johnson advised him to undertake the editing? This is a new fact to me, and I should be glad to have the authority."

"You will find that Johnson, in his dictionary, often quotes Walton's 'Angler,' see under Brandling, Bream, Chub, Dew-worm, Gentle, Grayling, Minnow, Perch, &c. —I am, yours very truly, "G. BIRKBECK HILL."

It was certainly interesting to find that in asking Dr. Birkbeck Hill a question I should have been able to give him a new fact about Dr. Johnson.

R. B. MARSTON.

CHARLES LAMB AND THE "COMPLETE ANGLER."

From another batch of the hitherto unpublished letters of Charles Lamb we make the following extract, which shows what an admirer of old Izaak's immortal book the gentle Elia was:

"The 'Compleat Angler' is the only treatise written in dialogues that is worth a halfpenny. Many elegant dialogues have been written (such as Bishop Berkeley's 'Minute Philosopher'), but in all of them the interlocutors are merely abstract arguments personified; not living dramatic characters, as in Walton, where *every thing* is alive, and the fishes are absolutely characterised, and birds and animals are as interesting as men and women."

FLIGHT'S FANCY AND THE OLIVE DUN.

I HAVE looked at one or two books in connection with the question of the origin of the dressing of the fly known as Flight's Fancy, and I venture to submit that the following evidence explodes once and for all the claim of Messrs. Foster, of Ashbourne, that their father, the late David Foster, was the original patentee.

Now, what is Flight's Fancy? It is a dressing of the Pale Yellow Dun, which often does so much execution when the Green Drake is on, and it is described by Mr. F. M. Halford and Mr. H. S. Hall thus:

Wings.—Palest starling.

Body.—Very pale yellow floss silk ribbed with fine flat gold.

Hackle and Whisk.—Pale buff Cochin cock hackle, or pale honey dun for a variety.

Hook, 0, 00, or 000.

The special features of this fly are three, and occur in the body, namely:

(1) *Colour*.—Very pale yellow.

(2) *Material*.—Floss silk.

(3) *Rib*.—Fine flat gold.

I now take from the third edition of the "Scientific Angler," by the late David Foster, the description of the Golden Dun, on which Messrs. Foster base their father's title to be deemed the original sole inventor. It occurs among the dressing of the Olive Duns, and is worded as follows:

"In June shade (Golden Dun) to be tied or dressed with deep yellow silk, neatly ribbed with fine gold wire; wings from a young starling's longer fiberia quill; legs a palish dun hackle flecked with yellow."

In this dressing the body is wholly different from Flight's Fancy, namely, in

(1) *Colour*.—Deep yellow instead of very pale yellow.

(2) *Material*.—Silk, not floss.

(3) *Rib*.—Wire, not flat gold.

It may be asked how do I know that the silk is not floss. Well, first I call in aid Mr. D. Foster himself.

The description of the Golden Dun goes on thus: "The Common Yellow Dun is the same dressing minus the gold tassel, the waxed tying silk being used for the formation of the body." There is no tassel in the Golden Dun—but no matter. So it comes to this, that Messrs. Foster are claiming Flight's Fancy for their father because he added a gold wire rib to the Common Yellow Dun.

It may, perhaps, be said that Mr. David Foster's description is loosely worded, and that he meant floss silk for the body. Well, he didn't. Messrs. Foster tell us that their father quarrelled with the authors of "Shipley and Fitzgibbon on Fly Fishing" for annexing and publishing his patterns of the Golden Dun. We may, therefore, assume that what Shipley and Fitzgibbon published was his dressing. Let us see.

This is their description—p. 170 of the 1838 edition:

Golden Dun.—Body, deep straw-coloured silk ribbed with gold twist; legs, a honey dun hackle; wings, the palest feather of a young starling.

Here, again, by the way, we have the deep colour in the body, and the rib is gold twist, round instead of flat. But how do we know that the silk is *not* floss? Well, the authors say so—p. 148: "The silk with which the fly is dressed is often sufficient to form the body of a slender fly. We shall often, therefore, use the expression 'body to be of such and such coloured silk,' which means nothing more than that the fly is to be dressed with silk of the colour indicated."

Messrs. Shipley and Fitzgibbon wrote for Derbyshire wasters.

That floss silk was known in those days and in that country for fly dressing purposes is amply demonstrated by the fact that the first edition of "Ronalds' Flyfishers' Entomology," published in 1836, contains no less than sixteen patterns out of forty-seven in which floss silk is the body material. As is well known, Ronalds fished the rivers of that part of the country.

Therefore the claim that Mr. David Foster is the originator of Flight's Fancy fails.—Q.E.D.

The late Mr. George Currell, of Winchester, had a number of patterns of the olives, from the darkest to the palest, the note of them being that the body was floss and that the hackle had a red or ginger tone, and that there was either a gold rib or a gold tag. They were not modern patterns, and probably coincided in date with the coming into use of floss silk for dressing bodies.

Flight's Fancy was in this series; it was one of the light ones; the darkest had hen black-bird wings, deep olive green floss body, and deep red hackle stained olive; the lightest running to palest starling, cream coloured floss, and yellow dun hackle.

The Olive Dun is *the* fly of the Itchen; there is scarcely a day in the year when it is not to be seen at one hour or another, and in one shade or another on the water. It is, therefore, only natural that when floss silk came into use it should be applied to the dressing of Olive Duns of all shades in the headquarters of the Olive Dun.

The name of Flight has been honourably known in Winchester for generations, and as I understand the present representative of the name does not claim the pattern, it is to some preceding generation that we must look for origination of the title.

It would thus appear that Messrs. Foster's protest, besides being ill-founded, is very much belated, and I trust that they will see fit to remove from their next edition their not too tasteful references to the individual named Flight.

In writing at this length on such a subject, I may perhaps be said to be "breaking a fly upon the wheel." Personally, I attach little value to dressings and the titles to the invention of dressings. They have their uses for those who are not fly dressers, and to a certain extent for those who are. The latter, however, should not be fettered

by the restrictions of stereotyped pattern, but should have such a knowledge of and mastery over their material as to be able to imitate the natural insect without reference to books or records of patterns. I have written rather in the interests of truth and good manners, which are not conspicuously well served in the outburst which was the occasion of the editorial note which led to the recent correspondence in these columns on this subject.

G. E. M. SKUES.

BOXING DAY AMONG THE ROACH.

If the roach fisher could have selected his own weather, he could hardly have improved on Dec. 26, 1898.

A soft, calm morning, with a gentle air from south-west, after a little fine rain. What could be better? Certainly the water was low and clear, but with fine tackle this condition is not fatal to success. A punctual train (for even on the southern lines and on Bank holidays such things are known) brought us to our station by about 10, and within an hour our porcupines (I mean the floats, not the animals) were sailing down the shallow swim, from which we had lately taken many a dozen lusty roach.

All seemed propitious, for the morning had cleared, and no rain at present threatened, but not a touch could we get in our old swim. Shifting a few yards off I found a shoal, and secured three good fish, but not a nibble more. My companion, thinking, with justice, that the touch of frost a few days ago might have sent the roach into their winter quarters, tried a deep hole by a sluice, and here he at once got some good fish—better than mine. After an hour or two and some lunch I shifted to his swim, and though the fish were very shy we made up a fair bag of a dozen or two, nearly all good fish. My best were taken with cubes cut from the inside crust of a loaf, but my companion had nearly the same number using paste alone.

Our attempts at the pike were in vain, though this section of the Darenth holds, I fear, only too many; and some of them had showed themselves unmistakably on previous occasions, when we had been roaching for an hour at a time with great success, counting our spoil by the dozen, some of the fish running 1lb. or more.

I fancy our sport then had been owing partly to the rains, for the water was a little discoloured in most cases; and I think that if any roacher can spare a day now for the Darenth, after all this wet, he may do well.

Leave must, of course, be obtained; but for roach only this is not very difficult. I am speaking of the Lower Darenth.

On the trout fisheries higher up the owners are reluctant to grant permits, though in some sections roach are found of large size.

With regard to tackle, fine gut seemed to do quite as well as hair. We gave a fair trial to each; but I advise each angler to make the experiment for himself. It is noteworthy that the fish do not always feed best on the bottom. In the deep holes a bait swimming a foot or more short is often taken when not a touch can be had in the usual way.

J. PAUL TAYLOR.

A FISHING TOUR IN SWEDEN.

(Continued from page 17.)

As for trolling and spinning baits, a Devon minnow from one to two and a half inches, with golden belly and brown back, is very good. But as the grayling very often also take that bait, it gives one much trouble, and somewhat spoils the sport, taking off all these small fish when prepared for bigger fish. On shallow water when you have to put out a long line, the Devon is too heavy for trolling, and then a light transparent soleskin bait with patent combination swivel on the ball bearing principle is better and handier. I tried several kinds of baits, and a very handy killing bait was the bleak tail, of which I had lots preserved in salt. For those I used the ordinary parr tail tackle with a treble at the end. Trout and grayling were mad on it. I also had a bottle of bleak preserved in a weak solution of formalin. Of the formalin that you buy from the chemist, which is the saturated watery solution of 40 per cent. formic aldehyde, you take, for instance, a

small wineglass to fifty glasses of water (same glass), and there you have a good solution for preserving baits. Formalin seems to be the best known preservative for baits. It keeps the fish in natural brilliancy, but makes them rather stiff. In consequence thereof, you have to put the baits first into a flat-bottomed square vessel for some hours, and let them remain there in the above solution until growing sufficiently stiff when straight. Then put them head down in a bottle with same solution,

Björkholmen also, a place near the falls next above the Parkijaur Falls.

Njavvi is comparatively a rather comfortable little place for some days' stay. The people seem to be well-to-do people, and can offer you a snug chamber and good food. The first afternoon here I gave the grayling a try with fly, and my little Zulu brought to my basket almost 15lb. of fish, but none exceptionally big. Although I was told it was useless trying for big trout here, the next day I rigged up my spinning rod,

QUICKJOCK.

ROTATS.

whereby they will keep their straightness, which is much desirable when using them on the spinners.

Well, after some rather successful fishing days at Parkijaur, we continued our journey, passing the lakes Parkijaur, Skalka, and Tjomåtesjaure, and arrived at Njavvi, much mentioned for its excellent grayling fishing. If you have plenty of time you will find good fishing waters at

and baited with bleak tails, to see whether some old cunning trout in these lonely regions could be circumvented. But I got, however, nothing but grayling, except a couple of 1½lb. trout. During my whole fishing career I never saw the grayling taking baits so eagerly as here. Some English author on grayling fishing says the grayling very seldom take the minnow, and that is also my experience. But the Njavvi Falls and streams make

a splendid exception. Here the grayling took not only small bleak tails, but also my formalin bleak on an ordinary spinning tackle. And what splendid grayling they were, seldom weighing under 1lb., but many 2lb. and 2½lb., and 3lb. to 3½lb. My catch to-day weighed 38lb. Not a bad result if you were on the look out for grayling with fly and your little single-handed rod. But now I handled a weapon able to kill a 20lb. salmon, and under such circumstances, in my opinion, it was nothing but disappointment.

a flag line about 30yds. long. By means of that screw ring and the line I anchored myself here and there, gradually going down as far as the line would allow me. By that way you are able to proceed more carefully, and not depending on an awkward and careless boatman.

On the third morning we left Njavvi, and set out on the Lake Saggat, at the other end of which the little village Qvickjock is situated. After some minutes' rowing on Saggat, a most beautiful view over the snow mountains opens to

a week in the summer. Up to here travelling has been comparatively comfortable. If you are going further up along the rivers that flow out at Qvickjock you have to walk and put the luggage on the back of some men. At Qvickjock you will always find one or another willing to follow you even as far as the boundary, if you should be prepared to go home over Norway, then passing Sulitelma for Bodo, and therefrom by steamer for Trondjem, Christiania, or Bergen, and Hull. From Qvickjock you can make fishing excursions in several directions. Two rivers fall out here into the Saggat, viz., Kamajokk and Tarrejokk. The first seems to be little good for fishing, the water being like milk, as it comes from mountains with eternal ice, under which the ground consists of apatit, some sort of clay soil. As a rule, the rivers from such mountains get a milky appearance. So we took our way along the other river, Tarrejokk, with its bright, transparent water.

On leaving Qvickjock we had two Lapps and two other men to carry our luggage. After about two hours' walk we came to a nice little fall, by name Rotats. The banks were very rocky, and the water, in some places very deep, of a peculiar blue transparent colour. Some of the rocks were undercut and kettle-shaped. Here we made a halt for fishing. At the first peep over the rocks I saw a couple of fine trout lying near the bottom, probably 5 or 6-pounders; but as soon as they get sight of us they disappeared among the rocks. A little farther down I saw another big trout. I hid myself behind a rock, and sent over him an Orange and Partridge; but when my fly touched the water he looked disturbed, and moved slowly away. No doubt it is not worth while trying fishing in such clear rivers before getting dark. Only some few small, careless trout we were able to kill at our halt here. Now, as for baits in rivers like this one, it seems to me very hard to properly present the fly or the spinning baits to the fish. The water is deep and boiling. Here give me a worm, and I am sure it will prove to be a more effective bait; at least, that is my experience as it concerns our southern rivers of same features. Many a trout of 7lb. and 8lb. I have killed with worm when other baits have been useless.

Well, soon we were on the move again, and arrived, after half an hour's walk, at Njuonjes. Njuonjes is the last house on the Swedish side where you will find men living. Further on, as far as the boundary, is nothing but wilderness, where you will only find two small huts that the Swedish Touring Club has built, so that you are not obliged to sleep in the open air if you are going over to Sulitelma. It takes about three days to Sulitelma from Njuonjes.

Next day I went up to the first hut, and on the two following photos I have marked where the hut is situated. It lies in a beautiful little place at the Lake Tarra. In the Tarra there is nothing but char. Grayling and trout do not go so high up. Lots of char you can catch here both with fly and spinning baits. What they liked best was a little hog-backed silver spoon, about 1½in long. With that spoon I killed a great many 3 and 4-pounders, but when fly fishing I only got small ones. This little hut is an excellent spot both for a fishing and shooting stay, as there are plenty of "ripor"—a sort of grouse—in the neighbourhood, and the fishing and shooting is free to anybody. Here I enjoyed some agreeable sporting days in the most favourable weather. The sun was rather hot at daytime, but as soon as it touched the horizon it turned cold very quickly, and the night was cold, although we were in the month of July.

Some other year I hope to have a chance of revisiting those beautiful regions that ever shall be green in my memory. G. HYDÉN.

THE DISTILLERY PROBLEM.

THE pollution of our salmon rivers by distillery and other refuse has been a favourable theme of comment ever since distilleries began to multiply and salmon fishings to rise in demand. But, although the evil was patent to all immediately interested, public attention was not so emphatically directed to the needs of the grievance as it ought to have been till the famous Spey case brought it directly under the notice of the "man in the street"; and now there are hopes that

THE RIVER TARREJOKK AND THE LAKE TARRA.

THE HUT AT THE LAKE TARRA.

As a rule there are not many comfortable or suitable places where you can wade or fish from the bank. The best way is to get a boat and a good boatman to take you down the streams, throwing your fly to the right and left. But very often it is almost impossible to get an intelligent and careful boatman. In such cases I enjoyed much better going alone in the boat, having a screw ring fastened to the stern of the boat, and

your eyes. If you should be favoured with a bright day, and never been up in the highlands, the view is most imposing. I never enjoyed rowing better. The sun was beaming, and we were lying comfortably on reindeer hides in the bottom of our boats, smoking our pipes and enjoying the fine sights all round. In the evening we arrived at Qvickjock. Qvickjock has its own post-office, and the post is running twice

something practical and to the point will be done before long in tackling this most interesting though difficult problem.

What is everybody's business is nobody's business, and till the riparian proprietors on Speyside saw that it was their business to protect their valuable property in the rapidly diminishing numbers of salmon ascending their famous stream, and took drastic steps to bring home to the distillers the injury their industry was doing to their sport and profit nothing came of it. Remonstrances, threats, and complaints *ad libitum* were hurled at the offending parties, yet all to no purpose. The cry of the "poor old Spey" went up from the throats of disappointed anglers, and re-echoed throughout the land; yet nothing effective was done, and very little attempted to check the growing evil. Distillers pointed out, and justly enough, that they alone were not to blame. There were the thousand and one other causes, they said, which were killing off the salmon and trout supply, as well as their "burnt ale," and these ought to be dealt with too. But two blacks never make a white, and so the Spey pollution case came into court, and by the narrowest shave went nigh against the "whisky refuse," and shook to the very foundations the thin platform upon which the distilleries stood in regard to pollution from all such works.

The judge wisely decided that sufficient time had not yet elapsed to test the methods, proved to be at least up to date, if not the best that science had yet devised, and so the case thus stands. It was neither a victory nor a defeat for the one side or the other, but it taught the "trade" a lesson. The problem was not sheaved. It was, as it were, remitted back to them to see what more could be accomplished before crippling or shutting down altogether a valuable and highly remunerative industry, which was making headway by leaps and bounds for the commercial benefit of the country in general and the otherwise needy north of Scotland in particular. Since then the distillers have not allowed the grass to grow beneath their feet. They know their business too well, and, like business men with a considerable stake at issue, they have done the best and most sensible thing they could do under the circumstances.

Knowing that their only chance of dealing with the difficult and technical problem of the innocuous disposal of their distilleries' effluent thus forced upon their attention in a practical and effective manner, was to call in the aid of the scientific world, they, or a combination of them, in September last offered the handsome premium of £2000 to the person who will devise and hand over to them such a scheme for treating the bye-products of distilleries as will effectually purify them. Certain conditions are attached to the awarding of the premium, which, of course, are necessary to ensure the end in view being properly fulfilled, and to safeguard the rights of the combination in return for their money.

But although this is proof of the distiller's anxiety to meet the necessities of the case as now presented to him, he has not been indifferent in the past, and probably thousands of pounds have been spent during the past dozen years or so by private firms and others in experimenting on their own account, in the hope of solving the problem. And not a few are still working away at it under able and skilled advice, in the hope of perfecting schemes in which they have unbounded faith and great hopes for the future. May they continue them, for in the multitude of counsellors there is wisdom, and a solution, come when it may, or how it may, cannot come a day too soon.

The premium of £2000 offered by the Elgin combination was not long out before it began to bear fruit. The ink was hardly dry on the prospectus before busy brains were at work, and schemes were either in the air, or being formulated, and even rapidly submitted to the combination "respectfully commanding their attention." Brother Jonathan was early in the swim from across the Atlantic, and for all we know he may yet be an easy first. However, the time of lodging proposals does not expire till April, and, although some authoritative and well-known men have taken up the subject, and are now working away at it, no doubt by that time others will be in the field with schemes of their own, worked out to a practical issue.

Many of the schemes for dealing with the "Distillery Pollution Problem" may be effective enough, but impracticable—too costly, or otherwise abortive. They have been so in the past, for their name is legion; and, likely enough, the temptation of a big reward, with a sure fortune to follow in its trail, will attract every sort of hair-brained idea it may be possible to imagine to its alluring folds.

It is not my intention to adjudicate on any scheme already made public, nor offer gratuitous criticism, which might be the least offensive to the parties concerned. Rather would I encourage all and every suggestion, however much I might be inclined to help on the weeding-out process of the likely from the unlikely. But in this there is no need, as whatever scheme is sent in to the official of the Elgin combination, will be placed before a higher tribunal than what my humble, however earnest, opinion can ever aspire to be, and will receive "due consideration," in the true sense of the term, on its own merits. For "the money shall not be paid unless the combination shall be satisfied by practical tests—and that for one year," that it treats all bye products after a satisfactory manner.

Mr. C. A. Stephenson (Edinburgh), an expert of considerable experience, has suggested a mechanical method of treatment of the effluent by carrying it up to the top of a high tower, and dispersing it as spray. This has already been alluded to in the *F. G.* of Oct. 22 last, when Mr. Anderson's pamphlet was issued dealing with his scheme. In addition to others, I might give a passing notice to that of two names which have just come under my notice. Mr. James Hendrick, of the Agricultural Laboratory, Marischal College, Aberdeen, has been following out the quest on chemical lines. He has been experimenting on an extensive scale, and, being within easy reach of the area of the pollution and its cause, has been successful in discovering a process which it is expected will not only cure the pollution, but yield valuable bye-products from the polluting liquid, one of which is a manure comparable in value to bones. Of course, in this, as in all other schemes, expectations will require to be made good by results on an extensive scale before it can be finally pronounced on. It may be said, however, of Mr. Hendrick's scheme, that distillers who are "in the know" are very jubilant over it, and freely recognise that it is the only feasible solution of the question which has up till now been presented to them.

Another northern chemist of world wide repute on the subject of pollution, and river pollution in particular, has also a scheme "in the steep." Mr. Thomas Jamieson, city analyst for Aberdeen, and who has a life-long experience at his back to commend him, has also worked out an economical process of dealing with distillery effluent, and his suggestions will also come up for review in due time, and no doubt command the respect the opinions of such an authority deserve.

But distillery effluent will not be the only problem dealt with. It is the most urgent in the public eye in the meantime. Yet whatever scheme is found to deal effectually with "burnt ale" will no doubt be adopted and applied to all kinds of mill refuse and village sewage. By modifications of the methods adopted, no doubt all such matters, teeming with death to salmon spawn in particular, and destruction to fish life in general, will be treated after a similar fashion. That mill owners, local authorities, and county committees will at once rise to the occasion, and when a feasible and practical solution of the pollution problem is arrived at, and proved satisfactory to a certain extent at least, they will at once adopt it as being worthy of a trial.

G. M.

MESSRS. ANDERSONS' SALE.

As will be seen from our advertisement columns, Messrs. Andersons' annual stock-taking sale of waterproofs of all kinds, including many bargains in fishing stockings, &c., begins on Jan. 25, and lasts for a fortnight.

Our readers should make a note of this, as it is a *bona fide* sale of good goods at a discount of from 30 to 50 per cent., or half price in many cases.

The address is 37, Queen Victoria-street, London, E.C.

ADVANTAGES OF COMBINING WET AND DRY-FLY FISHING.

It may be well to look at both systems as applied to our numerous club waters and some of the larger rivers in Scotland. It must, however, be born in mind, that no hard and fast line, as we say, will attain the greatest success as applied to fly fishing. Forty years' experience and practice has not produced the feeling of having exhausted the subject, or that anyone is always a match for these 'cute customers. It is not, however, a matter of time or practice, for some fishermen are "born, not made." Exceptions appear now and then where a great state of proficiency is attained in three or four years, and also to the general rule of having "too many strings to your bow," for in this case the more the better, if properly used. The reading of the numerous articles in your valuable paper from time to time is a great treat and of much benefit, besides being the next best to actual fishing. Another combination, viz., minnow fishing, has proved of great advantage in enabling fly fishers to determine by the look of the water the holds of the fish and their manner of obtaining food, &c. It should be the aim of all parties to fish only the smallest portion of each stream or pool where the largest fish have taken possession, or the part, for the time being, which the matter of sun, wind, shelter, or depth makes most favourable. Only last winter, in November, a catch of eight brace of grayling was taken by adopting a similar movement of the wrist to the style a stranger was adopting while fishing gentles, but keeping the flies about 3in. under water moving in a peculiar manner.

The same style of fishing does not always apply to both trout and grayling, and both fish have their peculiar charms. Our district of Ryedale, in Yorkshire, happens to possess numerous clubs and free portions of fishing, more varied than almost any similar extent of district, the noted "Costa," along with the Seven, Rye, Dove, and Hodge, contributing their portion. There is also the great advantage in some portions of these rivers of having nothing whatever but trout in several of their upper beats. As to the pleasures of fishing, these are too numerous to be entered into in detail in this article. One person informed me the fact of losing no tackle went a long way with him; to some the outing is the object; most, however, prefer, at any rate, the taking of a few fish home. Two outings are given on the same club water during similar windy days (for position of the wind has much to do with it), so give the usual rules, viz.:

When the wind is in the north,
Never a fisherman need go forth.
When the wind is in the east,
'Tis neither good for man nor beast.
When the wind is in the south,
It blows the fly into the fish's mouth.
When the wind is in the west,
Then the fishing is the best.

On the first occasion (which was before the magic oil bottle had been invented) the execution was done by a mode of stiffening the dropper and making it skip similar to a natural fly. By using a longer dropper, with a loop about 1in. in length, and one larger point fly added (placed the right distance apart), fish could then be tempted from the deeps or clearest water that would rise to no other style. This outing, for instance, gave over eight brace, while the same flies used by another party in a different manner resulted in no fish. On another occasion the same flies fished by two equally good fishermen on a neighbouring stream resulted in seven brace of grayling being landed out of one pool (by the skipping dropper), while the other flies used with more delicate gut on another (without the same movement) were of no avail. Both got fish, however, in the streams.

On another visit matters were very different. Some considerable time was spent to no effect, and parties who had repeatedly fished this same club water were giving it up in despair. It was found out by accidentally standing still and allowing the line to sink at will that the fish would take the fly near the bottom. It seemed unsportsmanlike allowing the flies to sink deep, but resulted in over five brace of beautiful grayling.

Grayling are peculiar fish, and require a good deal of tempting at times, but there is no reason to come home with an empty basket if many

different modes of tackling them are resorted to, some of which will succeed even in the brightest summer weather.

We have most of us heard of the "Child not being hungry for simply bread and butter," and these fish will at times persistently continue rising until a particular fly is presented, and be caught at last. One of our noted fishermen believes that any fish can be tired out, and made to rise. After all, the main point is being able to present a fly on the water so naturally that fish "go for it," and do not look out for line. Numerous instances could be given where even good hands failed, by omitting some little minor accomplishment—and both wet and dry fishers will not succeed unless they master the little intricacies connected with each branch. Only this season a proficient south country fisherman failed by not condescending to use dry fly or give any jerk or wrist action to the line. Dipped Hackle flies, fished dry, move in a very mysterious manner whenever a varying current occurs, and trout can often be tempted by this style of fishing.

There are many occasions when the use of both systems tempts large fish, which could not otherwise be obtained. On fishing the Pickering Association Club water this summer, using dipped flies, fished dry, a youth remarked that a large trout was rising under a willow bush, and that it had broken his cast on his last outing. All efforts were of no avail until sinking and striking the fly under water was tried, which secured this fine specimen. Fish know the difference between a supposed dead fly floating and one rising again steadily of its own accord (as if in life), which effect the dipping gives it, irrespective of the wrist action. Again, in casting a floating fly over rising grayling it is often remarked, "This time the fly floats splendidly," and, strange to say, secures the fish notwithstanding the many previous castings.

To encourage beginners a case is mentioned of three ladies tackling grayling with no result, until their flies were anointed from the magic bottle, when each had the pleasure of landing a fish within a very few yards, and many other instances could also be given in favour of its use. As to which are the best flies, a good deal depends on the district, and actual experience is the best. Lastly, a few weeks ago, during the dry season, the record of a day's fishing was broken on a club water in less than half a day, which could not have been accomplished without the bottle.

Time and space will not allow further explanation, so must candidly admit that dipping the upright winged flies acts like magic in many cases, especially in bright sunlight, when fishing clear streams. This requires delicate handling, for the least pull sends the flies under water, and the great secret is to have them always floating and well under control.

J. C. FRANK.

LAKE VYRNWY.

LAKE VYRNWY is one of the sights of Wales, and, unlike many other noted spots, it is well out of the beaten track. The lake lies about nine miles to the west of Llanfyllin Railway Station, in Montgomeryshire, and it has been formed by the erection of an enormous dam across the basin of the river Vyrnwy. It is from this reservoir that Liverpool draws its supply of water. The length of the lake is nearly five miles, and it has an average width of half a mile. When the lake is full the water has an area of 1121 acres, and it weighs 58,000,000 tons. Its greatest depth is 28yds. Round the lake there is a beautiful drive of twelve miles.

On the north side of the lake there is an erection which suggests a castle on the Rhine. This is the Straining Tower, and it is here that the water leaves the lake on its long journey of sixty-eight miles. The Straining Tower contains three screens of very fine copper-wire gauze, through which the water passes into three pipes (one for each strainer), which lead to a circular culvert, made of concrete. This culvert is half a mile in length, and conveys the water to the Hirnant Tunnel (two and a quarter miles long). At the Hirnant end of the tunnel the water is received into a chamber from which it is conveyed to the Parc Ucha' Reservoir (six miles) through a cast-iron pipe. The aqueduct does not run on uninter-

ruptedly from the lake to Liverpool. It is divided into six parts, thus:

From the lake to Parc Ucha' Reservoir	... 9 miles
" Parc Ucha' to Oswestry Reservoir	... 8 "
" Oswestry to Malpas Reservoir	... 18 "
" Malpas to Cotebrook Reservoir	... 11 "
" Cotebrook to Norton Reservoir	... 10 "
" Norton to Prescot Reservoir	... 9 "

Total length to Prescot, near Liverpool ... 63 "

It took 1500 men ten years to build the dam, and it contains 510,000 tons of masonry. More than one-third of the stones weigh over 4 tons each, and there are several stones weighing over 10 tons. The dam is surmounted by a roadway, 10ft. above the overflow level. During the construction of the dam ten of the workmen met with fatal accidents, and nearly forty died from natural causes. The first stone was laid on July 14, 1881, by the Right Honourable Edward James, third Earl of Powis, and the work was completed in ten years, the cost of the undertaking being well over £2,000,000 sterling.

The lake is well stocked with Loch Leven trout, and affords the angler excellent sport. The following shows the record of catches since the year 1895:

Year.	Number of Fish Caught.	Weight.	Average Weight of each Fish.
1895	1773	1131lb.	10'4oz.
1896	2093	1312lb.	10'04oz.
1897	2767	1916½lb.	11'1oz.
1898	3348	2397lb.	11'4oz.

Every fish caught in the lake is weighed, and the weight is entered in a book kept for the purpose. The largest fish caught weighed 6lb. It is now to be seen at the hotel. During the spawning season most of the trout leave the lake for the many brooks that run into it. A large number of the female trout are caught, and the spawn carefully squeezed out of them, and, after being fertilised, they are placed in running water in a dark room. The work of collecting the spawn is a very delicate business.

There are very few men on the hotel staff that can do it properly—without injury to the fish. It is a remarkable fact that the spawn must be placed in running water, and in darkness. If the water ceased running for half an hour the spawn would not hatch. In ninety days the young trout makes its appearance. It is then carefully fed three or four times a day with Spratt's food, as a chicken might be, and it soon becomes capable of taking care of itself, when it is turned out into ponds, where it spends three years prior to being promoted to the lake. Several thousands of trout are put into the lake every year from this hatchery.

The hotel stands 1000ft. above the level of the sea, and it commands a magnificent view of the lake, the lofty peaks of the Aran furnishing a fine background. The proprietress (Miss Davies), besides being an ideal hostess, acts as churchwarden of the parish church, and she is also a member of the parish council.

The church and vicarage are close to the hotel. On the vicarage doorstep there is a very interesting round stone marked 57½, which was dug out of the old churchyard. The stone is known as careg-y-gamp (feat stone), and it weighs 57½lb. In the old days, on Sunday afternoons, the youths of Llanwddyn used to meet in the parish churchyard to hurl this stone over their heads for the furthest, which must have been splendid exercise for the muscles of the back and arms. The old churchyard is now at the bottom of the lake, but the remains of the dead were carefully removed to the new burial ground before the old church and the two old chapels (Calvinistic, Methodist, and Wesleyan) were submerged. There are two other interesting stones on the doorstep of the vicarage, viz., a pair of hand mill-stones, which were found in the parish. They date from about A.D. 1.

In the new church a coloured window has been put in by Mrs. Hayhurst France, in memory of her husband, the late Capt. Hayhurst France, who was drowned in the lake while fishing on the opening day of the season in March, 1897. Another window is about to be put in, in memory of the late Mr. Percy Bailey, who was killed while cycling over the dangerous road from Bala to the lake.

During the winter of 1894 the surface of the lake was sufficiently frozen to allow people to skate across.

It is very curious how almost everybody mis-

pronounces the word Vyrnwy, giving the terminal "wy" the pronunciation of the English word "you," i.e., sounding the "y" before the "w," instead of the "w" before the "y." The old form of the word "Vyrnwy" was probably "Chwyrnwy" (Chwyrn=swift; wy=water).

THE LOWER AND MID-THAMES:
WHERE AND HOW TO FISH IT.

(Continued from page 20.)

By F. H. AMPHLETT.

ROACH.

"There sat my friend with patient skill,
Attending of his trembling quill."—WOTTON.

ROACH are taken from the Thames in large quantities than any other fish. They are held in the highest estimation by a large number of anglers, many of whom confine themselves entirely to this branch of fishing. The London club anglers are particularly devoted to roach fishing, and competitions on a large scale are often arranged between the members, who are, needless to say, much more successful when fishing from a punt. There are times when roach require much coaxing, and the perseverance, doggedness, and skill of the roach fisherman is then brought into play. On some days the float is only disturbed by a succession of nibbles of the faintest description, and it is then that the angler has to bring all his knowledge into requisition, for if one of these faint "touches" are missed, the probabilities are that a large fish has escaped being captured. On the other hand, there are occasions when the veriest tyro can go out and fill a bag with these fish. Such occasions are, however, few and far between, and now that the Thames is so much fished, it requires a great deal of piscatorial persuasion to induce them to feed in a right royal manner. Walton calls the roach "the fresh-water sheep;" but, owing to the pursuit to which they are now subjected, this soubriquet is scarcely applicable, especially to the fish of the Thames and its tributaries. The requisites for success are fine tackle and proper bait. For Thames fishing the "roach-pole" is only used in quiet eddies and lay-byes. Some bank anglers prefer a long rod for fishing any portion of the stream, but the most successful roach fishing is done from either a boat or punt. Then a light cane punt rod is used, with a very fine plaited silk line (undressed) and an easy-running winch—the Nottingham for preference. The float should be a porcupine quill with cork body, capable of carrying about six or seven shots. This tackle is suitable for fishing the swims in the channel of the river, where it is requisite that the bait shall reach the bottom almost directly it is placed in the water. The angler then gets the full benefit of each swim of the float. In clear water, with only a slight stream, a porcupine may sometimes be found sufficient. I always enamel my floats *mignonnette* green, the colour is very pale, and when in the water resembles a weed floating down stream. The hooks should be on the finest gut—Crystal hooks are the best when using gentles for bait. Greville Fennel, in his "Book of the Roach," says: "These 'Crystal' hooks are admirable; they appear, both mechanically and practically, to settle the long mooted question of the best shape, size, and temper requisite for roach angling; and obviously emanate from one who has long thought, and thought to the best results, upon what was most desired, and are named after my best fisherman, Harry Crystal." If using a small worm for bait, use also the round bend hook; wasp grubs, red worms, boiled wheat, and the caddis are also good baits. The fish should be struck immediately the float disappears, and only a small portion of the latter should be left above the water, so that a bite can be immediately detected. Sometimes the fish will only feed at the end of the swim. Then the Nottingham style should be adopted, using the lightest running tackle. This is especially successful in clear water.

It is a very simple matter to breed gentles in the summer and autumn, and as gentles are, as a rule, the best bait for Thames roach, one or two hints will not be out of place. First procure some bullock's liver, and hang it up in a place where blow flies frequent. They will lay their eggs on it, or if a few cuts are made in it with a knife, so

much the better; the blow flies will then be able to lay their eggs in the crevices. An earthenware jar should be placed underneath, and when one or two gentles have hatched and dropped into the jar, take down the liver, and place it in the vessel. In two or three days more gentles will be seen, and then they should be removed into a jar containing bran, with a piece of liver on the top for them to feed upon. By adopting this plan the angler will always have at hand a plentiful supply of gentles. But there is yet another bait which the roach of the Thames are especially partial to, viz., soaked bread crust, cut into small square cubes and placed on the point of the hook. This bait should be tried before gentles. The ground bait used for Thames roach fishing is of simple manufacture. A loaf is well soaked, and then broken up into small pieces, and mixed with bran and clay. The latter is used to make it sink quickly, so that the stream does not carry it away. Sometimes a few gentles are mixed up with the "mess," and then the whole is rolled into a ball, and dropped gently overboard. The clay ball gradually breaks, and the small pieces of bread and bran escape by degrees. This attracts the fish to the spot, and the angler must be ready to hook a fish at any moment after the ground bait is in the water. But the depth must be properly plumbed, and it is usual to fish near the bottom. Never forget to carry a plummet. In the summer, when the stream is slack, more success will be assured if the punt angler can find a piece of water that is more rapid than usual. For bank fishing the stream should not be too fast. Eddies are exceptionally good places for the bank angler to try his skill in the winter. In fishing the cuttings below the locks where the water is quiet try paste. In such places, of course, the clay is not required to sink the ground bait. In fishing the weir pools in hot weather, silk weed (*Conferva rivularis*) which can be scraped off the weirs, is a taking bait. It is twisted round the hook, and sometimes the fish will take nothing better. Ledgering for roach is very seldom practised on the Thames, the float tackle being a more fascinating method.

It goes without saying that more roach are taken by punt fishing than by fishing from the banks. This is because the best swims, as a rule, cannot be reached from the bank. If the services of a professional fisherman are called into requisition, try and obtain one who is *not afraid of work*. In some parts of the Thames one can engage really good men, though there are a number of persons who call themselves professional fishermen, but who have really no sound claim to such title. I quite agree with "John Bickerdyke," who says: "The professional fishermen of the Thames are a curious race. As a rule they know the water well in their own immediate neighbourhood, but cannot be depended on as guides away from their homes, although they will tell you they know every inch of the water for fifty miles. They are generally civil and attentive, but adverse to hard work. They sometimes undertake to provide tackle and bait, but the former is invariably of an inferior description, such as no real roach fisher would tolerate, and the latter—except in two or three very frequented stations—conspicuous by its absence. There are many accomplished and attentive Thames fishermen, but the mere watermen who pose as fishermen should certainly be avoided, and here and there one meets with men who are lazy, impudent and greedy."

(To be continued.)

ANOTHER IZAAK WALTON RELIC.

THE publication of our illustration of the old carved oak linen chest which belonged to Izaak Walton and his first wife Rachael, brought us particulars of another most interesting Walton relic, now in the possession of Sir Henry Harben, of Warnham Lodge, Sussex. We wrote to Sir Henry about it, and he has kindly given us permission to reproduce the photograph of the very fine cabinet which belonged to Izaak Walton and his second wife Anne, in 1656, three years after the publication of the first edition of the "Compleat Angler."

Sir Henry Harben gave us some particulars about this cabinet which we have his permission to print. With a pretty general knowledge of all that is known about Walton, we are unaware of any reference to this cabinet in any published

writings by or about Walton, and believe this is the first public notice of it.

LETTER FROM SIR HENRY HARBEN.

"DEAR SIR,—In answer to your inquiries about the Izaak Walton cabinet, I bought it from a gentleman at Ealing, to whom it had been given as a wedding present, and who would not have parted with it but that he was going abroad, and could not take it with him.

"Before buying it, I had it examined by an expert, and on sending him down I told him the price asked for it, but told him not to make any bid for it until he had consulted me.

"But he was so much impressed with its value that he made an offer for it, lest it should be sold elsewhere.

"On reporting to me what he had done, he said he was afraid lest if it were submitted to auction it might fetch a price I might not like to give.

rich marqueterie panels in arches at sides; the frieze and cornice with mask heads, and inscribed with monograms and

"IZAAK WALTON ANNE,"

"16 VIRTUTE NON ARMIS FIDO. 56."

"Formerly in the old Deanery at Winchester, where the Angler Walton died at his son-in-law's."

It is a little curious that this cabinet was not mentioned in Walton's will, seeing that his hanging cupboard was.* Possibly he had given it during his lifetime to his son-in-law, Dr. Hawkins, or to Dr. Hawkins' wife. He says in his will that he loved Dr. Hawkins "as his own son," and it was at his, Dr. H.'s, Prebendal House at Winchester he died, Dec. 15, 1683.

He married Anne Ken about 1646, he being then fifty-three and his wife thirty-five. She died in 1662, and the cabinet bears the date 1656, when they were probably residing in Clerkenwell, for we know little about his life from 1650 to 1661.

CABINET BELONGING TO IZAAK WALTON IN 1656.

"I immediately sent to the gentleman, and paid him the price he asked for it.

"Pasted in one of the drawers is a piece of printed paper, evidently from a catalogue of sale of old date, of which I send you a copy.

"You can reproduce the photograph in the *Fishing Gazette*.—Yours faithfully,

"HENRY HARBEN.

"Warnham Lodge, Sussex.

"R. B. Marston, Esq."

COPY OF THE CATALOGUE DESCRIPTION REFERRED TO ABOVE.

"Very fine and unique cabinet, the lower part with large drawers, richly moulded and carved, and cupboard with fall front enclosing pigeon holes, drawers, and secret recesses; above is cupboard, with carved and inlaid marqueterie panels in birds, flowers, &c. The top part is canopied with rich back, the centre panel in bold relief, 'The Day of Wrath,' and deeply recessed; figures and

A PRESENTATION COPY OF WALTON'S "LIVES."

Mr. H. Littledale, of Worcester, has kindly sent us this week a note to say that in the library of Worcester Cathedral there is a copy of Walton's "Four Lives" (1760) with

for Mrs. Elyza: Johnson
Fr. Izaak Walton

on fly-leaf.

On the title page she writes: "Eliza Johnson—Given to the Library of the Church at Worcester."

On referring to Walton's will we find that "Mrs. Elyza Johnson" is one of those to whom he left a ring.

* A picture of this hanging cupboard is given in my "Lea and Dove" edition of the "Compleat Angler."—R. B. M.

THE RAINBOW TROUT IN BRITISH COLUMBIA.

(Extract from a letter dated Aug. 30, 1893.)

It will interest you to hear that I have met the rainbow trout in his own home on two occasions, the first, when I had two hours to spare, at a place called Bonnington Falls, on the Slokan river. They are the very gamest of game fish. We fished from a boat on the edge of the rapids in the evening. The best fish rise at dusk, when it is almost too dark to see the fly. I had bronchitis, so did not stop out late, but still, managed to land nine fish, averaging probably $\frac{1}{2}$ lb. They catch them there up to $\frac{1}{2}$ lb., but a 2 lb. fish is considered a good fish. In appearance they are something like an Irish white trout, only with much smaller scales and a brighter silver colour. They fine away towards the tail more than a white trout, after the manner of a mackerel. The "rainbow" is a wide streak, about $\frac{1}{2}$ in. to $\frac{3}{4}$ in., or possibly 1 in. wide, which runs right along the side from the tail to, and including, a portion of the gill-cover, perhaps a third. The streak is a most beautiful pale pink and "iridesces" in the light. Altogether it is the prettiest fish I ever saw, and so game that it was hard to believe a $\frac{1}{2}$ -pounder was not a pounder till you saw him. They mostly rose low; sometimes you could see the curl, but oftener not. Now comes the triumph. I changed one of their three hideous, gaudy, badly-tied local flies for an Excellency before I started fishing. After catching four fish on it, and none on the others, I changed a second one for a Glenhest, leaving the local tail fly on, and caught the other five fish on one or other of our two Irish flies—not one on the local flies! This, after the contemptuous way in which my flies had been criticised, was a distinct "score." I gave the boatman, who really did his best to give me good sport, one of each, to his immense delight.

This place (Kaslo) is a splendid fishing district. It is not a good season, but still, a good many trout and salmon are caught. The former are rainbows; the salmon I have not seen, but they tell me they are exactly like English salmon. They run up to 30 lb.; 20 lb. is no uncommon size. They don't take the fly on the lake, but are caught by trolling with a spinner. Some seasons they are very plentiful, and hang around the mouth of the creek; there, as far as I can make out, they do rise to a fly. An Englishman caught nearly 2 cwt. in two hours a year or two ago.

There is also a smaller variety of trout, called the "speckled" or "mountain trout," exactly like a small white trout in shape and colour, except for some dark-coloured scales here and there on the side. The average size seems about $\frac{1}{2}$ lb. They are game fish, and live in very swift water.

Kaslo is on the Kootenay Lake. There are also two other varieties of fish in the lakes, and a short way up the rivers the chard (which I have not yet seen), something akin to a salmon, but not so game, and I believe not to be tempted by the fly; secondly, the "white fish." They are shaped somewhat like the rainbow, but the head is more like a whiting's, and the fork of the tail is larger and longer than a trout's. They are supposed not to take a fly, but I caught one on a fly a couple of days ago. Their flesh is white, and they are not in the least game. This fellow made one fine rush and then caved in utterly, and was quietly hauled in. Yesterday I had the great piece of good fortune to see and watch from quite close a genuine humming-bird. C. B.

"WATERPROOF," in the *Melbourne Leader*, tells us that "In angling for trout with grasshoppers the best variety to use is the small red legged species, without wings, and the best method of catching them is by walking along the edge of the stream and frightening the 'hoppers' into the water. You can then easily collect them with a landing net. You will require about three 'hoppers' to bait a No. 4 hook. The first 'hopper' should be threaded from breast to tail, and push it well up the shank of the hook; the next you also thread on the hook, but insert hook at back. By doing this you will have the red legs showing at front and back of the hook. The third 'hopper' is placed on similar to the first, just breaking the skin at the tail with the point of the hook. Sometimes it is as well to leave all the barb exposed. Having got your tackle ready and your hook baited, you cast into the deepest water you intend to fish. You will find the bait sinks slowly, and when you think it has reached the bottom, raise it to the surface slowly and make another cast. Do not pull up the bait quickly, as a trout often takes it when just below the surface of the water."

PORTRAIT OF JOHN KIRBY.

In my angling library I have a little volume entitled "The Anglers' Museum," rather scarce, and not, I think, mentioned in that invaluable work the "Bibliotheca Piscatoria," which has for frontispiece the portrait (which I have had reproduced for the *Fishing Gazette*) of "Mr. John Kirby, the celebrated angler."

Although this is the only reference to him, I think it is most probable that he was a member of the celebrated family of fishing hook makers so often mentioned by old angling writers. For instance, Izaak Walton (in his second and third editions only) makes Piscator say to Viator:

"But if you will buy choice hooks, I will one day walk with you to Charles Kerbye's, in Harp Alley, in Shoe Lane, who is the most exact and best hook maker that the nation affords."

Writing about a century later (1760), Hawkins

Engraved for the Anglers Museum.

MR. JOHN KIRBY.
the celebrated ANGLER.

Published June 4, 1764, by John Fielding, Patnr. noster Row, London.

has this note about Kirby in his edition of "The Compleat Angler":

PRINCE RUPERT AND CHARLES KIRBY'S HOOKS.

"In some former editions of this book the author (i.e., Walton) has, in this place, mentioned Charles Kirby as a maker of excellent hooks; of whom take the following account: He was famous for the neatness and form of his hooks; when, being introduced to Prince Rupert, whose name frequently occurs in the history of King Charles the First's reign, the prince communicated to him a method of tempering them, which has been continued in the family to this time; there being a lineal descendant of the above-named Charles Kirby now (1760) living in Crowther's Well-alley, near Aldersgate-street, whose hooks, for their shape and temper, exceed all others."

The "Bibliotheca Piscatoria" says that a copy of the third edition of Walton's "Angler," which belonged to King Charles II., who was an angler, was in the library at Chatsworth. Possibly it was a present from Prince Rupert, as he knew Kirby, who knew Walton. R. B. MARSTON.

SOME TIPS BY A VETERAN CLEAR-WATER WORM FISHERMAN.

(Continued from page 19.)

At times, in the Tweed and other rivers which are tolerably well fished by all and sundry, the trout, even in the proper season, come short at the worm, or only half hook themselves, a condition of things well known to all who practice the art, and who are "far ben" in its mysteries.

In such a case it is just worth while to try spinning the worm in the streams.

In doing this it will be advisable not to use the very smallest hooks on the Stewart tackle, nor the very smallest worms, for, first, it is indispensable that the worm should spin rapidly, and then fair sized hooks, No. 3 or 4 (Kendal scale), if the worms are medium sized, will be sufficient to hook the trout as they dash at the lure. Very small hooks (1 and 2) would miss, while spinning, many a trout. Of course, a very small swivel is quite necessary, the smallest size made by Hutchinson, of Kendal—not brass, but blued steel. A shot will seldom be necessary. Indeed, one more swivel would be far more advisable, and is often much to be desired—in a deep, strong run—in any large volume of water, like the Tay or the Tweed. In tributary streams ("waters," as they are called in Scotland) the single swivel of smallest size (No. 12) is all that can possibly be wanted. The first thing is to make sure that the worm spins well, and this is no such easy matter. As a rule, I generally find that the upper of the three hooks of the Stewart tackle should be entered quite close to the head, and the worm should be nearly straight to the second hook; but between the second and third hooks the worm should take a spiral form, and the only way is at once to try it, and to shift the bottom hook till the worm spins like a top.

If it is used before it spins quite freely, the result will be failure. I would just like to add, never put a worm on without partially stunning it. It is needlessly cruel, and the worm is apt to tie himself in a knot, especially if you are fishing with very fine drawn gut, and you will have to change your worm, as he will soon break his body in pieces on the sharp, thin drawn gut. In stunning a worm, lay him in the hollow of the left hand, and give him a few taps with the fingers of the right. I have at times kept them in the hollow of the left hand, and with the right palm so held that it is also hollow, I bring the right hand smartly down on the left. The worm is practically never touched at all by the right palm, but the concussion of the air after one or two smacks will generally suffice to stun a worm without breaking it, which is the thing to avoid.

Newly dug worms full of earth easily break, and are a great nuisance to the clear-water worm fisherman. Prithee, avoid them!

As for the method of spinning the worm itself in the stream, it can be spun across with a series of draws, or fished up and across; but in a favourable spot a very good method is to wade in the shallows, and switch the worm upstream and yet across, then, lowering the point of the rod, bring it downwards, making the arc of a circle, and repeating the cast at each step.

I very often use one of these tiny blued steel swivels (No. 12) when fishing upstream—when a shot would be an advantage—and I very much prefer it to a shot. Can anyone doubt that a worm deftly placed near a wary old trout—and which begins to revolve gently when the fisherman lifts his rod upwards—is more likely to conceal the hooks and to tempt the old fox than when simply placed before him more or less motionless. And please remember that the worm, which may spin rapidly when dragged sideways through a rough stream, when thrown right upstream will only turn gently round and round, and more than this would not be advisable. It gives to "the wriggling wum" an appearance of life. Anyone who runs short, and has to use some old water-logged worms, knows how the trout "sneeze" as they come close to their noses; and, as all know, things are proved by their opposites. By the way, did anyone ever do any real good with the indiarubber red-painted worms one sees in tackle shops? I have not dared to try one. I do not mean the rubber sand eels.

Those who fish for sea trout, sewin, herling, or any sort of white trout should give my spinning worm a trial in the shallow streams when the fly

is not doing well. Few ever think of it. N.B.—It is at times very deadly amongst herling. This “tip” alone is worth making a note of. And even old hands may do worse than remember that “naethin’ beats a trial” in this connection.

Good burn fishing is not the highest branch of the art, but I hold that it is the very poetry of clear-water worm fishing.

If I could be a young man again, I really think that I would take up burn fishing as my own special delight and my dream to be in old age. It has a peculiar fascination, and I am proud to say I am at one with that excellent sportsman, be it with dry fly or wet fly, worm or minnow, who still occasionally writes to the *F. G.* under the title of C. Hevit, “The Hon. Chaplain of the *Fishing Gazette*,” and who remembers my paternal grandmother (who was a personal friend of his own father), which is more than I do, as she lived “owre the border and awa” when I was a raw-boned Scotch laddie.

Burn fishing, I say, is a fascinating pursuit. And what, pray, constitutes a burn? asks someone who has never lived in the “land o’ cakes” and “barley bree.” I will try to answer him. The heads of all our Scottish rivers are at first only burns, and at times they are many in these upland regions. There are burns, however, in the more lowland portions of Scotland as well as in the mountainous regions, but they differ widely from the burns which run from every little valley amongst the hills. Now, if once a young angler took to burn fishing as his peculiar hobby, I distinctly say he has entered on an earthly paradise which it is hard to beat. I know of no one who has done so, and I hold it out to those who have youth, time, leisure, and money, for to do it well a man would have to travel from point to point. The trout do not, as a rule, run large. I have fished a burn near the sea where the trout were red fleshed and averaged about $\frac{1}{2}$ lb.; but this was an exception to the rule. There is an infinite variety in burn fishing. In the low grounds the burns have different characteristics—they run slower and are more turbid, sometimes milky if passing through clay, but by no means always, for at times they are as clear as crystal.

The burns—“many muirs an’ mosses many, O”—are apt to be more or less coloured by peat stain, but they are absolutely charming, with their succession of pools and streams and tiny cascades, and now and then one comes to a long, still pool, or a large and deep pot underneath some high cascade; and here the wily fisherman may do well to kneel down, and fish the pool up with a cast of hackled flies. He can still, if he lies low, fish it with the worm. To reverse the process would be a mistake. To the tired brain, what more delightful than being alone with Nature, up some wild, lone glen, rod in hand! The music of the water is of itself soothing; the cuckoo and moorcock are our companions, as are also the water ouzel and various smaller birds. Birch trees grow in clumps here and there, lending beauty to the banks.

The fisherman requires a sinewy, active frame; it is not the pastime for the inactive or the old and feeble. My own day for climbing and kneeling, and so forth, I confess, is over, as is this paper.

E. M. TOD.

THE FLY DRESSER'S LIBRARY.

(Continued from page 21.)

BY VAL CONSON.

IN 1847 the indefatigable “Ephemera” produced his “Handbook of Angling.” It contains a long theoretic dissertation on artificial flies, a clear and interesting chapter on the mechanics of the art, and a list of some sixty-eight patterns, with the dressings. This author was all for “exact imitation.” Another edition appeared in 1848 with eighty-two patterns, and third and fourth in 1853 and 1865 respectively.

In 1847 there also appeared the very artless work of Mr. Soltan, a well-known Devonshire angler. It is called “Trout Flies of Devon and Cornwall” on the title page, but inside it is called “Treatise on Flyfishing.” It is full of irrelevancies from start to finish, and its only value consists in its coloured plates of some eighteen flies. The reader must, however, guess of what materials they are constructed.

A second edition appeared in 1856.

In 1849 appeared a work called “Practical Fly Fishing,” by “Arundo,” which, although neither scientific or accurate in many respects, impresses the reader with the capacity of the author and with a respect for his short list of by no means conventional patterns. There is nothing in it of the mechanics of fly dressing. There has been a recent reprint of this work (Methuen and Co., 1893), which puts it within the reach of all.

Another and still more remarkable work which appeared in 1849 was Hewett Wheatley’s “Rod and Line.” Wheatley was a man much ahead of his time in many ways. He advocated eyed hooks, and described and illustrated the Red Tag, for the title of inventor of which many claimants were lately contending in the columns of the *Fishing Gazette*. His book does not deal with the ordinary trout flies, but after a chapter on “Minnows and Waterwitches” (as he calls spinning artificial minnows), and another on “The Grasshopper, Cabbage, and other Grubs,” chiefly as bait for grayling, he gives a most interesting and valuable set of directions for imitating beetles. In the following chapter on “Fancy Flies” he gives some eleven patterns, which are still worth a trial. Among them are the Red Tag above mentioned, the Yellow and Orange Partridge, and two flies which rather suggest than imitate the Iron Blue Dun. But he admits “many of the so-called fancy flies have their prototypes in nature. The term fancy fly is often vulgarly applied to all flies whose living original is unknown to the angler.” In the next chapter, on “Moths,” the author anticipates the theories of fly dressing lately propounded by Mr. Charles Walker in the columns of *Land and Water*, in his lectures to the Piscatorial Society, and in his clever volume, “Old Flies in New Dresses.” He recommends the dressing of large Sedges and Moths in the position of rest. The last chapter, on “Salmon Fishing,” is one with which we have no concern here. The book is beautifully illustrated, and is written with much caustic wit and spirit. It is a sound, practical work, and it is a matter of surprise that it has not been reprinted.

In 1851 appeared anonymously a work called “Fly Fishing,” published by Van Voorst, and chiefly remarkable for five eccentric plates of salmon flies. It contains more of other matter than of fly fishing. But in the parts devoted to trout and grayling there is a brief list of flies with their dressings.

In 1853 Michael Theakston published his “List of Natural Flies,” republished in 1863 as “British Angling Flies,” and again in 1883 with the same title, edited by Mr. F. M. Walbran. The book is a very creditable attempt on the part of a man who had had no scientific education to describe the natural flies which are imitated by anglers. There are black and white illustrations of every fly, very well drawn indeed. Theakston had a theory of his own as to nomenclature of flies. He called all the Ephemerae Drakes, on the analogy of the Green Drake, probably failing to realise that the Green Drake owed its name to the feather with which it was dressed. He called the Sedges Duns, the Perlidae Browns, the Tipulidae Spinners, and so on. His system has not caught on. The descriptions he gives of the dressing of flies are very inadequate. He was a Yorkshire angler.

Theakston was followed, in 1854, by John Jackson, another Yorkshire angler, with a capital little illustrated work called “The Practical Flyfisher.” It has twice been republished, once in 1862 and again in 1880. In 1889 it was republished at the end of a re-issue of Major’s edition of “The Compleat Angler.” There are some brief instructions for dressing winged and hackled trout flies, eked out with some amusingly primitive, but nevertheless serviceable, woodcuts. Then follow a series of plates, not so good as Ronald’s, none too well coloured, but still of some value. They contain, side by side, the natural flies and their artificial imitations, the latter drawn with little pretence to neatness of dressing, but most evident faithfulness of drawing. The interleaved letterpress describes the dressings—an excellent series.

“Rambles and Recollections of a Flyfisher,” by “Clericus” (the Rev. W. Cartwright), appeared in the same year, 1854. It claims to contain “an appendix, with ample instructions to the novice, inclusive of fly making and a list of really useful flies.” His directions are very simple. His list of flies is a good one.

In 1857 came a work that no angler on wet-fly streams should be without, “Stewart’s Practical Angler.” No better work on fishing burns has ever been published. The description of the methods of dressing trout flies, simple as they are, are well worth learning. Stewart’s list is a short one, comprising three winged and three hackled flies. These, he says, are sufficient; but he is not dogmatic, and he does not deny that other patterns will catch fish.

In the following year appeared “The Teesdale Angler,” by R. Lakeland—an ill-digested collection of dressings, thrown together anyhow and full of repetitions. It was apparently got by ringing the changes of different coloured silks with different hackles. It is at this period one notes the beginnings of the prevalence of that style of fly dressing known as the Yorkshire hackle style. It is, indeed, singular how little earlier authors had regarded the hackled as compared with the winged fly.

In 1861 “Wade’s Halcyon” appeared. It contains some fairly lucid directions for dressing flies, and some miscellaneous information with regard to materials, dyeing, &c. At the end of the book there is a plate illustrative of certain processes of dressing, and five plates of coloured illustrations, roughly done, of natural and artificial flies. The text contains a list of 210 flies, the longest, I believe, and, except Lakeland’s, perhaps the least digested, list in the literature of angling with the fly. They are placed in no sort of order, and there are cases among them of mere repetition.

In 1863 a small volume was published, called “Trout Fishing in Rapid Streams,” by H. C. Cutcliffe, F.R.C.S. It is a most original work, written from the point of view of a Devonshire fly fisher, and it contains much information not to be found elsewhere as to breeding fowls for hackles, and the collection and preparation of materials for fly dressing, and some excellent instructions for dressing the large hackled flies affected on Devonshire waters. At the end of the book is a list of Devonshire flies that he recommends. The book is worth reading closely from cover to cover. A fresh edition was published by Messrs. Sampson Low and Co. in 1883.

In 1865 and 1868 appeared, in New York, two editions by Robert Barnwell Roosevelt of “Superior Fishing.” He gives a poor set of instructions for dressing flies. He adds:

The various flies that appear upon the surface of the numerous and varying waters of our country, from the borders of Mexico to the confines of Labrador, would furnish the subject for an instructive and interesting work.

The natural flies, whether hatched from the caddis at the bottom of the streams, or from the burrows in the ground, or the knots on the limbs, or the acorns amid the leaves of trees, are more numerous than those of any European country. As a class they are larger, the Ephemerae especially, and although often found to be similar in general appearance, furnish many species unknown there. They have never been properly described and classified, and no satisfactory work has been written at all thorough and reliable in which an attempt is made to record their nature and habits.

(To be continued.)

SALMON FISHING IN THE RIVER USK.

A COUPLE of very important meetings connected with salmon fishing in the river Usk were held at the Great Western Hotel, Abergavenny, on Friday. First there was a joint conference of representatives of the Usk and Ebbw Board of Conservators, the United Usk Fishery Association, and of the River Usk fishery owners. The chair was taken by Lord Tredegar, and there were also in attendance Sir Joseph Bailey (now Baron), Captain John Hotchkis, Mr. S. H. Cowper Coles (representing the Marquess of Worcester), General Gillespie, Major Williams, Captain Sandeman, and General Sir Charles Barnard, together with the clerk (Mr. Horace S. Lyne). The question which the conference was called to consider was whether it was desirable to acquire the stop nets in the river. It was generally felt that it would be to the interests of all fishermen to have the nets under the control of one body. Colonel Lyne, it was stated, had already purchased, on behalf of trustees, the nine nets owned by the Marquess of Worcester. The trustees to whom these are to be handed over are Lord Tredegar, Sir Joseph Bailey (now Baron), Mr. A. D. Berrington, Colonel Lyne, and Mr. J. C. Hanbury, of Pontypool Park. Altogether there were eighteen nets on the river Usk. Nine were held by the Marquess of Worcester, one by Eton College, one by Mr. Clifford Cory, two by Lord Tredegar, one by Mr. Rieley, two by Mr. Hanbury, and two by Sir Arthur Mackworth. Already the Marquess of Worcester has sold his nine, Mr. Clifford Cory has agreed to sell his, Mr. Rieley will agree to continue the annual tenancy of his in the hands of the Fishery Association, Lord Trede-

gar has agreed to grant a long lease of his, and Mr. Hanbury's two nets are included in the lease of the Crown fisheries, now held by the association, so that there are only three others to be dealt with, and those will be looked after by the stop net joint committee. The money necessary to be raised to pay for the rights so being acquired is £1800. To meet this sum the fishery owners above Abergavenny have promised £700, and it is hoped to get £800 from the lower fishery owners. Of this latter sum £200 has been promised by Mr. Hanbury, and £100 by the Llanover trustees. It is hoped that the remaining £300 will be obtained from the association members, ticket holders, and the smaller fishery owners. Later a meeting of the Usk and Ebbw Board of Conservators was held at the same place, Col. Lyne presiding. Arising out of the conference of the representatives, the chairman moved two important resolutions in accordance with notices, and these were agreed to, viz.: "That the bye-law made by the Board of Conservators for the Usk and Ebbw Fishery District, on the 30th day of September, 1873, being bye-law No. 1 of the said board, be altered so that such bye-law shall read as follows: 'The termination of the annual close season as to the whole of the Usk and Ebbw Fishery District, both for all modes of salmon fishing, except with the rod and line, and as regards fishing with the rod and line, is hereby altered as follows, namely, such annual close shall terminate on the 1st day of March inclusive,'" and "That the licence duty upon stop nets within the Usk and Ebbw Fishery District be increased from £5 to £7 10s."

PROSECUTION BY THE GREAT WESTERN RAILWAY COMPANY.

At the Bristol Police Court recently, before Mr. S. Wills and Col. Coates, William Pole was summoned for travelling upon the Great Western Railway without having previously paid his fare, with intent to avoid payment of it, and Herbert Edward Cole was summoned for aiding and abetting him in this offence. Mr. Hart (Messrs Osborne, Ward, Vassall, and Co.) prosecuted on behalf of the Great Western Railway Company, stating that the facts of the case were somewhat peculiar. It was not an ordinary offence of travelling on the railway without a ticket, because Pole had a ticket, although not a correct one. In Bristol there was a club called the Golden Carp Angling Association, which was affiliated to the Provincial Angling Association, whose headquarters were at Birmingham. The Great Western Company made great concessions to the Provincial Association, and allowed *bond fide* members to travel to stations on their line at a fare and a quarter for the return journey. The Golden Carp Association being affiliated to it, their members enjoyed the same privileges. When a man was elected a member of the association he was sent, from Birmingham, a member's travelling card, or tablet, so that when he applied at a railway station for an angling ticket, and produced the tablet, he obtained his ticket at a fare and a quarter. On Sunday morning, October 23rd, the defendant Pole was seen at Temple Meads by one of the Angling Association's servants to take a ticket to travel by the slow early Weymouth train. He was heard to ask at the booking office for an angler's ticket, and he produced an angler's tablet. Evidence would be called to show Pole was not a member of the association, and not entitled to the angler's tablet. He had formerly been a member, and would therefore know the rules of the association. The defendant Cole had lent Pole his ticket. When an inspector of the company subsequently spoke to Pole, he replied that he had got the ticket for Cole, but Cole was not at the station that morning. When Cole was questioned by the Angling Association he made four different statements. At first he denied lending the ticket, then that Pole had asked him for it, that he had gone by an earlier train that morning—(there was no earlier train); and also that Pole had made a fool of him. Mr. Hart read a letter that Cole had written to the Angling Association admitting that he had lent his tablet. John Clements, a member of the Bristol Golden Carp Angling Association, said on Sunday morning, October 23rd, he was at the Temple Meads station and saw Pole go to the ticket window with an angler's tablet in his hand, and ask for an angling ticket either for Freshford or Bradford. Cole was not at the station that morning. On the Sunday previous to this he had heard Pole ask at the booking office for two angling tickets, but as he had not a tablet with him, the clerk refused them. Frederick Guy, booking clerk, said that on the Sunday morning in question he did not issue any ordinary tickets to either Freshford, Bradford, or Limply for the early Weymouth train. Richard Dix Frost, president of the Golden Carp Association, stated that Cole, on 23rd October, was a member of the association, and was, therefore, enabled to purchase an angler's ticket at a railway station. There was a rule of the association that no member of the association should use his tablet except when going fishing, nor lend it to anyone else. Pole was not a member of the association, but had been two years ago. Witness further corroborated Mr. Hart's statement, and added that Cole's tablet had now been forfeited. William Thomas Forrester, chief inspector on the G.W.R., also gave evidence in support of Mr. Hart's statement. Wm. Pole, having been sworn, said he lived at 192, Newfoundland-road. He borrowed the ticket from Cole about the 21st of October to have a day's fishing, thinking that as he was a *bond fide* angler he was entitled to use the ticket. He asked for an angler's ticket at the booking office. In reply to Mr. Hart: He had asked for an angler's ticket on the previous Sunday, but as he had not a tablet with him it was refused. Herbert Edward Cole, a butcher, living at Cranbrook-road, said that a day or so previous to the 23rd October Pole borrowed his tablet, saying he wanted it for a friend who had been proposed as a member of the association, but who had not yet received his tablet from Birmingham. Witness knew Pole had been

a member of the club, and had been led to believe he was still a member. He knew he did wrong in lending his ticket, even (as he thought) to another member, but intended it as a kindness to a new member. The bench said the offences had been committed, and the defendants would be fined 40s. and costs each.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting of this society was held at the Cannon-street Hotel, Mr. A. W. Parker in the chair. The usual reports from stations were read. Several members reported indifferent sport from Deal. An interesting discussion took place on wire lines. Mr. R. J. Gordon showed a winch in which the barrel was built up with wine corks, so that the drum was greatly increased and at the same time allowed the salt water to run away. Mr. Hearder's letter in the *Fishing Gazette* was read, and it seemed the feeling of members that Mr. Hearder ought to have stated when and where the wire lines were used that he refers to. Mr. Ormiston, who was present, stated, in reply to a distinct query, that he was of opinion that phosphor-bronze wire for sea fishing had certainly not been used for winch lines, being only introduced during the last ten years. Mr. Handley drew attention to the fact that no lectures had been given during the year, and asked that the hon. sec. should lead off. A formal resolution to this effect was then passed. The hon. sec. stated that he would be pleased to do so at an early date. The chairman mentioned that he would bring the matter before the next committee. The hon. sec. announced that Mr. F. E. Eldred would read a paper before the society on Wednesday, Feb. 1, on "Fish Hooks." This would be followed at an early date by a paper on "The Ramblings of a Sea Angler," by Mr. A. R. Mathews. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

GRESHAM ANGLING SOCIETY.

At a largely attended meeting at headquarters, Masons' Hall Tavern, Masons'-avenue, E.C., Mr. Mark Davies occupied the chair. A quantity of business was transacted, the drawing up of the committee's report for 1898, and the programme (provisional) for 1899. This will be issued towards the end of next month, and suggestions for the improvement of same are invited from every member. There are several vacancies for paper readings, and the committee would be glad to receive the names of any gentlemen who would be willing to further the interests of the society by volunteering to read a paper—not of necessity to be upon piscatorial matters. Two gentlemen were unanimously elected members of the society, and another nominated for membership. Mr. H. Short reported some roach from the Storr. Mr. F. Gray, from Leigh, two dozen dabs, in very rough weather; and from the Thames 22lb. of good roach. The event of the evening, a paper entitled "Rain and Rivers," was then forthcoming. It was delivered by our old friend, Mr. James Taylor ("Red Palmer"). He discoursed at very great length upon the subject. It would be impossible in the space at my command to give the details. Sufficient to say that the large audience were more than interested. Several gentlemen discoursed upon the different subjects touched upon by the lecturer, and at the conclusion a most cordial vote of thanks was accorded him for his labours. Several items of interest were discussed, after which the usual toasts and a vote of thanks to the chairman concluded a model Gresham evening.

ALEX. WRIGHT, Hon. Sec.

BRIGHTON ANGLERS' ASSOCIATION.

THE annual meeting of the above association was held recently at the Imperial Hotel, Queen's-road, Mr. Oxborough presiding. The quarterly and yearly balance-sheets were read by the secretary (Mr. Martin), showing a balance in hand of £27 15s. 11d. Mr. Kempshall (auditor) proposed that the balance-sheets should be passed, which was unanimously accepted. Mr. McFarlane (vice-chairman) brought before the members the advisability of introducing influential outside anglers to assist in forming a preservation board for the river Adur. He said "that it would be an expensive undertaking for the association to bear on its own shoulders." It was decided that a meeting should be called for Tuesday, Jan. 24, at 8.30, to discuss the matter. Mr. Pain proposed that ladies should be admitted into the association as honorary members for the sum of 1s. per year, which would entitle them to the railway privilege ticket. This proposition was supported by all, and twelve lady members were enrolled the same evening. The following officers were elected for the ensuing year: Gerald Loder, Esq., M.P., president; Rev. J. Goring and Sir Joseph Ewart, vice-presidents; Mr. Oxborough, chairman; Mr. McFarlane, vice-chairman; Messrs. Pain, Hall, King, Doughty, and Sackellmore, committee; Messrs. Kempshall and Quinn, auditors; Mr. A. Bunting, treasurer; Mr. Stevens, trustee; Mr. W. Martin, hon. secretary; Mr. Saunders, assistant hon. secretary. Members please note that 1898 privilege tickets are now cancelled. Tickets for 1899 can now be obtained by paid-up members from the secretary, at headquarters, every Tuesday night, at 8.30.

W. M. MARTIN.

CARDIFF PISCATORIAL SOCIETY.

THE annual meeting of this flourishing fishing club was held at the Alexandra Hotel on Thursday evening. Mr. R. J. Watkins, superintendent registrar for Cardiff district, occupied the chair, and there was a good attendance of members. Dr. Taylor was re-elected president of the society, and Messrs Lascelles Carr, David Duncan, John

Mander, Colonel Gaskell, Major Rigg, and Councillor Gerhold were re-elected vice-presidents. Mr. Richard Harris was re-elected hon. treasurer, and Messrs W. H. Burrows, and Ernest Webster were elected as joint hon. secretaries, and M. J. T. Williams auditor. The relations of the society with the Taff and Ely Fishing Association and with the Provincial Angling Association continue to be of a cordial character, and the society will fish the first named association's waters on the same terms as last year. The annual subscription will remain at 5s. as heretofore. The society, in entering on the ninth year of its existence, has before it a full programme, and many new features of benefit to anglers generally, not only in Cardiff but throughout the Principality. It was proposed to give up some of the Rumney waters now rented by the society in favour of some more desirable fishings which the committee have in view. It was arranged to hold the annual dinner at the Alexandra Hotel, the headquarters of the society, on Wednesday, February 8th. Application for membership and all communications relative to the business of the society should be addressed to Mr. W. H. Burrows, 66, Conway-road, Cardiff.

GREAT YARMOUTH SONS OF NEPTUNE ANGLING SOCIETY.

ANNUAL MEETING.

THE annual meeting in connection with the above society was held at the clubhouse, North Quay, on Monday evening. Mr. J. S. Bartram, the chairman of the society, presided, Mr. S. Mobbs occupied the vice-chair, and there was a good attendance of members. The first business was to consider the question of raising the subscription of the society, and after a discussion it was unanimously decided to increase the angling subscription to 2s. 6d., whilst non-angling members will pay the same subscription as has previously been in force. The secretary next gave his report and balance-sheet, from which it appeared that the society had just entered upon its seventh year. The present year's accounts compared very favourably with any previous one. They had a membership of 107, which was a reduction on 1897. Several members, however, had not yet paid their subscriptions, but would probably do so if asked. During the past season seven matches had been held, four fresh and three salt water. The first named took place at Potter Heigham, Fritton, Acle, and Ormesby, whilst the three latter were held on Breydon (2) and Caister Beach. There had also been an improvement in the gross catch of fresh-water fish, for in the four matches 228lb. 11½oz. were weighed-in. The salt-water matches had not been so successful, as only 73lb. 14½oz. were landed in the three contests. In the seven competitions held fifty members turned out at one or more of them, whilst altogether 180 entries had been received, an average of nearly twenty-six per match. Nearly £20 had been given in cash or kind as prizes, and of this amount £10 16s. 6d. had been presented to the society by gentlemen interested in it. Early in the season Mr. W. T. Nicholls had presented them with a handsome silver cup. This had been fished for four times, Messrs. D. Houghton (2), H. Grimmer, and G. Himpleman respectively having been the winners, the last named being the holder until next year. In the competition for this trophy they had raised the scale of fish to be weighed-in, and it had worked very satisfactorily. The society's challenge cup had been won by Messrs. J. George, F. Downing, D. Houghton, and G. Himpleman. In the competition for the association shield they had not taken a very prominent position, but he (the secretary) hoped that they might be more successful this year. The report and accounts having been adopted, the election of officers was next proceeded with, with the following result: Mr. J. S. Bartram having decided to relinquish the position of chairman, which he had held nearly three years, Mr. S. Mobbs was appointed in his place, whilst Mr. W. Breeze was elected vice-chairman. The treasurer (Mr. J. Harris) and secretary (Mr. E. W. Buckle) were both re-elected. Messrs. R. Bammant and H. G. Buglass were elected auditors. The general committee were constituted as follows: Messrs. F. Mobbs, F. Downing, R. Rowlett, J. S. Bartram, W. Budds, A. Bensley, H. G. Buglass, E. Plummer, and H. Rudd. The angling committee elected were: Messrs. G. Thompson, S. Mobbs, F. Downing, J. S. Bartram, S. Layton, W. Pye, G. Himpleman, H. G. Buglass, and D. Houghton. Messrs. J. Harris, S. Mobbs, and E. W. Buckle were elected as delegates to the Yarmouth and Gorleston Amalgamated Anglers' Association. The secretary having reported the death of a member (Mr. W. Sharman, of Southtown), which had occurred the previous day, the society decided to show their sympathy and respect for the deceased by purchasing a wreath. Votes of thanks to the retiring officers and to the prize donors concluded the meeting.

E. W. BUCKLE.

ANGLERS' ASSOCIATION.

MR. W. H. BECKETT occupied the chair on Monday evening last at the January delegate meeting of this association. The minutes of the last delegate meeting, general committee, renting and preservation committee were read, and in the latter minutes the cost of the netting at Tottenham reservoirs was mentioned, the same amounting to £85 5s. 2d. It was also stated that Messrs. W. Westbury, T. Harris, H. Hartwell, and F. Lucas had been elected hon. bailiffs to the Grand Junction and Slough Canal. The visiting officers gave their reports. Mr. G. Manning stated that he had had no visit since the last meeting; the next one will be to the Stapsney Angling Society on Monday evening, Jan. 23. Mr. Abrahams reported that his next visit would go to the Islington Brothers'. Mr. T. R. La Mond (Clissold A.S.) was elected

visiting officer of the Tottenham Suburban List on the proposition of Mr. Abrahams, seconded by Mr. Rowles. The chairman read a letter from the Midland Railway, which stated that in reply to their application for Sheffield, on their line, they had issued notice to grant anglers tickets to that station for 5s. A complaint was made by a member, Mr. Haynes (Crown and Buckland), that he had been turned away from the association's fishery at Wormingford, as a society called the Merry Anglers claimed it as their fishery. The secretary was instructed to see into the matter, and will report at the next meeting. Mr. Knight proposed, and Mr. Ford seconded, that application be made to the South-Eastern Railway to issue cheap tickets to Maidstone. Thirty-eight clubs were represented. A vote of thanks to the chairman closed the proceedings.

HON. REPORTER.

PISCATORIAL SOCIETY.

THE annual general meeting of this society was held on Monday evening at the Holborn Restaurant, Major Graham Gordon presiding. There was a very large attendance of members. The auditors, Messrs. C. C. Blundell and F. G. Bridgman, presented their statement of accounts for the past year, showing a small balance to the good after paying all liabilities. After a short discussion the accounts were duly passed, on the motion of Mr. G. Smith, seconded by Mr. Chas. H. Wheeley. The committee and officers for the ensuing year were then elected by ballot, and will be as follows: Mr. T. R. Sachs (president), Mr. R. S. Pennings (vice-president), Mr. E. Foreman (hon. treasurer), Mr. M. G. E. de Courcy (hon. secretary), Mr. J. W. Zaehnsdorf (hon. librarian), Dr. Chas. S. Patterson (hon. curator), Messrs. C. Butler and C. C. Blundell (auditors); and committee, Messrs. H. H. Brown, F. G. Bridgman, C. H. Bywaters, W. Edmonds, E. K. Foreman, E. M. Mayes, C. Stallibrass, Frank Ward, Chas. H. Wheeley, Chas. E. Walker, R. Clay, and Neville Davis. A resolution, proposed by Dr. C. S. Patterson and seconded by Mr. F. G. Bridgman, was unanimously passed that an expression of condolence be forwarded to the hon. treasurer, Mr. E. Foreman, from the members assembled, on his trying illness, accompanied with a hope that he would soon be amongst them again. Mr. J. Flower was duly elected a new member by ballot.

A motion by Mr. E. McFee, seconded by Mr. R. C. Blundell, that the hour of meeting be altered from 8 p.m. to 8.30 p.m. was carried, as also a resolution to the effect that new members joining after Aug. 1 should pay only half the yearly subscription, viz., £1 11s. 6d., with the usual entrance fee of a guinea.

With reference to the acquisition of new water for trout and coarse fishing, it was explained that, owing to the fact of the society having, as the chairman put it, "no concrete individuality," a lease could not be granted to it direct, and, as a consequence, Messrs. R. C. Blundell and E. Foreman had taken for a long term of years the famous fishery on the Colne at Uxbridge, known as Dr. Ramsgill's water, as trustees for the Piscatorial Society. If the latter found that their finances permitted them to take the water over from the lessees named, the operation would be effected by a declaration of trust, which would state that so long as the society paid the rent to Messrs. R. C. Blundell and Foreman all the rights and privileges they had in the water would be enjoyed by the members. The chairman explained the legal aspect of the case, and the question of ways and means was fully gone into. It was felt, however, that until some of the waters which the society at present holds are given up, the income available for water renting would not be sufficient to cover the additional expense of the new water. To get over this difficulty a number of members at once subscribed their names to a guarantee fund to provide the sines of war. Dr. Patterson moved, and Mr. G. Smith seconded, however, that any deficiency in the rent should be taken from the reserve fund. The chairman, as hon. solicitor of the society, although he thought that if there was a deficit at the end of the year, and they could show that it was not likely to be a lasting one, resulting from the exceptional case of having waters on their hands which they could not at once give up, they could draw upon the fund to meet such deficiency. On the other hand, if it was to be an enduring deficit, he did not think they could touch the fund alluded to to provide for it. In any case, until they knew what the deficit was at the end of the year, they could not pass a vague resolution like the one suggested. An amount must be specified. Thereupon Mr. C. Stallibrass moved, Mr. R. Bradford seconded, and it was unanimously resolved that the society take the water secured by Messrs. R. C. Blundell and E. Foreman at Uxbridge; the lessees giving the society the whole of their privileges, with the exception that the control of the fishing hut was to be vested in the two gentlemen named. A very hearty vote of thanks was accorded to Messrs. R. C. Blundell and E. Foreman for the energetic steps they had taken to obtain such a splendid stretch of water for the use of members. It is expected that the members will be able to fish the new water in about a month's time, but they will receive the earliest possible intimation on this head from the hon. secretary. No one, however, will be allowed to fish without a special permit, and until the current year's subscription of three guineas (not two guineas) is paid. The recommendation of the committee that Mr. T. R. Sachs and Dr. Coates be placed on the list of hon. members was agreed to, and, after the chairman had been warmly thanked for presiding, the meeting closed shortly before midnight.

M. G. E. DE C.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

30 min. for Chelsea.	55 min. for Kew.
Add 40 " " Putney.	75 " " Richmond.
45 " " Hammersmith.	80 " " Twickenham.
50 " " Barnes.	85 " " Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Jan. 21	9.4	9.45
Sunday, " 22	10.28	11.9
Monday, " 23	11.46	—
Tuesday, " 24	0.21	0.50
Wednesday, " 25	1.14	1.36
Thursday, " 26	1.56	2.14
Friday, " 27	2.30	2.46

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, Jan. 21	9.44	10.25
Sunday, " 22	11.8	11.49
Monday, " 23	12.26	0.40

These times show high water at Houghton Bridge, Amberley. Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—At the time of writing my general remarks last week there was every hope of the anglers doing some good business in the river at the end of the week; but since then it has occasioned nothing but the greatest disappointment. There has not only been some heavy showers of rain, but the most disastrous gales and a tremendous stream of water. The old days of work came with great force to my mind, with the absolute necessity of a personal and practical visitation to the river, or as near as I could get to the flooded portion, and the desirability to watch and prepare for the work to follow, when both men and nets would be required on its return to recover the fish that had been drawn away from the parent stream, and it was a sight to witness the priming of the fish in the meadows and lands adjoining. In addition to the staff of wholly paid keepers, the fishermen were always found ready to assist in securing the safety of the fish. One occasion comes strongly to my recollection in some meadows near to Shepperton Lock, where some pools had been left behind full of fish life, and, thanks to the willing and able services of George Rosewell, the late David Hackett, and others, large quantities of good fish were netted out and placed with safety in the proper channel. I could mention others who came forward in other portions of the river to do similar work, and, speaking of the fishermen generally, I am greatly indebted to them for the help they were always ready to give me in the work of river preservation. The tidal waters were always a source of very great anxiety in the time of a flood by the fish getting into the meadows, and the work it necessitated in their recovery, and the names of Kit Brown and the late George Howard are most prominent for help in that direction. In a previous number of the *Fishing Gazette* I referred to the steps taken by the Thames Conservators at the present time to prevent anything like a recurrence of the floods of bygone days, and the anxiety of the officials of the T.A.P.S. is greatly relieved, but the associations in the Upper Thames still find it necessary after a pressure of water to net the ditches and other tributaries for any stray fish. The river is not only high, but the water very thick.—B.

—(Datchet).—John Keene says: "I have been out one day with Mr. Jones and Mr. Herbert, who creeled 30lb. of roach and a chub of 4lb., several of the roach weighing 1lb. each; and another day, with Mr. George Shepherd, 40lb. of roach, a great many of them weighing over 1lb. each. The water is now very thick."—B.

—(Hampton Court).—William Milbourne, writing on Monday evening, says: "Owing to the heavy rain there has not been anything done. The weirs are all drawn, and the water has risen 5ft. 3in., and it is still on the rise. It looks more like high flood. There will not be any fishing in the Thames for the next fortnight if the weather keeps fine."—B.

—(Henley).—Jan. 19.—The continued heavy rain has brought the river up bank high. In places it has overflowed, but am pleased to say to no serious extent in this district at present. Both Marsh and Hambleton Weirs are drawn, and a tremendous stream running. I need hardly say that little has been done in the way of sport, although one or two anglers have braved the storms. It should be good when the water fines down again.—when.—STANLEY MEAD.

—(Kingston).—John Johnson during the week, seventeen bream, twelve dozen of roach, and one brace of jack, the largest roach weighing 1lb., and two of the largest bream 4lb. each. The bank anglers have been getting a few roach and bream. The water is high and thick.—B.

—(Teddington).—There are no reports of angling interest, and W. McBride has been getting a few lampreys.—B.

—(Twickenham).—The principal item of river news which Mr. John Spong could give me on Tuesday morning was the appearance of a seal and a porpoise, which have been roaming about there and Teddington

this last week. One of his men, who had seen the former, estimated its weight at 40wt. It was seen on Monday morning opposite the residence of Mr. Labouchere, and on Tuesday near the ferry. I was sorry to learn the Acton Anglers, in their competition at the end of last week, had been unfortunate through the bad state of the river. One of the members, only three bream; another, seven dozen of gudgeon in the shallows; and another, only two. Mr. F. J. Ogden Smith told me he had been out one day, and only landed a few poise. A gentleman fishing with R. Spong, close by, caught a jack of 2½lb. with pearl barley; and I also heard of one of the residents, fishing from his river steps, creeling a jack of 3lb. with bread. It was the opinion the flood waters would do good for this portion of the river, and bring some good down from the upper waters. The reports from the fishermen were as follows: C. Browne, one day, eight fine bream; R. Moffatt, three bream and a few nice roach; G. Chamberlain, three dozen of fine roach; and George Coxen, three bream and one dozen of dace.—B.

—(Windsor).—The river is now in high flood, and I suppose the usual uncalled for attacks upon the Thames Conservancy and lock-keepers by the floods committee will now be heard of again. No doubt the gentlemen of the committee think they are right; but before making complaints they would do well to grasp the subject of the management of the river before making attacks upon the much respected and hard working lock-keepers, whose attention to their duties, no one who frequents the river will deny, are carried out in the most efficient and painstaking manner. A fair number of fish have been taken by bank anglers. The best lot I have heard of was taken by Mr. Paice, of Eton, and consisted of six roach (five of which were over 1lb., and the best one turned the scale at 1lb. 6oz.), and three barbel, largest over 4lb. Should the rain keep off I am afraid the river will not be in condition for at least ten days.—CECIL HOWLETT.

—(Arun (Pulborough)).—A fair muster visited here on Jan. 15, but, owing to the flood, went on to Amberley. Only three returned from here, Mr. Wigley, of the Bermondsey Brothers, taking a 2lb. bream, which is all to record. At the time of writing (Wednesday night) the water is gradually sinking, but under the most favourable circumstances the river will not be in order by the 22nd, the land at present being under water for miles.—W. G. HOLLMAN.

—(Bure (Norfolk, Wroxham District)).—Jan. 16. This river is now, owing to constant rain and high tides, in the lower reaches, at very high level and full of dirty water, with hardly any current throughout part of the day. Fish appear to be almost entirely off the feed, and prospects are poor all round. With a falling glass, rising wind, and more rain to-night (16th), they do not appear likely to improve for a week or two at least, and angling is likely to have a break, I fancy, for a time.—C. H. TAYLOR.

—(Devonshire Streams).—The streams are all in heavy flood, being bank high. The conservators of the Taw and Torridge will again discuss the question of net fishing in the estuary after the commencement of the close season. This is now prohibited, it being considered that injury to the salmon fishing resulted. It is thought by some, however, that trawling should be permitted. Last season this board had a balance in hand, but their funds now show a deficit owing to the decreased revenue of the past season and the increased cost of watching the rivers. The Avon and Erme Conservators will spend £15 in re-stocking the rivers under their control, and alterations have been made with regard to the licences. Day tickets have been abolished, and the price of weekly tickets raised to 10s., of monthly tickets to £1, and of season tickets to £2.—DEVONIAN.

—(Exe and Canal (Exeter)).—A succession of spates has effectually put a stop to all angling for the past week. To-day (Wednesday) the river is in full flood, and, given no more rain, will take at least three days to subside.—RED PALMER.

—(Fen District (South Lincs. and Cambs.)).—Pike fishing is the leading feature in this district, particularly on the popular lengths of the Welland, the Forty-foot, and other noted waters. Numbers of fish have been caught, but mostly on the small side. The best fish reported has been under 10lb. On the other hand, roach fishing is reported as very successful. Takes up to 20lb. are reported from the Cambridgeshire side. From Surfleet, Outwell, March, &c., good doings are mentioned.—LIMPET.

—(Idle District (North Notts)).—There has been a freshet on the Idle from the late rains, and the water is up again this week. Bottom fishing, however, is fairly prosperous, and good baskets of roach and dace are reported from the lengths just below Retford. Grayling fishing is also at its best on the upper reaches about Gamston. Some good lots are reported by the bottom fishers. From the river below Mattersey there have been captures of pike, and also from the drains in the lower district. Canal fishing continues good.—L.

—(Lark (Lackford and Fliampton)).—Heavy showers are making the water discoloured. A few pike have been killed live baiting in the quiet parts. Messrs. Skinner Brothers, out on the 14th, two pike, 6½lb. and 3lb. If no more rain, river will be in fair order by Thursday.—A. E. KEMP.

—(Lea).—The unfavourable angling weather continues, and Lea fishers have had another bad time of it. The river has been very thick, while on some occasions it has been almost impossible to hold the "pole" over the stream owing to the boisterous weather. To-day (Thursday) prospects are again far from bright for the week-end. As may be imagined, there has been little sport anywhere. The best roach reported (1lb. 3oz.) was secured at Tottenham. No good baskets have been notified me, but as soon as the water begins to settle down and clear again I—

providing the weather is also favourable—hope to be able to report some excellent sport among the roach. There are plenty of grand fish in the river, especially from Broxbourne upwards, and I should advise anglers to try and catch the river fining down. Then, with white paste, gentles, worms, or crust they ought to get some splendid roach. The Stort has been like pea soup, and at the time of writing I can hear of no improvement and of no sport. —ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these streams are now running very high and muddy, and have been out over the fields in some places, owing to the continued falls of rain, accompanied with snow and hail. In fact, the weather has been as bad as it could be, and the rivers are all out of anything like order for fishing, and will be for some time by the look of it. The Pinsley is high and mudd. No fishing done of late.—G.WYNE.

Nene (Peterborough).—The water in the river has risen considerably since last week, to-day (Wednesday) the gauge at Peterborough Bridge registering nearly 13ft. On Saturday, under adverse circumstances, some good sport was had amongst the pike between Alwalton and Woodstone Staunche, about a dozen being taken, the largest weighing nearly 12lb. A good number of roach, too, have been landed, the bait most partial being worms. The question of the pollution of the river Nene came before Judge Bagshaw, at Thrapston, on Thursday, but an adjournment was made to the March Court. It was reported that the Northamptonshire County Council had done all they could to overcome the difficulty, and had sent up plans of a revised scheme of sewage disposal to the Local Government Board, but no communication had yet been received from that authority. It was decided to ask for an early reply in the matter.—E. A. S.

Ouse (St. Ives, Hunts.).—River flooded; roaching to be had in places; roach up to 1lb. 5oz. have been weighed in to-day. Pikeing out of all question for the next week.—E. COLLINSON.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—Angling in any shape or form is completely out of the question in this neighbourhood at present, and will be for some time unless we have a sudden change in the weather, but there seems little prospect of any alteration yet, as it is raining in torrents, with a great gale of wind from the south-west, and consequently all these rivers are much flooded, and are still rising rapidly, and contain a large quantity of snow water. On Tuesday a violent thunderstorm passed over the neighbourhood, followed by a very frosty night; but the atmosphere is much milder now, so that a fall of snow is only too probable.—VYRNWY.

Sussex Rivers and Chichester Canal.—Variable has been the weather of the week—gales, hail, and heavy rain storms. The Arun is in flood, and the Ouse following suit. A few good fish have been taken from the Ouse when the elements have favoured. Mr. Durrant secured handsome roach weighing 1lb. 11oz., also dace of 8oz., angling with worm. Other anglers have taken a few roach and small pike. The Rother is running like a mill race, and out of condition. Chichester Canal is the only available water that I know of; although bank high, it is in good condition. Several anglers were out on the 16th, and but little done. On Tuesday pike were feeding—fish of 4½lb., 3½lb., and 3lb. were taken below Donnington, and perch up to 2lb. in the reach below Hunston. Small roach have been captured, and bream up to 1½lb. Seven fish taken recently weighed 9lb., all with paste.—GEORGE F. SALTER.

Teme (Ludlow).—The Teme in this district has been visited with some heavy falls of rain and snow and sleet, and it has made the river rise considerably, and it is now muddy and bank full. At the end of last week there was some prospect of sport being had, but a sudden change has upset calculations, and there will be no fishing done for some days to come. The water is very thick, and there must have been very heavy weather up the country to make it so. No anglers have been out since Saturday. Before Saturday a few coarse fish were taken, but no grayling, with worm and maggot. The Ony, Corve, Clun, and Ledwyche are running high and muddy, and quite out of fishing order, and there has been nothing done in them for weeks.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part has now rose rapidly, and is bank full and very muddy, owing to the most severe weather we have had during the week, when snow, rain, hail, sunshine, thunder and lightning have been the order, and the rivers soon rose again. No anglers have been out, and there is little prospect of any fishing being done for some time—certainly not before the middle of next week.—WORCESTER.

Witham, &c. (Mid-Lincolshire).—Sport on the Witham has been rather quiet. About Bardney there have been some pretty good captures, and also at the outfall of the Bain and of the Sleaford Canal. At Coningsby, on the Bain, roach fishing is reported as very good. A Lancashire sportsman has been doing great things there lately. In four days he took about 100lb. of roach, running up to 1½lb. each. This was in addition to returning all under ½lb. Numerous pike have been secured from the lower lengths, but fish have run small. Live bait is recommended. About Boston things are quiet.—LUCI.

Yare (Brundall).—Four boats were out on Jan. 15. Two Norwich anglers in one boat found a quiet corner and caught 20lb. of roach. The others did next to nothing. To-day (Tuesday) the river is like a clay pit.—W. H. ELSMORE.

Yorkshire Rivers.—We have had a variety of weather since my last report, but more boisterous winds, snow, and rain than anything else. Consequently the Yore, Swale, Wharfe, Nidd, Aire, Ouse, &c., keep very high, particularly in the lower reaches; consequently the bottom fishermen have not been numerous, and their

takes, as a rule, poor. But Mr. Wood and a few other York anglers have done fairly well; and on Saturday last, in the Ouse, Messrs. Pope and Jenkinson, fishing for pike in the waters of the York Angling Association in the Canal at Pocklington, had very good sport, killing between them seven nice pike, the largest fish weighing 9½lb. and the smallest 4lb. Grayling fishing keeps very good in the Yore, in spite of high waters and wretched weather. Dr. Murphey, of Bolton, has had good sport at Danby up to Friday last. Tuesday was a typical grayling day, there being a sharp frost, with bright sunshine. The water was big and high coloured, but I had a dish of fourteen nice grayling, weighing 8lb. The fish took both the brandling worm and gentle. The Rev. Father Murphey had good sport on the same day, both in the Cover and the Yore. The trout have returned to the main rivers, and are "mad on the feed." The three of us returned fully a score fish, several of them weighing over 1lb. They are very forward in condition, doubtless owing to the open winter. Messrs. Smithson and two or three other Northallerton anglers have been out in the Swale, in the neighbourhood of Morton Bridge and in the Wiske. Few anglers have been seen higher up the river in the neighbourhood of Catterick or Richmond, and their takes do not call for any special comment. The frost of yesterday gave way to snow, followed by rain to-day (Wednesday, Jan. 18), and all our rivers are running high and thick again.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAM.—The gale which set in yesterday afternoon and continued fiercely all night (melting snow and rain), culminated in the heaviest flood we have had for six years. Miles of land in the valleys of the Yore, Swale, Nidd, Wharfe, Ouse, &c., are under water, and at the time of this dispatch the flood has a tendency to increase rather than decrease. Messrs. Thomas and Bumby, of Leeds, caught two nice pike at Pocklington yesterday.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Kenmore (Loch Tay).—On Jan. 17, on the hotel water, Mr. H. Buchanan, Glasgow, killed two new run salmon, weight, 20lb. and 18lb., also two salmon, 17lb. and 17lb.; Mr. H. J. Carson, one salmon, 18lb. Prospect on loch looks good; only two boats out.—WM. KNIGHT.

Loch Tay (Killin Hotel).—Jan. 16, Mr. Clepham, one salmon, 17lb., and one fine trout, 11lb.; Mr. Mitchell, banker, Ardrrie, two salmon, 19lb. and 15lb.; Mr. Steel, two, 21lb. and 20lb.; Mr. Ure, two, 20lb and 14lb. Jan. 17, Mr. Mitchell, one, 29lb.; Mrs. Maisey, one, 17lb. Jan. 18, Mr. Clepham, one, 17lb.; Mr. Ure, one, 19lb.; Miss Sloan, one, 16lb.; Mr. Sloan, one, 15lb., and one nice trout, 2½lb.—H. MAISEY.

North-East of Scotland.—A snowstorm of some considerable severity has been raging chiefly in the Grampian range since Sunday. This will be all the better for big waters later on, although it may interrupt the work on rivers just opened. The floods are subsiding with the frosts. Fresh fish have been running freely in all the early east coast streams. There is a good head of fish well forward to the upper waters, while the floods have also assisted a good clearance of the early kelts. Disease has been pretty prevalent among speut fish, but no fresh fish have been, as far as is known, yet met with either in a dead or dying state. Bar weather accidents, the opening on the bulk of Scotch waters some three weeks hence should be attended with considerable success. Angling waters are being rapidly picked up.—G. M.

Tay.—The salmon rod fishing opened on this river on Monday last under most unfavourable weather conditions. On the upper reaches the wind was cold, and blew in full gusts from the north-west till the afternoon, when it veered round to the north. Throughout the day showers of snow and sleet fell, rendering it very unpleasant for such anglers as ventured out. The heavy rains and recent snowstorms had swollen the river to an abnormal height, and by mid-day, on the lower reaches, the river got too dirty for fishing. The spawning season was fairly good, and a great many fish were observed on the spawning beds. The prospects are fairly bright, and anglers are hopeful of a good season. On the opening day, on the upper reaches, Major H. J. Pearith, fishing Findyate water, caught one fish of 20lb.; and on Tuesday a salmon of 15lb., and a trout of 4lb. On Pitcastle water, on Monday, Mr. Johnstone lauded a new run fish of 18lb. Fishing Dalguise water, on Wednesday, Mr. H. Mackworth Praed killed five fine new run fish, of 13lb., 14lb., 14lb., 22lb., and 25lb. On Fisher's Hotel (Pitlochry) water, on Tuesday, Mr. Tom Greig, Glencarse, killed a nice salmon of 18lb., and two magnificent specimens of newly run fish, weighing 27lb. and 30lb. respectively; and fishing same water on Wednesday, caught a nice fish of 20lb. Mr. W. O. Bell Irvine, fishing Murthly water on Tuesday, caught one spring fish of 19lb.; and on Wednesday, one of 18lb. Fishing on Stanley water on Monday for Mr. Herbert Lewis, Aberdare, Mr. J. S. Mowat caught two fine fish, which weighed 16lb. and 22lb. respectively. Fishing on Taymount water on Tuesday, Lord Blythwood landed two salmon; and on the same water, on Tuesday, General Campbell lauded a fish of 10lb., and Mr. Montague D. Campbell caught a fine salmon of 16lb. One fish was caught on the Earl of Mansfield's water on Monday.—A. A.

Tweed, Teviot, and other Border Rivers.—From all the accounts that I have received, fishermen in the Border district of the Tweed seem to be under the impression that the forthcoming spring season will be a fairly satisfactory one, especially on waters which will be properly fished. Up to the present time we have had little or no frost, and all the spawned-out fish lately in the rivers have by this time gone back to the sea, there to

resuscitate their wasted energies, and once more, later on, again ascend to the fresh water reaches. There has not been much done in trout fishing since my last notes, although the rivers have been running in good volume all the week, and their colour was good until this morning, when, owing to a fall of snow yesterday (Tuesday) they assumed a bluish tinge. The takes of trout got have been poor, ranging from 2lb. up to 3½lb. Last week the Tweed Commissioners, bailiffs, and superintendent, along with the local fishermen, netted the junction of the Tweed and Teviot and other casts in the Kelso district for gravid fish, so as to obtain ova for the private hatchery at Mertoun House (Lord Polwarth's), in view of again stocking the Tweed with hatchery fry. No fish, however, were got suitable for the purpose, but operations were, I believe, to be tried on other parts of the river. At one shot of the net a very large grayling, said to be fully over 2lb., was landed, but it was at once returned to the river again.—MAXWHEEL.

IRISH REPORTS.

Irish Rivers.—Since last report the majority of the rivers have risen by the floods, and are still greatly swollen, especially the upper reaches of the Shannon. The weather continues fairly mild—a little frost now and then. No pike fishing worth recording for a considerable time.—J. A. B.

Cork Rivers.—All the Cork rivers continue in heavy flood, and the spawned fish are clearing out seawards.—T. J. D.

Lough Curran and other Waters (Water-ville, co. Kerry).—Angling opens here on Feb. 1, and good sport is confidently looked forward to if the weather be at all favourable. The Waterville Weir Fishery has not yielded as well as usual so far, owing to the existing unfavourable climatic conditions, but matters are improving at time of writing. 45,000 yearling salmon are to arrive this week, to be placed in the hatchery here, and a further consignment of 45,000 later on.—T. J. D.

Shannon and Lough Derg (Killaloe).—The weather continues wet and wild; but, all the same, I still think that the river in some parts will be fishable on Feb. 1, despite the present high water. Spring fish are already running up from the sea, and more than two or three huge ones have been seen sporting under the weir wall and gates—the bonniest bit of water here at Killaloe in early spring. Several rods from both sides of the channel have already taken waters here. One enthusiastic salmon fisher writes me: "I am now ready for the fray, having tied some killing flies and got all my tackle in order. So there is nothing now but to wait for this day fortnight, when I hope to meet you on the bridge and once more try my luck on the old Shannon." The spawning time has been favourable to the salmon and trout during the present close season in this way, that there has been no snow, and therefore no snow broth to sicken the fish. But I have a grave charge to make against the conservancy board for the manner in which the main river and tributaries have been left without watchers this winter.—S. J. HURLEY.

Westmeath Lakes (Mullingar).—Since Nov. 1 it has been one continuous scene of spawning operations in the tributary streams of the lakes and the rivers Inny and Brosna. There has been no break caused by frost or snow, and the large staff of water bailiffs have had busy times day and night; in fact, there were no intervals of rest up to the present. At same time, while due vigilance has been used, poachers, otters, and herons have destroyed their quota of fish on the redds. It would take at least four times the number of watchers to afford proper protection. The season for the Drogheda district of Westmeath will open on Feb. 12, and for the Limerick district on March 1.—T. J. W.

SEA FISHING.

Brighton.—About a score of anglers on the west pier, but they have done very little. Water is quite thick, and it is too rough for small boats to venture out; wind west, and very sharp.—W. H. ELSMORE.

Baltimore.—Nothing doing here at present owing to stormy and generally wet weather.—T. J. D.

Darrynane.—All kinds of fishing suspended here for the present in consequence of strong N.W. winds.—T. J. D.

Deal (The Pier).—Very few attempts at fishing have recently been made in this locality, the unsettled weather having rendered the water about the colour of clay. Signs are not wanting which indicate that the whiting season is fast approaching to its close, but codling are fairly plentiful at certain spots. Sunday's anglers included Messrs. Bowles, Hinton, Smidt, Krenkel, Boock, Lane, Scott, and Andrews, but all returned to town that night with very indifferent catches. Mr. Smidt had a small cod of 6lb. in the morning, and Mr. Hinton one of similar weight in the evening. On Monday Messrs. Humphreys, Preston-Gardner, Gareau, Bowles, Camps, and Hinton fished for several hours, but scarcely any return was made. Mr. Gareau hooked and landed a 5lb. cod minus a tail, that appendage having probably been recently bitten off by a dogfish or conger, and Mr. Camps took a small 3½-pounder. The fine weather on Tuesday brought out sixteen rods, but the total day's catch did not reach two score. Matters were even worse to-day (Wednesday), only three fish being caught between eight in the morning and four in the afternoon. The water still remains unusually thick.—J. RICHARDSON (B.S.A.S.).

Dea.—Owing to the very unsettled weather nothing of importance in the way of angling has been done, and the latter part of week several anglers put in an appearance, but returned with poor takes. On Tuesday one local fisherman put out and landed about thirty codling, several of them were large ones. To-day several boats out, but

nothing of importance to report. However, if weather becomes settled, in all probability we shall see more sport. The tides suit to fish all day now for a few days.—EDWARD HANGER (B.S.A.S.).

Dingle.—The weather has been very rough for the past week, and both angling and netting operations are at a standstill here at present.—T. J. D.

Eastbourne.—The weather is still very rough and unsettled, and has remained so now for more than a week, with the exception of an occasional fine day. Boniface has had several good takes, making about £7 during the other week. When weather moderates some good sport should be had. High water on Saturday, Jan. 21, about 5.45 and 6.15 p.m.

Southend and Leigh.—Although since last report some very nice fish have been taken, the week-end, to which the metropolitan angler usually looks for his sport, was very wet, with a strong breeze and choppy sea, so that very little was done. The wind has been very strong all this week, the barometer jumping up and down in a manner indicative of very unsettled weather. Barometer, 29.60 in. falling; wind S.W., fresh; sea choppy. Prospects very uncertain.—CHARLES HUSSEY (B.S.A.S.).

Valentia.—Nothing doing here at present, even within the practically land-locked harbour, owing to a continuance of strong gales and generally wet weather.—T. J. D.

THE following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, Jan. 20. Tides increase.

	Sat.	Sun.	Mon.	Tues.	Wed.	Th.	Fri.

STOP PRESS.

WEATHER REPORT.

BY TELEGRAPH.—FRIDAY, JAN. 20, 9.25 A.M.

DEAL.—S.W.; smooth.
DOVER.—W.; light; moderate.
RAMSGATE.—W.S.W.; smooth.
MARGATE.—S.W.; smooth.
HASTINGS.—W.; smooth.

"MR. SYDNEY BUXTON," says the *Saturday Review*, "is right when he says in his article on angling in one of the monthly reviews that if the reform of the London water systems is much longer postponed, the Hertfordshire trout will be in the same predicament as the men and women of East London. The springs of the lovely head-waters of the Lea are getting lower and lower, whilst the little brook Mimram, or Maran, empties a far smaller supply than fifteen or twenty years since into her neighbour. The Kent Cray is fast disappearing, and the Darent of the same county no longer deserves the praise it won from Spenser. The water companies are sucking dry the great sponges of chalk, in which these once fair streams have their sources."

A GREAT BLESSING TO HUMANITY is without doubt a medicine composed of ingredients that, while it eradicates the germs of disease, strengthens the system. Holloway's Pills act in this manner, and in general debility, mental depression and nervous irritability there is no remedy which operates so beneficially. They purify the blood, give tone to the stomach, and thoroughly regenerate the system. They are mild in operation, although most powerful in removing disease. Delicate females and young children can take them with safety and benefit. It would be difficult to enumerate all the advantages to be derived by taking these wonderful pills. No household should be without them, for there is no complaint which they cannot cure or relieve.

Angling Fixtures.

January 22.

Brothers Well Met: Outing to Bures.
Camden: Match at Henley.
Campbell United: Match at Henley.
Drayton Park Piscatorial: Outing.
Elgin: Match at Surly Hall.

" 12.—Seymour Brothers: Match at Goring.
" 14.—Good Intent: Supper.
" 14.—Victoria Brothers: Outing to Bourne End.
March 6.—Piscatorial Society: Annual dinner.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Benevolent Society.—The next committee meeting will take place on Friday evening, Jan. 27, at 8.30. At our last meeting one application received £6, another two guinea convalescent home letters and a guinea donation.—R. GHURNEY.

Anglers' Association (No. 1 EASTERN DISTRICT) Visiting List.—The next return visit will be to the Stepney A.S., the Beehive, Rhodesswell-road, Stepney, on Monday next, Jan. 23. As this will be the first visit in the New Year, I hope we shall begin well with a big meeting.—G. MANNING.

Anglers' Association (No. 2 DISTRICT) Visiting List.—Our next return district visit will take place on Jan. 31, at the Islington Brothers' A.S., Myddelton Arms, Canonbury-road, Islington, N. I hope to see the usual crowd of merry anglers present on this occasion. It is my first visit in the New Year.—BEN ABRAHAMS.

Anglers' Association (WESTERN DISTRICT) Visiting List.—On the 16th inst. a most enjoyable visit was given to the Prince of Wales' A.S. On the roll-call eighteen clubs were well represented. The association's box contained £18s. The next visit goes to the Queen's Piscatorials, 1A, Chapel-street, Edgware-road. Date later in the *Fishing Gazette*.—J. HARRIS.

Anglers' Benevolent Society (WINDSOR COMPETITION). Committee-rooms, 1A, Chapel-street, Edgware-road, W.—In answer to various letters received as to whether 1½oz. or 1oz. came in for prizes, all I can say is that there were eighty-five prizes and one special awarded on Jan. 12. Weights ranged from 2lb. 3drs. down to 1½oz. 3drs. Mr. Wright (2nd Surrey) took eighty-fifth prize, and there were 123 who weighed-in. If any prizes come in I will communicate with next on the list.—BEN ABRAHAMS.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On Jan. 15 Mr. C. Osborne saved us a blank with nice roach and perch. The match at Amberley, which was to have taken place on the 23rd, has been rescinded on account of the state of the water. All members please note match at Hampton Court; roving, either bank; first and second trains only

from Waterloo or Cannon-street—instead of Amberley same date. Usual other conditions; show fish 5.30, at Railway Tavern.—H. HAINES.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate.—At our meeting on Jan. 16 we had the delegate's report from A.A. by our delegate G. Blades, which was accepted. One or two of our members had fish, but nothing out of the ordinary. The above was well represented at the Prince of Wales' A.S. annual return visit on Monday last, our member Abbott occupied the vice-chair. Ben had a take of flatfish, and also Mr. Wheeler (hon. member) at Southend-on-Sea. It was a breezy day, and a little wet to crown our sport. We compete for sweepstakes match in the A.A. waters, Langley and Slough canal, for jack. One rod only to be used for jack fishing, but members can have a go for roach, &c. Only jack count. Boundary, Veitches and Cottage Pounds; tow-path or meadow sides. Entrance fee, 1s. Date of match, Jan. 29; 8.43 a.m. train, or any subsequent train. Members arriving later must report themselves to chairman.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portsmouth Place, Lincoln's Inn Fields.—On Jan. 15 the following weighed-in: Mr. Boothby, roach (heaviest, 1lb. 2½oz.); Mr. Hopping, roach; and Mr. Drew, roach.—J. CHAMBERS.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—The result of the competition at Amberley was bad, as, in consequence of the floods, only two prizes were taken, by Messrs. Cripps and Nunn, jun. The remaining prizes to be fished for; go where you like. Mr. Rowley was elected a member and Mr. Fryatt proposed. Will members show up at the Crown and Buckland on Monday night?—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—A concert will be held in our spacious hilliard-room on Monday, Jan. 30, when our president (Mr. T. Crumplen) will deliver a lecture entitled "Fishing in the Eastern Counties," and I hope to see a large gathering. A collection will be made for the Thames Angling Preservation Society. Several gentlemen have been proposed as members, and we hope to have some more in a few weeks. Particulars can be had of—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Our match at Cookham, on the 15th inst., was fished under very adverse conditions. However, the prizes were won by Messrs. W. Thomas, A. Jenkins, and J. Cox respectively. Also weighed-in: Messrs. Smeed, F. Ireland, Ansty, and G. S. Ireland. Our next match will take place on Feb. 5; open, roving; jack barred. To go down on the morning.—A. JENKINS.

Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Since my last report we fished our match at Wraybury, but owing to the state of the river only two prizes were taken. Mr. Painter, barbel, first; Mr. Tringham, dace, second. Mr. H. White also had fish, but not enough to take a prize. We take a visit on the S.L.U.V. List on Jan. 30, when I hope to see a good muster.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—The members of the above fished a competition for their January series of prizes on Jan. 15, in the river Arun. Only one member, Mr. J. Wigley, succeeded in taking a fish. The two remaining prizes will be added on to the February series.—ALF. CONN.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Jan. 15 Messrs. F. S. Pavett, F. W. Stocker, and T. Davis weighed-in roach. All subscriptions must be paid on or before Wednesday next, Jan. 25, when the books will be closed.—T. PATERNOSTER.

Brompton Angling Society, D'Oyley Arms, Marlborough-road, S.W.—Will members kindly note our supper match for the 29th has been postponed to Feb. 5, in order that we may join with the Sandial Angling Society on the latter day at Bourne End. Final arrangements will appear next week.—C. A.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—On Jan. 11 one of our members, Mr. A. Field, had a very fine show of roach, weight 15lb. On Jan. 15 Mr. H. C. Canton, 4lb. of roach. We fish a match on Jan. 22 for a series of prizes in our water at Bures. Any member can go down on Saturday evening.—HY. TAME.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On the 15th Mr. E. Wright and H. Ward saved us from a blank with roach. A prize outing takes place at Bures on Jan. 29, for six prizes, pegged-down, start Jan. 22, 9 a.m. train from Liverpool-street. Start fishing at 11.30 a.m., cease fishing at 5 p.m.; show fish at the Swan Inn not later than 6.15 p.m.; stewards, R. Hubbard and T. Benny. On the 17th four working members were made.—P. E. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—We have a roving match at Henley on Jan. 22.—E. BOXALL.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Several members fished a competition at Wraybury on Jan. 15, but returned with small results: J. Thorne, first, &c. A committee meeting will take place on Monday, Jan. 26, at 9 o'clock sharp. Important business will be transacted on this occasion. Mr. A. Bowater weighed-in 5lb. 5½oz. roach from other waters.—G. T. JAMESON.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On Jan. 15 several were out, with bad results. We were saved a blank by

Mr. Gudgeon. On Tuesday usual meeting, good mnster, and delegates gave a good report. Members please attend, to arrange for A.B.S. concert and fix date.—T. FAULKNER.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—During the last fortnight we have had some nice shows of fish, Mr. W. Beames heading the list with 16lb. of jack; Mr. F. Beames, 8lb. of jack; Mr. Ball, roach and perch; Mr. Jarrett, roach and perch; Mr. Turner, roach; Mr. Stafford, roach. A vote of thanks was given to Mr. Sandilands, of the Stratford A.S., for his kindness in returning Mr. Beames his pocket-book, with privilege ticket, &c., which was lost on London Bridge Station. Members are requested to attend in force on Wednesday, to hear the balance-sheet read.—G. FORD.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On Jan. 15 Messrs. Curtis, Massey, Marshall, and Outbush had some good shows of roach and dace; and on Tuesday Mr. Halford (our host) had a good bag of roach, dace, and bream.—W. MASSEY.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—On the 15th we had the first blank this season. Will clubs not receiving tickets for our concert on the 23rd kindly accept this invitation, as it is impossible to write to all. I hope to see members and friends early. I am sorry that the Phoenix A.S. have arranged their visit on the C. and D. for the same night.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On Jan. 15, in spite of the inclement weather, several of the members were out, but Mr. Davies was the only one who succeeded in obtaining any fish, he saving the society from a blank with a few nice roach. On Tuesday, the 17th, there was a fair attendance, when the auditors (Messrs. S. Wood and T. Swain) presented their report and balance-sheet, which was accepted. Members will oblige by attending on Tuesday, the 24th, to make final arrangements for the outing on the 29th.—S. MALBY.

Didbin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Several of our members out on Jan. 15, but no fish were weighed-in; all got soaked. Wednesday, at usual meeting, Mr. Colman elected a member, and Mr. West proposed as another new member. All going well and strong at present.—J. EDWARDS.

Drayton Park Piscatorial Society, Stanley Arms, Landseer-road, Holloway-road, N.—Outing Jan. 22.—GREG.

Forest Gate Piscatorial Society, Forest Gate Hotel, Godwin-road, Forest Gate.—On Jan. 15 only one member weighed-in, viz., Mr. H. Creeke, 5½lb. roach and bream, largest 1lb. 4½oz. and 2lb. 10½oz. respectively.—H. F. C.

Forest Piscatorial Society, Rose and Crown, Hoe-street, Walthamstow.—Messrs. H. Tisley and G. Beaumont weighed-in with roach, and Mr. W. Davies with dace.—H. TISLEY.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, W.—On Jan. 15 Mr. Ellins had the only fish weighed-in, a nice roach of 1lb. 6½oz. On the 17th, Mr. King weighed-in nearly 16lb. of jack. I should like to see members on Tuesday, to discuss the question of the next outing.—J. E. LAWFORD.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Mr. Thompson saved us from a blank on Jan. 15. On Tuesday the members decided to have our annual supper on Feb. 14. Mr. J. Williams was unanimously voted chairman and Mr. A. Coker, vice-chairman. I hope all members will attend on Tuesday next to decide about prizes.—R. MURPHY.

Greenwich Angling Society, Morden Arms, Circus-street, Greenwich.—At our annual general meeting, held on the 11th, for the election of officers for the ensuing year, the following were elected: Mr. G. H. Dowsett, president; Mr. W. Marshall and Mr. J. B. Orr, vice-presidents; Mr. T. J. Church, chairman; Mr. H. Burgess, vice-chairman; Mr. A. T. Waring, treasurer; Messrs. French, Gorton, Dupere, Wack, Steer, Thompson, Windred, and Scoble, committee; Mr. J. Dryden, secretary. The statement prepared by the auditors showed that we have £20 in Post Office Savings Bank and £4 in hands of treasurer, and the number of members to date 101. Several alterations were suggested in the rules, and increased measurements of fish suggested instead of weight; and, after due discussion, most of the alterations were carried. A present of books from Mr. M. H. Smith (published in America), on fishing subjects, are on the way, which will be most interesting to the members. A committee meeting will take place on Wednesday, Jan. 25, at 7.30 p.m.—J. DRYDEN.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Mr. Smith has weighed-in some roach. The balance-sheet has been adopted. I hope members will attend next meeting night for special business.—C. SMITH.

Hoxton Brothers Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—At the last meeting (Jan. 12) the auditors, Messrs. S. Cole and W. Bishop, gave their report. The balance-sheet showed an increase of members, which now stand at seventy, and still electing more. Mr. J. Huntley, jun., was proposed as a working member. On Jan. 15 Mr. F. Newton weighed-in roach.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—On Jan. 15 Mr. Burwash weighed-in dace, saving the club from a blank. Others were out, but had no sport. We met on Tuesday, Mr. Boys in the chair, when the minutes of the previous meeting were read and confirmed, and one new member proposed. A special meeting is called for Jan. 24. Our return visit on No. 2 Eastern List takes place on Jan. 31.—J. H. HERBERT.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville.—On Jan. 15 a few members were out, but no fish were shown, this being our first blank

of the season. On Jan. 22 we fish at Bourne End for seven prizes. All to start from Paddington by the 8.40 train. Usual conditions.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—The weather has been most unsettled—windy, wet, and cold—and totally unfit for angling, and consequently most anglers have wisely stayed at home. Our quarterly meeting on the 12th was only moderately attended, but the quality, if not the quantity, was there all right enough. Capt. Macnab was in the chair, and the president, Mr. Veale, was his *vis-à-vis*. The minutes of previous meetings were read and confirmed, subscriptions received, and the routine business speedily got through. The hon. treasurer's quarterly account of receipts and payments was read and submitted, and unanimously adopted, and all due accounts, amounting to over £23, ordered to be paid. The annual dinner was fixed for Feb. 23, and a dinner committee appointed. Our fine library was well patronised, members taking home the "Book of the Grayling," "Book of Angling" (Francis), "George Doggett, Keeper," "Fish and Fishing" (Manby), &c. Steps are being taken to obtain some more jack for the Knowsley water. Following up the forming of a centre in Liverpool of the Northern Anglers' Association, members from the Liverpool, West Derby, and Central Angling Associations here met Mr. Redford, by appointment, at the Bee Hotel, on Saturday evening last. Mr. Redford explained the position, and after some discussion, it was unanimously resolved, on the motion of Mr. Woolfall, that a centre of the Northern Anglers' Association be constituted here; and on the motion of Mr. King, seconded by Mr. Wishart, Mr. R. Woolfall was unanimously elected first representative and secretary for two years of the said centre. It was further agreed that a meeting be held on Saturday evening next, Jan. 21, at the Bee Hotel, at 8 p.m., for the purpose of electing a committee and settling generally the preliminary business of the centre, and placing it in working order. There is no doubt all Lancashire and Cheshire angling organisations should belong to the Northern Association, their railway concessions, fishing facilities, and privileges being equal to, if not better, than any other consolidated body.—RD. WOOLFALL.

Maldon and Heybridge Angling Society, White Lion Inn, Fullbridge, Maldon, Essex.—The Langford waters during the past week have been well coloured, and a good run of water has been beneficial to anglers fishing the backwater. Mr. J. Freeman, jun., and A. Springett have taken some remarkable good roach (over 14lb. between them) on the 16th inst. The result of the first round in the cup competition fell to S. Vince on the 14th inst., with three roach, scaling 3lb. 12½oz. (largest fish 1lb. 6oz.), and T. Springett, second, with roach. The water is now fining down a bit, and some good catches of roach are expected. Messrs. Ben Lees, Miller, Race, Homer, and a few other anglers were here on the 15th, and secured some good roach between them. The time of high water at Beeleigh will be at 9.7 a.m. on the 22nd. The second round in connection with the cup competition commences at two o'clock on Saturday next; start from the Long Weir after drawing for swims; finish fishing at five o'clock; weigh-in fish at six o'clock at the clubhouse.—F. KEENE.

Mildmay Angling Society, Clarendon Hotel, Mildmay Park, N.—The outing arranged for the 22nd inst. to Pangbourne has been indefinitely postponed. The only fish shown last week were a few decent roach from Broxbourne. I shall be glad to hear from any of the members who have not yet received tickets for our fourteenth annual dinner, to be held here on Feb. 7.—A. E. HENDON.

New Albion Piscatorial Society.—As the Great Eastern Co.'s lantern slides are in such great request, we are unable to give our lecture as arranged on Thursday next, and the matter must stand over to a future date. On Feb. 9 we fish for Mr. Wood's fifteen-guinea cup in conjunction with the St. Ives inter-club competition. Mr. Daish's ten-guinea cup will be fished for on Feb. 23. Members will please note that their attendance is necessary at the meeting previous to the outing.—A. E. BALDWIN.

North-East Brothers' Angling Society, Star and Garter, Green-street.—On Jan. 22 we have a boundary match from St. Margaret's Bridge to Rye House Bridge. All fish to be shown at St. Margaret's Bridge at leaving off time, to be decided on morning. Train, 7.20 Globe-road, or eight o'clock Liverpool-street. Monday, Jan. 23, concert; all club members are cordially invited.—A. LEWIS.

North London Angling Society, Tap House, Holloway-road.—A successful return visit on the Central List took place at the above on Tuesday, the 17th, the chair being occupied by Mr. J. Pailles. The harmony being started, never flagged, being contributed by the following: Messrs. H. Stretch, Wells, Sherton, W. Stretch, A. Fitter, H. Pink, and Collis; and special mention must be made of Messrs. A. Thomas, Haynes, and Badham for their selections on the guitar and whistle; Mysteria, who gave a ventriloquial entertainment, and also showed how a rim of a hat could be turned about and altered to represent a great number of styles; last, but not least, Mike O'Leary (our waiter) for his songs and dancing. Twenty-one clubs responded to the roll call, to all of whom I return thanks.—H. STRETCH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Jan. 15, a blank. £2 10s. has been voted from our funds to be fished for; date not fixed. On Jan. 30 our first Bohemian concert this season will take place at the above in aid of the Anglers' Benevolent Fund.—E. BROCKETT.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—On

Jan. 15 only two prizes were taken. Mr. Abbott, first, roach, largest 14lb.; and Mr. Foster, second, roach. Mr. C. Wood showed a nice tray of roach. Remaining prizes to be fished for; members to go where they like. Next return visit on the Central will take place at the above clubhouse on Feb. 6; secretaries please note.—A. HILL.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—A few members of the above were out on the 15th inst., Messrs. Hopton, sen., Tracy, Carter, Reitz, Skeggs, Hopton, jun. Only two weighed-in jack and perch. All members are requested to attend on Tuesday, at 8.30.—W. S.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On Jan. 15 Messrs. Anstin and Bonflier a few good roach from the Thames. The last match of the season will be at Bourne End on Feb. 12, three prizes. Members and friends who are not post-carded re Clerkenwell concert on Jan. 23rd please accept this invitation.—R. C.

Queen's Piscatorial Society, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On Jan. 15 the following weighed-in: Messrs. W. Shepherd, J. Winsby, and C. Brett. The return visit on A.A. List takes place on Jan. 31 at 8 p.m. sharp. We expect to have a host of talent. Re correction plaster casts, instead of reading lent by Gibson, should have read "Gillson," of the Queen's Piscatorial Society. The casts have been very much admired, and have been pronounced by many to be perfect specimens of art, particularly when it is taken into consideration that it is the work of an amateur.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—Most of our members were out on Jan. 15, but only one, viz., Mr. Davis, returned with fish, and he also had the satisfaction of saving the club from a blank. I should be very pleased if members would make an effort to attend our next meeting.—J. GIBBONS.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—On Jan. 15 Messrs. Smith and Woolton weighed-in roach.—PELICAN.

South London United Anglers' Visiting List.—The next visit on the above list will take place on Jan. 30 at the Battersea Piscatorial Society, Winstanley Arms, Winstanley-road, Clapham Junction.—ALF PAINTER.

Stockwell Angling Society, Old Queen's Head, Stockwell, S.W.—The first annual supper, held at the above address on Tuesday, Jan. 17, was a decided success. With the exception of two members, who wired their excuses, the whole of the club sat down to do justice to the good things provided by our host and brother angler Mr. Geo. Fisher. The concert that followed went with a roar, and was kept up to a late hour. I am desired to express sincere thanks to those gentlemen of the profession who so ably entertained us, notably Messrs. Harry Payne and Ted Batt, character comedians; and to Mr. Walter Graham and the lady who presided at the piano. Our outing to the Thames has been postponed until further notice.—THOS. LUCAS.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith, W.—On Jan. 15 Mr. Parker had 4lb. 6oz. of roach, and Mr. Holt 12½oz. Our next outing will take place at Bourne End on Feb. 5; further arrangements next week. During the evening a very handsome lamp, which was presented by Mr. Sherman and won by Mr. Holt, was admired by all who saw it.—C. E. LOCK.

United Brothers' Angling Society, Druid's Head Tavern, Deptford.—Several members were out on Jan. 15. Mr. J. Oakley had roach. We fish a match in the Lea on Jan. 22. A special meeting will be held on Jan. 23 to transact important business.—H. TYLER.

Victoria Brothers' Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—On Jan. 15 Messrs. J. and W. Toothill weighed-in a good show of roach. We have a prize outing to Bourne End on Feb. 12, and a good prize list.—W. H. B.

Waggoners' Angling Society, White Lion, Albert Embankment.—Some of our members were out on the 15th, but only one weighed-in (Mr. Clegg, dace). We had a good meeting on the 17th, when some very important business was got through. Our next match takes place on Feb. 5, at Datchet; full particulars next week. Members wishing to compete must bring themselves within limits.—H. C.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—On the 18th inst. we had a fairly representative meeting, and a lot of business was done. I wish to remind all members that our supper outing at Cookham takes place on Feb. 5. All those who wish to compete should send in their names at once.—W. BATCH.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—Our competition resulted in a blank, the river being unfishable on account of the floods. At the invitation of our worthy president (Mr. A. Pielaine) we sat down to a very nice leg of mutton supper, provided by our host, and enjoyed a very pleasant evening.—W. WRAT.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—On Jan. 15 the following weighed-in roach: Messrs. John Newton, T. Miller, C. Miller, F. Homer, and R. Pethurst. I wish to remind members that it is our monthly meeting on Wednesday next, Jan. 25.—R. LOWTHER.

West London Angling Society, Dartmouth Castle, Hammersmith.—Our next supper is arranged to take place at the clubhouse on Feb. 2, at 7.30. Members will also fish for six prizes in a club match on the same date, so as to endeavour to make a show on the trays for the evening. All fish to be weighed-in after the supper. Our president will give a Bickerdyke's book for the heaviest roach of 1lb. or over. We shall be pleased to welcome brother anglers and friends at our social gathering.—J. J. HUNTER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—On Jan. 15, in spite of adverse conditions, Mr. A. Beck made a good show with barbel, roach, and dace. On Wednesday next there will be a special meeting to consider a question raised about the last match. The January match will be fished on Jan. 29, in the Lea, from Rye House Bridge to St. Margaret's Bridge; leave Liverpool-street for Rye House 9.8, return 7.20; two rods; jack barred.—S. J. H.

White Hart Angling Society, The Volunteer, Chesnut-road, Tottenham.—On Jan. 8 we fished a pegged-down match at Ware for Mr. Croxon's prize of 1 guinea, divided into three prizes, the first prize only being taken, by H. Walton, with roach. The remaining two to be fished for on Jan. 22; all fish; open; also for an handsome oil painting, presented by Mr. W. Perry (open).—W. E. BEAUMONT.

Wimbledon Piscatorials, 28, Alexandra-road, Wimbledon.—A roving competition is arranged for the 29th inst., in the Thames, anywhere between Hampton Court and Weybridge. Mr. W. Bovie took a good tench from the Thames on Monday, weighing 2lb. 2oz., a somewhat unusual catch at this time of the year.—HON. SEC.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We had a good muster at our meeting on Tuesday, when the books were audited, and, after paying all expenses, leaving us in satisfactory condition with a fair balance in hand. The outing advertised for the 22nd has been postponed till the 29th, owing to floods.—N. LINDEN.

Doffings by the Way.

THE fifty-seventh annual dinner of the Friendly Anglers' Society will be held at the Hotel Cecil, Strand, on Wednesday next, Jan. 25. The dinner is ordered at 6 for 6.30 sharp. Mr. Fred Berry will occupy the chair, and Mr. A. C. Kent the vice-chair.

It is with great regret that the news is received of the death of Mr. Fred Freethy, on Jan. 15, aged 58. For many years he has been connected with the St. John's Angling Society, and was for some time its secretary. In the words of one who knew him well, "he was as good an angler and as good a gentleman as ever lived, and his loss will be mourned by all who knew him."

THE Royal Aquarium will add considerably to its attractions on Monday. An American champion cyclist will compete with an Englishman in a two miles' race on a home trainer; Dido and Domdo will give a comic knock-about show; the Phantos, a laughable pantomime act; and Schubert's goats and dogs, a very clever performance. The Yachting Exhibition, opening Feb. 1, will, I am told, be a fine display.

SHARP penalty on poachers. At Fintona (Co. Tyrone) petty sessions a few days ago, three men named Gibson, Gerr, and Muldoon, were prosecuted for poaching Fintona river. Muldoon thrashed the water, driving the salmon towards the net which was held by the others, Muldoon was fined in £2 10 or a month, and the others were awarded the full penalty of £10 or three months each.

MR. W. BOVIE, one of the members of the Wimbledon Piscatorials, was fishing from the bank on Saturday near the Hampton waterworks. A little girl and boy were larking about in dangerous proximity to the edge of the river, and were twice warned by the angler that if they were not careful they would assuredly tumble in. The youngsters, however, paid no attention to Mr. Bovie's remarks. Soon after a scream was heard, and the gentleman named saw, upon turning round, the girl struggling in the water, which was 5ft. deep at this particular place. He rushed to where the child was, and being just able to reach her with his hand, pulled her out. Had he not been on the spot the girl must have been drowned: no one else was near, the current was setting out from the bank, and a very high stream was running. The rescuer, I understand, was not even thanked by the parents for saving the child's life; but there, the winter wind is not so cold as man's ingratitude.

JUDGING from the recent news of the progress of the Royal Commission on London's water supply, the water companies are spending money lavishly (I was about to write "like water," but realised in time the unsuitability of the simile) in expensive counsel and witnesses, in order to make the commission report to Parliament that very much more water can be taken from the Thames without "injury" to the river. Should they succeed, and obtain Parliamentary powers to carry out their schemes, it will be a sad day for London anglers, and, indeed, for all lovers of the Thames. The trout fishing would not be worth pursuit, the barbel and chub fishers would find their occupation gone for lack of stream, as many have experienced during the last summer and autumn; and all re-stocking of our grand old river would of necessity have to be confined to slow-stream fish, such as carp, tench, and bream; while those who have been dreaming of making the Thames once more a salmon river, would be rudely awakened to impossibility of salmon negotiating a mere succession of semi-stagnant pools, divided by locks. If there are any old wet-bob Etonians among the counsel assisting the companies, their hearts can scarcely be in their work when they remember the Thames of the days of their youth, and think of what the companies now wish

to make of it. Surely, if the Thames is to be ruined, it should only be for a real public necessity, which has not been shown—and not for mere private profit.

UNDER the heading "A Chance for Anglers," says the *Sun*, "the damage caused by the bursting of Tangle Mere, near Guildford, is being repaired. The lake, standing above the level of the surrounding meadows, is now a sheet of mud. The water tore a deep hole in the meadow, causing a pond, in which thousands of fish were caught, including carp, tench, pike, roach, a few trout, and eels. The neighbouring ditches are also full of fish."

MR. LUCAS writes: "Dear 'Dragnet,'—I noticed your explanation of Poetic License; would it permit the following impromptu atrocity?

An angler who drank half and 1,
When lucky, would ch¹ folks and 1½;
But the floods stopped his 1½ter, for very soon ½ter,
He was found hanging dead by his sc¹.

OUR F. G. ALBUM OF ANGLERS.

No. 33 (New Series).

DR. FREDERICK JOHN BROWNFIELD BATEMAN

Was born at Norwich in 1859, and commenced his angling career in the rivers Waveney, Bnre, and Yare, and the Wroxham and Ormsby Broads, where he caught large numbers of bream and roach. At eighteen he was placed as a pupil with a medical man at Stony Stratford, Bucks, where he had good sport in the Ouse, and succeeded in landing, on fine tackle, a bream of 6½lb. His next move was to Cains College, Cambridge, where he had good sport in the Cam. From Cambridge he entered Middlesex Hospital, and had good sport in the Colne with the late Dr. Henman, where he caught his first chub with pith and brains. After getting qualified he went out to China as ship surgeon, and on his return went into practice in Somersetshire, where he had good sport with the trout up to 4½lb. Since the year 1895 he has been very successful in the Thames. His first big take was on Sept. 27, 1895, with the late J. P. Wheeldon, when they took over 400lb. of barbel up to 6lb.; J. P. W. took 108 fish, and the Doctor 118. In the same summer he took a fine roach of 1lb. 13oz., when out with John Keene. On July 12, 1897, before 6 a.m., fishing near Surly Hall by himself with strawberries, he caught three chub in one swim, the respective weights of which were 5lb. 4½oz., 4lb. 6½oz., and 2lb. 9½oz. (the best brace he had set up by Cooper). The same summer, fishing with Mr. Cecil Howlett, of Eton, and attended by James Bunce, on many occasions had good sport with the barbel, and landed in October a pike of 11lb. 9oz. whilst barbel fishing. He is a good all-round sportsman, and a true lover of dogs. Last year he succeeded in winning the silver challenge cup of the Royal Windsor and District Piscatorial Society outright, and he is also a member of the well-known Kingston Piscatorial Society.

IN answer to several queries as to which part of the globe I elected to fish during the unsettled weather we have been experiencing, I can only say that I "selected" none. There is one little river in Norfolk (that's as near as can be mentioned—for it is a little bit of private) which might have been all right, but it was not sampled. It came about thuswise. Two friends (good sportsmen), A. C. B. and E. W., were discussing the various appliances for sea fishing. We had long rods, short rods, light rods, heavy rods, rods made expressly for sea fishing, and rods that were not.

WE had rods with revolving tops and some with pulleys. Wire lines, hemp lines, and silk lines. Leads of every conceivable make, shape, and size. Paternosters, trots,

chopsticks (not Chinese), booms, and hand-lines. No; that's wrong. We were wedded to the rod, and Mr. A. C. B. said, "Why not let us experiment with them?" Agreed. Southend was selected. A wire to "Manager: Alexandra Hotel. Dinner for three. Roast fowl and ham—and followers.—'Drag.'" Of course, the manager did not know "Drag," and had it not been for Mr. Charles Hussey, "dinner for three—special" might not have been ready on our arrival.

"CHARLEY" met us at the station (Great Eastern), and made arrangements with a boatman to provide baits and all that was necessary to carry out our trials—hemp v. wire, &c. He introduced us to all the most influential sea fishermen, resident and non-resident. A gentleman (yes, a "puffick" gentleman, whose name I am sorry to say I cannot remember, but whom I thank most heartily), placed at our disposal a strong, servicable, and thoroughly sea-going boat. The coxswain of the lifeboat was to be our guide. The luncheon was ordered to be stowed away, and it was stowed. What did it consist of? Wait.

AFTER a good dinner one seldom worries about next day's luncheon; but Mr. Manager Toogood, assisted by his admirable manageress (Miss Heath), had fixed us up with a champagne case containing a bottle of brandy, one of whisky, a large (very large) bottle of bitter, rabbit pie, cold fowl, celery, cheese, bread (yes, bread), corkscrew, knives, forks, plates, glasses, &c. I volunteered a remark that our "trial" trip was a bit ominous, as there would not be much time for fishing after "testing" Toogood's sea tackle.

UP to now you will notice that I am getting on with the account of an outing to Southend. There is a large and pretty theatre at Southend. "Little Red Riding Hood" was being performed, and the quartette (for "Charles" was showing us up—I mean about) would have nothing short of a private box. We had it; also a drink with the lessee; also, on returning to the Alexandra, just one with all the "boys" who had assembled to meet "Drag" and Co. To bed, anxiously awaiting the morning. "Breakfast at nine, please, Mr. Toogood."

THE breakfast came; the morning broke; the tide was out; the rain came down; we were in; and there we remained, for the prospects of fishing were anything but favourable. Now for the fishing! Arrayed in sou'-westers, sea boots and macintoshes, we got wet going to the boat. Then discharged the boatman; told him to eat the two quarts of shrimps, do what he liked with the sprats and lugz, and send the champagne case back. We followed it.

"Let us have some hot luncheon, Mr. Toogood—say at 1.30." We had it. (Better than cold rabbit pie and celery, eh?) Then we discussed the rods and tackle. Then we strolled out, for at 3 o'clock the rain had ceased, and the wind blew enough to knock another piece out of the 3-mile pier. At the extreme end of this pier were many fishermen—that is to say out of about twenty there were three or four. "Ben" Abrahams was getting an occasional dab, not many, and not very large, but his were sizeable. So were two or three others. The remainder basketed everything that came up; dabs quite 2in. in length, and even the harmless unnecessary crab.

"CHACUN à son goût."—Certainly! I like the long line if I'm fishing for the pot, but when fishing for sport the rod is preferable. It was "amooisin'" to see several so-called anglers using two, three, four, and even five lines, all tied on to the pier. They were using lines that would have been useful as clothes lines, and kept working away at them, getting them out of tangle—and rebaiting. The bait merchants must have done a roaring trade, for the fish (or crabs) made a clean sweep of everything offered them, and quite unknown to the fishermen. I should like to see this indiscriminate slaughter of baby fish prohibited by the Southend authorities. Why does not Mr. Charles Hussey (a resident) see to this?

JUST one little bit more fishing before we leave Southend. The wind, as I have said, blew. My nose was blue. My cap was secured by a bit of wire line (had no hemp handy). Found it useful, for I came home with my own cap. Not so "Charles." His seven-and-sixpenny B.S.A.S. Commodore cap, on which was fastened the B.S.A.S. badge, went on a voyage of discovery to the North Sea. There were no boats handy for the rescue, and so, it is presumed, will ere this be food for conger or cod.

I HAVE often heard that well-known sea fisherman (Zachnsdorf) relate the story of the cod and mackintosh sleeve. Some poor sailor had lost his oilskin, and some poor cod—hungry perhaps, and taking a fancy to the oil—had swallowed the sleeve. It was discovered when being prepared for table, and the chef of the hotel is keeping it as a "momentum." Look out for Hussey's hat when you catch or buy cod. It will be recognised by the B.S.A.S. badge.

Also look out for a startling headline in the evening papers. "During the recent gales a fishing boat was discovered bottom upwards. Near it was found floating a seaman's cap, on which was fastened a very pretty badge—B.S.A.S." Should this meet the eye of the bereaved widow, it shall be forwarded at once on application to DRAGNET.

Notes from the North.

FINER weather seldom if ever favoured the opening on the far north streams of Sutherlandshire as was experienced last week. Fresh fish were seen on the lower reaches, but the rivers were too high for good sport all over.

The Tay and Loch Tay district opened in the midst of a blinding snowstorm, and dashed for the nonce the otherwise bright prospects of fair weather at least. The advent of hard weather, however, will have the favourable effect of checking the floods and reducing the water to its normal level.

Now that a commencement has been made on the first group of early spring salmon waters, greater interest will be manifested as to the prospects on the second and main group of streams, which open on the 11th prox., some eighty in number, as also in the netting, which also opens on the 11th.

A sudden change in the weather has been experienced since Sunday, and a considerable fall of snow has taken place in the Grampians and northern ranges. As it has come from the west, however, the prospects are that it will not be long.

Salmon disease has been rather prevalent on the Tay during the winter, but as yet only the spawning fish seem to be affected. No spring fish have, as far as is known, been yet picked out in a dead or dying state from the disease, and it is hoped it may now disappear with the descending kelts.

On Saturday night, Dr. Fulton, late scientific expert to the Scottish Fishery Board, delivered an address in the Town Hall, Lossiemouth, on the international aspect of the trawling limit. The address was under the auspices of the Moray Firth Fisheries Association.

Buckie, a rising east coast fishing town near Peterhead, is to have a fish mart of its own. Fishery matters are going up by leaps and bounds in the north.

It is understood that Lady Gordon Cathcart has decided on the erection of a new hotel at the highly attractive and picturesque village of Colliston, some three miles from the Ythan estuary, on which Lady Gordon has joint proprietary rights. The new hotel is to be after the model of Cruden Bay Hotel, although probably of smaller dimensions.

Cluny Castle, in Aberdeenshire, is a favourite resort of the Duke of Connaught when at Balmoral. Other members of the royal family pay yearly visits to the Cathcart party, and this new hotel will form an admirable adjunct to Cluny Castle during the autumn season.

Since commencing these notes a snowstorm has been raging with considerable severity, and from 6in. to 1ft. of snow has fallen in the Inverness district. The more the better for the spring prospects in general.

Mr. G. Sim, naturalist, Marischal-street, has just received three pheasants, crosses between the golden and the common. The cross is a very peculiar and quite an uncommon one. SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

A fully-attended general meeting of the Birmingham Angling Association was held on Thursday evening last, Jan. 12, at the headquarters. The meeting was called for the purpose of electing the working committee for the ensuing year. Mr. T. Coles presided, and Mr. J. A. Dance occupied the vice-chair. The president, in opening the meeting, pointed out to the delegates the good work the committee had done during the past twelve months; they had all worked together with one common object, and that was to benefit the association as far as possible with their council and wisdom. The secretary reported that fourteen committee meetings had been held during the year, and that the attendances of the members had been all that could be desired. In some few instances the committee-men had been unable to attend through illness, but the majority of the members had attended the whole of the meetings. The result of the election was as follows, the following twenty members receiving the highest number of votes, namely: Messrs. Halliday, Birmingham Piscatorial; Hughes, St. Paul's; Foster, St. Stephen's; Kingham, Spring Hill; Bowley, Good Intent; Gilman, Lozell's Falcon; Tucker, Deritend; Gamley, Chandos; Perry, Aston Britannia; Bagley, Alliance; Jolly, Queen's Arms; Neale, Birmingham Heath; Rabone, Fruitful Vine; Jones, Highgate Park; Currie, Belmont Royal; Dudley, Haddleton; Hands-worth, Yardley Manor; Kingerley, Highgate; and Griffiths, St. George's. Mr. W. Phipps, of the Rose and Crown Society, was elected general auditor. For some time past it has been thought that the different railway companies have been very slow in not taking action against the members of such large associations as the Provincial Angling Association for lending their travelling cards to non-members. A case was heard at the Bristol Police-court, of which a full account will appear in another

column, in which both the lender and the borrower were fined 40s. and costs on Wednesday, Jan. 11 last, for so committing themselves. This, when it becomes known, will deter members of all associations throughout the country from rendering themselves liable to prosecution; it will also be the means of strengthening the associations, as there are many anglers who, as long as they can borrow a card, will not join any society; they will now have to choose either to join a club or pay the full fare. Anyway, it will teach all a lesson, and settle the important question as to the rights of the railway companies. The Provincial and Birmingham Associations have asked the railway companies to take these cases up before, but they have refused, and left the matter in the hands of the associations to deal with the offenders as they think fit; expulsions have followed, but still now and again a case crops up, but now that the companies have begun to take action, we shall not be troubled with any such cases in the future. I wish to remind the secretaries of the branch associations of the P.A.A. that the Coles' testimonial fund will shortly close, and those wishing to contribute to it should forward their donations as soon as possible to the secretary of the P.A.A. The committee, who have the matter in hand, wish to make the testimonial as large as possible, in order to recompense Mr. T. Coles for the good work he has done, and the loss of time and money which he has been put to in furthering the interests of the angling community at large. Rain and wind has again very much interfered with our sport. All our rivers are flooded, and the water is out over the meadows in low lying districts for miles. I have just received a letter from Stafford to this effect. Under the circumstances angling is almost at a standstill.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

Towards the end of last week a check was put upon angling operations in the Fen district in consequence of the flooded condition of the rivers, the result of Thursday's heavy rain, and since then, owing to the prevalence of wind storms, only desultory sport has been obtained. The waters, however, have fined down again, and angling generally has been improved by the freshet. Roach fishing, in particular, has undergone a marked change, and with suitable bait—worms and paste for preference—as good sport has been met with as is often experienced in the autumn. Especially has this been the case in the Tattershall district, where the Bain falls into the Witham, and at the confluence of the Sleaford Canal, near Dog-dyke. Another water which is just now attracting the attention of visitors, and which will continue to do so so long as the open weather continues, is the Glen, at Surfleet, where hags varying from 15lb. to 20lb. of roach have been captured in a single day. The heavy gales have quite upset the arrangements of pike fishermen; but those who have operated in periods of calm weather have found the fish more disposed to feed than has been the case for some time. In this department the Witham and Welland are showing the best sport.

FROM HULL AND DISTRICT.

Live bait fishing for pike has been fairly good in the upper stretches of the river Hull, and also in its tributaries and at the heck-ends, where several good-sized fish have been met with. Odd fish have also been taken in the lower waters at Beverley Beck-end and at Wawne. A few fish of fair size have also been taken in the vicinity of Brigg, on the river Ancholme, but our local pike fishermen have done by far the best on the Market Weighton Canal, and the ponds in the Newport district, where fish up to 5lb. each have been taken. Roach fishing since the New Year came in has only been very moderate considering the success of our city roach men during the month of December, but this may chiefly be accounted for owing to the stormy weather and swollen condition of the river. A few nice-sized roach were taken during last week in the top stretches of the river Hull, above Hempholme Lock and in the neighbourhood of Bingham, and amongst the fish shown at the clubhouses Mr. N. Cracknell, of the Globe Angling Society, had a roach that scaled 1lb. 3½oz., taken near Emmotland, this being about the best fish shown since the advent of the New Year. Worm fishing for flounders and eels is being practised with a fair amount of success at the havens and drains entrances, and also in the lower portion of the river. One of our most successful pike fishermen, Mr. Charles Snowden Nowell, passed away rather suddenly on Jan. 5. He was much respected by a large circle of angling friends, and will be greatly missed on the banks of the river Hull, which was his happy hunting ground. A new angling society is in contemplation at Newland, the matches to be fished on the river Hull on Saturday afternoons. The first match on the river Hull this season, open to all comers, will take place at Dunswell on May 13, under the auspices of the Blundell, Spence, and Company's Angling Society. Another new angling society is being formed at the Bangor Castle Inn, Providence-row, Mr. H. Hudson being appointed the hon. secretary *pro-tem*. The members of the Tigress Angling Society dined together at headquarters on the 9th instant, when a most pleasant evening was spent, and the president (Mr. J. P. Sherwood) in his address to the members, said that although the society had only been in existence about seven months, they had fished for about £14 in prizes, and had a good balance in hand to commence the season with. The Duke of York A.S. have removed their headquarters to the Gainsborough Tavern, in High-street, where the club's business will in future be conducted, a special meeting being held there this (Saturday) evening, on important business. The Central Hull Angling Society's hall, which took place at the Central Hall, was a most enthusiastic and successful affair. On Monday evening next the North Myton A.S. will hold their annual *soirée* and ball at the same hall; and the Victoria A.S. have their annual meeting at headquarters.

FROM THE LAKE DISTRICT.

The controversy respecting sea gulls and the alleged mischief they work upon fish life advanced a stage on Thursday, at the meeting of the West Cumberland Fishery Board. The clerk read a letter from the Home Office, in answer to one sent by the board, asking the procedure necessary to get the black-headed gull removed from the list of birds protected by the Act. The reply stated that the steps necessary to this end were for the board to ask the County Council to make application to the Secretary of State, stating the ground on which the application was based. Mr. W. H. Watson suggested that a little more time be given to the question. There were several kinds of black-headed gulls, but he believed the resolution passed at their last meeting referred to the lesser black-headed gull, and this bird was not detrimental to fish. Small black-headed gulls did little, if any, damage to fish, but they were of great benefit to the farmer by killing insects and other parasites injurious to crops. He suggested that they should obtain further information, and discriminate between the two species, and not make a representation to the County Council simply as to the "black-headed gull."

FROM LANCASHIRE.

Liverpool is a city just at present affording a lot of interest in angling matters. For some time they have displayed plenty of healthy enthusiasm, their latest item being a movement to federate all clubs into one general association. Like Manchester was, their affections are divided between two premier associations, and with a view to getting evidence to guide them, Mr. Redford, gen. sec. of the Northern Anglers' Association, visited Liverpool on the 14th, and so satisfied were those at the meeting, that it was resolved to form a centre of the N.A.A.; and with Mr. R. Woolfall as hon. sec. and representative to executive council they have an efficient official to start with. The proceedings were unanimous and enthusiastic, and stand adjourned for completion until to-day (21st). Several additional stations have been added, most favouring the anglers at Bamfurlong and Stalybridge. The Clarendon A.S., at Openshaw, is developing into a strong one. The last general meeting of the County Palatine Angling Association was held on the 12th, and was attended by delegates from sixteen societies, when it was resolved that no action be taken to acquire any fishing rented by any club or association without their consent. Notice of motion was given to the effect that in future all meetings be held at some hotel in the city convenient for the majority. The next meeting will be held at the Britannia Inn, Rowsley-street, Ashton New-road, Bradford, Manchester, on March 9.

FROM MANCHESTER.

The Good Intent A.S. report further progress with their new venture. Several new members have joined, and more are offering. A report is to hand from the old Standard A.S. On Jan. 16 they elected the following as their executive for 1899: President, Mr. Clarke; vice-president, Mr. Vignerot; treasurer, Mr. Chadwick; secretary, Mr. M. Plant; committee, Messrs. Dyson, Ewart, and Underwood; delegate, Mr. Lloyd. The president congratulated the members on their sound position in every way, and intimated that owing to the great success of their last match, that of the coming season would probably be on the same lines. Several new members were enrolled, and others will come on for voting at the next meeting, when several items of deferred business will also be discussed. The annual dinner of the Buckland Angling Society was a great success. After the dinner there was an interval for social intercourse, during which the guests were amused with a "gramophone" programme. Then came the event of the evening, Mr. Bibby's lecture on his angling trip to Ireland, or through the Ballintra district with rod and camera. Mr. W. Johnson manipulated the lantern satisfactorily, and as one scene after another was depicted the grandeur of this wild district was effectively demonstrated. The Moss Side Socials are again in evidence with more stocking operations. They have arranged for another large consignment of mature roach and other coarse fish. Several city clubs were busy last Saturday transferring fish to their waters.

FROM NOTTINGHAM.

There is really no practical angling news to record or relate. The fact is the Trent has been running in flood volume for a week, and at the period of writing the waters were out in the meadows. On the 15th inst. anglers mustered in force on the southern bank above the City Bridge hoping to kill roach in the slacks behind the weir; but before the advent of noon rain began to pelt down, and the downpour continued for hours. On Tuesday Mr. F. J. Lindley tried the "Slough" at Beeston, but found the water too thick for fish to discern a bait. Recently, in Flintham Lake, Mr. E. Bull and Mr. J. Bell killed a dozen pike.

FROM SHEFFIELD.

Better sport has been obtained during the last week by Sheffield anglers, but the weather has again been too unsettled to allow of fishing being followed with that degree of comfort which would render it enjoyable in the extreme. The river Trent, as usual, has been patronised by a large number of anglers, and during the end of last week a good deal of fishing was obtained, the water having run down a little after the recent heavy rains. Pike anglers have had a fairly good time of it, and at Shardlow some very fine heavy fish have been captured, whilst other well-known stretches have been well looked after. The water has been of a very good colour for roach fishing, a few nice baskets having been obtained at Fiskerton, Barton, and other places, the cockspur worm having proved very deadly, with the result that some exceptionally fine fish have been secured. The lower reaches of the Trent

have not fished very well, and it is not until the weather settles that really good sport is anticipated. Visitors to the well-known winter stream, the Idle, have dropped in for some first rate sport in the immediate neighbourhood of Retford, roach and dace having furnished some capital fishing, whilst in the neighbourhood of Mattersey pike have been found to well repay the trouble of anglers who have gone with the special intention of devoting their energies to this particular branch of sport. The Witham is just now in rattling condition, and anglers seem to increase in numbers every week. Roach have been diligently fished for, and by using paste and worms as bait the majority of rosters have accounted for some nice takes, a good proportion of the fish running up to decent size, 1lb. being about the top weight. The heavy rain has nearly spoilt pike fishing, but at Bardney there has been no lack of sport amongst roach. In the Bain, the Dogdyke, and Sleaford, several roach anglers have had a very good time, the condition of the former river being in marked contrast to what it was in the summer, when the bottom weeds choked the water and made the lot of the angler an unhappy one. Pike fishing in Hornsea Mere has been followed with gratifying success during the last week or so, and anglers are also looking forward to getting some good eels out of the water. Very little fly fishing has been obtained in the Wye and Derwent owing to the height of the water, but a fair amount of coarse fishing has been secured.

FROM WORCESTER AND DISTRICT.

Angling is quite at a standstill in this district. All the rivers are full of highly coloured water, and, with the heavy storms we are having, it will be some time before either stream will be fishable again. Some few have had a little sport among the pike in private water, but not many fish have been taken. Meetings have been held at the various clubhouses, and the arrangements for the coming season are nearly complete. The St. John's Club have arranged to have their annual dinner on Feb. 2, and it is likely to be a good affair. The Good Intent Club have removed their headquarters from the Four Ways Inn to the Gloucester Arms, Copenhagen-street. The salmon have been passing over the weirs in numbers, and there should be more in the upper waters of the Severn than have been for years. The season opens in another fortnight, but the local fishermen do not expect to have very good fortune, so many fish having gone up the river.

FROM YORK AND DISTRICT.

The continuance of stormy weather has not permitted of either enjoyable or successful angling. The flooded and discoloured state of the rivers has proved disheartening, and, even under the most favourable conditions that could be sought out by experienced hands, the poor results have by no means compensated for the discomfort undergone. Many anglers who have ventured abroad are said to have had "lively" times, which is very likely indeed. The week-end reports had very little to show in either the quantity or the quality of the fish caught, and prospects were little better for the present week. Owing probably to the prevalence of mild weather, grayling have not been anxious for fly or bait. The season for this class of fish, in the Wharfe and the Yore especially, seems to have been a poor one. Early this week there were sharp frosts, which, however, quickly resolved into thaws before the advancing south-westerly currents, and Wednesday last witnessed a condition of things for anglers generally of a somewhat depressing character. Purely local fishing in Ouse and Foss waters remains at a very ordinary level, there being nothing unusual to report. The gathering in connection with the York Amalgamation, at the Bay Horse Hotel, this (Saturday) evening, has of late formed the principal topic in angling circles. It is anticipated that some very important topics relating to angling will be touched upon. It is complained by York anglers that they are placed at a very great disadvantage in having to seek

most of their sport in other rivers than the Ouse, which flows past their doors. This state of things is attributed to the Ouse not being covered by the Fresh-water Fisheries Act, the river poacher having it all his own way in consequence. This is one of the chief grievances of the Amalgamated Anglers, who seek to have a close time for the Ouse, and to stop the netting system, which is found to be most pernicious and ruinous to angling.

ANSWERS TO CORRESPONDENTS.

G. W.—The only coarse fish, other than pike, mentioned by "Hi-Regan" in "How and Where to Fish in Ireland," are perch, concerning which he has much to say on page 14, under the heading of "Perch Fishing with the Fly." They are also casually alluded to on pp. 147, 149, and 150.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

THE MAY FLY ON THE AMOUR.

SIR,—Some time ago, in reading Mr. H. de Windt's "The New Siberia" (Chapman and Hall, 1896), I came across a paragraph in his book, which I noted at the time, but which I had afterwards overlooked, and which, I think, may be of interest to anglers generally, but especially to that portion of them more closely identified with midland and south country angling.

Mr. de Windt, in relation to his voyage upon the lower Amour and of the vessel's approach to Michaelovsky, which he describes as a pretty village not far inland from Nicholaefsk, situated at the mouth of the Amour, says: "We approached the village (Michaelovsky) towards sunset, after a glorious day, and as we did so witnessed a curious sight. Millions of large white moths suddenly surrounded the steamer, and the river (previously glassy as a mirror) became alive with splashing, leaping fish, attracted to the surface by the fluttering insects. The swarm was so dense that, viewed against a background of dark pine forest, it looked like a heavy snowstorm."

Is there any trout angler acquainted with the May Fly who does not believe that these "white moths" were not as Mr. de Windt describes them, but in reality May Flies? Michaelovsky, I believe, is not above 100 miles north of Vladivostok, the eastern terminus of the Siberian Railway now in course of construction by Russia. There is, Mr. de Windt says, a fleet of about twenty-five steamers now on the Amour, and it was upon one of these vessels that he steamed down the river for a distance of upwards of 700 miles.

Nicholaefsk, at the mouth of the Amour, Mr. de Windt tells us, is about four miles wide, so I take it that the river will not be much narrower at Michaelovsky.

What think you of this, ye May Fly anglers, and of the sight which a fine summer's evening would produce over upwards of 1000 miles of this great river, without reckoning the possibilities which the locality would place at an angler's command?—Yours, &c., W. B.

[We are much obliged to "W. B." for this interesting note, and have no doubt the "moths" are really members of the great family of the Ephemeridae. Some are

much whiter and slighter than our *Ephemera vulgata* or *danica*, and others larger and much stouter in the body.—Ed.]

IMPROVED BAIT PRESERVING.

SIR,—I am glad to see that my letter on this subject has led to a certain amount of correspondence. What strikes one as most curious are the varied opinions of your correspondents as to the utility of certain methods; but as a very old hand at bait preserving, I suspect that the differences of opinion are really due to differences of use. To myself, for instance, whose fishing is practically limited to trout, with an occasional salmon, it is quite conceivable that a plan may be useful which is of no use for pike fishing owing to the different way in which those fish approach their prey. If, therefore, my experience differs from that of others who have written, I hope that they will attribute it to this, the real cause, and not to simple "cussedness."

As "W. P. H." says, the bait question is not yet settled, I venture to prophesy that it never will be till we find a way of keeping fish alive without water. Even preserving in ice or cold chambers won't do it, as fish kept thus, though they keep good and preserve their colours, lose some of the glitter that makes a live or freshly killed bait attractive. I think, however, that if your correspondents will try the plan I advocated of first keeping the baits for twenty-four hours in a weak solution of formaldehyde (1 in 250—equal to a one per cent. solution, or dilution rather, as Mr. Hussey points out, of formalin), and then keeping the baits in glycerine, they will get all the advantages of formalin—the natural glitter of the bait. The reason of this is, I think, that the watery solution soaks the scales, rendering them sodden, which the glycerine apparently does not. As to the stiffness in formalin baits, to which some of your correspondents seem to object, is to me, as a trout fisher, "a boon and a blessing," as once the baits are cured to the proper extent they do not lose their elasticity for a much longer time than a fresh bait. The apparatus I use is so simple that anyone can make it for himself with the aid of a few strips of tin and a strong pair of scissors.

Then there is a consideration which I suspect may have to be faced soon. By the new postal regulations as to "deleterious fluids," there is no saying but the authorities may conceive it their duty to forbid the postage of bottles of baits unless sent by registered letter and packed in a metal box. I do not say that they will, but it is quite conceivable that they may, and then there would be a pretty kettle of fish. Now, fish preserved as I directed will keep some time without drying up or wilting, and may thus be sent free of all liquid but the little glycerine adhering to them.

So far of the method I suggested. Of the various other plans proposed, I may say that I have tried them all and found them wanting. I have tried glycerine alone, and in combination with boric acid, borax, boro-glycerid, and tannic acid (this last is the Pharmacopoeial glycerine of tannic acid), and found that it had the disadvantage for a preservative of not keeping the baits fit for use. I have also tried the boric acid and salt cure, and found it almost as good as common salt without the acid; a combination of borax and salt was quite as good, and I fancy, though I am not quite sure, that I sent a note on this subject to the *Fishing Gazette* early in the "eighties." I have also tried *inter alia* chloride of zinc, corrosive sublimate, tannic acid without glycerine, as well as those methods depending on spirits. I must confess that I have never done well with methylated spirits, though baits preserved in whisky proved useful if one could only reconcile oneself to the necessary waste of good liquor, and the over festive smell communicated to the user thereof.

Baits, especially whitebait or sprats (as originally suggested by yourself), keep beautifully bright and clear,

SOUTH-WESTERN NORWAY.

SALMON RIVER to LET.

For SEASON 1899.

TWELVE Miles of Fishing; sole right both banks. Excellent well-furnished lodge, ten bedrooms, four reception-rooms, servants' accommodation; stabling, icehouse, and kitchen garden. Good trout fishing within half an hour's drive. Salmon enter the river beginning of May. English references. Or river might be divided, as a smaller lodge will also be available for lower water.

WESTMINSTER BUDGET.

32 Pages of Letterpress and Pictures.

PRICE 3d. by Post 3½d.

THE WESTMINSTER BUDGET is an Illustrated Weekly Newspaper that can be read and enjoyed by the senior and the younger members of the household.

IN THE WESTMINSTER BUDGET the Week's News is epitomised in a concise and readable form, accompanied with Illustrations.

Special Articles on current topics.

Cartoons by the popular caricaturist "F. C. G." in every issue.

Illustrated Reviews of Books are given weekly.

A page is devoted to Dress.

"Dumb Things All" are dealt with.

Short Stories and Chess are always provided.

The Stage, the Church, and the Law are also regular features.

There is a Page for the Children.

THE WESTMINSTER BUDGET is specially suitable for sending to friends abroad or in the provinces.

PRICE 3d., by Post 3½d.

May be obtained of any Newsagent, Bookseller, at the Railway Bookstalls, or from

The WESTMINSTER GAZETTE Office: TUDOR ST., E.C.

unt I have always found minnows simply salted the surest bait till formalin came in. I certainly have found it the best thing yet, but for the dulling of baits kept long in it, and I think the glycerine treatment disposes of that objection. I have had in my possession sprats preserved in formalin solution for about two years, and they are wonderfully clear in colour, but they have not the iridescent glitter of a fresh bait; though, of course, so very brilliant a bait can stand some dimming without losing its efficacy.—Yours truly,
T. SPENCE.

SEA FISHING AT SOUTHEND.

DEAR SIR,—After reading in *Fishing Gazette* of Saturday last that good sport was being had at Southend, I went there on Sunday morning, and sticking at it in the wet and wind till nearly five o'clock, my take consisted of two dabs—both, however, of good size. Now, as my experience coincides with that of several of my friends, and we have had much the same luck these few weeks past, either our fishing, or methods of fishing, or the reports must be wrong, unless, of course, they apply simply to boat fishing. I happen to be one of those unfortunate beings who cannot go out in a boat, so confine myself to pier heads. I do not say a greater number of fish than stated above have not been caught, but I say that fish of good size for some little time past have been few and far between. I saw one or two strings of dabs on Sunday, numbering, I should say, forty or fifty. But the size of them. No true sportsman would ever take them off the pier. I notice these are caught generally by fishermen mostly using hand-lines and very small hooks. Could not something be done to prevent this business? Sport is sport, but this seems destruction. Some of these gentlemen have no less than six or seven lines going at a time. Between three of them on Sunday there were seventeen, one having seven, another six, and the other four. Why not charge so much per line or rod, and limit the number to two at Southend, as at other places? Perhaps if this matter was ventilated, some steps would be taken to improve it.—Yours, &c.,
OBSERVER.

SOUTHEND PIER—A SUGGESTION.

SIR,—As a frequent visitor throughout the year (and in the near future a resident) of Southend-on-Sea, I have read of the second narrow escape of the pier, the first accident to which has so interfered with our fishing, and I certainly think that all piers round the coast could be protected from accidents of this kind by adopting a very simple arrangement, which may suggest even better methods. My idea is that chain cables of sufficient strength could be run (say, 50yds. to 100yds. distant from the pier) right away from the shore to within a few yards of the end of it, so as not to interfere with steam-boat traffic. The method of securing it in position would be to run it through rings affixed to wooden or other piles driven into the shore at sufficient depth and at regular distances, allowing the chain to swing clear of the bottom. Had this been in position before the *Dolphin* cut the pier in half (I was on it at the time), her anchor would have caught the chain, and the accident would have been averted. I am not a nautical man versed in winds and tides; I only know that "when the stormy winds do blow," such accidents are always possible, especially where long, light piers are found, such as Southend, and where the authorities, for cheapness, I suppose, employ foreign materials in the construction, the chances of serious damage are greater. From the peculiar flat character of the shore at this town, I should think that it is essentially the very spot on which to test successfully this idea. A nautical friend, and fellow member of the B.S.A.S., Mr. W. S. Penny, is at one with me in this suggestion.—Yours truly,
R. CHAS. GRAHAM, C.E. (B.S.A.S.).

FISH FROM DEAL BY RAIL.

DEAR SIR,—I and a friend, wishing to send some fish to town a few days since, dispatched five small baskets, carriage paid through, but on my arrival home I was informed, to my surprise, that another demand of 6d. had been insisted on, and paid. I therefore applied to the Chatham and Dover Railway Company, and was informed that that part of Canonbury to which the basket containing only a codling (weighing 1lb.) and a dozen whiting was addressed, being more than two and a half miles from Somerses House, it was beyond their radius of free delivery. I pointed out the fact that Somerses House was not the terminus of the Chatham and Dover Railway, and that St. Paul's Road was not two and a half miles from Holborn Viaduct; but I could obtain no satisfactory reply. The matter seems so illogical that you may think it worth while to insert this as a caution to my fellow members of the B.S.A.S.

The charge for the five small baskets, weighing altogether from 25lb. to 30lb., being 4s. 11d., I should have thought sufficient to cover delivery over a greater area.—Yours truly,
H. J. M.
Jan. 12, 1899.

HOW THEY RUIN THE SALMON RIVERS.

SIR,—I was much saddened by the way in which they ruin the fishing in Ireland. I rented a small river near Galway last year, and large numbers of grilse and salmon were constantly waiting to run up, but Lord — scooped them out by hundreds every night and morning. I don't whether a dozen fish were caught in the river the whole summer. I got six!—Yours, &c.,
AN IRISH ANGLER.

THAT 10LB. PIKE.

SIR,—While accepting "Dragnet's" suggestion that I should take a landing net when fishing for pike, I do not claim the honour you seem to accord to me, of landing a

10-pounder—a most difficult feat—without help. As a matter of fact I had with me a gaff, and was assisted by a friend, Walter H. Weil, a well-known member of the Stock Exchange, whose ardour for fishing is almost equal to my own.

The wolf like rapacity known to be dormant amongst members of the House probably evidences itself in the pursuit of the river wolf, and I have frequently noticed my friend's face light up with a more than ordinary gleam of pleasure at the sight of the hideous head bristling with rows of teeth brought safely to the punt bottom.

Last Saturday I essayed the same water, hoping to find my pike's mate; but alas! the three preceding days' rain had so fouled the river that another catch was an impossibility. Thus "Dragnet's" prophecy that next time I should have a net but no fish was verified to the letter. I tempted with snap and paternoster, but believe that even an Ave Maria would have failed to lure a lue.

Saturday was, however, a glorious day; the sun shone as in September; the cattle were lowing on the bank side; trees were budding forth, mistaking winter for spring, and the bird's sang with a will—a perfect charm. The usual disagreeable noises were absent from the river, the wave-creating launch, the noisy boating party, the loaded Oxford steamers were all conspicuous by their absence. In the upper reaches quietude reigned supreme, and I forgave the empty creel in the enjoyment of the pure and peaceful air.—Yours faithfully,
WENTWORTH STURGEON.

CAPTURE OF A STING RAY OFF PLYMOUTH.

DEAR SIR,—A fine specimen of the sting ray (*Raja pastinaca*) was caught about eight miles south-east of the Eddystone the day before yesterday by Capt. Greap, of the fishing sloop *Janet Hunter*, P.H. 49. As this fish belongs to a most dangerous and deadly species, it is a good job that neither of the crew was stung by it. It is a very rare occurrence that the sting ray is caught in English waters. It is supposed that the dart or sting in the tail is used in obtaining food, which appears to be small fish.

This dart or spear is serrated along the edges in such a manner that it cuts clean into your flesh, but it cannot be withdrawn unless it tears the wound and makes it much larger—something to the same effect as the barb of the hook.

There are some curious tales told about the enervating properties of this sting. In olden times it was used for the purpose of enabling children to cut their teeth more easily. When reduced to powder it was believed to have the power of relieving toothache, and of finally causing decayed teeth to drop out of their sockets. The fish was shown to me by Mr. G. Spicer, fishmonger, 1, Abbey-place, St. Andrew's-street, and it is well worthy of a visit.—Yours, &c.,
WILLIAM HEARDER (B.S.A.S.).
195, Union-street, Plymouth.

LOUGH DERG QUERIES.

DEAR SIR,—I should be much obliged if some of your readers could answer the following queries:

1. What is the best route to Lough Derg?
2. Name of any reliable resident who will give notice when the fly is up?
3. On which Irish loughs is there the best chance of having good sport with rudd and bream?—Yours truly,
BLATHERWYCK.

WIRE SEA LINES.

DEAR SIR,—I venture to trespass on your space in order to put before your numerous readers the precise nature of the problem of which, in the opinion of Mr. Parker and others who have given a good deal of attention to the matter, a wire line affords the only probable solution.

At several points on the coast there are rather deep swims, in which fish in large numbers or of exceptional size congregate and feed at certain times of the tide, generally when the stream is running with considerable force. Of these I may mention as well known to sea anglers the near Deep off Yarmouth, the South Bank End at Deal, the West Roads at Dungeness, and some excellent marks off Shoreham. At none of these places is it possible to fish with the line at a smaller angle to the perpendicular than 60° without the use of inordinately heavy leads at such times as the tide is running with even one half of its spring-tide flood velocity.

A very heavy lead throws an unfair strain upon a nicely-constituted rod, and necessitates the use of an instrument like a barge pole. A long tide-swept line deadens the vibrations of the bite and involves a great expenditure of, perhaps, valuable time in running out and reeling in. What sea anglers want is a line which, with a sinker of not more than 8oz., and, if possible, only 6oz., will reach and hold bottom in eight fathoms of water in a two-knot tide, and will lie at an angle of not more than 45° from the perpendicular. Its breaking strain should be not much under 20lb.

Of numerous cord lines which I have tried I mention three which, though they do not quite fulfil the desired conditions, approximate more nearly than most of the lines used by my confrères:

- (a) A "Victor" line from Ramsbottom, Manchester (letter H, I think), 3s. for 30 fathoms;
- (b) A cable-laid line, called "No. 9 drab," from the Manchester Cotton Twine Company (2s.);
- (c) A cable-laid line from Belfast Twine Company. Not in the retail market, so far as I can elicit, but supposed to be extremely cheap.

Single wire lines of extreme thinness would fulfil the stated conditions, but there are other grave objections to the use of them, which Mr. Parker has already pointed out. The experiments made with the twisted wire are

giving great promise, but they are hardly as yet sufficiently exhaustive.

The resistance which lines offer to the water varies (approximately) as the diameters of their sections; but their strength varies (approximately) as the areas of the sections, that is, as the squares of the diameters. It follows that if you halve the thickness of your line, you must use a material four times as strong if you wish to have the same strength.—Yours truly,
HAMUS (B.S.A.S.).

WIRE SEA LINES.

SIR,—After trying everything which has come along in sea lines during the last twenty years, I can give my opinion most emphatically that there is nothing to beat hemp, cotton, or silk.

As a reel line, wire of any make which has appeared up till now springs, kinks, or overlaps. As a hand-line, besides kinking and want of pliability, the punishment to the hands is great. I would ask Mr. A. W. Parker how his hands feel after even one tide's heavy handling of cod or conger?

Even used as snooding, I have found it desirable to use the snoods as short as possible.

Wire lines certainly hold less tide than any other, but good, strong, and fine hemp lines have too many advantages to be displaced by a material which has so many disadvantages.

Good hemp is suitable for all sea fishing, and much river fishing, too.—Yours truly,
VIATOR.

DEAR SIR,—Messrs. Hearder and Sons' letter, which appeared in the *Fishing Gazette* last week, must have astonished those anglers who have adopted the wire running lines which I am introducing, because it is evident, even from their own statement, that they could not have tested such lines, using blocks with sheaves the size of a shilling. Their statement is: "If there had been at all any virtue or benefit in using plaited, twisted, or even single wire for sea lines we should have adopted it years ago, when we thoroughly tested it."

There are many good things that cannot be appraised at their true value without practice and experience. For instance, the patent boom which I am about to introduce in an improved and simple form will not catch fish unless the baited hooks attached to it are dropped on the spot where fish are feeding. On the other hand, whether there are fish or no you can at once test your running line. And I am pleased to be in a position to state that many of the members of the B.S.A.S. will be able to convince the most sceptical or conservative angler of the advantages of using wire lines provided the two fish together in the same boat, for even if the usual heavy sinkers rendered necessary by silk or flax lines fail to convince by a comparison with those of his friend using wire lines and light sinkers, the matter must come home to him when he finds, as the tide gathers strength, that he is unable to keep the bottom whilst his friend is fishing in comfort.

Permit me, in conclusion, to state that the improvement is so very marked that I am convinced those who adopt wire lines will no more be induced to give them up than our navy and mercantile marine their wire hawsers and rigging. Some of our best yachts are now using phosphor bronze for these purposes.—Yours truly,
A. W. PARKER.

THE STONE FLY, &c.

DEAR SIR,—I observe in this week's *Fishing Gazette*, page 32, in your footnote to "Mona's" letter, you make a mistake in stating the larvæ of the Stone Fly lives in a case or caddis. The Stone Fly belongs to the *Perlidae* family, none of their larvæ having caddis cases. The Stone Fly, sometimes confused with the May Fly, and as coming from a caddis case, is called *Bipunctata bicaudata*. The larva is known as the creeper. The fly hatches out in May and June, and occasional stragglers all summer. The larvæ hatch in September and October with us. They grow very rapidly, feeding all winter principally on the larvæ of other insects and their own species. At present they are much darker in colour than they are in April and May. During the winter they do not change their skins, but do so once during the spring. Before emerging into a fly, they crawl to the side, on to the stones, or up a stem of grass, the back splits open and the fly crawls out, and soon flies away, their flight being peculiar. If the wind is blowing across stream towards you, they come whizzing over like a wounded bird about to fall.

Another little mistake, see page 15. "G. M." says, in the spring fish in the Earn, &c., are like the 7, 8, 10, and 12-pounders got in the Dee, &c. The spring fish on the Earn average over 20lb., some years heavier. The autumn fish average 17lb.—Yours truly,
Perth.
P. D. MALLOCH.

NETTING FOR FISH IN THE RIVER TRENT AT NOTTINGHAM.

DEAR SIR,—I should like to call attention, through the medium of your valuable paper, to the netting there is being carried on in the river Trent between the Clifton Colliery and Beeston Bend. On several occasions during the past few weeks I have been an eye-witness to what I consider a condition of things which is nothing short of a scandal. On one occasion I saw the son of a local fishing-tackle dealer, together with three other men, net the small hole found just inside the first field beyond the Clifton Colliery; and so great was the haul of fish that it required the united efforts of all four men to draw the net out. The fish were then sorted, and all suitable for pike haite and stocking purposes were put into a small tank, and the larger fish, which included several baby pike, were put into a sack, and the lot taken away on a hand-

cart. I could scarcely believe there could be so many fish in the spot mentioned had I not seen them myself, but perhaps the river running in semi-flood accounts for this. I might say that the same place was again netted on behalf of the same party during the week. One day during the past week I saw two men netting in all likely places right up beyond Beeston sewer. Each man had a net—one a dip, and the other a cast net. I was pleased to see their efforts meet with very little success. Is there no one responsible for this kind of thing? Can nothing be done to put a stop to it? If it is allowed to go on unchecked there will be little use or pleasure in going to the river to fish in the neighbourhood I have named. Many working men anglers, like myself, have not the time or means to go to a distance, and the free fishing near the city has been looked upon as a great boon by us, but cannot long remain so if something is not done to put a stop to this illegal practice.—Yours truly, A WORKING MAN ANGLER.

SEA PATERNOSTER BOOMS.

SIR,—Mr. Chas. A. Payton, writing from Calais, sends you some French sea booms which he extols as simpler and more effective than the combinations of brass swivels and a (generally pendent) brass boom which he saw at Deal lately. As this amounts to a direct challenge of my Patent Straight-pull Sea Paternoster (which, by the way, happens to be figured in Farlow's advertisement on the page next to that containing Mr. Payton's letter), I claim a few lines in reply.

Any boom which is fixed to, and projects rigidly at right angles from, a metal attachment in the same line as the main line is irredeemably bad in principle, and an abomination in practice. Every sea angler with a ha'p'orth of experience knows that much. The French kickshaw that Mr. Payton has dug up (from what pile of pre-historic remnants Heaven only knows) appears to be similar to what every little lad makes for himself, from bottle wire, when he first essays paternostering, and as figured it stands self-condemned. Mr. Payton claims for this barbarous relic superior simplicity and effectiveness. As to the great simplicity of the thing, and of those who may be cajoled into using it, I make no question; but on what data, pray, does he found his assertion of superior effectiveness? Has he killed big fish on both gears; or on either?

For aquaria fishing, and for children fishing up and down in still water for atherine and 2oz. pouts, this French trash doubtless serves admirably; but Mr. Payton talks of Deal! Now, at Deal we get big fish; at Deal we cast the bait well out; at Deal there is a tideway, so that willy-nilly the bait usually hits the ground at a point some distance from the point under the angler's feet, and if the boom is attached at right angles to the main line, the main line itself being at an angle of, say, 60°, such a boom becomes a manifest absurdity in practice. The whole truth of the matter, whether one is fishing up and down or casting out, is that the rigid boom is bad, because there is always a right angle, or a series of angles equivalent to a right angle, between rod point and bait, and when a big fish lays hold the metal suffers. This hending and unhending of the metal damns for all time all rigid right angle booms.

Mr. Payton says his French boom was admired at Deal. Well, people, even anglers, are sometimes polite, even at Deal, and most of us admire a veritable antique; or perhaps he uses the word "admira" in its original sense of denoting amazement and surprise?

My booms have been tested to lift 1½cwt., and anyone can hang a 4lb. to 10lb. weight on them and swing them for a minute, or an hour (if he can), without bending or damaging them; but I would like to see the French soda-bottle wire (twisted, apparently, to make it strong?) after hauling six score 1½lb. whiting, or a tussle with a 12lb. cod. Mr. Payton, who, I should imagine, does most of his fishing with a "J" pen, calls my gear a pendent boom, quite oblivious of the facts (a) that one does not fish in air, but in water; and (b) that in the sea the pendent boom is strayed out by the cumulative pressure of the tide on boom and snood and bait. Clearly, the salient points in favour of my gear have never come home to Mr. Payton, viz., that the angle intervening between rod point and bait is practically nil; that the strain on the metal is always longitudinal, never transverse; that the tackle fishes straight, and the fish are hauled in a direct line.

Mr. Payton further says: "I do not see that either swivels or revolving booms are at all necessary for sea paternosters, and can vouch for it that the slightest bite is felt when using these booms properly." Well, I always pity the blind, who cannot see; and the man who will avouch that the slightest bite is felt on a particular tackle will vouch for anything, though in this case I take the more charitable view that he is not aware of the meaning of his words. It is, of course, absolutely impossible that bites can be felt so well on a right angle boom as on a straight pull boom. But granted that gingerly bites are to be felt on his tackle, what of it? Does Mr. Payton really imagine that sea fish (I talk not of eight-to-the-pound fish) are "struck" in the fresh-water angler's sense? It occurs to me that he must be one of those omnipotent fresh-water anglers, who occasionally patronise Deal—who intend to astonish the natives and empty the sea, but only succeed in making laughing stocks of themselves. These amazing folk—and we get fine samples of them at Deal—persistently delude themselves that they "strike" their sea fish. Fancy a rodsman striking a fish, thirty fathoms of line out, 1½lb. lead on, and a 3-knot tide under him—a fish, too, that has already half digested the hook. But I encroach.

Personally I think no paternoster, not even my own, is at all comparable in efficiency as a fish slaying implement to the Kentish rig, and if had to catch fish for a living (which the Lord forbid!), I should use hand-line and

spreader. But anglers are wedded to the rod, and let no man sunder them.—Yours &c., JOHN KIRBY.

[Mr. Payton (known for nearly half a century as a salt and fresh water angler, under the name of "Sarcelle," of the *Field*) did not mention or refer specially to any particular boom for sea fishing—their name is legion—but he can hold his own either at sea fishing, salmon fishing, or fishing with a "J" pen—if he cares to do so.—Ed.]

AVON AND ERME FISHING ASSOCIATION.

DEAR SIR,—The season will soon be coming around for trout fishing again, and I see that some of the associations have had their annual meetings. I notice that the Avon and Erme Fishing Association, which was started two or three years ago, are making some wonderful alterations, and from all appearances the committee and association are desirous of keeping the rivers to themselves. They resolved that season tickets, other than landowners, should be limited to thirty; day tickets, which last year they charged the modest sum of 4s. 6d. for, are this year to be abolished; the price of weekly tickets are to be raised to 10s.; monthly tickets, £1; and tickets for the whole season, £2. These prices are for trout only, as the association has nothing to do with the salmon licences, which of course will be extra. They also resolved that not more than two monthly tickets and five weekly tickets should be running at the same time. I don't know whether the Board of Trade has any jurisdiction over associations of this kind, but I should recommend any landowners having property through which any portion of the rivers run, to form themselves into a company and issue tickets to fishermen upon payment. I am not sure how these associations get their power, and upon what terms. I think it is to the interest of all honest fishermen that we make full inquiries.—Yours, &c., WILLIAM HEARDER, Plymouth.

FISHING NEAR LEATHERHEAD.

DEAR SIR,—I should feel greatly obliged if you would give me and several of my club members any information respecting the coarse fishing (if any) to be had in the neighbourhood of Leatherhead.—Yours truly,

W. HOWELL.

[Leatherhead is on the Mole. You can go by either L.B. and S.C. or L. and S.W.R. by anglers' privilege tickets. The following, which appeared in the *Fishing Gazette* of Dec. 14, 1895, should be useful to you.—Ep.]

MOLE (Surrey).—The Mole rises from springs in lakes situated in St. Leonard's and Tilgate Forests, near Crawley, Sussex, and although fed by other small tributaries and drainings from Field Mill Pond, it attains no volume until it reaches Horley, and is thus of very little fishing value. After passing Horley the stream is gradually increased, until at Betchworth it assumes greater proportions, and is of value to anglers. It then pursues a winding course through the beautiful vale country surrounding Mickleham, to Dorking, Box Hill, Leatherhead, Cobham, and Esher, falling into the Thames opposite Hampton Court Palace. In the upper portions of the river at Reigate it only requires a "small tip" to the keeper when he comes round, to avoid molestation; whilst at Horley, anglers using the Six Bells (Mrs. Chart's) can fish. At Dorking, 1s. per day can be paid at Castle Mill and elsewhere, in private parts, but near Box Hill and Dorking permission must be obtained; also at Leatherhead, where there is good water and excellent fishing—trout up to 4lb. or so, pike fairly large, roach, perch, chub, carp, bream, and very fine dace. From the old bridge, looking towards the South-Western Railway line, numbers of trout may be seen on the shallows, and in the season they may be caught with fly. Below the railway bridge some good swims will be found for roach, bream, chub or perch fishing, and pike are met with here and there in suitable spots. Some of the landowners about here are liberal in granting a day, but not on Sunday. In Betchworth Park the water is strictly private; likewise between Cobham and Esher, where it flows through private lands and estates. The fishing from the left bank, from Esher Bridge to the South-Western Railway embankment (South Waylands Farm), is rented by the Anglers' Association for the sole use of its affiliated members. No night fishing allowed. The Mole, which was once a good trout stream, is now chiefly productive of bream, roach, carp, dace, tench, and pike, with a few trout in its upper and swifter running reaches. Its lower lengths are of a very sluggish character, but exactly suited to bream, which abound in shoals, and attain a size of 4lb., 5lb., and even 6lb. They are very seldom taken in daylight; but in the right weather (hot nights), and a little advance baiting with brewer's grains, mashed potato, boiled rice, worms, and sometimes even bran and bread balls, a ledger with a lob or marsh worm will often account for from six to a dozen good fish between ten o'clock at night and break of day. Mole fishing, like that of the Medway and Kentish Eden, requires thoroughly understanding to achieve success. There are mostly a few good fish in the wide pool, particularly carp, just above the Linoleum Works by the railway embankment, also in the millpool below, but they have been too much fished. In the stretch below the mill down to the Thames the fishing is poor. Above the Anglers' Association water at Esher, the left-hand bank upstream from Esher high-road bridge, permission must be had from Mr. Thompson, the farmer of the land on that side of the river from the bridge to Barwood House Estate (Hon. Henry Leonard Bourke). It will be remembered that a few years ago Mr. Bourke put chains and barbed wire across the Mole at the commencement of his land, and stopped the navigation of boats from that point to Cobham. The law suit which resulted, the Public versus Bourke, upheld the right of navigation, and the obstruction has been removed. As to the fishing rights on the Mole from East Molesey to Cobham, they

are wholly and solely in the hands of Captain Hotham, who does not, however, interfere with angling from boat or bank, and only asserts his rights by annually posting printed notices over that part of the river. Under these circumstances, so long as Captain Hotham does not actually forbid fishing, the public may fish from a boat, and cannot be prevented by owners or lessees of the land, provided the angler conducts himself properly. The farmers and tenants can personally let their banks for fishing with Captain Hotham's permission only. Be it noted that the Hon. H. L. Bonrke chained the river to prevent ignorant and rowdy boating parties using bad language, and bathing in a nude state opposite his mansion at all hours of the day throughout the summer. This is what anglers have frequently to suffer from. The Mole's close season is as the Thames, viz.: Coarse fish, March 15 to June 15, both days inclusive.

A LANCASTER FISHING TACKLE MAKER.

To the Editor of the *Lancaster Guardian*.

DEAR SIR,—It gives me great pleasure to forward to Mr. Marston information respecting my grandmother, Elizabeth Howell. Her father, Edmund Taylor, was the nephew of the celebrated and learned divine, Dr. John Taylor. He commenced the fishing tackle business entirely for the benefit of his widowed daughter, Elizabeth Howell.

Mrs. Howell not only made her own flies, but spun the fishing lines, and these were sold from north to south; in fact, she was known far and wide. Her fishing tackle, along with the verses (issued in the local papers Jan. 6, 1899), were to be seen in the windows of the great metropolis.

Her father was an ardent angler—had been out fishing only a few hours before his death, which took place Jan. 18, 1816. A month after this event Betsy issued the said verses—so afraid was she that after Edmund Taylor's death the business would cease to prosper. (She was a highly educated and very intelligent woman.) Many of the gentry now living in the vicinity of Lancaster will remember Elizabeth Howell—the Taylors were a well-known Lancaster family.

Mrs. Howell's ancestors were horn at Scotforth. Her uncle, John Taylor, was a member of the council. He died in 1817, leaving several bequests to charitable purposes. (A copy of J. Taylor's will is in my possession, and I shall be pleased to let Mr. Marston see it at any time.)

There are no descendants of the Taylor family living, not that I know of, with the exception of my sister, Mrs. Hall, of Friar-street, her son—who is quite as keen a fisher as his great grandfather—and four daughters. Edmund Taylor's great grandson, Rev. John Reeves Pursell, died recently at Eastwick Rectory. His sister, Miss Pursell, was in London the last time I heard of her, doing good work among the Chnrch Missions. In conclusion, Edward Taylor was manager for James Nohle, Esq., silk merchant of this town, and was highly respected by that family. In 1789 the Freedom of the Borough was presented to him. In the advertisement the warehouse is described as being "behind St. Anne's." There it still stands, only the warehouse has, in late years, been substituted for the much-needed washhouse.—I am, yours truly,

ELIZABETH TAYLOR CLEMMY.

5, Friar-street, Lancaster.
N.B.—The fishing-tackle business was carried on until Elizabeth Howell's death in 1856, at the age of eighty-five.

TROUT FISHING IN SCOTLAND, &c.

SIR,—Could any reader of the *Fishing Gazette* kindly inform me if there is any sea trout fishing in Sutherlandshire as early as April, and if the brown trout fishing is good in the north of Scotland at that time?

Also when brown trout fishing is good in Shetland? I am told that the best months there are the autumn months; but is there any decent fishing there as early as May and June? I should be very grateful for information on these points.

I am so much obliged for your kind information with regard to the "Sportsman's Guide."—Yours, &c., A. K.

[March and April are the best months for brown trout on such streams as the Tweed, Tay, Don, Deveron, &c. There is no sea trout fishing worth going north for until June or July. "A. K." should write to Mr. E. Bankart, Vaila Estate Office, Sandness, Shetland, for particulars about the excellent brown trout, sea trout, and sea fishing to be had there.—Ed.]

ROACH AND DACE—WHAT WILL THEY LOSE AFTER CAPTURE?

DEAR SIR,—It is well known (at least so it is frequently reported) that fish grow quickly when taken out of the water; and I should be glad if any of your readers would kindly say what deterioration (if any) would take place in seven or eight hours on a hot day.—Yours truly,

H. WILKINS.

[If the fish does not bleed, and is kept in a damp cloth, there is no appreciable loss of weight in a day.—Ed.]

ANGLERS' ASSOCIATION RE-STOCKING FUND.

DEAR SIR,—Since my last report to you I have to acknowledge receipt of the following sums:

	£	s.	d.
Kingston Piscatorial Society	...	1	1
Clissold Angling Society	...	0	10
Original Alexandra	...	2	2

—Yours faithfully, ALEX. WRIGHT, Hon. Sec.

Several important letters unavoidably held over.

— NOTICE. —

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newspapers and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
"Six Months ditto	5s. 4d.
"Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

WITH WHICH IS INCORPORATED

ANGLING AND CLUB GOSSIP.

SATURDAY, JANUARY 28TH, 1899.

THE EARLY SPRING ANGLER.

In another fortnight spring salmon angling will be in full swing north of the Border. Already in the Perthshire valleys and far north streams in Sutherlandshire the song of the reel is being daily heard; but the bulk of Scotch salmon angling waters do not open till Feb. 11, and a few are somewhat later still. The second group of rivers, however, which open on the 11th prox., includes by far the more important salmon angling waters than either the very early or the very late streams—except the Tay and Loch Tay.

The opening days in the Tay district were somewhat blighted by the sudden advent of a passing snowstorm, the abnormal and muddy condition of the waters, and the adverse nature of the wind—a most important factor in salmon angling. Towards the end of the week, however, more favourable weather conditions were experienced, and on the whole the early spring angler on the Tay system found his lines cast in more pleasant places than deigned to grace the opening days, and the amount of sport since then has been deemed highly satisfactory, one rod, on the 19th (Mr. H. Mackworth Praed), having five newly run

fish scaling from 13lb. to 25lb.; while other anglers since then have fared equally well.

The weather conditions either make or mar the early spring angler's prospects of sport to such a degree that, given fair open weather, other considerations are of minor importance, and may be relegated to the background. He may have big waters to face, but as long as he can get his line out and his fly well sunk he has hope, and covering his water pool after pool, and trying an eddy here and bit of slack water there, he ultimately lands on the right spot, and draws blood.

As far as the season has gone the prospects are all in favour of the early spring angler. There has been comparatively no snow, so that the temperature of the waters is much above the normal readings for January. This induces an early run of fish, and, as these have been observed running inland in considerable numbers for many weeks past, the current belief is that fresh spring fish are well forward into the head waters of all our long seasoned rivers, such as the Dee and Spey, and that the upper proprietors and lessees on these waters may confidently look forward to participating again this season, as they did last year, in a share of the sport agoing on the opening days. This is not often the case, the common experience in these parts being that the spring is well advanced before anything like angling is general so far inland. As a rule, these upper waters bear such a reputation of being so barren of fresh run fish in the early days of the season, that in a season like that of last year, and like the present as far as it has gone, they are apt to be neglected and left to the local fishermen and gillies to make the best of, till sport is a certainty. Then they have a right royal time of it. There may be kelts galore, but when spring fish are about there is rejoicing in many a camp over the picking of their bones, too, and they know how to pull them out.

At the best the early spring angler has no easy task before him. The rigours of an arctic climate may be his lot for weeks on end, just as he has wet his line for the first time, and before he can rejoice in a single run. He may then be shut up in a wayside hostelry out of the world, shut out from all external communications for days on end, and even reduced to considerable straits when the storm lasts, and the commissariat department gets low. Lucky he may think himself should he have a chum to share the tedium of his enforced idleness, and doubly so if an "open door" be found to the friendly society of some social shooting lodge or country house party, even after a sledge drive or a tramp through the frozen snow. Then times may pass tolerably well while waiting for a thaw, and the discomforts of the early spring angler reduced to a minimum. Hospitality is an outstanding characteristic of gentle and simple alike in these highland glens, and, were it not so, the lot of many an early spring angler in times past would have been beyond endurance, even to the most sanguine enthusiast. The early spring angler need not stand much on ceremonies at such times. His position as a gentleman is taken for granted should he have no other credentials or friendly acquaintance to introduce him, and the parson, the laird, or the local doctor for that matter, are ever on the lookout to proffer what kindly help and hospitality they can command when sporting gentlemen are snowed up in their neighbourhood. Many life-long acquaintances have been made under such circumstances, and not a little romance to boot, when likely-like subjects have come together. A welcome may always be counted on if such be within reach. As Burns says:

And when life's stream I ferry o'er,
A time that surely shall come,
In Heaven itself I'll ask no more
But just a highland welcome.

The early spring angler should at all times provide himself with plenty of warm clothing. When packing his portmanteau, his furs and flannels should occupy a conspicuous place. If he does not need them, so much the better, but there is no saying what a day may bring forth in these northern latitudes. The morning may be bright and fair, and the rugged landscape showing its best in the glowing sun, cheating one in the belief that spring, with its genial showers, has come to stay; yet before night the howling wintry blast and stormy drift has changed all, and the face of nature lies buried beneath a foot or so of snow.

It is then that heavy underclothing enables the early spring angler to "face the music." Wrapped in his reefer, and well "stockinged" both under and above his waders, with sealskin or fur lined cap, with capacious ear flaps, well encasing his head, he can sally forth and—bar heavy frosts, filling the river with ice floes—enjoy the best of sport sometimes, even when the fleecy flakes are falling thick and heavy on the water. But if not well protected, chills are often caught, for the running of a fish, apart from the heat of excitement, is a heating job in itself, the after effects of which have to be well guarded against.

A most fatal moment for getting a rise is just as the snowfall commences, or is just going off. Many experienced anglers and fishermen would not miss such an opportune moment on an otherwise unpropitious and stormy day for weeks of fine weather put together. They will sit shivering in the hut, or under a sheltering bank, while the storm rages above, watching for the first indications of a break, by the light or otherwise, in the storm clouds, and when it comes, make for the head of the pool, and, with a 3in. Eagle or Tricolour or Heron, cast swiftly and silently and with shortened line—for one cannot see far over the water through a haze of snowflakes—over the stream, and wait with eager expectation for the rug which is sure to come when there are fish about.

They do not need to reply to such a bite. The fish then generally take the lure with such determination that they are, in ninety-nine cases out of a hundred, fatally hooked, and only the possibility of an accident of the most unforeseen description can result in a loss. It may be the light, which is either darkening down or clearing at the breaking out or passing off of a snow shower, but, whatever it is which affects the fish, they seldom come short, and are seldom found without a full mouthful of the hook well home.

The early spring angler is an enthusiast of enthusiasts, but he is well rewarded for his pains. There is much to face in getting to the riverside in the early days of the season, but then the sport is par excellence the very best of the whole year when a good head of fish is in the river. The fish are then in the gamiest condition and the battle royal of the keenest description. A seven or eight-pounder will show as much fight when fresh from the sea as a salmon twice its weight later on, when it has been a few weeks up from the briny. They are not nearly so shy, and then the season is young, and this also may account for much of the inborn enthusiasm of the early spring angler.

Whatever may be said about killing autumn fish while sitting in an armchair surrounded by cushions, &c., the same cannot be thrown in the teeth of the early spring angler. He has to rough it, even under the best of weather conditions, for it is winter still in the north even when March is well advanced, and only but the average hardy constitution can stand the ordeal with impunity. Yet he has his reward; and few, if any, who have ever had a spell of good spring salmon angling can say that they are not tempted to return again and again, be the difficulties and hardships what they may, to renew the experience.

That there will be a rush north in the course of the next few weeks goes without saying. Even should the weather break down at the last moment, the prospects of sport are so well assured, from the favourable conditions hitherto enjoyed during the close season, that when the weather mends, as it certainly must do as the season advances, the chances are all in favour of the success of the early spring angler. G. M.

THE WORLD'S POSTAGE STAMPS.—All postage stamp collectors ought to know of the existence of an extremely useful and cheap little book published by Messrs. Bright and Son, Bourne-mouth, and Simpkin, Marshall, and Co., London. It is called "Bright and Son's A B C Descriptive Priced Catalogue of the World's Postage Stamps, Envelopes, Post-cards, &c." It is well and fully illustrated, and it enables the possessor of a collection of stamps to price almost every item; also to judge whether prices asked by stamp dealers are fair or not. The illustrations are so good that you can instantly identify originals by them, and there are many thousands of them, and all particulars about all stamps, post-cards, &c., of all nations.

A COLLEGE BOY'S SPORT IN NEW ZEALAND.

PERHAPS some readers of the *Fishing Gazette* may remember having seen in its columns in 1894 a fishing diary, kept by a New Zealand boy—Alister C. Grant, aged fourteen. Well, I am that boy, and having again had uncommonly good sport, I thought that my experiences might be of interest.

In September, having had the misfortune or otherwise to have a slight attack of rheumatic fever, which forced me to leave Christ's College and take a complete change, I went to stay with my brother-in-law, Mr. W. H. N. He lives in Woodville, a small township in the Bush district, about a hundred miles from Wellington.

The term the Bush district is rather deceptive. Ten or fifteen years ago there was between Napier and Wellington a block of about fifty miles square, three-quarters of which was covered with thick native bush. Now, except in the case of one or two fairly large blocks, and here and there small patches of standing bush, this large tract of country is all cleared, and all that remains of what once was magnificent bush is charred stumps and logs, with pasture land between.

However, although civilisation has done much to spoil the scenery, it has also brought blessings with it, and it was to splendid trout fishing that I looked forward when it was decided to send me to Woodville.

This district abounds in fine shingle, streams, and rivers, all of which are either fully stocked or fast becoming so, and it is now about the best fishing district in New Zealand.

The main river of the Bush, into which all the other streams of the district flow, is the Manawatu. It is a large river, flowing over a wide shingle bed and full of fine rapids and pools. To cross it when in its normal spring condition is a matter of at least 50 yds. of wading up to one's knees in a stiff current; but in a hot summer like the present one it gets much lower than this at about Christmas time.

The best places to fish the Manawatu from are Danevirke, Kumeroa, and Woodville, and from all these places one can also get splendid fishing in the smaller streams. A lot of these streams flow through patches of standing and fallen bush, and, as a consequence, are very full of logs. It is impossible for an English fisherman to fully realise what fishing a loggy creek means without having seen the article for himself. In almost every pool there is a log or a pile of logs, under which the monster of the hole lives. Your fly floats down the rapid and skims above this mass of snags, and out he comes. Often he is a fish of 3 lb. or more. If you hook him, does not he fight to get back? And if he succeeds, doesn't he wind you round and round those logs? Test a brand new cast well before you use it in a bush stream, and make up your mind to bend your rod quite double sooner than get taken into one of those piles of logs. You need sound tackle in the bush.

The tackle I use is as follows: A 12ft. Hardy's split cane; a Hardy's perfect reel; 40 yds. of No. 16 oil silk line, the finest silk line I can buy here; finest drawn casts, but I always test them very heavily before using; and flies on No. 9 hooks, mounted as lightly as I can buy them. The only alteration that I should like to make in my list is that the rod should have a steel centre. But in saying this I say nothing against the 12ft. split cane, for it is a beauty. It has already caught me about 800 fish, weighing over 1000 lb., and it will catch me many another. The difference the steel centre makes is that you can put these heavy strains on, for sometimes it almost means lifting a three or four-pounder out of a mass of logs, and yet not wear your rod out. The split cane bears tremendous strain, but it is not built to stand them for more than a certain time, and cannot fairly be expected to.

The experiences Hardy's steel centred rods live through are marvellous. A friend of mine was fishing with a 10ft. 6in. steel centre Hardy in the Totara Creek at Kinneroa. He hooked a 4-pounder above him, and, in playing, the fish came straight down to his feet. The tip of the rod caught over a thin branch of a tree, and was completely bent back round it—an experience that no wood could have stood—but J. I. N. M.

succeeded in landing the fish, and the tip sprung back straight again. I have since used the rod, and, although there is a very slight kink in the middle of the tip, there is not enough wrong to affect the rod the least bit as far as use is concerned.

As for the light casts standing these heavy strains, they will stand nearly as much as the heavy ones when new, and although they don't last quite as long, one gets far more fish with them than with heavy ones.

In a loggy part of the Tamaki I got a 4 lb. trout in an extraordinary way. A tree had fallen across the stream, and in among its branches was a space of clear water of about two square yards. In rather a reckless moment I flicked my fly into this piece of open water, when out from the tree came my 4-pounder. I had no room to play him, so I held my reel, doubled up my rod, and held him with his head almost on the shingle, while I slipped off my gaff and hooked him out.

In one of the pools of the Mangatoro there was a mass of logs, in the middle of which there was a space of clear water of about 2ft. square. As I came up a 2½ lb. trout was lying on the top of the water, evidently well on the take. After a moment's hesitation I went my fly, and he had me almost before it touched the water. Letting him get his head down meant allowing him to wind my cast round at least a dozen logs, so there was nothing for it but to hold his head up till I gaffed him, and after a severe struggle this was managed.

But these are only two instances of success among a hundred of failure, resulting in lost flies and casts, and even in the escape of big fish who, although almost played out, made a last effort and got into a snag.

The weights of the different baskets in my diary give a very fair idea of the average run of fish in the different streams. If one can strike a new and almost totally unfished piece of water, as my uncle, A. J. R., and myself did when we fished the upper waters of the Mangatainoka, on Jan. 6 and 7, one probably will get a 5-pounder or two, and perhaps an even larger fish.

On the 6th, my basket of eight fish, weighing 25 lb., was made up of a 5½-pounder, a 5 lb., a 3½ lb., a 3 lb., a 3 lb. rainbow, and three smaller fish, running about 1½ lb. each. A. J. R. had a 5-pounder and three fish of about 1½ lb. each—two of them rainbows. The following day he got a 4 and a 3-pounder, while I got a 4½-pounder. On Dec. 10, when I caught twenty-eight fish, weighing 46 lb., in the Upper Tamaki, I had a 4-pounder and a 3½-pounder, and nine others of over 2 lb. On the 16th, when my bag totalled thirty fish, weighing 57½ lb., it contained two 3½-pounders, and four others of over 3 lb.

There are a few large fish in the Manawatu Gorge, and in the Mangatoro and Upper Mangatainoka I have seen several fish of at least 7 lb. or 8 lb.; but the average fish of the district will only be a 1½-pounder.

Of course, the way the fish play varies with their condition. In September they are hardly in sufficient condition to be very game, but by November they are pretty well right. From this month on the Manawatu fish are very game, indeed; and often does a fly fisherman need a clear 40 yds. of line to control them when they rush across the stream and leap into the air on the opposite side. Many of the fishermen of the district use a minnow, and, of course, they find the fish comparatively lifeless, for no fish will play very gamely with three sets of triangles in him. Those we caught in the Mangatainoka were in uncommonly good condition, playing like tigers, and tasting afterwards like salmon. But in the comparatively unfished streams one comes across a good many ill-conditioned fish that just give a few wriggles and come out. One such old shark I caught in the Makairo. In really good condition it ought to have weighed 8 lb., but only weighed 3 lb., and its head must have accounted for at least half.

The fish to give one good play are the rainbows; but, although the society is letting out more and more of them every year, there are at present very few of them in the streams I have fished in the district.

The first rainbows I have seen caught were caught in the Makairo on my rod by my pupil, in the art of fishing, Miss A. M. H. B., on Nov. 17. She caught two of 1½ lb. each, and they were very

game. Subsequently, F. S. H. B., who was also a pupil of mine, caught four of these fish in the Makuri, and another in the Makairo, and his report as to their play is very enthusiastic, indeed. My only personal acquaintance with the rainbow trout lasted for twenty minutes, and was in the Mangatainoka. I caught a 3-pounder, and he gave me magnificent sport. Running out, on several occasions, within 3 yds. or 4 yds. of all my line, and then shooting into the air, he would come back almost as fast as he went, and leave yards of my line hanging slack, before I could do anything. However, being well hooked, he came ashore all right in the end.

The only day's fishing out of the Bush district that I had was in the Hantapu, near Karioi, on Dec. 2. To reach this stream one has to go fifty-six miles by steamer up the Wanganni river, coach thirty-two miles in from Pipiriki to Karioi, and then ride another seventeen miles to the fishing. Having a day to spare while at Karis, and knowing that there were fish in the Ranjitikei, into which the Hantapu flows, I thought it worth my while to try whether they had yet worked their way up to the head waters. A fifteen mile ride brought me to the stream, and going another mile down I started fishing at about 10.30. However, after fishing for three hours, and seeing nothing, I rode a mile further down, and had another try. Not believing there were fish in the stream, I was fishing rather carelessly, when I came right on to a fish of about 7 lb.—a real beauty. Leaving him to recover himself for half an hour, I caught some locusts and grasshoppers; then, planting myself behind a bush, I started to fish for him. My first device was a large grasshopper, which landed nicely in front of him. Up he floated, and his great nose almost touched my bait, but take he would not, so I tried him with a locust. Having treated this in the same way as the grasshopper, and having absolutely ignored a fly, he seemed quite immovable; but on my dragging a fly minnow over him he came at it in real earnest. Thinking he had it, I struck too soon, and he would not come near me again. My last device was a Halcyon spinner, but this was too much for the old villain's nervous system, for after rushing round it about half a dozen times, he turned tail and went under a big rock; and so, after an hour's excitement, I had to give him up and go home empty handed.

Perhaps the best of my this season's baskets is that of Dec. 27. My brother-in-law, myself, and a friend of mine, L. H. G. G., plotted on Sunday to make an early start the next day and fish the Manawatu at Ornihi Flat. We got up at 1 a.m., had an early breakfast, or, perhaps, better, a late supper, and having caught the horses in the dark, a long and very annoying business, we set off at 3.40 a.m. to drive our thirteen miles. We had chosen about the best piece of water in the Manawatu, and we started fishing at 6 a.m. The day was a cold and raw one, with a misty rain falling at times. W. H. N. fished a minnow, myself a fly, while L. H. G. G., who is not a fisherman, looked on and did the cooking. By 9 a.m., when we adjourned for breakfast proper, we had seventeen fish between us; W. H. N. had seven fish, weighing 20 lb.; while I had ten, weighing 21 lb. He then tried fly, but found himself handicapped by the thickness of his line, so we swapped reels for two and a half hours. During that time W. H. N. caught seven fish to my three. We then again swapped, and I got seven to his one. A fairly conclusive proof that a light line makes a difference—at least W. H. N. thinks so, for he has now got a No. 16 line, like mine. Thus my basket for the day was twenty fish, weighing 43 lb., which is by far the fly fishing record for the river. W. H. N.'s basket was fifteen fish, weighing 35 lb. Our total basket of thirty-five fish, weighing 78 lb., is also the two rod record for the Manawatu. Mr. J. N. M., however, has done much better than I have with a minnow, catching twenty-six fish early this season weighing over 50 lb.

While at Danevirke I stayed with Mr. W. F. K., of Tahoraiti—a keen sportsman. One evening, when fly fishing in the Manawatu, after I had caught two fish the fish seemed to go quite off the take. After strolling some distance up the shingle bed, I noticed a fish rising very fast, and started casting over him. At first he did not take, but after some time he rose just beside where my last cast had gone, and so I struck

sharp—and out spun my reel. At first it hummed out, and then it worked out at a slow, steady pace. Mr. W. F. K. and a friend were looking on, and each of them had a try at the rod, and we all came to the conclusion that it was a 4-pounder at least. After twenty minutes heavy dead play, out came a 1½lb. eel, which we found to be hooked foul right in the middle of the body. When the first moment of disgust was over—for we had all made up our minds after the first fifteen minutes that it was a 6-pounder—we had a hearty laugh at ourselves. However, the eel's life did not end that night, for I took him home and put him in a pan of water in the meat safe, to keep him alive and fresh. In the morning shriek after shriek came from the bath-room, and, on enquiring the cause, to my horror I found that Miss O. K., in having her plunge bath, had stepped on a living eel under the water, and that my eel had disappeared—to my mind a conclusive proof that

water much affected by the fire. However, not going far enough down before starting, I arrived back at the station at 2 p.m. with eighteen fish, weighing 25½lb. Not a dead fish was to be seen until within about a quarter of a mile from the station, when I noticed one dead and another dying. I then saw a fish of about 2½lb. lying in the shallows at the edge of a pool, apparently feeding; but as he would not take, I went up to him, and found him breathing at about three times the normal rate, and evidently dying of suffocation. He let me pick him up, but was able to swim away when put back again. A little further up there was a pool with fifteen fish in it, either dying or dead, so I stopped fishing, and, having had lunch, rode four miles down stream to where the fish were unaffected by the fire, and succeeded in catching twelve more that afternoon, which went 32lb.; thirty fish, weighing 57½lb., being my total for the day.

readers wish for really good sport they could hardly do better than visit Danevirke or Woodville, and try the bush streams of New Zealand.

As to flies, I advise a very small variety. Throughout the season the red tip Governor is the standard fly, and never should one put up a cast without him. Early in the season, *i.e.*, until the end of October, an Irish March Brown pays well; after that date substitute a Quill Black Gnat, and don't use more than two flies.

In the hot weather of January and February a locust, a small gauze winged "cicada," which chirps in the grass, is more deadly than an artificial fly, but, of course, it is not the same sport fishing with this bait, although it takes considerable skill. As to buying one's tackle, the best man to deal with is W. H. Tisdall, Wellington.

To get good fishing in the Bush, and, for that

A DAY'S CATCH (FORTY-TWO FISH WEIGHING 80LB.).

[Woodville, N.Z.]

eels do travel at night on dry land when they cross from one sheet of water to another.

My fishing in January was much spoilt by bush fires, and I am afraid that some of the streams in the district will not yield as good fishing again, as they did this year, for another two years, owing to the terrible mortality that these fires caused among the fish.

The effect of a log or bush fire on the trout is curious to watch, and I had an uncommonly good opportunity of doing so on Dec. 16. The night I reached Waewaepa, Mr. G. P.'s place, a large fire had swept right across his property, covering about 3000 acres in its ravages, and burning a piece of fallen bush on the very banks of the stream within a mile above where I was to fish the next day. Mr. G. P. advised me to walk down about two miles through some standing bush, and to fish up to the station, and thus avoid fishing

The cause of this mortality is variously explained, but I fancy this explanation to be the true one—the burnt charcoal forms hydrate of potash, which absorbs the oxygen in the water and acts like lime does, and hence the fish die of suffocation.

Of course every year there are fires, but never have they been so bad as they have this year. A long hot summer, and some heavy gales of hot, dry wind just as everyone was doing their year's burning, caused the fire to spread from log to log throughout the district. Homesteads were burnt, and thousands of pounds worth of stock and fencing lost; and so, compared with these evils, the mortality among the trout is dwarfed into insignificance.

However, many of the best streams and rivers are hardly affected, although some have been almost swept clean of fish, and should any of your

matter, in New Zealand, all one requires is a £1 licence. For the most part the fishing of the district is quite unpreserved, and even where it is preserved it is done so more on the principle of what is not worth asking for is not worth having than on any other. Besides, the English tourist is a welcome guest, and men such as Mr. W. F. K., who do preserve their water, would allow him to fish where they would refuse to allow anyone else but their friends.

As for accommodation, there are good hotels throughout the district within comfortable reach of the fishing.

In these notes I have only dealt with a small district in the North Island of New Zealand. However, I have one of Mr. J. A. Harvie-Brown's fishing diaries, which I have kept since 1893, and which was a present from the author. In this there is a record of some 500 more trouts' deaths;

some in Wellington, some in Canterbury, and some in Central Otago.

The illustration shows a catch made with the fly in the Manawatu River, North Island, N.Z. W. H. Nelson, eighteen fish, weighing 34½lb.; A. C. Grant, twenty-four fish, weighing 45½lb. The result of nine hours' fishing on April 10, 1898.

ALISTER C. GRANT.

P.S.—I have delayed in sending this, and since writing it have had three more days' fishing. On Easter Monday my brother-in-law (Mr. W. H. N.) and myself made another midnight start, and broke our previous record for the Manawatu. We caught forty-four fish, weighing 80lb., all on fly. Between 12 a.m. and 2.30 p.m. I took eighteen fish out of one rapid of not more than 100yds. in length. W. H. N. then came up, and took three more fish out of the same piece of water. We have determined to, on next Boxing Day, again try our luck at the same place, and to, if possible, break all previous records.

A SNUG BERTH FOR A SEA ANGLER.

I AM only a tyro in the art of angling, either in salt or fresh waters. My inborn fondness for sport having, through circumstances of climates and countries in which the greater part of my manhood has been spent, been devoted to the gun, the rifle, and hound. Advancing years, diminished means, and other circumstances over which I have had no control, have combined to induce me to seek rest for a time from worries in the quiet of a seaside village, there to try and enjoy the pleasures, hitherto unknown to me, to be found in sea angling. The perusal of Mr. Bickerdyke's "All Round Angler," one of the most perfect in detail of any book I have ever read of instruction on any kind of sport, determined me to try my 'prentice hand, and, although late in my life, to endeavour to become a decent performer with rod and line. I have so far succeeded that I have found pleasure in the pastime, and the bracing sea air has given better health, and makes the worries look less black.

Mr. F. G. Affalo's most clear and instructive work on sea angling further stimulated my desire to become a proficient in the art, the mysteries of which he so well describes for the benefit of his readers. Mr. Affalo writes in the appendix to his book on the fishing to be had at many places at home and abroad; and, writing of Mevagissey Bay, incidentally remarks that, "When the proper spirit of piracy has (as it inevitably must do, with the development of Cornish railways) found its way west of Plymouth, I shall go abroad for my sea fishing, or, at any rate, to the North of Scotland or West of Ireland, &c." Now, in gratitude for his book, and as a duty I feel I owe to Mr. Affalo and other brother anglers, I will endeavour to describe this other resort for sea angling, which as yet almost unheard of, excepting by people in the immediate neighbourhood, will, I expect, when better known, become a favourite resort of the sea fisher.

The month of June last year I spent with relatives at Crosshaven, a village opposite Queenstown, in Cork Harbour, built on the estuary of the Carrigaline river, and never heard until months after my departure that the said river simply swarms with bass and grey mullet in their due season. One day, when at Crosshaven, I was persuaded to join an excursion to this place—Ballycotton, a fishing village, said to be one of the best stations for fish on the south coast of Cork. What I saw and heard that day regarding its fishing capabilities decided me to return one day and try my hand; but it was not until Oct. 1 that I found myself here and settled for the winter. There are two ways of getting here. One by train from Cork to Middleton, and thence by car (about eleven miles) on here. The other, by train from Cork to Passage, thence by steamer up Cork Harbour, touching Queenstown, to Aghada (pronounced Ahadda), and there you are met by a long car, which brings you by a pretty road, through the ancient city of Cloyne, on here (about eleven miles of car). This is by far the pleasantest route, but it can only be used every day in the week from May 1 to Oct. 1. During the other months of the year the long car runs from Ballycotton to Aghada, and returns only on Wednesdays and Saturdays. This village is built in a straggling

fashion along the south-west side of the harbour of Ballycotton, the houses generally facing north-east. There are some very decent lodgings to be had and a few furnished houses. The Sea View Hotel, as its name indicates, is built just overlooking the little port, with its pier and breakwaters, and commands the best view in the place. It is very clean and comfortable, the food abundant, well cooked, and neatly served, and Mrs. O'Keeffe, the proprietress, is most obliging and attentive to the wants of her guests. Yachts and rowboats can be hired by the month, week, or day, and there are several capable and obliging men, who thoroughly understand their work and know every rock and the best ground for each kind of fish, who would hire by day or terms. To mention only a few known to me—John Hoar, a typical old salt, who served ten years in the Navy, a master of the art of fishing, and full of droll yarns; William and Richard Harding, respectively captain and coxswain of the local lifeboat; Tom Daly has a boat of his own; and Richard Welch. All the above are dependable men. Ballycotton Bay faces S.E., and runs N.W. inland for about two miles. In breadth it is over three miles at its entrance, narrowing gradually to less than one and a half miles. The village ends abruptly at a channel of 150yds., dry at low water, which separates it from a small, flat island, from which in turn it is divided by a deep and rocky sound from a larger island formed of a high scarped rock, on the summit of which is built a fine lighthouse. The sound is about 300yds. across, and a heavy tide runs through it each way. Of the principal fish caught here, I am enabled, through the kindness of Mr. W. Howard, chief officer of the local coastguard station, to give a list, together with the approximate numbers of each caught during the past year by the professional fishermen. This list does not, of course, include the large numbers caught by amateurs. Cod, 1700; ling, 1663; hake, 4025; pollack, 4824; mackerel, 10,640; herrings, 213,250; flat fish, 7840; skate, 500; conger, 3885; sprats, 520 firkins; haddock, 43; bream, 2244; whiting, 1525; gurnard, 9560; lobsters, 604; crabs, 322. This last season has been one of the worst known for herrings, and very poor for mackerel. Of lobsters and crabs there are an abundance, but the local men don't go in for them, and they are taken by outsiders. The small number of haddocks taken does not imply that they are scarce, but mussels, the best known bait to catch them with, are totally absent from this part of the coast, although they are plentiful in Youghal and Queenstown harbours. Scad (horse mackerel) are caught in large numbers, but are worthless. There is another fish which gives good sport, a summer visitor, and I have not seen it. Locally it is called connor or rock bream, and frequents very much the same rocky depths that pollack and bream prefer. Dog fish, like the poor, we have always with us, and a veritable pest they are. Then, for those whose fishing takes them ten or more miles out to sea, there are the large sharks, which are so persistent in their attentions as often to render fishing impossible, and oblige the crews to up anchor and change ground. There is little or no mud anywhere near here, so that lug worms are practically unknown as bait. Sand eels also are so rare as not to be counted upon for bait. Mackerel and sprats are the universal baits in spring and summer, with the addition of herrings in autumn and winter. Conger and dog fish are the most generally used as bait for spillers in winter and early spring. Sprats come in immense shoals, and, considering that they are ceaselessly preyed upon by everything big enough to swallow them, it is a marvel how the supply, year after year, appears at the usual time, and ever inexhaustible. One of their most wholesale devourers is a cetacean, from 30ft. to 40ft. in length, and locally known as the "worrum" (a grampus, I imagine it to be). Unlike their smaller brethren, the porpoises, these large fellows are almost invariably solitary. They generally rise up suddenly under the shoal of sprats and suck them down by the bushel, often, as I am informed by John Hoar, engulfing at the same time a lot of puffins, who, busy under water eating sprats, get drawn, in common with their prey, into the terrible vortex. The puffins, however, eventually fare better than the sprats, for, after a time, they are thrown up—tickling the throat with feathers seeming to have

the same effect on the "worrum" as it has upon us poor humans. The puffins look dishevelled and utterly demoralised for a time, but they eventually recover, and are able to fly away. Mackerel, whiting, pollack, bream, and mullet are abundant throughout the summer; the latter are, however, little fished for, as no one understands ground baiting, and fishing for them with paste and fine tackle. This bay is well sheltered from all seas but those from E. and S.E., which roll in splendidly in winter, but are rare in summer. One need not go far to get fishing; in fact, mackerel, gurnard, and whiting you can scarcely go wrong for, whipping in the early morning or evening, and plenty of all kinds can be taken from pier or breakwater with paternoster, ledger, or float tackle. Then there are well-known rocks, over which one can anchor and fish with paternoster for bream, pollack, and conger, &c. The rocky sound between the two islands, through which a strong tide runs, swarms with pollack and bream, and the former run to large size, and take greedily rubber eels and other artificial bait used trailing. The registered fishing boats number forty-four, of which five are luggers, used principally for trawling. There are two small private yachts, and about ten small punts. The port, with its pier and breakwater, gives safe anchorage in all weathers, and if there was a light at the entrance would be a most valuable harbour of refuge, in the event of their being surprised by bad weather at night, for the fishing boats of Youghal and Queenstown, lying equi-distant about ten miles east and west of Ballycotton, but owing to the want of a light they are deprived of its benefit. Even the local boats have to run terrible risks trying to grope their way into the port on dark nights, and it is more by good luck than anything else that there have not been serious disasters. Considering that this is a coast-guard station, and that there is a splendidly equipped lifeboat here, too, and that both crews are liable to be called for service on rough, dark nights, the neglect of the responsible authorities to provide a light at the entrance to the port is all the more unaccountable. However, owing to the kindness of Capt. Donelan, the energetic M.P. for this district of co. Cork, who has already commenced to interest himself on behalf of these poor fishermen, there is every reason to hope that the authorities will at length see their way to remedy so serious a want. There is a post and telegraph office here, likewise a Protestant Church, the curate, Rev. A. Martin, a good fisherman.

EDWARD H. H. MASSY.

BALA, NORTH WALES—ITS RIVER AND LAKE FISHING.

IN May, 1898, I found myself with this (to me) rather difficult question to answer: "Where can I obtain fairly good river and lake fishing, combined with comfortable quarters at reasonable charges, for the next few months or longer?"

My general experience has been that when the rivers are low and almost useless, then lake fishing is at its best; and when the rivers are good, then lake fishing is poor. Hence I wanted two strings to my bow, for year in and year out I am never tired of fishing, although occasionally fishing tires me. Many an evening I have been so worn out that I have resolved in the most determined way possible to rest or cycle on the following day, but no sooner has the next day dawned than in nine cases out of ten I have broken my resolution, and started even earlier than usual for either the river or lake. "Poor humanity! Queer commodity!" as an old Scotch parson often said to me, after visiting his people.

I thought first of Ireland, and that was only natural, for among the fifteen fish cases that decorate my walls one contains a brown trout which is labelled: "Lough Conn, April 24, '97; 10½lb."

For several reasons I was reluctantly forced to the conclusion that the hour for Ireland had not yet again arrived, so that elsewhere it must be.

Then I thought of the English Lake District, but the thought was strangled almost before its birth; for had I not fished one of the largest and best known lakes of that lovely district several months for several years in succession, and the best trout I have to show for so much work is the

saddest looking fish in my collection, weighing only some 3lb.?

(I always start with this fish on show days, and by the time the visitor gets to Lough Conn the wisdom of so doing is more than apparent.)

Then I thought of Scotland, but my personal experience of that austere but wonderfully attractive country has been, large expenses—small returns. Justice, however, bids me say that only on three occasions have I fished north of the Tweed, and then only for two short weeks on end, and then, also, only for salmon.

(The Scotchmen I meet assure me that either the weather, or water, or some other thing was wrong on these occasions; and I have so far managed to believe them, that I purpose trying again some day, but not yet.)

Then I thought of “gallant little Wales.” Knowing nothing from experience, either for or against its fishing possibilities, I hunted in my books for information, and finally settled that for “good or ill” I would go to Bala. From that moment I began to ask all and sundry, “Do you know Bala?” I met no one who knew Bala (usually I had to spell the name), but from my books I learned that the lake was large, and from the fact that no one I met knew Bala, I concluded that it would be a quiet place; but for the rest I could only devoutly hope that it would meet my desires in most, if not all, other respects. From the “Angler’s Diary” I gathered that Mr. Owen, of the White Lion Royal Hotel, would supply information, &c., to visitors. In the kindest way possible he answered my questions in regard to the river, lake, and boat; and through him I secured comfortable quarters near both the lake and river.

The little town of Bala, with its 2500 inhabitants, is prettily situated among the hills; and all who have travelled in North Wales know how beautiful the railway journey is from Ruabon, via Llangollen and Corwen, to Bala and onwards. The constant peeps of the Dee, from the train, set all my fishing emotions on fire, and I longed to get to work.

The day after my arrival I purchased a £1 ticket (season) from Mr. Moses Roberts, fish tackleist, &c., High-street, which gave me nearly three miles’ fishing on the river Tryweryn.

The fishing begins under a mile from the town, and about the middle of it, and close to the river, is Frongoch, the first railway station beyond Bala. This station I found of real service, for when the weather was unsuitable for cycling the train brought me home in a few minutes.

Except in dry weather there is plenty of life about the river. Mostly it is broken water, with short stretches of quiet bits, while here and there deep pools are found which hold a few salmon in the autumn.

On the afternoon of May 6 I went to the river for the first time, and returned with an empty basket. Although on some other days my basket was lighter than I liked, yet this first day was the only blank one that fell to my lot during the many happy days I spent by and in the river—for I usually wade. The river opens on Feb. 14 and closes on Sept. 15. Before April 1 and after Sept. 1 no worm fishing is allowed.

The lake is about four miles long and averages a mile across. A small portion of the upper part Sir W. W. Wynn, Bart., reserves, but the rest is open to all. It takes some three hours to go round the free part with trolling rods, and, being deep on both sides, the boat can run within 20yds. or 25yds. of the shore, except in a few places where shallows or rocks make it necessary to work out a bit further. The lower end is not deep enough for trolling, but is good for perch and spinning.

At odd times, when the trout or pike did not move, I gave a few hours to perch fishing. From my diary I see that on one of these occasions I had thirty perch, weighing 7lb.; on another, forty-eight perch, weighing 12lb.; and on another, thirty-eight perch, the twenty-three largest going 4½lb. Worm or minnow seem equally good as bait. More than once when the fish “slacked off” from the worm, they started again curiously at the live minnow and vice versa. June and the three following months are the best for perch. Fish of 2lb. and 3lb. and larger have been taken.

My best day on the river was twenty trout, weighing 6½lb. My four best lake trout weighed 7lb., 5lb., 4½lb., and 4lb. The 7lb. fish is a good

shape, and Messrs. Cooper are setting it up. Not long after the season closed I had another trout of 8lb., which I returned, after carefully taking his weight.

My nine best pike weighed 15lb., 13½lb., 12½lb., 12lb., 11lb., 10½lb., 10½lb., 10½lb., and 10lb.

The best time for the lake trout is from the opening day in February up to the end of April. The best artificial baits for the lake are the Brown and Blue Phantoms; but sprats, gudgeon, and the small perch from the lake, on spinners, are far better. Small perch, on an Archer Spinner, accounted for all my trout but two, and certainly the most, as well as the largest, of the pike.

I ought to mention that an old professional fisherman (Tweenie), who has fished the lake with visitors for years, states that the past season was the poorest he has ever known for lake trout and pike.

I keep a record of each day’s fishing, and from this I have compiled the following table. It shows at a glance the number of days fished and the monthly results. This I thought might be a guide to any who, like myself, decide to visit Bala.

	RIVER TROUT.*				LAKE TROUT.				PIKE.

* The river contains a quantity of small trout. I returned far more than I retained. J. C.

BIG FISH IN AN OLD DUCK DECOY.

SOME years ago it was my good fortune to have permission to fish in an old wildfowl decoy—a lake of about fifteen acres, with an island in the middle of it, covered with trees, laurels, and other evergreen shrubs. The water was about 12ft. deep at the lower or floodgate end of the lake, shoaling gradually to less than a couple of feet, where once was the over-arching net of the decoy. The lake is situated on the confines of an ancient and extensive park near to the sea coast of Sussex, and when the north-east gales of winter howled over the cliffs of Beachy Head, hundreds of wild ducks and other sea fowl resorted thither for shelter from the bitterly inclement weather of the open sea in the channel, and were captured, to find a ready sale in the large towns of the south coast.

The decoy (now dismantled and disused) and the lake were seldom visited, except in early morning by the decoy men, for fear of disturbing the wildfowl that had “pitched” there during their evening flight, to be beguiled into the nets by the tame ‘coy ducks, and afterwards caught and killed by the men who “worked” the decoy. A little further up the valley were other ponds—originally “stews”—from which the dwellers in the fine old hall (built centuries ago) were supplied with fish on fast days. These still hold carp, and some are of large size.

A small overfall or weir forms a rivulet, which flows from the ponds through the dismantled decoy to the lake. The last 50yds. or 60yds. of this little stream was sheltered on both sides with trees, and covered with nets, stretched on bent saplings, forming a long archway some 15ft. above the brook. These gradually decreased in height and width, until they terminated in a long “pipe” of net, not more than 4ft. diameter, into which the wildfowl were driven and captured, for, after they had been enticed by food and the ‘coy ducks within the wide entrance to the nets, there was no escape, a screen, or curtain of net being instantly dropped or drawn across the outlet to the pond.

But I am describing a thing that was—an industry which has long passed away. The decoy is dismantled; the nets are decayed; even the stone fabric of the boathouse is a ruin; the boat a

wreck; and the pond, once a resort of numberless wildfowl, is now swarming with pike and perch.

My first visit there was in January, 1882; that was long after the decoy had fallen into disuse. But the bent saplings, on which the nets were stretched, yet remained; and the ex-decoyman (turned lake keeper) attended on me and my companion, and told us how, formerly, he had caught “thousands and thousands” of wildfowl during the keen, wintry N.E. gales; also how, that once a covey of eleven partridges, bewildered by wind and a snowstorm, had flown within the decoy and up the “pipe,” where he caught and killed them, and his “missus made ‘em into pigeon pies.”

There was a tidy little inn about a mile away, where I always stayed when fishing this decoy pond; it was called the Anchor. The landlord (a retired sea captain, who had been in the Baltic timber trade) kept the finest whiskies and other spirituous liquors. His wife was deceased, but his niece, the manageress, an excellent cook, and a bonny woman, vied with him in making their customers comfortable; in fact, visitors staying at the Anchor “sojourned in a land of milk and honey”; and there my companion and I arrived that January night to find our supper (previously ordered) ready and waiting us. We, of course, “sampled” the “captain’s” grog, and, as already stated, it was excellent. The park, slightly covered with snow, presented itself to my view from my bedroom window as I peered eagerly forth the next morning. Magnificent oaks and elms were dotted about at wide intervals, and in the distance I could just make out a belt of tall poplars which surrounded the decoy pond. We did not loiter over breakfast, but made an early start, as a slight mist was drifting away, dispersed by a gentle breeze and the bright winter sun, so that the chances appeared favourable for our having good sport. The lagoon-like waters of the lake were margined by reeds and sedge (the latter is called “sword grass” by the natives or marshmen), and under the shadows of the poplars the decoy pond lay, dark and somewhat gloomy. At the top end were the remains of wattled hurdles, interlaced with fir branches, and some of the old decoy stakes yet stood where years before many a bronze-winged mallard and blue-striped teal had plunged down on to the waters at their evening flight like bullets from the clouds. The pond was rather weedy, but fishable at certain places.

My companion set to work in a nice clear pool between some weeds with a small gudgeon on paternoster tackle, and soon had a run, eventually landing a beautifully marked perch, gleaming with lustrous colour, and in prime condition. It seemed as though he had tumbled upon a large family of perch, for he kept pulling them out one after another, until in about an hour he had eight splendid specimens, one or two close upon a couple of pounds apiece, and altogether a handsome catch of fish. All this time I had been live bait snap fishing for pike in the deeps near to the culvert at the lower part of the lake and caught two fish, the largest 12lb. 6oz., which gave me good sport, and allowed of no “scruffing,” for my trace of gut was not very stout, my practice being to always use fine tackles, on which I invariably hook most fish, and generally bring them to the gaff or landing net. The perch having gone “off feed,” my companion, following my example, began snap fishing. We were not well provided with dace live baits, they being about that time scarcely procurable, but we had plenty of roach, which we found good substitutes, and did very well with them. He baited with a small roach, and soon landed an 8lb. pike, also some smaller ones, while I made frequent captures, and had fair sport. We retained none under 4lb. At noon lunch reached us from our inn, with an accompanying jar of brown October ale, and never was liquid more enjoyed by thirsty anglers.

After lunch I tried a likely looking place by a venerable pollard willow that had partly fallen over, half covering a deepish bit of water. Casting my live bait under the tree, I was about to draw the float a little towards me when I saw a huge pike sail up, with its great fanged jaws wide open, and gulp down my bait as a man would an antibilious pill. Then I felt a savage tug, and the fish went straight away with at least 30yds. of line from off my reel. Then it rushed back again to where the hidden roots of the old tree lurked

beneath the surface. The remains of an old worn-out punt had sunk in the deep water close by, but the lake keeper had warned me of this submerged obstruction. I soon had the fish well under control, and induced it to shape another course in less dangerous places, when, after some twenty minutes of grand sport, I played it to the gaff, and lifted ashore a splendid specimen of a really handsome pike. It weighed 21½lb. My companion meanwhile had not been idle, for having cast a gudgeon on float tackle under the branches of an oak that reached over the water, he captured a perch of 3½lb., one of the most superb specimens I ever saw. This fine fish was immortalised, i.e., made "a thing of beauty," in a handsome glass case, by those most skilful of taxidermists, Messrs. S. Sanders and Son; and it now helps to adorn the club-room of a London angling society. He next got a pike of retainable size. Then a curious thing occurred. He put a large gudgeon on his hook, and cast it again under the oak boughs. He laid down his rod, came to me, and remained a quarter of an hour. On returning, he found his float was under water, and the bait (as he thought) fast in a weed; but keeping a strong tension on his line, the float came up and sailed some distance away, bobbing under water and up again for several minutes. At last he got the fish to the bank, and lifted it out in the landing net—an eel of 4½lb., which had entirely swallowed the big gudgeon.

It was a "silver bellied" eel, and next day, served up "spatchcock'd" and stewed, proved most excellent eating. By driving some miles we caught a train for London, and of my own captures I brought home:

1 pike, 21lb. 8oz.	} 80lb. 6oz.
1 " 12lb. 6oz.	
7 " 46lb. 8oz.	

My companion's basket contained:

5 pike, 31lb. 8oz.	} 50lb.
1 perch, 3lb. 4oz.	
8 " 10lb. 12oz.	
1 eel, 4lb. 8oz.	

Our next visit to the decoy was on a fine wintry day in early February, 1883. A new punt, constructed with a well in it to contain live bait, had meanwhile been launched on the lake, and this enabled us to fish the water round the island, where, under the overhanging branches of trees, we captured some nice sized perch, but none much exceeding half the weight of the fine 3½lb. specimen caught on our previous visit. Our landlord, the Baltic ex-captain, volunteered to accompany us on this occasion to manage the punt, and the first thing he did was to fall partly overboard, but, fortunately, into shallow water. I think it was from the effects of his "sampling" too much of his old Jamaica rum, which had made him unsteady on his legs. However, beyond a wetting he was not much the worse, and stuck bravely to us all day, declining to go home and change his clothes; so I fitted him up a rod with stout tackle, put on a "thumping" roach, cast the bait out beyond the pollard willow, and started him pike fishing. His float was bobbing up and down on the ripples raised by a brisk wind, when I exclaimed, "There's a fish after your bait, Captain, or I am much mistaken;" and I had scarcely uttered the words when under went his cork. "Told you so," said I. "Let him have it." And he did, with such force and fervour, too, that if the tackle had not been strong enough to hold an elephant, it must have resulted in a break.

The next movement on the part of the pike, was one that nearly pulled the rod out of the captain's grasp. Then I remembered the danger of the sunken boat, and I cried out "Hold him up, hold him up!"

The old man was all abroad at this unexpected rush of the fish, and his line was then dangerously slack. "Here, take hold of the rod," he shouted, "or I am bound to lose him." "Not a bit of it, play him yourself," said I. And so literally did he take my advice that he drove the winch round as if he was working the handle of a windlass aboard his old Baltic timber ship, while my companion and I could not help a hearty laugh at the mingled expression of enthusiasm and distress depicted on the old fellow's features. Another impetuous tug and the big fish, ignoring the heavy strain then put on him, flew up to the surface, sending the water in swirls of foam-tipped wavelets across the lake. Clearly the

"king of the pool" was on, and resenting the captain's rough treatment the fish instantly retaliated with a magnificent "burst" for the deeps. Down went the bending rod once more, and then followed an ominous crack, like the snap of a frost-bitten stick. The lately arched rod-top broke, and slid down the line into the water, and the big fish was gone. "Oh, devil take him," cried the captain, "he's broke me. Oh, to think on't! Oh, dear me! What a grand 'un! What a fish! If it had been one of Carter's rods he wouldn't have broken me." And the captain quite collapsed. But the big fish was not utterly lost, for from the eddies on the surface of the pool I saw that the pike had retreated to his lair among the sedges bordering the deep waters near the flood-gate of the lake, and there I fished later on in the afternoon. ALFRED JARDINE.

THE LOWER AND MID-THAMES: WHERE AND HOW TO FISH IT.

(Continued from page 38.)

By F. H. AMPHLETT.

DACE.

Of't swiftly as he swims his silver belly shows;
But with such nimble flight, that ere you can disclose
His shape, out of your sight like lightning he is shot.

MICHAEL DRAYTON.

THIS lively little fish abounds in the Thames, and can be caught on the same tackle as used for roach. They are usually to be found where the stream flows rapidly, and on the shallows they afford capital sport to young fly fishers. It is a very sportive fish for its size, and though often taken when roach fishing, they will greedily take the artificial black gnat, coachman, or governor, especially in warm weather. There are other small flies he will take—little red tag and the sweep—and if they be tipped with a gentle or small piece of white kid, it sometimes helps to fill the creel. Three flies may be used at the same time, two nine inches apart from each other, and nine inches above the one at the end of the collar—or gut cast, which should be tapered. A light single-handed stiff fly rod is used; and when the flies are cast across stream they should be drawn gently over the water. If a fish seizes either of the flies, strike sharply. The exact manner in which to throw a fly must be learnt by experience, and there is every opportunity on the Thames for learning this art in fly fishing for dace. It also forms a pleasant diversion from float fishing, and on a warm summer's evening plenty of dace are to be found on the shallows. Dace will also take a sunken fly or a single gentle on the hook, thrown as a fly, and usually called whipping. The lighter the gentle or fly falls upon the water the more prospects there will be of the fish taking it.

Upon the curling surface let it glide,
With nat'ral motion from your hand supplied.

I have already pointed out the shallows at Kew, Richmond, Twickenham, and other portions of the river where fly fishing is obtainable. Mr. R. A. Banfield, a member of the Clapham Junction Angling Society, once took at Twickenham 117lb. 4½oz. of these sportive little fish in fifteen days, or an average of 7lb. 2½oz. per day. There is no reason to believe that on the scours between Twickenham and Teddington the sport has deteriorated, and it is possible to catch a large number of fish there provided that the tide is suitable, and the water not too highly coloured.

PERCH.

Perch, like the Tartar clans, in troops remove,
And urged by famine or by pleasure rove;
But if one pris'ner, as in war, you seize,
You'll prosper, master of the camp with ease;
For, like the wicked, unalarmed they view
Their fellows perish, and their path pursue.

Thames perch are renowned for their fine colouring, the back being of a rich olive green, with greenish yellow sides, and white belly. They spawn in April, depositing their ova in the form of a ribbon round weeds and submerged boughs of trees. It is seldom the good fortune of the Thames angler, especially in the lower and mid portions of the river, to have a really "big day" amongst them. They have been so rarely met with during late years, that many anglers have altogether given up the idea of spending time in

an endeavour to take them. But there can be no doubt Thames perch are gradually but surely becoming more numerous, and these fish, as a rule, are seldom under a "takeable" size. A 2lb. fish, however, is considered a decent fish, whilst he who takes one of 2½lb. should have it "set up" in memory of the occasion. The best baits for perch fishing are lob worms, red worms, and minnows, and they often take a spinning bait. Some portions of the Thames are better stocked with these fish than others, but though there is no hard and fast rule that can be definitely laid down concerning their whereabouts, they may be found near old piles, bridges, in deep holes, and in the water just above the weirs. The weir pools sometimes holds them, and occasionally they are taken there when barbel fishing. The paternoster is the recognised style of fishing for them in the Thames, but two hooks should be used in this instance. The lower should be baited with the tail end of a lob or a small red worm, and to the top hook, which should be placed nine or ten inches above the other, a minnow should be fastened by placing the hook through the upper lip. With a paternoster a large amount of ground can be covered, and if the angler takes a fish he should try the same place again, as perch swim in shoals. If using float tackle, only use one hook, and do not let the float be large. One which will carry seven or eight shots is sufficient. If baiting with minnows, give the fish a few seconds before striking, so as to ensure his getting the bait well into the mouth. Izaak Walton says: "The perch is 'valiant to defend himself,'" and if a good sized fish is hooked this is perfectly true; but in worm fishing the bait is generally swallowed so that the angler need not fear losing a fish if he knows how to handle his rod, and has good, though fine tackle.

A large number of perch have lately been taken at Kingston, Staines, Datchet, and Marlow. One London angler took thirty of these fish at the first-named place, and there can be little doubt that, if perch fishing was more pursued, the reports from the Thames would show that a quantity of them would be caught, especially if the paternoster was used, the *modus operandi* of using which is thus described by Mr. H. Cholmondeley Pennell: "The rod should be a longish one, and moderately pliant. The leaded line should be dropped under the point of the rod, or gently swung out into the spot it is desired to fish, and the lead allowed to rest on the bottom. The line between the lead and the point of the rod should always be kept taut, in order that the bite, which is perceived only by the touch, may be more readily detected, and the probability of hooking increased. When a bite is perceived, the bait should not be pulled up immediately; on the contrary, it is better to drop the point of the rod slightly, so as to slacken the line a very little, and prevent the biter being prematurely pricked. After two or three preliminary twitches or nibbles a decided downward tug or pull will generally be experienced, and this is the moment for the fisherman to pull in return, which should not be done suddenly, or in any degree striking-wise, but by a firm and steady upward movement of the rod. The chances of hooking the fish are increased in proportion to the shortness of the line between the point of the rod and the lead." I can recommend no better advice for paternostering than that given by Mr. Cholmondeley Pennell, though, perhaps, I should not be inclined to allow so much time to elapse between the bite and the moment of striking.

(To be continued.)

"TAILING" GRAYLING.

THOSE who have fished the Kennet at Hungerford have oftentimes had long tales of woe to recount of what they have termed the extraordinary prevalence amongst the grayling there of the reprehensible practice of "tailing." Some of the most expert fly fishers, both of the wet and dry school, have undertaken the sixty odd miles of railway journey to that charming place, only to spend a day with the tailers. They have found all their skill and ingenuity absolutely and completely baffled, and have in the end had to retire vanquished in the unequal combat. I am fully aware that the question of whether grayling do tail or not may produce a plentiful crop of

opinions, both *pro* and *con*, but the importance to those who stalk this "lady-like" fish of coming to a definite understanding on this debateable point cannot, I think, be gainsaid.

Trout we know for a certainty do sometimes tail in a *bonâ fide* manner, and by casting over them continuously with a biggish fly, they generally succumb to the patience of the angler.

As a case in point, I remember on one occasion last summer I visited a trout stream in company with two brothers of the angle. I came across a tailing trout in the evening, and threw over it for a quarter of an hour to no purpose, and had finally to leave to catch a train. Friend No. 2 took my place, and cast yet another fifteen minutes, but he, too, had to give up the game. For trains, like time and tide, wait for no man. Friend No. 3, who had a bicycle with him, took up the running, and ultimately got the fish. He rode to the station at a rate which, had he been unlucky enough to have come across the man in blue by the wayside, would most assuredly have resulted in his being brought up before the bench and mulcted in a more or less severe fine for furious riding. He just managed to bundle his machine into the guard's van and scramble in our compartment well nigh breathless, but he had got a 3lb. taylor to show us for his pains.

It is heartbreaking, too, to tackle "smutting" trout, but even these may frequently be circumvented by putting up a small Greenwell's Glory, or (on waters where the wet fly is allowed) a medium Alexandra or Silver Doctor, but with grayling things are altogether different. In my own limited experience I have not discovered, nor have I heard of, any fly which can be relied upon to catch grayling when they are indulging in the bad habit of tailing.

I had often heard of the famous—or rather, I ought to say, *in-famous*—Hungerford tailers. I was fishing there in September, and had apparently a grand day for sport. There was just enough wind to cause the tiniest ripple on the generally smooth gliding shallows. I saw plenty of fish disporting themselves, but could not get one either with the best presented dry fly or the most reliable patterns of sunk flies. Nondescripts of various sorts were not of the slightest use—the grayling were tailing, and it appeared waste of time to cast over them.

As a last resource I thought I would give a trial to a fly I had had dressed as the result of an idea fortuitously found flourishing in my fertile fancy, and this, from its very novelty it may be, brought me nearly two dozen fish, the majority of which were, however, small for the Kennet. Still, I went away almost convinced in my own mind that I had partly, if not quite, solved the problem of "nailing the tailers." In fact, so delighted was I with the new fly, that I had made up my mind to call it "The T. T." or "Tailor's Terror." But alas!

The best laid schemes o' mice and men
Gang aft a-gley—

for when next I journeyed to Hungerford, and tried the same fly, I could not get a single fish to entertain it, and my visions of big bags of tailers melted into thin air. I experimented with yet another fresh pattern, one with a fat slate coloured floss silk body ribbed with silver, ginger hackle, and Indian crow tip. With this I had three tailers, although on a subsequent occasion this fly also turned out a dead failure.

I have read through most carefully an admirable lecture delivered some time ago by that noted grayling fisher, Dr. Brunton, before the members of the Piscatorial Society, but not a word can I find in it bearing upon tailers.

Quite recently, however, an entirely different complexion has been put upon the matter of these so-called tailers. A member of the aforementioned society, who frequently fishes at Hungerford, has made a series of most valuable observations upon them, and the conclusion he has arrived at, after mature thought and consideration, is that they are not tailing at all in the generally accepted meaning of the word, but are in reality playing, amusing themselves, or doing something else than grubbing. The gentleman in question watched several fish for an hour at a stretch at different times of the day. He saw them push their heads into the sand and gravel, and then roll over and over. This performance was repeated at short intervals for a long time. There was nothing to indicate that they were on

the look out for larvæ of any kind, and the only explanation which could be given of their strange conduct, was that they were to all appearances rubbing their bellies on the bottom in order to get rid of an itching or tickling sensation caused by some parasite adhering to their bodies. In fact, they seemed to be scouring themselves in precisely the same manner a trout does after spawning, for the sake of some peculiar pleasure or benefit derivable from the operation.

This scouring, or whatever it may be, is the *bête noire* of the grayling fisher, on the Kennet at any rate, and if any of the numerous readers of the *Fishing Gazette* could elucidate what seems to be somewhat in the nature of a mystery, and would point out how these "tailers" can be attacked with a reasonable prospect of success, they would earn the thanks and gratitude of many who have toiled hard the whole day through and caught nothing.

H. A. ROLT.

SOME NOTES ON BANK AND BOAT FISHING.

THE other day I was looking at a once favourite eddy in a well-known river in which I had caught many splendid roach, when a native I had known from a boy appeared on the scene, and, after the usual salutations, said by way of warning, "Fishing from the bank in this part of the river is no good now." "No good? How is that?" "That I do not know, but I do know that all the best fish this summer have been taken by the most clever anglers fishing from a boat."

This man was no angler, suspected nothing, and, on asking him what anglers caught from the bank, replied: "If you want to see what they catch you should come and look at one of their pegged-down matches that are constantly taking place about here." "Indeed." "It is one continual slaughter of baby roach, dace, and chub, in addition to a few gudgeon, bleak, and wretched 'tin plates,' or silver bream." "The old game, I suppose—loz. one shot, 2oz. three shots." "Yes; about ten or twelve to the lb." "I wonder if it will ever cease." "Not until 'scrapers,' I suppose, become as scarce as specimens."

Not long after he had gone I met two Sheffield anglers fishing in the best eddy that could be operated on from the bank in this locality, in a river seldom disturbed by either boats or barges.

One of them, after fishing about five hours, had caught a dozen fish. They consisted of roach, bleak, and dace; the largest roach weighed about $\frac{1}{2}$ lb. The eddy was some 4yds. from the bank, easily commanded, and the fish were caught with gentles, in the approved finished Sheffield style. The eddy was about 6ft. in depth, the water clear, and, from the mere fact of this angler using only gentles and admitting that the fish, although biting well at first, soon went off the feed, I think he should have tried some other bait and swim. A river that an angler knows is constantly fished from the bank when at its normal summer level, by all sorts of anglers, using three or four different baits, I think makes a great mistake to stick to one particular bait, expecting the fish to come on the feed. In the course of a day it often happens that from three to five anglers will fish in the same swim with different baits and tackle, and one can easily predict what the result is likely to be. No wonder fishing further out, from a boat, in deeper, quieter swims, where an angler can sometimes catch his fish from 10yds. to 20yds. from a boat, as the case may be, is often more successful. In some rivers swims vary to such an extent that, by keeping well back, and being perfectly still, I have taken splendid roach within 2ft. and even less from the side. In this case it was really an overhanging hollow bank at a sharp bend of the river, where the fish loved to go in and out. Personally, I always like to have two and even three good swims on which to operate, some distance from each other, for, strange as it may appear, roach will sometimes bite in one particular swim and no other. In three or four favourite swims the fish, from some cause, or another, may be dead off the feed, but in the fifth, roach after roach may be caught with a similar bait that they would not look at in any of the other swims.

In the field where the Sheffield man was fishing, probably before he was born (for he was not forty) on several occasions I have commenced to

fish with stewed wheat, using fresh brewers' grains as ground-bait, dropping in two or three small balls made up of a mixture of pollard and grains, with a few grains pitched in at intervals afterwards, or even half a handful of the grains well masticated and dropped in a very gentle swim fishing well over the same, and failed to catch a single roach; but as evening approached I have tried the same swim with stewed malt, using nothing but grains as ground-bait, and had capital sport. For the time being the fish were evidently sick of wheat.

To say (as some anglers do) that roach can only be caught with wheat at harvest time I think is great bosh, for I have caught plenty of roach long after that period. Not only this, I know half a dozen rivers along which one might walk for miles and miles without passing a single wheat field. I know several clever anglers who take considerable pains in baiting up roach swims; but I prefer to get the roach together as I go along, and the angler should (more especially where wheat is much used) always endeavour to make the fish believe that the grains are floating down the stream of their own accord. He should never allow the fish to see him pitch in the ground-bait, and so, for the purpose of both fishing and using ground-bait, he should, if possible, be so hidden that he can only just see his float. It lulls suspicion.

Another thing I do not agree with, is pitching in handful after handful of loose grains at comparatively short intervals, for I know of few baits that spread out like grains float down such long distances even in rather sluggish streams, and so take the fish clean out of the swim from the commencement. It appears to me that in some rivers fish are so harassed and disturbed—they often frequent swims in mid-stream—it would be folly to try for the same sort of fish in similar swims in less disturbed rivers. In fact, in swims an angler in the know would not think of trying for them, such fish as chub and roach, for instance, affecting swims that can be successfully fished for from the bank. These fish simply adapt themselves to circumstances; but on several occasions, even in such a comparatively quiet river as the Ouse, I have caught much larger roach angling in mid-stream than local anglers have caught when fishing from the bank. I know several rivers along which an angler might walk a long way without seeing one of those ideal swims so often charmingly described, for there is no such thing as "a deep, quiet hole under overhanging banks and bushes," and even if there were the disturbance is so great that the "deep, quiet holes," &c., may be the very worst places to obtain sport, for the simple reason that the fish are enjoying themselves higher up the river, right out in mid-stream, in 8ft. and even 10ft. of water, in the height of summer, where I have absolutely seen them caught, and where fishing for the same sort of fish at the same depth and period in other rivers of equal calibre would be considered an idiotic proceeding. Thus we see in one river fishing from the bank is best, but in another mid-stream. So much depends on the nature of the traffic and other conditions.

To succeed in business all sorts of things must be taken into account—heaps of 'em—and it appears to me that the same remark applies more now to angling than ever it did; for what, may I ask, do we really know why fish refuse to feed, when, so far as one can judge, everything is as favourable to sport as one could wish; and yet they will sometimes feed with avidity when everything is apparently dead against it? I have repeatedly experienced it.

Even the novice will not fail to gather from these facts that fishing is often nothing but a contradiction, caused probably by some hidden necessity, so pressing that, if he be wise, he will be on the alert to take every advantage of these necessary yet peculiar proceedings on the part of fish whenever an opportunity occurs.

H. E. W.

THE 1000th issue of *Blackwood's Magazine* will be reached in February, and will be a double number. Among a long list of contributions are a *Noctes Ambrosianæ* revived for the occasion, Sir John Mowbray's reminiscences of the House of Commons, and stories by Joseph Conrad, Maurice Hewlett, Hugh Clifford, Neil Munro, Miss Beatrice Harraden.

THE FLY DRESSER'S LIBRARY.

(Continued from page 40.)

By VAL CONSON.

ANOTHER American work, "The American Angler's Book," by Thaddeus Norris, appeared in 1867. It contains a fair description of some simple modes of fly making, but it does not mark any advance in the art, or touch the higher branches.

In 1867 an unpretending little work by J. T. Burgess, called "Angling," appeared. It contains a brief and poorly illustrated set of instructions for fly making, and a list of some forty flies. A later edition, revised by Mr. R. B. Marston, was published recently.

In the same year appeared what is probably the best all-round book on angling ever written—"A Book on Angling," by Francis Francis. It has gone through a number of editions, but is still fresh and sound. It contains the first reference to fishing with the dry fly. There is a plate of natural flies in colours, looking suspiciously like those of Ronalds' "Flyfisher's Entomology," and a plate of beetles, grasshoppers, &c., confessedly borrowed from Hewett Wheatley. There is an excellent list of dressings—as good a list for all-round purposes as is to be found in angling literature. There are four or five pages of instructions in fly making—sound and useful, if now a little out of date. They are simply illustrated by a plate of woodcuts.

Francis Francis' work, in its successive editions, appears to have very much held the field for some years, for no noteworthy publication occurred for some time.

"The Modern Practical Angler," by Mr. Pennell, in 1870, was chiefly remarkable for discarding all the usual theories as to flies, and propounding a theory that three flies, tied with yellow, brown, and green hackles respectively, answered all purposes. The theory seems to have died a natural death. It would have been bad business for the tackle-makers if it had found universal acceptance.

St. John Dick's work on "Flies and Fly-fishing" was brought out in 1873. It contains some pages on fly dressing, with some roughly executed cuts, and a longish list of patterns of flies.

In 1876 the late Mr. W. H. Aldam printed from an old manuscript, never before published, the work of an old man well known a century earlier on the Derbyshire streams, under the title, "A Quaint Treatise on Flees, and the Art a' Artificially Flee Making." It was illustrated by means of sunk panels, in which were mounted, side by side, the artificial flies described and specimens of the material employed in their manufacture. It was published at £4 4s., and was, and is, of great interest, not only on account of the text, but on account of the exquisite colours of the floss and tying silks employed by Mr. Aldam in the work of fly dressing. It is a pity that Messrs. Pearsall or some energetic trade rival do not procure and imitate the colours.

"Ogden on Fly-tying" saw the light in 1879. The author was the late James Ogden, tackle-maker, of Cheltenham, the father of the present James Ogden. It gives a brief description of dressing an upwinged Dun, and a short list of flies. The main portion of the work is devoted to angling incidents foreign to the subject of the title.

About 1881 Mr. W. Sang published at Barnard Castle a little pocket volume (24^o) of "Synonyms of Trout Flies." It is an interesting little work, even if one cannot agree with all its conclusions.

In 1882 appeared the first edition of David Foster's "Scientific Angler." It has the merit of propounding for the benefit of anglers a simple and intelligible system of nomenclature of natural flies without troubling them with minute scientific distinctions or entomological terminology. There is a very inadequate set of instructions for dressing trout flies, but a commendable list of patterns. This, however, does not, curiously enough, include either of the famous Derbyshire patterns, the Throstlewing Dun or the Apple Green Dun, though the author was distinctively a Derbyshire angler. A series of later editions has appeared. The coloured plates are somewhat disappointing.

The year 1885 saw the late Mr. T. E. Pritt's "Yorkshire Trout Flies"—a work which gave an

excellent series of Yorkshire patterns, but no instructions for dressing. The coloured illustrations do not do the text credit. They are not well drawn, the colours are often glaring, and altogether they contrast unfavourably with the work of fifty years previously. The work, however, supplied a want, and later editions have followed under the title "North Country Flies."

The same year was marked by the publication of "The Angler and the Loop Rod," by David Webster, a professional angler on Tweed and Clyde. It gives directions for dressing winged flies not differing vastly, so far as winging goes, from the floaters of the south; but the patterns are much sparer, and are marked by extreme simplicity of detail. There is a grotesquely illustrated list of flies, twenty-one being day flies, five gloaming flies, ten night flies, and five spider flies. The book is interesting and valuable as being no compilation or bit of book-making, but the original work of a genuine sportsman.

In 1886 Mr. J. Harrington Keene published a work called "Fishing Tackle: Its Materials and Manufacture." There is an elaborate, but not first rate, set of directions for dressing flies. It is, however, interesting and full of hints. Among the novelties it propounds are fish scale wings and gut bodies. Detached bodies are also dealt with. Tod's triple gut hinge is described and illustrated, and the work includes directions for building those ugly American grubs used for black bass. The illustrations are plentiful and sufficiently clear, but crude in execution. There is a list of patterns with their dressings.

In 1886 Capt. Dunne ("Hi Regan") published "How and Where to Fish in Ireland." The work contains a number of dressings of a kind not very familiar to Englishmen, but doubtless effective on Irish waters.

In the same year came Mr. F. M. Halford's work, "Floating Flies, and How to Dress Them," in which, for the first time, the whole process of dressing artificial flies of the most complicated kind was treated so simply and logically that it became possible for the novice to instruct himself from that book alone. It was an epoch-making work, and one which will probably be always accorded a place of honour in angling literature, both for the information it contains, and for the lucidity and charm of its style. Having once learned what it has to teach, the amateur can without difficulty pass to the simpler methods in use in dressing wet flies. Some of the methods described have been improved upon and abandoned. The book contains numerous illustrations, including a plate of colours for dyeing, and ninety-two coloured flies, whose component parts are succinctly given in the letterpress. The work was incorporated with much subsequent matter in "Dry-fly Entomology," to which reference will be made later.

In 1888 "The Book of the All-Round Angler," by John Bickerdyke, appeared. There is a brief but not inadequate illustrated set of instructions for dressing the commonest form of loch trout fly, but no other information on the subject either of the mechanics of the art or the composition of the patterns referred to.

In the same year appeared the "Book of the Grayling," by Mr. T. E. Pritt, illustrated with a beautiful plate of that fish, and some far less satisfactory pictures of the favourite grayling casts of the author and four other noted anglers, the dressings of which are described in the text.

In 1888 also appeared the "Salmon and Trout" volume of the Badminton Library, which was entrusted to the editing of Mr. H. C. Pennell. It contains an article by H. R. Francis, on "Fly Fishing for Trout and Grayling." There is in it a poorly illustrated series of six flies for lake fishing, with the dressings described in the text. There is also a short list (also illustrated) of flies for river fishing, with descriptions of the dressings. The work also contains an article on "Chalk Stream Fishing with Dry Fly," by Mr. H. S. Hall, with an excellent list of eighteen patterns. This, again, is followed by an exhaustive article on "May Fly Fishing," and the necessary patterns of May Fly and Spent Gnat from the pen of Mr. F. M. Halford.

(To be continued.)

GRANT'S CHERRY WHISKY.—This attractive "pick-me-up" is a pleasant combination of Kent Cherry Juices and very soft old Scotch Whisky. This and Grant's Morella Cherry Brandy are sold by Wine Merchants.

PISCATORIAL SOCIETY.

DR. CHARLES S. PATTERSON took the chair at Monday's meeting of this society punctually at 8.30 p.m., the time fixed, under the new rule, for the weekly gatherings to begin. Angling experiences were exceedingly meagre, owing to the boisterous weather and heavy rains which had obtained during the previous week. It was left for Mr. Neville Davis to recount the best day's sport. This gentleman had been fishing private water, and had taken nine jack in all, the heaviest weighing a trifle over 6lb. Mr. Charles H. Wheeley mentioned that on Saturday the Thames at Shepperton, and as far up as Chertsey, was running tremendously fast. There was also a gale blowing, which made it absolutely impossible to fish anywhere. Messrs. M. G. E. de Courcy and H. A. Rolt had paid a visit to the new water on the Colne, at Uxbridge, and reported very favourably upon it. It was mentioned that, despite the abnormal rainfall, the banks were quite hard, nor were there any signs discernible of the meadows having been flooded. The extent of the water was over a mile, the society having the right to use both banks. The main river branched out some half mile below the road bridge, part running down to a mill, and the other portion to a weir, below which there was a fishing hut erected upon piles in mid-stream. The whole of the water looked particularly "fishy," and would, doubtless, prove exceptionally good for chub. There were broad shallows and narrow deep runs, with plenty of eddies and lay-byes. The river wound about a good deal, which was a great advantage in strong winds, as it was possible to find sheltered swims let the wind blow from what point of the compass it might. The gentleman named, considered the water would be somewhat "tricky" to fish, and warned the members that in their opinion they must not expect to sit down at a swim and "dig out" fish as fast as they could bait the hook. They had tried the water in different spots, and, the terrific wind notwithstanding, had taken a nice lot of roach, some of the fish weighing 1lb. each. These were got for the most part "longcorking," the best and most successful method of fishing the Colne. The keeper had informed the visitors that there were plenty of tench in the mill stream and some large bream in various holes in the river. There would appear to be two distinct varieties of roach in the water, those of the Colne shape—short and broad—and others exactly like the Thames fish, long and more dace-shaped. The railway journey to Uxbridge from Paddington, took about three-quarters of an hour, and the fare by privilege ticket was 1s. 7d. The cottage occupied by the keeper close to the weir, could be reached from Uxbridge Station, taking matters quite easily, in a quarter of an hour, provided there were no stops for refreshments en route. The smoking concert arranged for next Monday, has been unavoidably postponed until the 20th February, and Mr. Robert Charles Blundell has most kindly consented to see to all the arrangements connected therewith.

M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Cannon-street Hotel on Wednesday, Jan. 25, Mr. C. O. Minchin in the chair. But few members reported sport owing to the stormy weather during the past week. Mr. Preston Gardner reported fishing at Deal for four days, one day taking six codling (two of 5lb., two of 4lb., and one of 3½lb) off the pier, baiting with lug on two Minchin whiting hooks lashed at an angle of about 90°. Other anglers fishing near him with single hooks took no fish. The subject "To strike or not to strike in sea fishing" was discussed, arising out of a paragraph in a letter in the *Fishing Gazette*. Mr. Mignot said how necessary it appeared to him, especially in cod fishing. Mr. Norman concurred. Mr. Preston Gardner said it was entirely a question of how the fish were feeding. The hon. sec. also spoke, endorsing Mr. Gardner's remarks. The chairman spoke, drawing attention to the manner in which cod feed in aquaria, and the invariable practice of the professional hand-liner in striking cod. Dr. Branton also urged the necessity of striking when the fish bit lightly. A very useful graduated load was shown by Mr. J. B. Bates. The discussion turned on bottom feeding fish feeding near the surface. Mr. Preston Gardner stated that he had seen a dab follow his bait nearly to the surface and then take the bait. Striking the fish, he got it. The fish lay over at an angle of 45° when taking the bait. Mr. Norman, after consultation with his co-owners, offered to lend his boat to fellow-members wishing to fish at New-haven by communication with them. A very hearty vote of thanks was given by the assembled members. Mr. Norman urged members to take their bait with them when going fishing at that station. Members are reminded that on Wednesday next a paper will be read on "Fish Hooks," by Mr. F. E. Eldred. A good attendance is hoped for.

CHARLES S. PATTERSON (Hon. Sec.).

CARDIFF PISCATORIAL SOCIETY.

At an adjourned meeting on Jan. 17, Mr. R. J. Watkins in the chair, three gentlemen were added to the committee. It was proposed to have several angling contests during the coming season; and I should like to see a large number of the members taking part in them, so as to show their appreciation of the committee's work. Mr. Burrows (hon. secretary), Mr. Watkins, Mr. Armstrong, and Mr. Handley expressed their intention of giving lectures at our fortnightly meetings. The progress of the society has been marked by a great increase of members lately, and we commence the season with a good balance in hand over last year's expenditure. Will members please make a note that the date of our annual dinner is fixed for Feb. 8?

C. C. J.

THE FRIENDLY ANGLERS AT DINNER.

A VERY pleasant and enjoyable evening was spent by the members and friends of the above-named society, numbering nearly one hundred, at the Hotel Cecil, on Wednesday, Jan. 25. The occasion was the fifty-seventh annual dinner of these friendly sportsmen, which was made still more interesting and memorable by the presentation of a silver tea and coffee service and a handsomely embellished vellum testimonial to their chairman of the night, Mr. Fred Berry, as a mark of the high esteem in which he is held by his brother members for his very unselfish devotion to their interests, extending over many years, and exemplified particularly in his successful efforts to obtain the lease of the grand stretch of the Colne, which the members have the exclusive right to fish, and to his labours in connection with re-stocking this water. In fact, the singularly capable and energetic personage of Fred Berry has always been to the fore in connection with good work for his old society. These and other points of interest were happily referred to by Mr. H. Mitchell, one of the oldest members, in the speech in which he made the presentation.

Mr. Berry, in a characteristic reply, expressed the pleasure it gave him to be surrounded by so many friends, old and new, and to receive from them such a handsome and permanent proof of their goodwill towards him, and gave renewed assurances of his readiness to assist the society whenever required.

In his toast of the Friendly Anglers, the chairman gave due meed of praise to those of the members whose skill during the past exceptionally bad season had enabled them to triumph over difficulties, and put good fish on the society's trays. The members thus singled out for distinction were Messrs. R. L. Pugh, W. Back, E. T. Craggs, W. Griffin, B. Alfieri, J. Stewart, W. and J. Palmer, Shepherd, and Sutton.

The vice-chair was Mr. A. C. Kent, who discoursed humorously on the Thames Angling Preservation Society and the Press, replied to by Messrs. H. W. Higgins and T. Crumpley respectively. Mr. Kent further, in the toast of "The Officers," accorded them due praise in jovial fashion. Mr. McDermott, the secretary, replied.

Mr. Napier Satton gave the toast of "The Visitors," responded to very entertainingly by Mr. S. Pallant.

Mr. Meakin dealt ably with the toast of "The Vice-chair," and gave Mr. Kent another opportunity of displaying his good natured good humor.

The dinner itself was fully abreast of the high standard which the Hotel Cecil has set for itself.

The musical programme was a triumph for that worthy and able Friendly angler, Mr. Walter Back, who seems to perform the impossible task of improving on his previous best in that respect. He had gathered round him the following accomplished artists, viz, Messrs. John Sandbrook, Fred Stephens, Herbert Emlyn, Mansell Lewis, James Ayon, Fred Russell, and pianist Mr. J. Douce, B.M.—all of whom acquitted themselves in a manner worthy of their high reputations—and Mr. Back himself sang two songs in very pleasing style. J. M. D.

ESK (YORKS) FISHERY ASSOCIATION.

ANNUAL MEETING OF CONSERVATORS.

The annual meeting was held at the offices of Mr. W. S. Gray on Saturday, Col. J. W. Richardson, J.P., presiding over a fair attendance. The report showed that the balance from 1898 was £206 7s. 11½d., and that their total income had been £425 11s. 11½d. The expenditure amounted to £184 7s. 11½d., and they had now a balance in hand of £241 10s. The total weight of dead fish had amounted to 12cwt. 2qr. 25lb., which compared very unfavourably with the returns for the past five years, the number of dead fish amounted to 189. Col. Richardson was reappointed chairman; Mr. J. Robinson, J.P., vice-chairman; and those two gentlemen, with Messrs G. E. Barry, W. S. Gray, R. Hay, and J. H. Keighly, the committee. Mr. W. Brown was reappointed clerk. It was decided that £100 should be deposited to the reserve fund; and that the question of repairing Lealholm dam should remain in abeyance. The committee were empowered to spend £100 in yearling trout. J. JACKSON.

NEW PISCATORIAL PATENTS.

The following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

154. Philip Ormiston, Old-street, London. Fishing and landing lines.
202. Henry Wilkinson and Alfred Rouston Gumsley, Chancery-lane, London. Improvements in fishing reels.
456. Samuel Brooks, Chancery-lane, Ardwick, Manchester. A perfect float for all kinds of angling.
- 21,244. Fishing. Patentee: Mr. A. José, Duncan-terrace, Islington, London. Relates to nets (other than landing nets) for pier, &c., use. A net extended by cross arms, and weighted, is suspended from a rod, and raised and lowered by a line and winch.

ORIENTAL BOOKS formerly issued by W. H. Allen and Co., now published by Sampson Low, Marston and Co., Limited, St. Dunstan's House, Fetter-lane, London, Publishers to the India Office.—A CATALOGUE of these Text Books, Class Books, Histories, and Indian Government Publications can be had on application.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

40 min. for Chelsea.	55 min. for Kew.
Add 40 " " Putney.	75 " " Richmond.
45 " " Hammersmith.	80 " " Twickenham.
50 " " Barnes.	85 " " Teddington.

EXAMPLE.—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Jan. 28	3.2	3.18
Sunday, " 29	3.33	3.47
Monday, " 30	4.2	4.18
Tuesday, " 31	4.34	4.50
Wednesday, Feb. 1	5.5	5.20
Thursday, " 2	5.36	5.54
Friday, " 3	6.18	6.33

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, Jan. 28	3.42	3.58
Sunday, " 29	4.13	4.27
Monday, " 30	4.42	4.58

These times show high water at Houghton Bridge, Amberley. Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—I had a few lines at the end of last week from Mr. McBride, of Teddington, in which he stated: "The water was all over the place and very thick, but was out on Wednesday and got a pike of 7½lb. on a lob, fishing for bream. After the water fines down we ought to get a lot of fish at the weir." The weather has been more or less unsettled since this was written, and until it has settled down there will be little chance of the anglers, especially the punt fishers, doing much amongst the fish, which are without doubt plentiful in the grand old river. The committee of the Thames Angling Preservation Society are rightly making a good start in their efforts to secure the housing of the barren swans during the fence season, and the best wishes of all anglers will go with them in their spirited determination to seek its accomplishment. In the year 1879, it would appear from the "Blue Book," there was the same anxiety as there is now about the swans, and the committee in their annual report state they received much assistance from the Lord Chamberlain during the fence season, through Her Majesty's Swan-keeper, the late Mr. J. W. Styles, the perch spawn had been preserved from the swans, and it is reported there had been an unusually large amount of ova on the boughs, and all were successfully vivified. The angling club to which I have previously referred in the *Fishing Gazette* as being about to be established at Twickenham will soon be an accomplished fact. The headquarters will be at the Black Dog, in London-road, and my piscatorial nephew, Mr. J. M. Brougham, of the Woodlands, Isleworth, is acting as hon. sec. pro tem. The first meeting is to be held on Friday, the 27th, at the above address, for the purpose of its inauguration and the enrolment of members. Mr. Ogden Smith, of 7, London-road, is taking great interest in the movement, and will be pleased to receive the names of any who are willing to become members, and there are plenty who ought to give it their hearty support. As far as the river is concerned angling is at a great discount, and now we are exceedingly scanty.—B.

—(**Datchet**).—River very high and thick. Not much chance of fishing for some time. The water went down yesterday, but this afternoon, after four fine days, it rose 4in., a rather curious phenomenon. We find ourselves at Datchet just as unable to get rid of water now that the old river is ruined, all the shallows gone, and boughs cut down as before it was done. The shallows at Boveney Weir and Windsor Weir are doomed, for no benefit whatever but to put money into the pockets of builders. We hear of fish preservation societies putting a few fish in here and there, at the same time allowing their natural spawning grounds to be destroyed. I make hold to say I could show them how to go to work to get rid of surplus water. It is apparent to a mere child if the question is looked at fairly. I should have thought the angling fraternity was influential enough to look after their interest, but it means money. Enough of talk, I will put down £5 to start a petition to Parliament to see if we cannot check the evil.—G. LUMSDEN.

—(**Hampton Court**).—The report from William Milbourne is of a very gloomy character. He says: "The water is higher than ever, and still rising. It will take a fortnight before the Thames will be in fishing order."—B.

—(**Henley**).—Jan. 26.—The water, although bank high and a very heavy stream running, is showing signs of fining down, which, with the sharp frosts we are having and no more rain, should be in condition by the end of the week, when some good sport should be had, especially by hankers. A few roach and perch have been taken, and some jack up to 4lb. A trout of about 2½lb. was caught at Shiplake while legering for roach with loch worms, which was, of course, returned to the river.—STANLEY MEAD.

—(**Kingston**).—John Johnson, one day, with Mr. Gunston, thirty-two bream; and during the week, with other anglers, an addition of thirty-five bream and nine dozen of roach.—B.

—(**Strand-on-the-Green**).—A trout of about 4lb. has been taken here this week in one of the nets of H. Pearce, and handed over on Wednesday to head river-keeper William Douglas, of the T.A.P.S., and turned into the river at Kingston, on payment of the usual reward of half-a-crown. The fish has been pronounced as a real Thames trout.—B.

—(**Ecdington**).—A few more lampreys have been taken by W. McBride, but no angling reports except that of a bank angler taking a flounder of 1lb., and another getting a smelt of 6in. in length.—B.

—(**Twickenham**).—When I was in this neighbourhood, on Tuesday, I found the river lower than in the preceding week, and a few really fine days would make it in good general fishing order. I found Mr. John Spang had gone with one of his clients to some private water, and his son was on the river amongst the dace. The bank anglers have now decidedly the best of it, and, according to Mr. F. J. Ogden Smith, are doing remarkably well. He gave me the following example of takes that had been shown to him: Mr. Simmons, from fishing in the bank eddies one day, five dozen of roach and dace; another day, seven dozen; and another day, four dozen. Mr. Edwards, one day, three bream and three dozen roach and dace, and the fish were all in good condition. The prospects of weather on Wednesday morning was fine and frosty.—B.

—(**Windsor**).—The river is still very high, but, should the weather continue fine, good all-round sport should be had in the course of the next week or ten days. Good roach have been taken by anglers fishing the eddies and quiet spots to be found under the boughs. It is a long time since so many specimen roach have been taken as during the past month. I hear Mr. Amphlett and friend were fishing some private water near here on Jan. 23, attended by James Bunce, and succeeded in creeling fourteen jack. My public duties prevented me from joining this genial Kingston angler on that day, but I followed on the next day with his friend, attended by the same fisherman, when we landed eighteen jack of the total weight of 45lb.—CECIL HOWLETT.

—(**Ancholme District**).—The conditions are very favourable just now for pike fishing, and a few anglers have been out and met with a fair reward. Bream are now off the feed a little, but some good roach have been taken in the middle and upper reaches of the river. The Market Rasen Trout Club is making good progress. A large stock of fry will be placed in the rearing ponds at Willingham in a few days' time.—THOMAS FORD.

—(**Arun (Pulborough)**).—There is nothing to record for the 22nd, fishing being out of the question owing to the flood. At the time of writing (Wednesday morning) the water is rapidly sinking, and, given fine weather, bank fishing will be possible on the 29th, though the water will not be in the best of order.—W. G. HOLLMAN.

—(**Dart (Totnes and District)**).—It is thought that the spawning season is a good one, there having been a good run of fish to the spawning beds. The Board of Conservators are desirous of making the fishing of the river better known, but at their meeting this week, nothing was said about re-stocking the river. Unless this is done really good seasons cannot be expected, and it is an unquestionable fact that something should be done if the river is to maintain its repute. It remains to be seen whether the fishing association will take action at their meeting next week. The revenue from the board's licences last season was £323, a decrease of £48, an adverse balance of £351 being reported.—DEVONIAN.

—(**Derwent (Malton, Yorks.)**).—The river has been in constant flood for the past fortnight. There was 12ft. 10in. of flood water in the Onse at York last Saturday. In about a week's time, if the weather is settled and colder, jack fishing should be good.—H.

—(**Devonshire streams**).—All the streams have had a good cleaning out by the prolonged heavy rains, and the run of salmon has no doubt been greatly assisted, although probably in some cases injury has been done to the spawning beds. The Upper Teign Fishing Association will re-stock the river with 1000 yearlings from the Western Fishery, Norwich. Last season some fine trout were taken in these waters; and it has now been decided that the minimum length of fish to be retained shall be 6in. instead of 4in. as heretofore.—DEVONIAN.

—(**Exe and Canal (Exeter)**).—After a month's almost continuous rain we have been treated to a couple of frosty days—a most welcome change to the pikeist. The river is still too high for angling yet, but, given a continuance of present delightful weather, some good pike scores are bound to be made. On Tuesday Messrs. Roberts and Tweenissen, fishing Cowley backwater, secured three, but all small, the largest but 4lb. Both Tiverton and Exeter canals have yielded a fair number of pike, but up to now have heard of no heavy weights.—RED PALMER.

—(**Fen District (South Lincs. and Cambs.)**).—The unsettled weather, and especially the gales, upset the fishermen's prospects at the end of last week. On the whole, however, when days are favourable, a change for the better is noticed. Roach fishing is better than usual at this time of the year, and visitors about Snettisham have been doing good things with this fish. About Outwell also roach fishers have done well. Takes have run up to 18lb. or so. Pike fishing is off, owing to the gales.—LIMPET.

—(**Idle District (North Notts)**).—Anglers in this district have had to seek their sport in the quiet waters. The river in many places has been affected by the storms and gales. The best report this week comes from the canal, between Stockwith and Retford. About Clayworth a few good roach takes have been obtained with gentles. In the lower fishing district pike fishing has been quiet. I hear of a good pike take, however, at Flintham, from a private water.—L.

—(**Lea**).—Prospects are very promising at the time of writing (Wednesday), and if the dry, frosty weather is

maintained many a good roach should be brought to bank this week-end. The river has been very thick. At the same time it has undergone a splendid flushing. There have been some nice roach and perch caught, but no heavy takes are reported. Next week I hope to hear of some 10lb. to 15lb. bask ts being secured. The fish are there right enough, and ought to feed if gales and rain hold off. Pike should also run as a result of the sharp weather. Satisfactory news has also reached me from the Stort. The river is clearing nicely. A few roach and jack have been captured, but few anglers have fished the river lately, as it has been quite out of condition.—**ISAAC WALTON.**

Lugg and Arrow (Leominster).—Both these streams have undergone a considerable change since last report. The rain continued to fall heavily, and the water coming down from the hills caused the rivers to rise quickly, and very soon they were out over the river banks, and along the side of the river the fields presented a fine lake of water to the depth of 2ft. to 3ft. The weather has changed, and frosts have been bad. The rivers are going down, but it will be some days before there will be any chance of sport in this part.—**GWYNNE.**

Lugg, Arrow, and Pinsley (Kingsland).—Two much weather, wind, and water. Waiting for a change; worse it cannot be, so there will be no thanks for mercies received.—**R. T. W.**

Nene (Peterborough).—Owing to the stormy weather, and the still high state of the water in the river, very little angling has been indulged in during the past week; but the state of things in existence, if not favourable for plying the rod, provides sport of another kind, as the wildfowl and seagulls have been seen, disporting themselves on the floods on the Fen side of Peterborough Bridge, and wild swans were noticed on Sunday morning swimming on the flooded fields near Orion Staunton. E. P. Monckton, Esq., M.P. for North Northamptonshire, and Councillor T. Pendered have been reappointed by the Northamptonshire County Council conservators of the Ouse and Nene Fishery District.—**E. A. S.**

Ouse (Huntingdon).—Water has been very high, but is now down again to its usual height, and, given fine weather for about three days, will be in grand fettle for all kinds of fishing, which doubtless, after the push of water, will show a marked improvement. At the present time anglers in quest of specimen roach would do well to try the quiet backwaters, the water being just the right colour for them.—**B.**

Ouse (St. Neots).—The water remains at its proper height and is slowly clearing, but is still rather thick for jack fishing, though some anglers consider it about right for roach. The river has had a good wash out, and frosty weather now seems likely, so that if we get no more rain I anticipate better sport in a few days than we have had during the past two seasons.—**WM. NASH.**

Severn, Vyrnwy, Tanat, and Cain (Llanymyneon).—Owing to the heavy rainfall in this district recently, accompanied by gales of wind from the south-west, all these rivers have been flooded to a much greater extent than for many years past. The flood was at its greatest height on Sunday last, and for three or four days many of the residents were kept prisoners, as their houses were completely surrounded by water, and the Severn Valley, as viewed from the adjacent hills, appeared like a huge lake. Angling under such circumstances was altogether impossible, but it is hoped that the forthcoming season for salmon fishing will be more productive than for many years past, as these rivers have now been so long in a more or less flooded state the salmon have had a most unusually favourable opportunity to reach the upper waters. The Tanat is fast getting into good condition, and the sharp, frosty nights are now followed by bright sunshine throughout the day, so that prospects of grayling fishing in that stream are all that can be desired.—**VYRNWY.**

Stour (Bures, Suffolk).—The water is now running in splendid colour for roach angling, and, with colder weather, some better sport is being had. The Brothers Well Met fished a match here on the 22nd, and all the members had fish, some having some good roach. Mr. Geo. Root, on the 25th, had a nice bag of roach, several of them close on 1lb. each. Should the weather continue as at present some good sport amongst the roach and jack should be had on the 29th.—**W. T. BAINBRIDGE.**

Sussex Rivers and Chichester Canal.—The weather during the past few days has been bright with frost, and rivers are feeling the benefit. Floods have been prevalent, and although the Adur, Ouse, and Cuckmere were running bank high, there is every appearance of sport by the 29th. A few bream have been taken from the Cuckmere by Mr. Maslin, also a few pike and perch. The Rother is out of condition, yet a few pike have been secured, one of 6lb from below the Tumble Bay. Chichester Canal remains in good trim, and during the week perch up to 2½lb., and several pike, averaging 3½lb., have been secured with live gorges. What a pity it is that the corporation should not take steps to secure fair fishing in this, one of the best pike and perch waters in the south. A goodly rental might be made as a subscription water, but when live gorge is allowed, and trimmers and bank runners ad lib., the water must soon be decimated. Nine bank runners were seen near Donnington a few days since, and at Histon and the basin the same pot-hunting is carried on to the detriment of legitimate sport.—**GEORGE F. SALTER.**

Taw (North Devon).—Feb. 1 is our opening day, but the death of the owners of the rivers may curtail the permits which were before so freely given, and when a few days were given it was made overlasting, besides that trout scarcely over 4in. and fishing all night when the summer was on. If free permits are given in future, they will be restricted considerably. The rivers have had a good washing out, and may have interfered with the salmon spawn. The net fishermen were brought up again

to-day for breaking the bye-law (no nets in the rivers after a certain time), and have continued to do so after the threats of punishment, and were fined. Wind E., with frost.—**RUSTY GAME.**

Tempe (Ludlow).—This district was visited at the end of last week with one of the highest floods that have been had for years. Heavy rain set in on Thursday, and continued until Saturday, and the water from the hills came down quickly into the tributaries of the Tempe, and the Tempe rose very rapidly on Saturday. In one place it rose 8in. in one hour, and the residents of some of the houses in the lower parts of the town had to move their furniture into upstairs rooms. In the fields under the castle, at the junction of the Tempe and Corve, the water was out over the fields, and it was like one vast lake. Cattle and sheep were removed with difficulty to places of safety. During the day and night the river rose quite 3ft. On Monday there was a change, and frost set in, and the rivers soon began to lower; and to-day (Wednesday) they were going down, and if the weather holds fine there will be a prospect of sport next week with maggot, worm, and paste. The Ony, Corve, Clun, and Ledwyche are all running high and coloured, and no fishing done of late.—**S. LUDLOW.**

Tempe (Tenbury).—In this part the weather has been most miserable, and heavy falls of rain have been had, which has filled all the springs, and they have now caused the Tempe to rise higher than it has been for some years, and on Saturday and Sunday there was a high flood, and a large number of the fields were covered with water. On Monday the weather changed, and frosts have been had since, and the river is going down nicely, and by Monday there will be a prospect of some sport being had bottom fishing. No fishing done during the past fortnight.—**WORCESTER.**

Witham, &c. (Mid-Lincolnshire).—Angling in this district has only been moderate during the last week or so. About the only decent take reported was obtained at Tattershall, as far as the river is concerned. In addition to a good basket of roach, a visitor obtained with live bait several good pike, one reaching 13lb. The quieter waters, such as the Horncastle and Sleaford Canals, however, are affording better sport for the bottom fisher. From Coningsby, on the former, some capital baskets have been obtained from the backwaters beyond the village. Here a few lukes are reported, best 20lb., with fish running to over 1lb. each. About Chapel Hill some good roach have been taken.—**LUCI.**

Yorkshire Rivers.—**YORE, SWALE, WHARFE, NIDD, DERWENT, OUSE, &c.**—The big flood of Thursday last had hardly commenced to subside when another followed on Saturday, and thousands of acres of land were again submerged, doing much damage to farmers, &c. It is, however, remarkable how quickly rivers run in after floods, and with an improvement in the weather on Sunday, followed by a sharp frost, which increased in intensity on Tuesday and Wednesday, many of our streams in the higher reaches are nearly at their normal level again, and as I write (Wednesday night, Jan. 25) prospects for pike and grayling fishing could not possibly be better. I had some splendid sport with the grayling in the Yore yesterday, three of my best fish weighing 2lb.; Collinson, of Middleham, had seven good fish. The Rev. Father Murphy also did well to-day, his reverence had eight fine fish, the largest weighing 14oz.; Collinson, fourteen fish, weighing all 8lb., other anglers also did well; all were caught with the braudling and the little red worm, on the improved Stewart tackle. The water being high and coloured; weather frosty, but brilliant fine. To-night the frost has a tendency to increase in intensity, and if the weather keeps settled sport amongst grayling, pike, &c., will continue good. The Black Ox (Northallerton) Angling Club held their annual dinner on Friday last, when over thirty members sat down to an excellent repast. Mr. John Harkness presided, the vice-chair being occupied by Mr. J. S. Smith. A very enjoyable evening was spent. The club is in a good position financially, and the prospects for the future are promising.—**JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.**

BY TELEGRAM.—The frost continues and increases in intensity, eighteen, and in places twenty, degrees of frost being registered. According to indications, there is every probability that the weather will continue settled for a few days. James Blades writes me that he killed five grayling in the Yore, at Hawes, yesterday. The river there is getting into capital trim; prospects for sport good. All the backwaters are frozen hard, and skating, &c., in full swing. At the North Riding County Council meeting, held at the Court House (Northallerton) yesterday, the following members were appointed to represent the council on the Yorkshire Fishery Board: The Rt. Hon. the Lord Bolton, Bolton Hall, Leyburn; Col. the Hon. Lewis Payan Dawnay, Benningbrough Hall, York; the Hon. Cecil Duncombe, The Grange, Nawton, York; Sir Reginald Graham, Bart., Norton Conyers, Ripon; the Rt. Hon. the Earl of Harwood, Harwood, Leeds; Mr. John Timothy Darcy, Hutton Marske, Richmond; the Hon. Geo. Edwin Lascelles, Sion Hill, Thirsk; Mr. Andrew Sherlock Lawson, Alldborough Manor, Boro'bridge; the Hon. Samuel Cunliffe Lister, Swinton Park, Masham; John William Lodge, The Roostery, Bishopton, Aysgirth; Sir Henry Meysey Thompson, Bart., Kirby Hall, York; and Mr. Charles Edward Redell, Leyburn Hall, Leyburn.—**JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.**

SCOTCH REPORTS.

Loch Tay (Kenmore, Perthshire, N.B.).—On the hotel water, on the 18th, Mr. Buchanan, Glasgow, killed two salmon, 17lb. each. 19th, Mr. J. H. Caron, one salmon, 18lb. 20th, Mr. D. Carson, one salmon, 16lb.; Mr. W. Knight, one salmon, 20lb. 21st, Mr. H. Buchanan, Glasgow, one salmon, 22lb.; Mr.

W. Knight, one salmon, 19lb. 23rd, Mr. Mowat Stanley, fishing for Mr. F. Kelley, killed two salmon, 28lb. and 17lb. 24th, Mr. D. Carson killed two salmon, 22lb. and 18lb.—**W. KNIGHT.**

Loch Tay (Killin Hotel).—Jan. 19, Mr. Clephan, one salmon, 15lb.; Mr. Steel, one, 23lb. Jan. 20, Mrs. Maisey, three, 18lb., 15lb., 13lb.; Mr. Clephan, one, 18lb.; Mr. Ure, one, 18lb.; Mr. Steel, one, 21lb.; Mr. Menzies, one, 20lb.—**H. MAISEY.**

North-East of Scotland.—A snowstorm of considerable severity is presently being experienced over the north. Hard frost has succeeded a considerable fall of snow. Yet on the whole the prospects continue all the more favourable for the opening of the bulk of Scotch waters two weeks hence. The death of Professor Nicholson, Aberdeen University, removes an eminent scientist from the world in general, and a pisciculturist from the arguing world of no mean authority. He was instrumental in establishing a marine aquarium at Aberdeen. The Spey pollution case was again on the *apis* last week, when the First Division of the Court of Session confirmed Lord Kyllachy's judgment in favour of the riparian proprietors. Inquiries for early spring angling are very rife. Mr. Smith, Feughside Inn, Banchory, N.B., has the Upper Blackhall water for April, May, and June to dispose of. The netting also opens on Feb. 11, even on systems where angling is already permitted.—**G. M.**

Tweed, Teviot, and other Border Rivers.—Just after sending off my report last week we had a very heavy rainfall, the result of which was an 8ft. flood, as marked by the Tweedometer at Kelso Bridge. This had scarcely subsided before we were treated to another rise, heavy rain in the western district, together with melting snow, having occasioned the second rise, of fully 6ft., in the rivers, Teviot being heaviest on this occasion. Both Tweed and Teviot are still running very full, the gauge to-day marking 3ft. of flood water. Very many so-called anglers have been out during the past week when there was a chance for getting a dish of trout or anything else with bait. Some of these fishers had very fair baskets, ranging from 3lb. upwards. On the tributary streams, which have all been more or less flooded, many baskets of trout have also been got. On the Eden, at a favourite spot four miles from Kelso, two anglers also had some trout. During the last three days we have had pretty hard frosts, as much as 12 degrees having been registered, but it has only helped to clear the rivers and decrease their volume, without doing any further damage.—**MAXWHEEL.**

IRISH REPORTS.

Antrim Rivers.—Angling opens on several of these rivers on Wednesday next (the 1st proximo), including the Lagan, Bush, Margery, and the Glens of Antrim rivers. Most of these will be in fair order by that time, but in the past few nights there have been very keen frosts, the continuation of which would put a stopper on trouting for some time. The Maine does not open till March 1.—**J. A. B.**

Bundrowes River (co. Donegal).—This river opens for angling on Feb. 1, and we are pleased to inform anglers generally that the conditions on which the river opens this year are much more satisfactory than heretofore, as we understand that the present lessee of the fishery is going to let the rod fishing of the river to anglers from Feb. 1. We also understand that the box and net fishing will be very considerably diminished in order to keep a constant stock of salmon in the river for anglers. The tickets will be issued by the day or by the week.—**M. ROGAN AND SONS (Ballyshannon).**

Caragh Lake (Kerry).—Jan. 22.—The fishing promises to be very good. Spring fish are running through. Anglers staying at Southern Hotel are now allowed to fish on lower Caragh at 2s. per day. Angling on lake is free by paying the usual licence. Boats and men are available at the hotel at moderate rates. The hotel hatchery is again stocked with salmon and trout ova. Some local gentlemen have contributed towards it this time, paying part of expense.—**G. C.**

Cork Rivers.—All the above rivers are now in grand order, and spring salmon are coming up in more than average numbers on the earlier waters. As far as can be judged at present the prospects for the opening day (Feb. 1) are very good for the Blackwater (preserved portions), Lee, Bandon, and Gullane.—**T. J. D.**

County Donegal Rivers.—Several Donegal rivers open on Feb. 1 next, the principal of which are the Bunduff, Bundrowes, Lennan, Gweedore, and Gwee Varra. This week the weather is cold and frosty, and snow lies on some of the mountain ranges. The Erne and Bann rivers remain closed till March 1. The majority of the Donegal rivers are still high.—**J. A. B.**

Kerry Rivers.—All the Kerry rivers are now rising down after the recent heavy and prolonged floods. Spring salmon are coming up in fair or average numbers in the Sneem, Kenmare, and Waterville rivers in South Kerry, and in the Feale, Gale, and Smeragh, in the northern parts. In the Killarney and Glenbeagh districts the runs have been reported heavy last week.—**T. J. D.**

Lough Currane, &c. (Waterville, co. Kerry).—Lough Currane is falling rapidly since Saturday last, and it will be in good order very probably when the angling opens on the 1st prox. The weir fishery on the river is now giving better results, and it is plainly evidenced that big shoals of spring salmon passed up into the lake on Sunday last. Kelts are clearing out to sea in big numbers from the Waterville, Lunny, and Cummeragh rivers.—**T. J. D.**

Lough Neagh.—The pulen fishing season commences on Wednesday, or rather, legally commences, for the fishers recognise no close season the year round, unless when the law compels them. The small stock of pulen will not be increasing in consequence. A few delinquents were made amenable to the law for poaching,

bnt the fines inflicted were, as a rule, only incentives to further poaching.—J. A. B.

Moy, Lough Conn, and Cullen (Ballina, co. Mayo).—Angling opens here on Feb. 1 on both river and loughs for salmon and trout. The past spawning season was an unusually good one, and not for many years has there been seen so many fish on the beds of the rivers. At present the river is in high flood; but, as we are having frost, would expect by the opening day to be in order for the fly.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—The floods are increasing, so it is now very doubtful whether the river will be fit on Feb. 1. I can, however, vouch that the preserved reach above the bridge, which has been rented by the Rev. Mervyn Archdall, Chaplain to the Forces, Belfast, will be in tip top form throughout that month, because high water suits it best. This week, again, the boisterous weather has interfered with the pike fishing on Lough Derg. Mr. Richard Hope and Mrs. Hope, of Maidenhead, England, who have arrived here for the fishing, have, however, secured a fair number of pike during the week. The largest, a 15-pounder, fell to the rod of Mr. Hope; and Mrs. Hope, who is a most accomplished angler, and loves the sport, has brought to boat several well-conditioned fish. Major John P. Traherne has let his lower water for February and March. There are a few other salmon stretches to let here, full particulars of which I shall be happy to forward to any of your English subscribers who may be on the look out for spring fishing.—S. J. HURLEY.

SEA FISHING.

THE following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, Feb. 3. Highest tide on Monday.

	Sat.	Sun.	Mon.	Tues.	Wed.	Th.	Fri.
	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.

Ballinskelligs.—Pollacking is once more giving good sport between Horse Island and Bolus Head, one angler, Mr. Sullivan, getting fifteen good fish on Monday in three hours.—T. J. D.

Brighton.—We have had about two weeks of very stormy weather from the west. The wind is now in the north, and a calm sea. Several boats have been off to-day (Jan. 25) hooking for cod and silver whiting. Dogfish are plentiful. The Brighton "winter herring" have arrived, and silvery, sweet flavoured fish they are; one boat took 1000 last night.—H.

Darvane.—Whiting are now giving generally good sport since the frost set in, and pollack are taking pretty well near Coom.—T. J. D.

Deal (The Pier).—The sudden change of wind which took place on Monday last has sadly interfered with local fishing, having rendered the water about the colour of yellow clay. The wind is still blowing strong from the north-east without any signs of abatement. The angling visitors on the 22nd inst. were Messrs. Tathnell, Clarke, Dupre, Lewis, Preston-Gardner, Vaughan, Barnard, and Andrews. The day's catch consisted of a few codling, pouting, and some very fine whiting. The pier had few patrons on Monday morning, but one of them (Mr. Hopper) was fortunate enough to secure several fine codling and a few whiting. Nothing was done in the afternoon on account of the extreme thickness of the water. Tuesday opened fine and bright, and Messrs. Morse, Howells, Boshnell, Filmer, and Waddell fished for several hours, but with scant success. A slight fall of snow and sleet dispersed all the above in the latter part of the day. To-day (Wednesday) the weather has been piercingly cold, and for the first time for many months not a single angler has patronised the pier.—J. RICHARDSON (B.S.A.S.).

Deal.—Owing to the strong winds and gales, which has

made the water very thick, scarcely any boat fishing has been done. It is now (Thursday morning) blowing hard easterly, and no prospect of fishing.—EDWD. HANGER (Agent B.S.A.S.).

Dingle.—No anglers have been out since last report, though the weather has been favourable enough for angling within the harbour.—T. J. D.

Fowey (Cornwall).—We have had very stormy weather for some weeks past, and sea angling has been quite in abeyance. A few pollack and small bass are netted in the harbour from time to time.—H.

Penzance.—Although we have had mild weather for the last week or two, the weather has been so fearfully stormy that boat angling in the bay has been out of the question, and pier angling is also in abeyance.—H.

Plymouth.—The weather has been very boisterous lately, and has interfered with all kinds of fishing. To-day, as I write, it is very fine and cold, and I see several boats are out. The pike anglers are doing a little but not much, on account of so much fresh water coming down the rivers; mullet are still on the feed, and some fine flat fish are being taken. The rivers are all in great flood, and I am afraid that some of the spawning beds will be disturbed. There are plenty of salmon in the big pools of the upper reaches.—WILLIAM HEARDER (B.S.A.S.).

Southend and Leigh.—After a month of very unsettled weather, with squalls and frequent gales, a fresh slant of wind has brought a great improvement with a much lower temperature. Fishing prospects are necessarily much better, but even now it is not possible to predict the weather for more than twenty-four hours. As far as one can judge, however, angling prospects are good. Owing to bad weather few fishermen have been out during the week, and, except in the trawls, only a few fish of good size have been taken. For next week the tide will be favourable. Barometer 30.58, with upward tendency. Wind N.N.E. slight. Sea smooth. Weather clear and bright. Mr. George Wagstaff, a well-known Southend angler, asks me to say that he has just opened his new and handsome Railway Hotel, where he will be pleased to welcome fishing visitors.—CHARLES HUSSEY (B.S.A.S.).

Angling Fixtures.

January 29.

Albion Brothers: Match at St. Margaret's.
Burlington Piscatorial Society: Outing to Langley.
Cambridge Heath Brothers: Outing to Bures.
Camden: Roving match.
Collingwood: Outing.
Dalston: Outing to Cookham.
North-East Brothers: Lapsed prize outing.
Original Clerkenwell: Roving match.
Westminster: Match at Rye House.
Wimbledon Piscatorials: Competition.
Ye Olde Clapham Rovers: Outing to Sunbury.

January, 30.

Anchor and Hope: Reading by Mr. T. Crumplen.
Battersea Piscatorials: Visit.
Original Alexandra: A.B.S. concert.
Thames Re-stocking Association: Committee meeting.

January 31.

Islington Brothers: Visit.
Queen's Piscatorials: Visit.

February 1.

B.S.A.S.: Lecture on "Fish Hooks" by Mr. Eldred.
Holloway: Reading by Mr. Horner.

February 2.

Hatcham Brothers: Concert.
Royal George: Visit.
West London: Supper.

Feb. 5.—Battersea Friendly: Match at Cookham.
" 5.—Brompton: Supper.
" 5.—Cambridge Friendly: Sweepstake match.
" 5.—Clapham Junction: Outing.
" 5.—Hearts of Oak: Outing.
" 5.—Islington Brothers: Match at Cookham.
" 5.—Izaak Walton: Match.
" 5.—Jolly Butchers: Supper match.
" 5.—North London: Match at Ware.
" 5.—Sundial: Outing to Bourne End.
" 5.—Wagoners: Match at Datchet.
" 5.—Walham Green: Outing to Cookham.
" 6.—Central Association: Delegate meeting.
" 6.—Clissold: Smoking concert.
" 6.—T.R.A.: Committee meeting.
" 6.—Original Clerkenwell: Visit.
" 7.—Millway: Annual dinner.
" 9.—A.B.S. (Windsor competition): Committee dinner.
" 8.—Cardiff Piscatorials: Annual dinner.
" 8.—Holloway: Supper.
" 8.—Izaak Walton: Match.
" 9.—Ives (Hunts): Annual match.
" 12.—Allason United: Match at Langley.
" 12.—Harcourt: Match at Shiplake.
" 12.—Phoenix: Match at Bourne End.
" 12.—Prince Albert: Outing.
" 12.—Seymour Brothers: Match at Goring.
" 14.—Good Intent: Supper.
" 12.—Victoria Brothers: Outing to Bourne End.
" 12.—West Ham Brothers: Match.
" 13.—Piscatorial Society: Smoking concert.
" 13.—West Ham Brothers: Visit.
" 14.—Golden Barbel: Roving match.
" 18.—Park: A.B.S. concert.
" 26.—Silver Trout: Outing at Hertford.
March 6.—Piscatorial Society: Annual dinner.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association (No. 2 DISTRICT) Visiting List.—My next visit takes place on Jan. 31, at Islington Brothers A.S., Myddleton Arms, Canonbury-road, Islington. I hope to see a good muster.—BEN ABRAHAMS.

Anglers' Benevolent Society (WINDSOR COMPETITION), Queen's Arms, 1A, Chapel-street, Edgware-road, W.—The committee dinner takes place on Feb. 9, not Jan. 26, as stated, owing to short space of time, and we want to see a good muster. Tickets 3s. each, and Mr. Keene, our treasurer, at above house, will supply same.—BEN ABRAHAMS.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—Our match at Hampton on the 22nd was quite a success, considering the condition of the water, good shows of fish being the order. Messrs. Thompson, bream, first; C. J. King, roach and bream, second and a special; A. Smith (Buster), third and a special; and A. Smith, largest roach prize. Other members had fish, not in the match. Owing to prizes being numerous, it was decided on Wednesday another match on Jan. 29 should take place at St. Margaret's; four good prizes and a sweepstake, and two left from last outing; all pegged-down; first and second train only; Messrs. C. J. King and Jeswell, stewards; stop fishing at 5; show fish at Railway Tavern 6.30 o'7.—J. H. HAINES.

Allason United Brothers' Angling Society, Dnke of Sussex, Uxbridge-street, Notting Hill Gate.—The match which was to take place on Jan. 29 is postponed until Feb. 12. All members please make note of same. We are unsettled as to the club owing to the change. I hope to furnish good news for my members next meeting; everyone will please attend. I have all cases of fish, books, &c., at my residence. Messrs. H. Smith, H. Slack, G. Blades, and G. Prouten had fish on Jan. 22. We were favoured with the company of our visiting officer, J. W. Harris, and Mr. Bungey, of the Prince of Wales A.S., on Jan. 25.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portsmouth Place, Lincoln's Inn Fields.—On Jan. 22 Mr. Montgomery weighed-in roach. On Jan. 24 the members and friends sat down to a capital spread, put on by Mr. Ling, and presided over by Mr. Pailles. After the tables were cleared, harmony followed. Messrs. Pailles, J. and C. Hawes, J. Drew, Jewell, Butlin, Habbijam, Johns, Collins, and Chambers sang some excellent songs. "Auld Lang Syne" brought a very pleasant evening to a close.—J. CHAMBERS.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—On the 22nd the following members weighed-in some good shows of fish: Messrs. Shurey, roach; Hutchinson, roach; Payce, roach; Millin, roach and dace; Brealsforth, roach, dace, and perch; Nunn, sen., roach. The prizes left from the previous outing being won by the following: Messrs. Shurey, Hutchinson, Payne, Nunn, sen.—G. MERRY.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—On the 22nd inst. several members were out, but met with poor sport, owing to the recent floods. Absent members please note that an open roving match takes place on Feb. 5. Mr. C. Burton was elected a working member on the 24th inst.—A. JENKINS.

Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Our visit on the S.L.V.U. List takes place on Monday next, when I should like to see the clubs well represented and give us a bumper. We fish for a series of prizes on Feb. 5, at Feltham; to go by the 8.27 a.m., and return by the 6.25 p.m.—T. TRINGHAM.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—We had a very nice show of roach by Mr. Howard on the 18th; also a nice lot of roach on the 25th. Other members out, with very poor takes.—WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Jan. 22 Mr. J. Taylor weighed-in some nice perch, one weighing 1lb. 1oz.; Messrs. F. W. Stocker, W. Bray, and R. Lummas, roach. Wednesday next, Feb. 1, will be audit night, Messrs. D. Warren and J. Morrell being the auditors appointed.—T. PATERNOSTER.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—On Jan. 22 the outing to our water at Bures for a series of prizes turned out a success, in spite of the boisterous wind, 42lb. of roach, one jack, and one bream being taken. A. Field, with 17lb. of roach, 1st; H. Bodien, 6lb. roach, 2nd; C. Smith, 5½lb., 3rd; H. Tame, 4th; E. Gairdner, 5th; H. Canton, 6th; H. C. Canton, 7th.

Cambridge Heath Brothers' Angling Society The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On the 22nd we had a good show of fish on the trays. A pegged-down match takes place at Bures on the 29th for six prizes. All to go down by 9 a.m. train from Liverpool-street on the morning. Start fishing at 11.30 a.m.; cease fishing at 5 p.m. Show fish at Swan Inn not later than 6.15 p.m. Stewards, R. Hubbard and T. Benny. Will members please attend next Tuesday to arrange for an A.B.S. concert?—**SECRETARY.**

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—We have a roving match Jan. 29; members to go where they please; two rods. I wish to remind members next Wednesday is quarterly night.—**E. BOXALL.**

Central Angling Association (Liverpool), Original Prince of Wales Hotel, 13B, Moss-street.—A meeting of this association was held on Friday, the 20th inst., when several new members were elected. Messrs. Bratt, Wishart, and Hann were elected to represent the association on the committee of the Northern Anglers' Association Centre, recently formed in this city. It is expected that membership cards, rules, &c., for 1899 will be ready by Feb. 2, and members are requested to note that on and after that date the meetings will be held every Thursday, from 8 to 10 p.m., instead of on Friday, as heretofore. Mr. J. Wishart has been fishing the Leeds and Liverpool Canal at Netherton, and reports good sport with the roach.—**GEORGE W. HANN.**

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Our next day's outing will take place on Feb. 5 at Cookham; boundary, from Cookham Bridge to Bourne End Railway Bridge. All members to go by the first train from Paddington; return from Cookham 7.40. All members to cease fishing at six o'clock.—**G. T. JAMESON.**

Clerkenwell and District United Visiting List—The visit to the Phoenix A.S. on Monday was a success, their large clubroom was crowded with company; Mr. Bouffier in the chair, faced by Mr. Isaacs. Twenty societies sent representatives, viz.: Great Northern, Lincoln, St. John's, Eustonians, Bloomsbury, North London, Camden, Phoenix, Royal George, Central Club, Queen's Piscatorials, Prince of Wales, Dibdin, Brompton, Walton and Cotton, Original Clerkenwell, Social Brothers, Wenlock, High Wycombe, and Globe. The next visit will be to the Royal George. At our last delegate meeting it was decided that we hold a concert in aid of the prize fund of the C. and D. List in the fence months, the arrangement of which will be taken into consideration at our next delegate meeting at the end of March.—**F. CASTELL.**

Glossold Angling Society, The Cricketers, North-wold-road, Stoke Newington, N.—On Jan. 22 we were saved from a blank by Messrs. Hunt and Thompson. We hold a "smoker" in aid of A.B.S. on March 6. On Wednesday Mr. Ringrose brought me up a grand show of roach. The three largest I weighed personally, and they scaled 1½ lb., 1 lb. 9½ oz., and 1 lb. 5½ oz. All three have been taken to Mr. Hesse to be set up. Members are requested to attend on Tuesday, and also committee meeting on Wednesday next.—**THOS. FAULKNER.**

Gobden Angling Society, Kensal-road, W.—On Jan. 22 three members weighed-in fish as follows: Messrs. E. Baxter, A. Howland, and J. Barnfather. Very poor show for this last six weeks. Will members kindly oblige by attending the club early next week, as we want to go to the Queen's return visit, and the conditions of the last match will be made on Feb. 7.—**T. TWYMAN.**

Gollingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—The following weighed-in during the week: Messrs. W. Beames, jack, 10 lb. 10 oz.; Ball, roach; and Jarrett, bream. Mr. Warren was made a member. Our monthly outing takes place at Hampton Court on Jan. 22. All start by the 8.15

a.m. train; return by 6.10 p.m. Towpath; roving.—**G. FORD.**

Convivial Angling Society, City of London, Sidney-street, City-road.—On Jan. 22 there was a fair muster of members out, but only the following weighed-in fish: Mr. G. Kynaston, 5 lb. 2½ oz. roach and jack; Mr. W. Marshall, 13 lb. 6 oz. roach and jack, several roach 1 lb. in weight.—**PHIL.**

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On Jan. 22 Mr. Cuthbert weighed-in roach and perch, and on Tuesday Mr. Curtis had a good bag of roach.—**W. MASSEY.**

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—The concert in aid of the Rivers Preservation Fund took place on Jan. 23, and was a great success. The following artists contributed to an enjoyable evening: The Verns (duettists), Will French, Dick Sandow, Harry Fowers, Ted Heath, Bert Langford, W. Isaacs, E. Scrutton (banjo solo), A. and C. Burwash, J. Garlick, Mrs. French, and our host W. Sear, who made a capital chairman. Edie Vern gave every satisfaction at the piano. Amongst others present were Messrs. Ghrnney, W. J. Wade, Matthews, and T. Crumple. The last named gentleman in a capital speech strongly urged the claims of the Preservation Societies upon anglers. The sum of 11s 6d. was collected, and will be duly handed over to the fund.—**G. H. FRANKLIN.**

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On Jan. 22 a few of the members were out, but the only gentleman who weighed-in was Mr. T. Thompson, who had a very fine show of roach, several going over 1 lb. On Tuesday it was decided that the members should travel to Cookham on the 29th by the 8.40 and 9.40 trains from Paddington.—**S. MALBY.**

Drayton Park Piscatorials, Stanley Arms, Land-seer-road, Holloway-road, N.—General outing Jan. 29. Particulars, &c., see—**GREG.**

Eagle Angling Society, Red Lion, Tottenham.—During the last fortnight our members have met with but poor success. On 19th inst. Mr. T. F. Barlow had a nice show of roach and dace, also a grayling just over 1 lb. Mr. G. Baynton also had a nice show of roach and dace on the following day. On 24th inst. Messrs. G. Baynton, J. Dyer, and T. F. Barlow weighed-in roach and dace. On 18th inst. about thirty members and friends sat down to a leg of mutton supper at headquarters, which was ably catered for by our worthy host, Mr. T. F. Barlow. Our president, Mr. E. T. Elder, occupied the chair. A most enjoyable evening was spent, songs, &c., being rendered by various members of the company.—**W. J. PRICE.**

Elgin Angling Society, Blenheim Arms, Blenheim-crescent, Notting Hill, W.—We fished our match at Surly Hall on Jan. 22, but owing to the bad state of the river four only of the seven prizes were taken, in the following order: Messrs. Drury, Pilgrim, Bridge, and King. The remaining prizes to go on to the next outing. Will all members try and attend next meeting night, in order to arrange date of concert in aid of the A.B.S.—**G. KING.**

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—The following members weighed-in on Jan. 22nd: Messrs. Crump, 11 lb. 8 oz. roach and dace, one p.p.e., 2½ oz.; Pheasey, 4 lb. 2 oz. roach and dace; Harne, 1 lb. 5½ oz. roach and dace; Mr. Crump being the winner of the fortnightly prize.—**W. LEFEVRE.**

Forest Gate Piscatorials, Forest Gate Hotel, Godwin-road, Forest Gate.—Only two members weighed-in on the 22nd inst., viz.: Mr. Head, about 6 lb. of good roach; and Mr. J. Durell, a fine roach 1 lb. 13 oz.—**H. F. C.**

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, W.—A roving match will take place on Tuesday, Feb. 14. There are several prizes, and I should like to see members on Tuesday, so as to allot them. On the 22nd Mr. Ellins saved a blank, weighing-

in between 5 lb. and 6 lb. of roach and dace.—**J. E. LAW-FORD.**

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Mr. Thompson and Maybury were the only members that showed fish on the 22nd. On the 24th the members decided to fish for eight prizes at St. Margaret's on Feb. 5; all go by the nine o'clock train. Our annual supper will take place on Feb. 14. Mr. J. Williams will be chairman; Mr. A. J. Coker, vice-chairman. The caterer will be Mr. Mignot, of Hackney.—**R. MURPHY.**

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We fish a match at Shil-lake on Feb. 12 for eight valuable prizes, when I hope to see all the members compete.—**A. E. PAYNE.**

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Mr. Smith had a show of roach. Mr. R. Norris was proposed as a member. Our prize outing takes place on Feb. 5. Hope members will attend and clear up arrears to be eligible to fish for these prizes.—**C. SMITH.**

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—At our usual weekly meeting on Wednesday, Mr. F. Clay in the chair, we had the largest company for some time. Several members had been out, but had met with indifferent sport. Messrs. Stevens and F. Clay had perch and pike on the 22nd, fishing in Hertfordshire. We have made arrangements for our third quarterly supper, which takes place on Wednesday, Feb. 8. Our final outing has been arranged for the third week in February. Mr. Horner gives a reading on Wednesday next. The meeting terminated with the usual vote of thanks to the chairman.—**A. CLAYTON.**

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—On Jan. 22 Mr. J. H. Herbert weighed-in roach. On Tuesday Mr. Moore was made a working member. Those members who intend going to the match on Feb. 5 kindly turn up on Tuesday next and clear books. The return visit on No. 2 Eastern District takes place on Tuesday, 31st, when I hope to have a bumper, as the A.B.F. box will go round, and after which it will be opened by the visiting officer, Mr. B. Abrahams. Those clubs not receiving post-card kindly accept this.—**J. H. HERBERT.**

Isaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—The members will compete for three special prizes on Feb. 5, on any part of the Lea or Thames (private waters barred). There are also three specials to be competed for on Wednesday, Feb. 8, on the Lea, between the Fish and Eels and Ratty's Weir.—**H. B.**

Jolly Butchers Angling Society, George the Fourth, Walnut Tree-walk, Lambeth, S.E.—We fish a match at Sunbury on Feb. 5, Jolly Butchers *versus* the Wellington A.S., for a supper; all members to leave Waterloo at 7.50 a.m.; no live bait to be taken down; jack barred; one rod only to be used at one time; members to start fishing by the steward's whistle, and to cease by the same. I hope all members will turn up on Wednesday next for important business.—**G. EDWARDS.**

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since my last report we fished our match on Jan. 15, Mr. Reddington being the only successful gentleman. On Jan. 22 Messrs. Bence and Gilder weighed-in roach from the Thames. I hope members will attend better next meeting night.—**G. BENCE.**

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville.—On Jan. 22 the following were the successful winners at our match at Bourne End: Messrs. Biggs, first; Manly, second; Johnson, third; Richards, fourth; Palmer, fifth; Packer, sixth; and Bowley, seventh. The takes of fish were rather small, owing to the flooded state of the river. Messrs. More, Holmes, Stevens, and Utton also weighed-in fish. A

SOUTH-WESTERN NORWAY. SALMON RIVER to LET, For SEASON 1899.

TWELVE Miles of Fishing; sole right both banks. Excellent well-furnished lodge, ten bedrooms, four reception-rooms, servants' accommodation; stabling, icehouse, and kitchen garden. special meeting is called for Wednesday next to arrange our last outing of season.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—Only a few members of the Liverpool Angling Association turned out for the competition in the Dee on the 19th, for it was only likely the river would be in flood. This was found to be the case, and fishing was almost impossible, but Mr. Jagger managed to get a few dace, and so won the second prize. The whole of the neighbourhood where the fishing took place was by the end of the week and on Sunday all submerged, and the adjacent village quite isolated, and people had to live in their upper rooms. Frost has now set in very keenly, and, no doubt, the river under its influence will rapidly fall. Mr. J. Pennington, a most persevering and skilful angler, was amongst the pike last week, getting eleven (heaviest, 6lb. 14oz.), and one perch (2lb. 6oz.), a really grand specimen, and one not likely to be easily beaten. A meeting of the centre committee of the Northern Anglers' Association will be held at the Bee Hotel on Monday evening, the 30th, when all preliminaries will be adjusted.—RD. WOOLFALL.

Maldon and Heybridge Angling Society, White Lion Inn, Fullbridge, Maldon, Essex.—The second round of the Saturday afternoon cup competition resulted again in favour of S. Vince, with 2lb. 14oz. of roach, and second place was again secured by T. Springett, with 2lb. 3oz. of roach; B. Hutchinson third. The third round takes place next Saturday afternoon, Jan. 28, at 2 o'clock as usual, drawing for swims on the long weir and finish fishing at 5.30 p.m., weigh-in fish at 6.30 at the above clubhouse. During the past few days, anglers have caught some very fine roach. Mr. Ben Bevers secured a roach, 1lb. 6oz., on Jan. 21, and Dr. Jim Race took seven roach, 6lb., same date. Mr. A. Springett also had a nice show a few days ago—ten roach scaling 9lb. from the Langford preserved waters. On Jan. 22, Mr. Durrell, a member of the Forest Gate Piscatorial, secured a fine specimen roach scaling 1lb. 13oz., and I hear from the secretary, Mr. Creeke, that it has been sent for preservation. Messrs. Ben Lees, Sandilands, Race, T. Springett, S. Vince, Newton, and others anglers were here on Jan. 22, and most of them secured fair sport. The time of high water at Beeleigh on Jan. 29 will be at 2.28 p.m., and anglers wishing to fish the tidal waters will have plenty of time for sport. The whiting pont are again giving excellent sport from Heybridge Basin. Mr. A. Butcher informs me he took 30lb. on Jan. 23 at night with rod and line, and lob worm as bait. I have a few more tickets for the Langford Fishery. Subscription to March 31, 3s.; day tickets 1s. each. Applications for particulars apply to F. KEEN, 26, Spital-road, Maldon, Essex.

North-East Brothers Angling Society, Star and Garter, Green-street.—Result of match on the 22nd inst., in rotation: Messrs. G. Thorn, W. Smith, S. Barrett, and W. Richards, sen. On Jan. 29 members may go where they choose for the prizes left. Mr. H. Collins, sen., has given 10s. 6d. for the largest roach taken on the 29th, in or out of match.—A. LEWIS.

North London Angling Society, Tap House, Holloway-road.—On Jan. 22 a few of the members were out, but did not succeed in catching any fish. On Feb. 5 the members fish for five prizes at Ware; pegged-down. At the Phoenix visit Mr. Badham left his bag, containing five whistles. If any gentleman has found them, and will communicate with me, I shall be obliged.—H. STRETCH.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—On Jan. 22 Mr. Hill first, with roach; Mr. Hunt, second, roach; Mr. Foster, perch. We fish for prizes on 29th, all members to go where they please.—A. HILL.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Several members were out on the 22nd: Messrs. Thompson, Reitz, Tracy, Carter, Hopton, jun., Hopton, sen., Coldwell. Only one had fish (Mr. Hopton), nice tray of roach. We hold a smoking concert in aid of the A.B.S. on Feb. 18, when we hope to have a good muster.—W. S.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On Jan. 22 Messrs. Carter, Austin, and Bonfield had some good roach. On Jan. 23 the Clerkenwell visit was a success; twenty clubs being represented. Mr. Bonfield, chair; Mr. H. Isaacs, Original Clerkenwell, vice; Mr. Booker, pianist. Numerous artists were crowded out. The next visit is to the Royal George on Feb. 2. A new member to make next week, please turn up.—R. C.

Prince Albert Angling Society, Prince Albert Hotel, Woodfield-road, Harrow-road, W.—Members of the above please note our last outing takes place on Feb. 12, at Cowley, between Cowley Lock Bridge and General Elliot Bridge. Meet at Westbourne Park at 8.30. Mr. Deary was the only member who was fortunate to obtain a show on Jan. 22.—W. B. F.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—Our return visit on the 16th was a grand success, eighteen clubs answering to the roll call, and I take this opportunity of thanking those who by their presence and ability helped us to spend a very pleasant evening. Our match at Bourne End

on the 22nd, for six prizes given by our host, resulted in some fair shows of fish. All the prizes were won. Among the takes was a fine tench of 2lb. 10oz. and a nice perch.—W. B.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On Jan. 22 we had a very poor show, only three weighing-in, viz., C. Brett, C. Strayton, and W. Brind. I hope members will not forget return visit of the above club on Tuesday next, 31st inst. Those clubs who have not received a postcard, will they please accept this notification as an invitation? All will be made welcome.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—On Jan. 22 several of our members were out, but only the following turned up to weigh-in, viz., Messrs. Bardot and W. Alport. On Feb. 2 we take a return visit on the Clerkenwell and District Visiting List, when we hope to have the pleasure of welcoming all friends.—J. GIBBONS.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow.—On Jan. 22 we fished a roving match for seven prizes, and the following were the winners: Messrs. F. Gardener, first, roach; E. Perry, second, roach; Helle, third, roach and dace; fourth, F. Pigatelli, roach and dace; G. Williams, fifth, roach; sixth, J. Payne, roach. Prize left over.—F. PIGNATELLI.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—Our next outing will take place on Feb. 26, at Hertford.—PELICAN.

South London United Anglers' Visiting List.—The next visit on the above list takes place on Monday next at my own club, the Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, and I should like to see a good muster on this occasion.—ALF. PAINTER.

Stepney Angling Society, Bee Hive, Rhodeswell-road, Stepney.—On Jan. 22 the following weighed-in: Mr. L. Ehern, roach; Mr. J. Shum, dace. On Monday last our annual visit was quite a success, twelve clubs in all being represented, and a most enjoyable evening was spent.—C. TATNALL.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—Since my last report the following members have weighed-in fish: On the 22nd Mr. J. Race, a good show of roach; Mr. F. Humphres, roach and dace; Mr. T. Sandilands, roach. On the 15th Mr. J. Race weighed-in some fine roach.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith, W.—On Jan. 22 Mr. Holt weighed-in 2½lb. of roach; Mr. Parker, roach; Mr. Lock, 6lb. 2½oz. of roach (largest roach 1lb. 14oz.). Last meeting night further arrangements were made with regard to the outing to Bourne End. The Brompton Angling Society accepted our invitation to join us in a sweepstakes. Several prizes were promised to be fished for by both clubs. I hope that as many members as can make it convenient will come up next meeting night, to make final arrangements.—G. E. LOCK.

True Caledonian Angling Society, 23, Caledonian-road, N.—On the 19th inst. one of our members (Mr. Miller) had a nice show of fish, thirty-six roach and four dace, weighing 38lb.; six roach over 1½lb. each, largest 1lb 11oz.; largest dace 11½oz. The same gentleman, on the 20th, had twenty-four roach and one dace, weighing 25lb.; eight roach over 1½lb., largest 1lb. 11½oz. Mr. Marsh, on the 24th, had a very prettily marked jack of 10½lb.—THOMAS F. WARD.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—Several members fished a match in the Lea on Jan. 22. Mr. J. Oakley, first; W. Todman, second; S. Drage, third. Other members had fish. A special meeting will be held on Saturday evening next for some very important business.—H. TYLER.

Victoria Brothers Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—On Jan. 22nd Mr. J. Toothill weighed-in a good show of roach. We are still making new members. Outing to Bourne End Feb. 12.—W. H. B.

Waltham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—On Feb. 5 we have an outing at Cookham, at the close of the day we adjourn to Mr. Cocking's for supper. The club invites all brother anglers who are desirous of joining us at the supper table to communicate to our secretary by Wednesday next, so that Mr. Cocking can be informed of the number to cater for. The supper will be supplied at 2s. a head.—W. BATCH.

Waltham Brothers Angling Society, King's Arms, Waltham Abbey.—Quite a representative lot of members attended the club-room on Monday night to have just a bite off Mr. W. Taylor's 9lb. jack, taken from the Lea at Waltham Abbey. The fish, together with a smaller one of 3lb., caught by the "Guv'ner," were handed over to Hostess Perry, and right well she performed her share in the cooking of it. After the supper harmony was indulged in.—A. G. BEACH.

Wellington Angling Society, Prince George, Hillingdon-street, S.E.—We had a crowded meeting on Tuesday night, and transacted a lot of business. During the evening, Mr. Mason weighed-in a fine pike from Ireland, weight 15½lb. We held a special meeting on Jan. 31, to select a side to represent us in our match versus the Jolly Butcher A.S. All members wishing to participate in same will please attend. The following gentlemen weighed-in on Jan. 22: Messrs. Brown, Carpenter and Barber, with roach and bream; Mr. Looker, with club, heaviest fish 3lb. 8oz.—S. WESTOBY.

West Ham Brothers Angling Society, Coach and Horses, The Grove, Stratford.—Our members were out on Jan. 22, and the following weighed-in: Mr. John Newton, roach; Mr. James Newton, roach; Mr. C. Miller, roach; Mr. F. Homer, roach; Mr. R. Pethurst, roach. Our return visit takes place on Feb. 13. All

secretaries not getting a letter to this effect will take this as a notice, and that we have a jack match on Feb. 12, at Hatfield Peverel, from the Baddow Bridge to How Mill Bridge.—R. LOWTHER.

West London Angling Club, Dartmouth Castle, Hamm-smith.—Members are requested to return to me the unsold supper tickets on or before Monday next. Supper will be served at 7.30. Members will oblige by attending punctually, as we have a long musical programme to get through during the evening. Members fishing in the match must weigh-in after supper, or they will be disqualified.—J. J. HUNTER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—On Jan. 22 Messrs. Goose and Dickens weighed-in roach from the Lea. At a special meeting, held on Wednesday, called to consider a report that a member weighed-in fish that were given to him by another member, was discussed and not proven, the accused leaving the club without a stain on his character. The January match will be fished from Rye House Bridge to St. Margaret's Bridge; two rods; jack barred. Leave Liverpool-street 9.8 a.m.; return from Rye House 7.20 p.m. Show fish at station before leaving.—S. H.

White Hart Angling Society, The Volunteer, Chesnut-road, Tottenham.—On Jan. 22 we fished for the two remaining prizes of the pegged-down match, which were not taken on that occasion, one only again being taken by S. Claridge, with roach. D. Knight was the successful winner of Mr. Perry's oil painting. On Jan. 29 we fish for four prizes.—W. E. BEAUMONT.

Wimbledon Piscatorials, 28, Alexandra-road, Wimbledon.—At Tuesdays meeting there was a very creditable display of fish. Mr. Bowie exhibited a brace of pike, the heaviest fish weighing 4lb. 12oz., and an eel of 2lb. 8oz., taken (with five other jack) from Wimbledon lake. Mr. H. A. Rolt showed a nice lot of roach—6lb. weight in all—and Mr. C. Floris reported the capture of bream, and a perch of 1lb. 2oz. from the Thames.—HON. SEC.

Doffings by the Way.

THE fourteenth annual dinner of the Mildmay Angling Society will take place on Tuesday evening, Feb. 7, at the Clarendon Hotel, Newington Green, N., under the presidency of Mr. J. A. Strachan. The dinner is ordered for 7.30.

THE fifth annual dinner of the Kingston Piscatorial Society will be held on Monday evening, March 20.

THE Lantern Lecture (in aid of the funds of the Thames Preservation Society) by Mr. T. Crumpfen will be given on Monday evening, Jan. 30, at the spacious club room of the Anchor and Hope A.S., Duke of Kent, Old Kent-road, S.E. Mr. W. H. Elsmore will take the chair at 8.30. The subject of the lecture is "Fishing in the Eastern Counties," and no doubt "Old Isaac" has photographed a few good "shops." A concert follows the lecture.

ON the same evening Mr. F. H. Amphlett, author of "The Lower and Mid Thames," will lecture before the members and friends of the Hastings and St. Leonard's A.A., at the Assembly Room, Castle Hotel, Hastings, on "The River Thames as an Angling Resort." Over eighty limelight views, including Mr. Amphlett's private collection of views of the old Thames bridges, will be shown. The chair will be taken by Dr. O. R. Travers at 8 o'clock sharp.

A BROTHER member of the Anchor Fishing Society, Kingston-on-Thames, writes: "Passing through Hampton on Friday last, I came across a fisherman near Tagg's Island with some splendid roach, six fish weighing over 9lb. I saw him take two of these fish within half an hour. The water at this time was very thick, and running almost like a mill-race. The man's name is Cox, of Hampton. He was fishing from the bank."

A SPECIAL general meeting of the Thames Restocking Association will be held at Carr's Restaurant, 265, Strand, W.C., on Tuesday, Jan. 31, at 7.30 p.m., to further consider the proposal to establish fish hatcheries on the River Thames.

"THE Resources of the Sea," or "An Inquiry into the Experiments on Trawling and the Closure of Areas," is the title of a work by Prof. McIntosh (C. J. Clay and Sons, Cambridge University Press Warehouse) to be issued shortly. The work gives the results of many years' experience in the department—from Lord Dalhousie's commission (1883-85) onwards. It commences with a general sketch of the resources of the sea in the various groups, then reviews the Trawling Report of 1884, the present condition of the fishing-grounds and fisheries, and comments on the changes which have since occurred in vessels and their equipment. The mode in which the trawling experiments have been carried out by the Scotch Fishery Board is then dealt with in connection with the closed areas, and, as the author suggested these closures for experiment, his criticisms have some interest. The whole series of the experiments in St. Andrew's Bay, the Forth, the Moray Frith, and the Clyde are minutely reviewed and criticised, and finally conclusions are drawn in accordance with the facts. These conclusions are adverse to the closure, and show that the influence of man in regard to the destruction of

"THIEVES! POLICE! MURDER!" are the blood-curdling cries which are sometimes heard in the silent watches of the night coming from the bed of some unfortunate sufferer from what is termed a disordered liver, or dyspepsia. Horrible nightmares are a common feature of these complaints, and the lives of the victims become a burden to them in consequence. Holloway's Pills and Ointment have long been famous for the cures they have wrought in such cases, because they act directly upon the liver. The Ointment rubbed on the skin penetrates immediately to that organ, whose blood and nerves it rectifies. One trial is all that is needed; a cure will soon follow. The Pills are also the best known antidotes for want of appetite, nausea, and flatulency.

any marine food-fish on an open seaboard is comparatively insignificant. The work is accompanied by thirty-two tables, and various photographs and figures.

ON last Boxing Day, according to a contemporary, a scratch crew—fitting title—of fenmen and others organised between themselves what must have been a most atrocious travesty of an otter hunt on the river Lark, and which ended in anything but a lark for two unfortunate otters. Instead of hunting the otters in a legitimate manner, this crew armed themselves with clubs, spades, spears, and other murderous implements, dispensing altogether with dogs, but, with dogged perseverance worthy of a better cause, they eventually discovered both Mr. and Mrs. Otter at home. The home was forthwith speedily broken up, and both the poor beasts literally smashed to death.

IN addition to the male and female otter there was another occupant of the house—a dear little baby otter about a month old. Some of the crew, more tender-hearted than their compeers, persuaded the others to spare the little mite, so it was taken away alive, and placed in the hands of a good Samaritan, who, assisted by his daughter, assiduously attended to the poor little orphan with such success that at the present time it toddles about the room after its benefactors, lies and sleeps in their lap, as tame as a kitten, very healthy, and a most interesting and pretty little creature. Comment on this story is needless.

IN a "jotting" recently mention was made of a kingfisher being shot at Bath on account of being suspected of appropriating some of the goldfish from the Roman bath in that city. The *Daily Mail* of Jan. 14, under the heading "Two Murdered Kingfishers," says, "the shooting by an attendant at the Roman bath, at Bath, of a little kingfisher who had made a practice of feeding on the goldfish with which the water is stocked, continues to evoke interest, not to say indignation, in many quarters." Then the *Daily Mail* editor says, "What, however, will the Marquis of Granby and other lovers of rare and beautiful birds think when they learn that not one, but two kingfishers were shot? A Bath correspondent, who expresses his approval of the act, says that not only the male bird but his mate also was shot as an accessory before and after the act." Some people will no doubt think that those who commit such outrages, as well as those who express approval, are exceptions to the theory of the survival of the fittest.

AMONGST other letters on the subject is one from Lord Llandaff to the editor of a Bath newspaper, and which is written from the office of the Brighton and South of England Zoological Society. His lordship suggests that "cats are also very fond of goldfish, and that kingfishers prey on very small kinds of fish, such as minnows, and cannot swallow any above that size, and they also feed on tadpoles and water beetles. It is a great pity that such beautiful and ornamental birds as kingfishers should be so ruthlessly destroyed for such a trifling cause as eating a few goldfish, which are so easily replaced. Not so these lovely birds, which are getting scarcer year by year, to the great regret of all genuine anglers, who always accord them a hearty welcome."

"RUSTICUS" sends the following: "What strikes one is that in such a city some naturalist had not interceded on behalf of these beautiful birds. Half a sovereign would probably purchase a couple of score of goldfish, and the last place one would suppose such fish would be placed was in a luxurious Roman bath. Indeed, some folk would possibly be of opinion that the splashing and cheerying these philosophic fish must undergo, amounted to 'cruelty.' The *Fishing Gazette* will probably print the prompt protest against the slaughter of the kingfishers from the most noble the Marquis of Granby, the friend of all anglers. How true it is, in the words of the noble Marquis, that 'gold fish can be easily replaced, kingfishers cannot. I am sure that, on reflection, those who control the management of the baths will, for the future, see the wisdom and humanity of welcoming, instead of destroying a stranger so rare and lovely as a kingfisher.'" Noble words these from a noble man!

THE Yachting Exhibition will open on Wednesday next at the Royal Aquarium, and will be on a large scale. The exhibitors come from all parts of the United Kingdom, and bring with them many novelties. Motor launches will be a popular feature of the show. There will be a great variety of launches, skiffs, punts, canoes, and other craft, and an exhaustive display of miscellaneous exhibits. The home trained bicycle races have been a success, and will be continued daily.

IN a section of the Shannon, where inundations are frequent, a board raised on a post presents the following inscription: "Take notice, that when this board is under water the road is impassable."

MESSERS. LUNLEY announce that they have acquired the Mandal River, South Norway, on long lease; all nets and traps have been bought up from Mandal Bridge to Foss-Poss (the highest pool accessible to salmon), and this early salmon river will be entirely devoted to purely sporting purposes. The Mandal flows from the large Haskfeld Plateau and from countless lakes or mountain tarns, thus forming an adequate reservoir for maintaining the necessary volume of water. From Government statistics

nearly 40,000lb. of salmon have been annually taken at three netting stations near the mouth of the river. No record of the amount of fish taken above these stations is obtainable, but, from the numerous ingenious traps and other implements used, it is computed that at least an equal amount has been annually netted in the upper waters, and it may be mentioned that the farmer owning the Foss-Poss pool had to pay an annual land-tax of twelve barrels of salmon, taken solely out of the Foss Pool.

MR. A. SCARD, of Holywell, near St. Ives, says "the flood is going down very nicely, and the water is a real good colour. I took some fine roach on Wednesday, several going over 1lb. each, in the deep eddies in front of my house. I reckon if we get no more rain good sport should be had by the end of the week. Some fine pike have been seen chasing the baits, and the frosts made them a bit hungry." Just so. I am quite of the same opinion. All along the line at St. Ives, Huntingdon, and St. Neots, the water should be in very fair condition. Time is getting short; March 16 will soon be "down on us"; and if you dress warm, keep your feet dry, and your haits wet, there should be something to report next week from the dreamy, breamy Ouse.

No official reports are to hand as to the state of the Lark at Barton Mills or of the Ouse at Brandon, but from what "I hear" some good fish are being taken. Two gentlemen managed to secure fourteen jack between them on the Lark recently, but the largest was only 9lb. The 30-pounders are not so numerous as they were—anywhere.

THE 45th annual dinner of the Friendly Anglers at the Hotel Cecil, on Wednesday evening, was a grand success. The dinner was (as usual at the Cecil) first class; the toasts, songs, speeches, &c., under the genial chairmanship of the veteran, Fred Berry, caused the time to pass all too quickly. I was sorry not to be able to accept a kind invitation to be present.

OUR F. G. ALBUM OF ANGLERS.

No. 34 (New Series).

MR. W. BENNETT

Is a prominent member of the British Sea Anglers' Society, and though a modest and withal of a retiring nature, has fished in many waters, and captured some good fish. As proprietor of the Old Cock Tavern, Market-street, Haymarket, he may be seen daily, and he is able and willing to converse with visitors in several languages. For many years he was on the Continent (France, Germany, and Russia) in the capacity of interpreter, and for eighteen years at Blanchard's, of Regent-street. Mr. Bennett possesses a beautiful oil painting (life-size) of "The Expulsion of Eve." It is on view, free, at the Pall Mall Safe Depository (close to the Old Cock Tavern). Mr. Bennett has many friends, few enemies, and is in every way worthy of being classed in the category of "gentle" anglers.

MR. E. WEBSTER and Mr. W. H. Burrows are the hon. secs. to the Cardiff Piscatorial Society, and Mr. A. E. Armstrong (late of the T.A.P.S.) is a member of that thriving society. Mr. Webster is responsible for the following: "Dear 'Drag,'—I am instructed by the committee to ask your kind acceptance of the accompanying ticket to our ninth annual dinner at the Alexandra Hotel, on the 8th prox. Mr. Armstrong has arranged for some extra special Scotch." Of course, I shall write and thank these good boys at Cardiff, and tell them I am not strong; that I was obliged to refuse a breakfast at Brecon; that I have not taken extra special for some time; but if all goes well I must try and keep an engagement to dine at the Hotel Cecil on the same night. I wish them all a pleasant evening and prosperity.

"FACTS are stubborn things," said the Irish lawyer to a female witness under examination. The lady replied, "Yes, sir, and so are women; and if you get anything out of me just let me know it." "You'll be committed for contempt." "Very well, I'll justly suffer, for I feel the utmost contempt for every lawyer present."

WHAT a blessing this change of wind is. "A green Yuletide," says an old proverb, "makes a fat kirkyard." That the Registrar-General's statistics have disproved the truth of this saying everyone knows, but all the same, a warm winter, or, indeed, unseasonable weather, at any time is bad for business and sport alike.

"THE Loch Lomond Angling Improvement Association," says the *Glasgow Evening Times*, "will be glad to hear that it has been relieved of one of its deadliest enemies in the shape of an enormous pike weighing close on 18lb. Two Jamestown gentlemen, while out duck shooting the other day, observed the fish resting salubriously in about a foot of water on the western shore, near the Frin. A plan of attack was formed, and by strategic movements his lordship was confined to shallow water. Several 'pot shots' were taken with a rifle, the third 'dose' causing wounds and excitement. A desperate *mêlée* ensued, in the midst of which Mr. Pike was rendered unconscious by a blow from an oar. I have the feeling that pike shooting will take on."

A CERTAIN large publishing house records the following experiences when asked for certain books:

WINTER OF DISCONTENT.

I've done a lot of fishing
In salt water and fresh,
And now atisha! tishing,
Am ordered to secesh.
But when the dismal day arrives
To punt me on the shelf,
A nuisance to my relatives
Will be my wretched self.
Recounting all I ever did
In piscatory way
Till they, in desperation, bid
Me "Shut up! Go away!"
And having thus been brought to book,
An antiquated bore,
I'll shrivel up and take my hook
To quite another shore.
A passenger in Charon's punt,
Across the river Styx,
When the time comes for me to shunt
Without my bag of tricks.—GOOSESTEP.

I AM sure all anglers will sympathise with Mr. Charles Hussey in the loss he has sustained by the death of his mother. The deceased lady was the daughter of a Waterloo officer, and had been an invalid for a long time. She was in her eighty-fourth year. DRAGNET.

"COMING OF AGE."

WE have much pleasure in recording the coming of age of Miss Florence Elise Williams, daughter of Mr. Alfred Williams, a member of the well-known firm of Messrs. S. Alcock and Co., Standard Works, Redditch, which took place on Jan. 20.

In continuance of the festivities on this occasion, Mr. Alcock invited about a hundred of the staff, heads of departments, &c., employed at the works, to an entertainment ball at the Temperance Hall on Friday evening. The room was tastefully decorated for the occasion, and a good programme of music, both vocal and instrumental, was provided, under the management of Mr. Albert Stratton, who, during the evening, asked Miss Williams to kindly accept a gold chain bracelet (which had been subscribed for by the staff at the works) as a memento of that day. He was sure that wherever her future life might lead her, she would always entertain a kindly recollection of those who had spent so many years in the service of her father and grandfather.

Miss Williams briefly returned thanks for the present, and also thanked Mr. Stratton for his kind words, which she should ever remember.

ABBAY MILLS SICK BENEFIT SOCIETY. (WM. BARTLEET AND SONS.)

THE annual meeting of this society was held on Monday, Jan. 23, Mr. H. S. Bartleet (president) in the chair. Mr. E. R. S. Bartleet was also present.

The chairman congratulated the members upon the work of the society for the past year, and also upon the excellent financial position, the sick pay having been less than the previous year. He trusted the coming year would be equally prosperous, both as to trade, which during the past year had been good, and also that the health of the workpeople would be as satisfactory.

Mr. E. R. S. Bartleet, in returning thanks for the election of Mr. H. S. Bartleet as president, and himself as vice-president of the society, expressed a hope that during good times they would not fail to make some provision for times of depression, which might possibly arise in consequence of war or other causes over which neither master or workpeople have any control. From the statement of accounts of the benevolent fund in connection with the society, it appears that the income, including the balance brought forward last year, was £42 12s. 10d., and that grants had been made of £10 10s. to the Hospital Saturday Fund, £1 4s. to the Nursing Association, £2 2s. to the Eye Hospital, and £7 to necessitous cases amongst the workpeople. It was resolved to make grants of similar amounts for the present year, and to leave the amount to be contributed to the Hospital Saturday Fund to the discretion of the committee at the time of the collection. The various officers and committee were elected, and a vote of thanks to the chairman concluded the business of the meeting.

LONDON WATER SUPPLY.

(From the *Daily Telegraph*, Jan. 17.)

When the Royal Commission, presided over by Lord Llandaff, resumed their sittings yesterday at the Guildhall, Westminster, Mr. Balfour Browne, Q.C., on behalf of the London County Council, took exception to the holding of a separate inquiry by Col. Rathbone, who has been appointed an assistant commissioner, as to the cost of the Welsh scheme of the County Council and the Thames storage scheme of the companies, in view of the fact that the former scheme had been submitted to Parliament, which would have to determine upon it. The chairman stated that the commission had had a vast number of conflicting estimates of the cost of the two schemes, and, inasmuch as it would be a task of infinite detail and considerable labour to criticise and compare these statements, it was intended to refer them for examination to Col. Rathbone, who would have before him the evidence already given. Continuing his evidence in support of the engineering case of the water companies, Mr. Charles Hawksley stated that the charges for high service made by the London water companies were little or no higher than those made by local authorities. When the fittings for constant service were complete and in proper order throughout London, he believed that by means of the regulations already in force the companies could reduce waste to such an extent that twenty-five gallons per head of the population per day would be an ample water supply for London. Except that the water examiner should be armed with express power to enter upon the works of the companies for the purposes of his investigations, no further public control was desirable either in the interests of the water consumers or the ratepayers. Whilst an amalgamation of the eight companies into one strong body might to some extent improve the position, he did not think it would result in any very great advantage, having regard to the fact that each of the companies was already very large. Cross-examined by Mr. Balfour Browne, for the London County Council, he expressed the opinion that it would not cause any injury to the flow of the Thames if 400,000,000 gallons of water were taken from it daily for the supply of the metropolis. Evidence to a similar effect having been given by Mr. E. M. Eaton, the commission adjourned until to-day.

(From the *Echo* of Jan. 19.)

It was hardly likely that the London water lords would go comfortably off to sleep while all the best heads in the municipality are working at the problems of purchase and supplementary supply. Indeed, to do the companies justice, they have lost no time in preparing for the struggle, and bending all their force to resist the new Bills from the earliest stages. Their witnesses talk expansively before the Water Commission in a confident fashion that might

deceive the very elect, if the elect were not reasonably convinced of the superior virtue of figures to special pleading. The Thames Valley supplies depleted, the poor Lea reduced to its lowest terms? Nothing of the kind say the prophets of smooth things. These two inexhaustible streams can easily supply, not only the London of 1899, but the prospective London of 1940 or 1950. And naturally they do not overlook the shamefully oppressed farmers of Wales. Emissaries of the companies are discovered in the pleasant valleys, quietly nursing revolt. Surely the Welsh farmer will not allow himself to be dispossessed by the rapacious County Council of a far-off Metropolis? Is it not an outrage on the liberty and the ancient rights of those who till the soil? And so the small farmer is sympathetically tended. His hypothetical grievance is carefully enlarged upon. He is treated with a liberality that speaks volumes for the disinterested motives of the water companies' agents. He is even brought to London in troops, and by special train, to support the protesting memorial in person. And the days occupied in the examination of the Bills are made to pass agreeably by means of dinners and the delights of music and drama. It was ever so. The children of darkness are wiser in their generation than the children of light. The public purse is not available for this sort of hospitality. True the right side wins in the end. But, unfortunately, the "resources of civilisation" provide its opponents with weapons of a peculiarly subtle and effective kind.

THAMES ANGLING PRESERVATION SOCIETY.

MR. HARRY L. W. LAWSON, J.P., L.C.C., &c., was unanimously elected president of the above society at a specially convened meeting of the executive committee, who met on Jan. 25 under the chairmanship of Mr. Alfred Nuthall, J.P. The future officers of the society therefore will be—H. L. W. Lawson, Esq., L.C.C., &c. (president); A. Nuthall, Esq., J.P. (chairman of committee); T. Crumplen, Esq. (vice-chairman); H. W. Higgins (hon. sec. and hon. treasurer).

Notes from the North.

THE snowstorm of last week has again ended in a rain-storm, and the rivers and streams have been running mountains high. Frosts have been very frequent and continuous in the upper part of the valleys, and curls have been again wielding the broom. On Saturday, however, the ice gave way, and anglers on the far north streams again got out a line.

The death of Professor Henry Alleyne Nicholson, of Aberdeen, will be received throughout the scientific world with regret. Professor Nicholson was a master in whatever science he took up, but natural history was his forte. In the matter of establishing a marine aquarium at Aberdeen the late Professor entered heart and soul into the concern, and in this respect alone his removal at the early age of fifty-five is a severe loss to pisciculture. In the beginning of May, 1882, he succeeded Professor Cossar Ewart in the Natural History Chair, and, notwithstanding his many engagements, found time for considerable original research. He was author of nearly thirty separate works, besides numerous contributions to zoological and other journals.

Mr. W. S. Bruce, who accompanied the Dundee Arctic expedition 1892-3, and served as naturalist to the Jackson-Harmsworth expedition, has just returned from a voyage to the Greenland seas.

On Friday last the judges of the First Division of the Court of Session—the supreme Scottish tribunal—affirmed Lord Kyllachy's judgment in the Spey pollution case against Roderick Kemp, Macallan distillery, Elgin.

A fresh snowstorm has been raging since Sunday, and snow is falling thickly as I write (Jan. 24). I am glad to see it, and hope it will harden up a bit among the hills. The more the merrier for the spring fishing.

With the opening of the salmon angling season finnock and sea trout also come under the chances of the angler. There is a run of finnock and sea trout contemporary with the early spring salmon, and many a jolly basket is made on the tidal waters by those who know the lies.

The Don was once one of the most prolific finnock reaches in the north, and more than one local angler made a good hit at the job—pot-hunting, of course. When the fish were thick, 40lb. of a morning was no unusual thing for the expert tidal fisher.

In the very early days the worm is a most deadly lure on the tidal reaches, and used by those who know how to place it, it is simply irresistible. The Devon and tube, white and red, are the next best lures, and on a fine sunny day the March Brown of a large size.

The fly is the best all-round spring lure, and of the plainest sorts and largest irons. In a river of "grue" and snow broth the Phantom works well, and in a heavy water nothing else should be tried. SPECIAL SCOTCH.

TO SPORTSMEN—Burberrys, of 30, Haymarket, London, are now offering, at half price, their 1898 model and stock sporting garments, in gabardine, combination, and rain-proofed tweed; shooting coats, 20s. 3d. and 31s. 6d.; breeches, 15s. and 21s.; Burberry capes and long overcoats, 31s. 6d.; farmers' overcoats, 15s.; Scotch stockings, 2s. 9d. Sent on approval on receipt of cheque covering.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The annual meeting of the Birmingham Anglers' Benevolent Society was held at the Birmingham Arms Hotel, Smithfield, on Thursday evening last, Jan. 19. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The minutes and work of the committee transacted since July last was placed before the meeting, and accepted without comment. The secretary, Mr. J. Rahone, gave in a report of the financial position of the society, which went to show that since July last the sum of £23 12s. 6d. had been paid out in death claims, the amount of money in hand at the present time amounted to £246 0s. 4½d. The late *soirée* would result in the sum of about £7 being added to this fund; the numerical strength of the society was about 700 members. The report was received and adopted as very satisfactory. The election of officers resulted in the following being appointed: President, Mr. T. Coles; vice-president, Mr. C. White; treasurer, Mr. C. White; secretary, Mr. J. Rahone Messrs. J. Hughes and H. Tullett, trustees; and auditors, Messrs. Foster and McMullen; committee, Messrs. Dearne, Bagley, Hopwood, Jolly, Holding, Shale, Foster, Wright, Egerton, Bailey, McMullen, Ainge, Barton, Gilman, Pearsal, Perks, Glover, Daws, Wilcox, and Bullock. The committee will be appointed to the various divisions at the next meeting. A vote of thanks to the president and committee for their past services brought the meeting to a close. The Severn Fishery Board have just issued their annual report, the financial portion of which goes to show that there has been a falling off in the income, which shows an adverse balance of £67 3s. 1d., notwithstanding that £150 has been transferred from the deposit account. This is very much to be regretted, as it has brought about the discharging of four water bailiffs. The action of the anglers not taking out the trout licences for taking coarse fish is strongly commented upon, and it is stated that a case has been granted on the question in connection with the late case which was tried at Shrewsbury some weeks ago. Although a case has been granted, it does not state that it will be taken to a higher court. The next meeting of the board will no doubt decide upon the matter. Salmon and trout take up the major portion of the report, and nothing is mentioned as to the close time for coarse fish. The board met on the 26th inst. at Birmingham, a report of which I will forward for your next issue. The Vine Unity Society, at their special general meeting held on Jan. 18, unanimously decided to form a fund for the preservation of specimen fish caught by their members. The scale of sizes for the fish to be set up are as follows: Roach, 11lb. 6oz.; perch, 11lb. 8oz.; bream, 5lb.; chub, 4lb.; dace, 10oz.; and pike, 10lb. It was also resolved to give prizes to those weighing-in the heaviest fish of the kinds mentioned. Several of the leading members promised some very valuable prizes, independent of which a framed diploma will be given to those weighing-in the heaviest fish in each class; the club offers £20 worth of prizes, and also are willing to pay a like sum per annum for a decent stretch of private water. The Cradley Association, which has just been formed, was visited last week by a representative of the Provincial Association, and found in every way properly constituted. A list of stations to which they require the privilege to travel to is in the hands of the sub-committee, and they will be in possession of their travelling cards in a very short time. The weather has changed for the best; from rain it has turned to a dry frost, which, I hope, will continue for some time. This will be suitable for pike fishing, and our members will be on the warpath as soon as convenient. All our rivers are up; but, should the present weather continue, by the time these notes are in print they may be fishable.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

Roach fishermen continue to obtain excellent sport on the Fen waters; in fact, better bags are being made in some districts than were made in the autumn. One of the best streams, the Glen, continues to yield as good as any, and many visitors have turned their attention in that direction. It has not been a difficult matter to obtain a bag of 12lb. and upwards with paste baits, and on some lengths of the Witham, especially where the various tributaries join the main stream, even better sport has been had. The boisterous weather has again proved troublesome to pike fishermen, and little was done towards the end of last week. At the time of writing, however, trolling had again got into swing, and anglers report favourably on the condition of the waters and the activity of the fish. On all the principal pike streams rodsters have been busy since Monday. A Forty-foot subserber, on Tuesday, landed three fish weighing 12½lb., and another had a brace weighing 9lb.

FROM HULL AND DISTRICT.

The wet and stormy weather of the past week or so has prevented many of our local anglers from being out, and only a few fish have been shown at the different anglers' rendezvous, although the club members at the White Horse Hotel have had roach, going from 12oz. to 15oz. each, during the week; and Mr. A. Marshall, of the Central Hull Angling Society, showed one last week that scaled 1lb. 5½oz., from the upper waters of the river Hull. The best pike of the week recorded scaled 4lb. 12oz., taken by Mr. Jefferson near the Foulness Dam, Market Weighton Canal. A perch of 14½oz. was taken by Mr. J. Cheeseman on Monday, amongst other fish, whilst worm fishing at Dunswell. A nice catch of flounders and eels was also had on the same day near Cicey. At the February council meeting of the Hull Amalgamated Anglers' Association the question of netting the Stone-

ferry Reservoirs and turning the fish into the river Hull will be discussed, and a day fixed for the operations, a committee having already been selected. Several of our local societies have made their fixtures for their first match of the season. The Alexandra Angling Association have selected March 1 as their opening day, on Patrington Haven; and at the same place the Albion A.S. will commence their season on Good Friday. The George and Dragon A.S. held their annual dinner at headquarters on the 16th inst., the president, Mr. R. Green, occupying the chair, when the aggregate and other prizes were presented. Mr. C. Turner was the recipient of the society's gold medal for most points in the matches of the past season, Mr. J. Ashwell also receiving a gold medal for the best fish during the season, the rest of the evening being devoted to conviviality. The annual meeting also took place on the 16th of the Albion A.S., when Mr. J. Kelly was elected to the presidential chair, Mr. J. Walsh as treasurer, and Mr. G. Hastrop hon. secretary; and on the 17th the County Angling and Recreation Society held their annual meeting, and elected officers for 1899, Mr. J. Helm being re-elected president, Mr. H. Dewhurst treasurer, and Mr. J. Coates hon. secretary. The members of the Globe Angling Society dine together at headquarters on Feb. 3. The Hull Corporation Employers' A.S. held a most successful smoking concert on Monday evening. The officers elected for 1899 are: president, Mr. C. H. Clarkson; treasurer, Mr. J. Dick; and secretary, Mr. W. Pegg. The annual *soirée* and hall of the Hull Angling and Preservation Society will take place at the Central Hall, on Feb. 6. At the annual meeting, which took place at the White Horse Hotel, Mr. John Dickenson was reinstated in the presidential chair for 1899, which he so well and ably fills, to be assisted by Messrs. W. Cutting and C. Wurr as vice-presidents, and Mr. W. Hay as hon. secretary. The official report shows the income of 1898 to have been £64 6s. 9d., and after

deducting all expenses—rent of preserves, and cost of securing 12,000 fish from the Barmston Drain and turning into the river Hull—shows a balance in hand of over £36 to commence the present season with. The "Cutting" and "Turner" challenge cups will each be fished for at Ferrihy sluice, on the Ancholme, this season.

FROM LANCASHIRE.

The Stockport County Anglers' Association have just placed some large orders for consignments of fish, and are anticipating the successful transfer of same to their private waters at Edgeley Park. The association offer prizes for the heaviest fish taken by the members during the season, and at the recent annual dinner, held at headquarters, the distribution took place. The first three winning fish were taken from club waters, the fourth from Cheshire Mere. The successful prize winners are: Mr. F. W. Williamson, roach, 1lb. 1½oz.; Mr. T. Cheetham, carp, 1lb. 10z.; Mr. John Lakin, trout 8oz.; Mr. D. Fielding, pike, 4lb. 5oz. The president of the association, Councillor Joseph Broadhurst, took the chair. The Ben Brierley A.S., Moston, have recently held a most successful annual business meeting at headquarters. The following are the officers for the ensuing year: President, Mr. Geo. Jackson; vice-president, Mr. A. Jeffrys; treasurer, Mr. Geo. Richardson; secretary, Mr. R. Cox. This club is now in a thoroughly sound condition, both numerically and financially. The Royal Walton A.S. recently held a meeting at headquarters, Barnes Green, Blackley, for disposal of important business and to elect the new executive for the ensuing season, which is as follows: President, Mr. M. Thompson; vice-president, Mr. J. Butterworth; treasurer, Mr. W. Roberts; secretary, Mr. J. Holmes. The private waters of the society are being replenished with consignments of mature coarse fish, and some 2000 are shortly expected to arrive for this purpose.

FROM MANCHESTER.

The Welcome Anglers have recently closed their club year with a most satisfactory balance-sheet, and every prospect of "good times" and increased membership in the ensuing season. A report is to hand of an important meeting held on the 24th at headquarters, Vulcan Inn, Clarendon-street, Hulme. There was a good attendance of members, and after going through some minor details, the question of revising the rules was discussed. Five new members were added. The following are the officers for the ensuing season: President, Mr. W. Hawkins; vice-president, Mr. J. Lloyd; treasurer, Mr. J. Swift; secretary, Mr. F. W. Garner. The fifth general meeting of the Lancaster A.S. was held on Jan. 18, at headquarters, the Lancaster Hotel, Stockport-road. The society is gradually increasing in strength, two new names being enrolled. A rather extensive programme is down for the coming season. The Sun A.S. has started 1899 on entirely new lines, and held an important meeting recently for the purpose of compiling fresh rules, notably those to govern a fishing match for the funds of the organisation. The officers are: President, Mr. Ridings; vice-president, Mr. Stafford; secretary, Mr. Ashworth.

FROM NOTTINGHAM.

The Trent has again been running in flood, and no fishing has been possible throughout the week. On Friday, at Beeston, Mr. James Lee, of that village, caught about 16lb. of roach and perch; and on the following morning a few choice roach were killed at Wilford, on the gravels, near the old barbel swim adjoining Jarvis's wall. In the afternoon, members of the Shoulder of Mutton Association engaged in a competition at Staythorpe, but failed to land a single fish. The weather turned out fearfully bad, and since Saturday night the river has been in a state of flood.

STATIONS AVAILABLE TO ANGLERS BY PRIVILEGE TICKETS.

ADDLESTONE (Wey), D, Surrey, 21; 2s. 3d.
ALTHORNE (Crouch), A, Essex, 36; 3s.

FROM SHEFFIELD.

At last we appear to have finished with the rain that has fallen so incessantly during the last month or so, and which has made matters so uncomfortable for anglers. The weather has turned very frosty, and if the cold snap will only continue, it will give the rivers a chance of running down a bit, and then anglers will look forward to better sport than they have recently had. Coarse fish anglers who have sought their recreation in the neighbourhood of Holmesford and Ambergate have fared pretty well, and in the canal bottom anglers have secured several nice roach and perch. Pike anglers in these parts have had poor sport. Up to the end of last week the Derwent and Wye were running much too high for grayling fishing, although in the Miller's Dale section of the Wye a few nice fish have been captured. At Darley Dale, too, bottom anglers have accounted for a few nice grayling with brandling worms. The Trent has come in for a good deal of attention, and now that the waters have receded anglers are doing very well amongst roach; whilst the Witham is rapidly improving, and is now beginning to afford first class sport amongst roach, whilst pike anglers are again having a look in. The Bain has provided several anglers with fish of very satisfactory size, and several well filled baskets have been taken from this stream during the past week. The proposed fishing match for £100, which is announced to be held during March, in Nickey Nook Reservoir, is exciting a good deal of interest amongst trout anglers in Yorkshire.

FROM WORCESTER AND DISTRICT.

All the rivers in flood, the country for miles along the Severn watershed, Teme, and Avon under water, and to-day (Wednesday) it is still on the rise. It is a long time since we had so high a flood in this district. Angling of course out of the question, but will be beneficial to sport in the long run.

FROM YORK AND DISTRICT.

The murmurings of discontent on the part of anglers on account of the weather reached a climax in general grumbings at the week-end, when the streams were running at great height, the flood waters reaching many feet above the summer level. On Sunday morning the Onse at York was 13ft. in excess of the ordinary depth, being the third time since Oct. 1, 1892, that a similar height had been attained. On that occasion 16ft. were registered. It follows, under these circumstances, that anglers have been obliged to forego their accustomed sport, and the reports show very little doing. The rivers ran down rapidly after Sunday, and with a crisp, frosty air, pleasant sunshine, and conditions other than that of the actual state of the waters being of an agreeable character, anglers were once more entertaining hopes of a better time, and of something like successful sport. The amalgamation of York anglers dined together at the Bay Horse, Marygate, on Saturday night, Capt. Key, J.P., presiding over a large gathering. The principal guest was Mr. Butcher, one of the city members, who, in responding to the Parliamentary toast, caused amusement by remarking that his colleague, Lord Charles Beresford, whose mission in China is just closing, possibly might bring home, amongst other discoveries, a new method of angling. Having referred to the abortive bill which he and the late Sir Frank Lockwood introduced with regard to fresh-water fishing, he said that if anglers wished it he would reintroduce it. The Bill would, if passed into law, advance the interests of anglers throughout the country. He ventured to tender this piece of advice, which he had read in an old book on angling: "The angler should practise courtesy to all his brethren, and be ever willing to lend a killing fly to a needy friend." The president, in acknowledging the toast of his health, referred to the Fresh-water Fisheries Amendment Bill, and said that he was pleased that Mr. Butcher would be willing to help them again. Mr. J. W. Blakey (Scarborough) proposed "Success to the Amalgamation." He urged the York organisation to devote as much money as they could possibly afford to the stocking of their rivers. He strongly deprecated the netting of the Onse for bait. An Act ought to be passed which would compel existing conservancies to preserve coarse fish, and prevent them applying the funds provided by the coarse fish anglers to the preservation of trout.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

LOUGH DERG QUERIES.

DEAR SIR,—In reply to the above in the *Fishing Gazette* of Jan. 21, the most direct route to Lough Derg is from Dublin by G.S. and W.R. to Nenagh, via Ballybrophy. Nenagh is five miles from Dromineer by car, and Dromineer is a central point on the Tipperary or east shore, where hotels and lodgings can be had. Lodgings and good fishing can be also had between Dromineer and Portmanna, the latter being the most northern point on the lake; and there are good hotels and lodgings to be found at Killaloe, the most southern point of the lake; and also at Mount Shannon, which is on the Galwey, or west shore, of the lake. Killaloe can be reached by rail from Nenagh.

If "Blatherwyck" wishes I shall be happy to give him further particulars by letter, and for that purpose send you my address, and, if "alive and well" next May, will let him know when the fly is up. I am in no way interested in any hotels or lodgings, and my information will be guided only by a desire to oblige a brother angler. Lough Derg holds large "schools" of rudd (locally

called roach), perch, and bream; but they are seldom fished for nowadays, except when they come to the shore and tributaries for spawning purposes.

I have killed bream in the Nenagh river of 7lb. weight, and good sport is sometimes had with perch, using live minnows for bait.

If duly "baited" for, I see no reason to doubt that rudd and bream fishing would give good sport, but up to date methods are unknown on the lake. I have often seen in warm, calm weather large numbers of both fish playing on the surface.—Yours truly, OIRMUHAN.

FISHING ON THE CASPIAN.

SIR,—I should esteem it a great favour if you or any of your numerous correspondents could give me any information as regards fishing near or around Baku, on the Caspian. Thanking you in advance for anything you can do for me,—I am, sir, yours truly. FERN SPRINT.

BOOMS.—THE GENTLE ANGLER!

SIR,—I venture to regret that you did not, by way of doing the writer a kindness and making room for more interesting matter, hold over Mr. Kirby's remarkable letter among the "several important letters" mentioned at the foot of the page on which it appears. That Mr. Payton's French spreader is—if Mr. Kirby permits me to speak as a "sea angler with a ha'porth of experience," as he very chastely puts it—extremely efficient is a fact that has stood the test of time, which, with all its possible excellence, Mr. Kirby's pattern has not. May we hope that he will ponder awhile on the peaceful countenance of his eighteenth century namesake (p. 39 of the *Fishing Gazette*, Jan. 21), and apologise to our most genial friend, Charles Payton.—Your obedient servant, Bournemouth. F. G. AFLALO.

SEA PATERNOSTER BOOMS.

DEAR MARSTON,—Many thanks for your kindly note at the foot of Mr. Kirby's extraordinary effusion, which must have gone far toward showing that gentleman that he was as mistaken in the ignorance and inexperience in sea fishing which he is pleased to attribute to me, as he is in his unqualified condemnation of the French wire booms, apparently without having seen them or tried them. In the face of so gratuitously uncourteous an attack, I think I had better say that I have no interest whatever in "booming" these booms, my stock of which far from "prehistoric" contrivances was purchased at tackle shops here, except some of the very finest kindly presented to me by an excellent French sea angler. But I have found, and still maintain, that they are not only simple, but effective, both for light and heavy sea fishing where booms are used at all, though for specially heavy work I recommend them to be made of a stiffer wire than the samples I sent you.

Some good English sea anglers have asked me for samples, and expressed an approval which I am sure actual use will justify. As to fishing up and down in still water, the anglers this side are famous for long casting. As to the killing of big fish, if any part of the tackle should give way during a tussle, I would bet it would not be the wire boom; and as to striking, perhaps I have had sufficient experience both in fresh and salt water angling to know when fish need striking and when they do not. The white metal, especially when dulled by use, is, I think, preferable to brass for clear water. These booms answered very well when I fished in December at Deal, where I found the anglers all polite, and therefore presume Mr. Kirby was not among them.—Yours very faithfully, CHAS. A. PAYTON.

WIRE SEA LINES.

DEAR SIR,—The secret is out, as I see our friend A. W. Parker is introducing these wire lines again to several of his friends. Of course he would see that there was nothing better. Did you ever know a fisherman run down anything that he had introduced as something new? Wire lines were tried just about the same time as gimp was made, and my late father was one of the first to manufacture this article. I have the machines by me now, but needless to say they are very antiquated in comparison with those of the present day. I am afraid that the old adage, "we are never too old to learn," applies to our friend A. W. Parker. Our fishermen here do not confine themselves to sitting on a pier with a rod and catching their 2oz. ponting, as is suggested by another writer, but their weekly catches are weighed by the ton, therefore I think they may be classed as fishermen of experience. We catch a few fish here, and it was not very long ago that one of our members of the B.S.A.S. (which society, by the bye, I was one of the founders of) caught in fourteen days, at Plymouth, 6wt. 1qr. 17lb. of fish, all edible; and I have had a letter from a gentleman who has been fishing at Appledore, who tells me that he and his man, fishing with fly rods and artificial baits, took in one year 3660 bass. I query whether he could have done this with a wire line.—Yours truly, Plymouth. WILLIAM HEARDER (B.S.A.S.).

SIR,—I notice in your columns a series of letters regarding the introduction of wire winch lines for sea fishing. Most of your correspondents seem to have entirely overlooked the fact that these lines are wholly and solely intended as winch lines for use with pulley tops on modern sea rods. Further, such lines have been introduced for one reason, and for one only, namely, to enable the sea angler to fish in deep water, where heavy tides prevail, with light leads. The reason why wire is a better material than either hemp, flax, or silk is twofold, viz., the specific gravity is infinitely greater, and the resistance offered to the rush of tide infinitely less.

The use of wire as a hand-line in the sea is not new, copper wire being employed for that purpose by the mackerel railers off Plymouth, and many foreign fishermen in the Mediterranean, off the Canaries, and other places. The objection hitherto existing to the use of wire line on the winch has been the liability that the first manufactured had to kink and then break. This most of us are of opinion has at last been overcome by the use of braided phosphor-bronze lines, and it would be as well if your correspondents who condemn wire lines were first to try one of these before pronouncing a definite opinion.

Some of them do not seem to have troubled to read what has already appeared on the subject. Thus "Viator," in your issue of Jan. 21, invites Mr. Parker to say how he likes wire used as a hand-line, an application which the latter gentleman has never recommended or, indeed, mentioned.

In return, I should like to ask "Viator" three questions:

1. What kinds of wire has he used?
2. How and where did he use them?
3. Has he troubled to try the new sixteen-strand braided phosphor-bronze winch line before condemning it?

The replies to these questions have no personal interest for me, but should be known to the readers of this paper, so that they may be able to form an opinion as to the value of "Viator's" letter.—Yours truly,

CHARLES S. PATTERSON.

DEAR SIR,—As one who believes there is a great future in wire lines, I consider that the writers up to date have not brought forward the real benefits to be derived from its use.

All sea anglers acknowledge that with flax lines (at certain tides) one has to use very heavy leads, and yet are unable to touch bottom. In company with Mr. A. W. Parker, I have tried the ginger beer wire, but found spring of same caused kink and breakage. During the last B.S.A.S. competition, while out with Mr. A. W. Parker in the Gull Stream off Deal, Mr. A. W. Parker using single phosphor-bronze wire, myself using fine cable flax line (at strong flood tide), Mr. Parker touched bottom easily with 2oz. lead; I experienced great difficulty with nearly 1lb. and most of line out. As I was sceptical of its value, having tried the other wire, Mr. Parker induced me to change rods, and I was converted at once.

Next day I called on Messrs. Ormiston, Old Street, E.C., and obtained ½lb. single phosphor-bronze wire, and following week visited Southend with Mr. Tucker, who, like myself, is very sceptical. After midday we fished off pier extension in a boat, with strong flood tide running. Mr. Tucker very soon had to give up fishing, while I continued with comfort (fishing with 2oz. lead), catching large pout and oodling. Result: another strong convert. On returning, I again called on Messrs. Ormiston, Old-street, E.C., and suggested the wire could be improved if we overcame the tendency to kink; and they recommended me the braided sixteen-strand phosphor-bronze wire, of which they made me 100yds. to test, and, up to the present time, I find it works splendidly. I would, therefore, urge all sea anglers to give the braided wire a trial; it makes fishing a real pleasure; there being no weight, does not hold water, line going straight down and up, and giving direct pull; only one must have a large wheel on rod top, say size of 6d., and, where possible, small counter sunk wheels along the rod, in place of rings, to save friction. Then, with ordinary care, they will agree that wire lines take most of the labour away from sea angling.—Yours truly, ARTHUR MIGNOT (B.S.A.S.).

SEA FISHING AT SOUTHEND.

DEAR SIR,—As a resident in Southend for many years, and ex-medical officer for the Borough, I should like to protest against the remarks of "Observer" in last week's issue. As to the fishing methods of your correspondent and his friends I know nothing, but I do know that the reports published in the *Fishing Gazette* both as to weather and fishing are absolutely correct, and I can further bear personal testimony to the care taken by your local correspondent to obtain the latest and most accurate information. Of course, anyone who knows Southend must be aware that the pier is not the best or nearly the best fishing station, and that although very good fish are often taken from the extension, the best come as a rule from the neighbourhood of the Low Way Bnoy. As to the basketing of immature fish, I am sure every sportsman will entirely agree with "Observer."—Yours faithfully, ALBERT MORRIS, M.R.C.S.

SEA FISHING AT SOUTHEND.

DEAR SIR,—Does your correspondent "Observer" mean to infer that Mr. Hussey's reports concerning fishing here are not correct. If so, I will venture to contradict him. I have known that gentleman for many years as an enthusiastic amateur sea fisherman, and know how carefully he inquires so as to get the information he sends you correct, no matter whether on pier or boat fishing. If you will insert this, you will oblige—Your obedient servant, FRANK MOORE (Boatman, Southend-on-Sea).

CAPTURE OF IMMATURE FISH.

DEAR SIR,—If anything could have given Southend anglers greater pleasure than "Dragnet's" visit, it is the fact that he has been good enough to testify in your widely-read columns to the manner in which so-called sportsmen basket undersized fish, or, as he humorously puts it, "dabs quite two inches in length." That in trying to put an end to this sport we should be assured of your sympathy and assistance goes without saying; but really it is difficult to see how such a desirable end

was to be attained, as ocular demonstration is necessary to realise the extent of the evil. A few, however good their intentions may be, could do little or nothing. Now that complaints have been made by "Dragnet" and "Observer" in your columns, and a personal appeal has been made to me in the matter, it has been decided, after consultation with Mr. Alderman Dennis, to formally approach the Mayor of Southend (F. F. Ramuz, Esq.) on the subject. That his worship personally will do all he can I feel certain, as he is a real good sportsman, but whether he and the corporation have power to interfere is another matter; the fact is, sir, we want a marine Mundella Act, or something of the sort, to deal with scandals of this kind. The damage done to sea fishing by line fishermen is, of course, trifling compared with that done by nets. On this subject I am collecting further information, which I hope to lay before your readers later on, but when one can buy soles at one penny per pair it is clearly necessary that the efforts which have been made in the past to prevent the capture of immature fish should be vigorously kept up if the next generation are to have any sea fish at all.—Yours faithfully,
CHARLES HUSSEY (B.S.A.S.).

THE STONE FLY, &c.

SIR,—I would be glad if you would allow me to say a few words re Mr. Malloch's letter, in your issue of the 21st inst., on the subject of the stone fly.

You may remember that in my letter to you of, I think, the 2nd inst., I wrote about the fly on its emergence from the caddis case. Now, at this period of its existence the fly is a helpless creature; true, it can crawl, but as for flying it is quite impossible, as its wings are not more than, I should say, a quarter of an inch long, and its body is heavy. Even at this early period of its existence as a stone fly, it is absolutely without cover of any kind. The fly remains under the stone, and does not emerge therefrom until it has reached maturity, but when it does come forth "on its own," it is difficult to recognise in the handsome creature the awkward and ungainly looking insect of a few days before. Now is the time it makes its way over the cobbles to the grass on the bank of the river, and when it gets there, if the weather is nice and warm, it is ever on the move.

I have watched it take to flight, which is in the direction of the wind, if there is any at the time; it takes this direction, I believe, not from choice always, but because it cannot help itself. Its flight is, as Mr. Malloch truly says, peculiar, sideways in fact. It does not appear to possess the power of changing the direction of its flight, always going in a bee-line; nor does its sight appear to be good when on the wing, for it meets with an obstruction it goes flop against it.

You will notice that Mr. Malloch in his letter does not introduce us to the fly until it has reached maturity, and so presumably he has yet to learn of its existence under the stones.

As to the statement about the back splitting and the fly crawling out, with all respect to Mr. M., the less said about it the better. I will only say I have at various times observed thousands of stone flies crawling about in the grass and up the stems, but I have never seen any back splitting going on, nor have I observed any covering on the insect at this stage of its existence, for the excellent reason its case had been left under one of the stones in the vicinity.

There is absolutely no affinity between the "creeper" and the stone fly, as, I submit, the results which I have already given you of my observations fully prove. I have a theory regarding the "creeper," but as it is only theory I withhold it.

You were therefore quite right in your statement regarding the larvæ of the stone fly, and I hope you will continue telling your readers, when necessary, that that larvæ is the caddis.—Yours sincerely,
J. HUDSON.

[Things are getting a bit mixed, so we hope to give in an early number illustrations of the Stone Fly and May Fly, and of their larvæ.—Ed.]

A CURIOUS TROUT.

SIR,—I think it may be of interest to your fishing readers, as well as to naturalists generally, to see some particulars concerning the 11lb. "trout" caught in Loch Tay on the opening day. The fish is bright, almost like a fresh run salmon. It is short in length, broad, and firm. The head marks on the cheeks, and absolutely straight tail, are distinctive salmon features, while the body has trout markings, and the fins are those of the "brown trout."

It seems to me to be a "hybrid"—perhaps someone can say whether this be so or not.—Yours truly,
Killin Hotel, Perthshire. ROBERT C. CLEPHAN.
[We see it stated in the evening papers that the fish was a bull trout.—Ed.]

FLAT FISH.

DEAR SIR,—There appeared in the *Fishing Gazette*, Jan. 14, p. 29, the outlines of a lecture upon "Flat Fish." Those dealt with were the most popular examples contained in two groups, those which have eyes on the right side, and those which have them on the left side of the head. The peculiar construction of the jaw was explained, both technically and in a manner likewise easily understood by the non-scientific portion of the audience by means of diagrams which the lecturer exhibited. The halibut was mentioned as being taken at great depths by long lines, and that the long, rough dab was like a turbot (halibut, if you please), but was distinguished from it by having fewer rays in the back fin. The turbot, "the pheasant of the water" (see pheasant, by the authorities), was of a tubby shape. One would have thought the

lecturer had before him the *Trigla hirundo*, the tubby, tubby, tubby, the sapphire gurnard. The brill, the lecturer informed the audience, resembled the turbot in every other particular except that the front of the back fin was not sloped down as in the latter, but stuck up like a cock's comb. It would have been far better to have shown the difference than the resemblance. The turbot being a round fish, smooth under surface, upper surface studded all over with osseous tubercles, and the whole fish totally free from scales; whereas the brill is an oval fish, the upper surface of the body is smooth, without any osseous tubercles, and dotted all over with beautiful pearly specks or stars, and both the upper and lower surface are a mass of scales. The dab and sole were next dealt with, instruction being given how to tell a true sole from a lemon sole. This sounds very scientific, seeing the difference in the two fish are so very positive, viz., the true sole in shape is an oblong oval body, thick and plump, all the upper side of the body is dark brown, scales edged with a deeper tint, the pectoral fin tipped with black, the under surface white. The lemon sole is wider in proportion than the common sole, but smaller in length, is nicely marked upon the orange-brown skin with spots of a rather pretty brown, some of a large size of ashy grey, and on the under side of the head some pretty blue spots; on the pectoral fin when spread out a black patch appears, looking like the wings of a butterfly. Our situation with regard to plaice is very cheering. All the large ones were not all caught as prognosticated in 1873, even if they do come from Icelandic coasts. That certainly was a remarkable and record catch those two founders by the lecturer—both the same weight, on the same day, in the same water, one being right and the other left eyed. In a former lecture it was stated that the bone of the garfish after being cooked turned green; it is naturally green, and seen best when the fish is fresh.

P.S.—Allow me to say, for and on behalf of myself and fellow "dabs," and others of the finny tribes, a word to those who feel so interested in our welfare inasmuch we should not be destroyed in our infantile days, that there is an Act, that appears to be unrepealed, on our behalf, it is the seventh section of the Act 1 Geo. 1, c. 18, where it is forbidden to bring to shore in England, sell, or expose for sale, or exchange for any other goods, any unsizable fish, that is to say: Turbot, 16in.; brill, 14in.; codling, 12in.; whiting, 6in.; bass or mullet, 12in.; sole, 8in.; plaice or dab, 8in.; flounder, 7in. I cannot ascertain whether this Act has ever been enforced, but we do hope all those who do object to us being taken so small will kindly keep these measurements to the front, and set the example by taking none of us less than the size set down for the future, as latterly there has been a deal of slaughter going on among our dear infants, and from remarks we hear made, with pleasure, when they change to another atmosphere.—Yours truly,
SMEAR DAB.

FISHING ON THE TORRIDGE.

SIR,—As I hope to spend a few days in April on the upper Torridge, near Shebbear, may I beg for some information? Is the trout fishing free, by ticket or by permission, and to whom must application be made? What flies are best in April, and are waders necessary or permitted? I should be extremely obliged for this and any other information.

I should also be very glad to know, on reliable authority, if Padstow is a good sea fishing station for August, and if at the same time salmon fishing can be worked.

In the all important matter of summer holidays "one who has been" to any given place is a better guide than "one who hears."—Faithfully yours,
H. F. DEVIS (B.S.A.S.).

THE MIDLAND COUNTIES' FISH CULTURE ESTABLISHMENT.

SIR,—As the rainbow trout has been brought before the public so prominently lately, the following may be of interest to your readers. A small chain of outlying ponds at the fishery here (not used as a rule) had trout placed in them some few months ago. The upper pond contained two-year-old *fario* and Loch Leven trout, the second *fontinalis*, the third rainbows about 7in. long, and the last three-year-old *fario*. Owing to the recent heavy rains, some sewage from an adjoining farm found its way into the upper pond through an old agricultural drain. The consequence was that of the trout in the first and fourth ponds many died, and the rest were removed just in time to save them. The rainbows and *fontinalis* do not appear to have suffered in the least; they feed as keenly as ever, and are thriving. This seems to suggest that there are many waters, which, owing to possible contamination, are unsuitable for our own native trout, yet might grow rainbow trout satisfactorily.

I may say my predecessor, the late Mr. Wm. Burgess, who was rearing rainbows here as far back as 1837, considered them well suited for stocking lakes and ponds.—Yours truly,
WALTER BAILY.
The Malvern Wells Fishery.

NETTING IN THE TRENT, NOTTINGHAM.

SIR,—I am sorry to say the case stated by your correspondent re the above, in your issue of Jan. 21, is only too painfully true. My society was formed some four years ago, one of its objects being to stop foul practices in the Trent, such as blowing up by dynamite, skull dragging, netting, &c. We give a reward of £1 to anyone giving information that will lead to a conviction of persons caught. Such reward was paid by my society to P.C. Bradbury, of Colwick, for taking two men blowing up fish in the water of the Colwick Park Race Committee; also to P.C. Marriott, of Lenton, for two men netting at

Beeston Bend—and we are still anxious to pay again for the conviction of these "spoilers"; but, sir, what are we to do if all anglers who observe these things, as "Working Man Angler" must have done, will not give the necessary information to convict these people? If your correspondent will make himself known to me I shall be much obliged to him.

I may say we are making full inquiries into the matter. Several letters have appeared in the *Nottingham Daily Guardian* upon the subject, one from Mr. Gaskell, president of the Wellington Society.

I may add that Mr. Eddowes, of the Trent Fishery Board, is only too anxious to prosecute if only proper evidence can be brought forward.—Yours respectfully,

HY. HOLLIS (Secretary Nottingham Anglers' Protection Association).

181, Denman-street, Radford, Nottingham.

THE LARGE TROUT FOR THE THAMES.

DEAR MR. MARSTON,—I laid the whole of the correspondence relating to the kind gift of trout, and placing of same in the Thames, before the executive of this society last evening, and I was instructed officially and formally to tender to you and Messrs. Corrie the best thanks of the society for the gift and the trouble taken to ensure the proper placing of the fish in their new home.—I am, dear sir, yours very truly,
H. W. HIGGINS
(Hon. Sec. Thames Angling Preservation Society).

Jan. 25.

FINS OF FISH GROWING AGAIN.

DEAR SIR,—Some time ago a friend and myself caught a number of small pike, spinning in private waters, and returned them marked in the following manner by cutting "one spine from the middle of the back fin," and have since then caught a large number from the same water, but never found one with the above mark.

Can you or any of your numerous readers inform me if you think it possible for the fin to grow together again? A reply through the *Fishing Gazette* will greatly oblige—Yours truly,
A. E. KEMP.

[There can be little doubt, we think, that the fins of fish which have been torn or cut heal up and grow together. We have a rather striking example in the shape of a small pike off which some larger relative had bitten not only the tail, but all the flesh and bones up to the dorsal and anal fins. Yet the wound had closed up, and a new tail was growing when the unlucky fish was killed by a heron. It was sent to us some years ago, and we had it carefully set up and put in a glass case. Dr. Günther, in his "Study of Fishes," refers to the power of fish to in some measure repair and even reproduce damaged or lost fins, and Dr. Francis Day, in his "British Fishes," says, "Fin rays, when broken, may again unite; if lost, they may likewise occasionally be reproduced, but often in an incomplete manner."—Ed.]

METHYLATED SPIRIT v. FORMALIN.

DEAR SIR,—In my letter of Dec. 17 I did not in any way disparage formalin as a bait preservative pure and simple. What I complained of was my inability, on repeated trials, to run pike with sprats preserved in it, although the baits themselves were in appearance everything that could be desired. I concluded something objectionable must be given off, which in some way caused the fish to fight shy.

Mr. J. Napier Sutton, in his interesting reply, put this down to the pike's uncertain times of feeding and its vagaries, and suggested the same result would have obtained if the order of baiting had been reversed. The motionless formalin bait deliberately seized and chewed under Mr. Sutton's observation supports this view, but I cannot accept it as conclusive.

I wrote in the hope that some of your readers had experimented after the fashion I did, and would give us their finding.

During the past twenty years I have used many kinds of baits, natural and artificial, and tackles of all descriptions, and I am satisfied that a medium sized sprat, preserved in methylated spirit, impaled on a good spinner (the Abbey Mills for choice) meets all the requirements, as a bait, of the pike spinner of the present day.—Yours faithfully,
ANTI-GORGE.

[Although we should not like to say it was the fault of the formalin, yet we thought it strange that when spinning for pike in a trout stream last summer, not a fish was taken with the sprat preserved in formalin, although it was tried for hours, and in water where we caught many pike with an artificial bait.—Ed.]

AVON AND ERME FISHING ASSOCIATION.

DEAR SIR,—The following notice will probably interest many of your readers who have fished in this part of the country.

At the annual meeting, held at Brent on the 13th inst., some of the rules were altered to the following effect:

On the motion of Mr. Hare, seconded by Sir Cuthbert Peek, Bart., it was resolved that day tickets should be abolished, that the price of weekly tickets be raised to 10s., of monthly tickets to £1, and of season tickets to £2, and that the number of season tickets (other than landowners' and occupiers' tickets) be limited to thirty, and that not more than two monthly tickets and five weekly tickets should be running at the same time.

It was also resolved that the present ticket holders of the association who apply to renew their tickets on or before Feb. 15 should be preferred to other applicants, and that all tickets should be issued by the secretary (C. E. Turner, Esq., Salcombe, Kingsbridge).—Yours faithfully,
F. HOWARD.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
„ Six Months ditto	5s. 4d.
„ Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	27 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The Life of every Advertiser and Subscriber is insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

SPRING SALMON LURES.

PROBABLY no subject occupies the mind of the early spring angler, next to that of where he is to fish, as that of what he is to fish with. Of course the fly is the lure of lures, and, in spite of all temptations to the contrary, still holds universal sway as the chief lure in the getting of salmon; but there are times and places when other lures can be substituted with more success, and he is very narrow indeed who does not recognise this, although from reasons best known to himself he may not practise it. That there are some keen sportsmen, and good all-round men to boot, who still stick tenaciously to the fly, and the fly alone, in season and out of season, goes without saying; but their ranks are thinning year by year, and in these later days have nearly reached vanishing point altogether.

It is very comforting to occasionally come across one of the very old school, and hear his affectionate eulogies on the supremacy of the fly, declaring his belief, confirmed by actual experience, that he can hold his own against all comers with the fly, and the fly alone, that he desires no other lure, and will have no other. We may not agree with him on the main question

even, but it is ours to listen and his to dogmatise; and when he breaks out on the demon of the minnow-can, the phantom and the Devon spinner, the prawn and the spoon bait fisher, he is really beautiful. What a field he has to tilt at, and how he does go at it! His arguments against his opponents' methods may be stale, may have been exploited long ago, may have been given up as untenable and one-sided, but in his mouth they are invested with a freshness which, if not convincing, is at least attractive, and commands a certain measure of sympathy.

As a rule the average up-to-date salmon angler prefers the fly, when the chances are in its favour, only calling in the services of the spinning rod as a rest, or under conditions which entirely put the fly out of court, such as a heavy water coloured deeply, or teeming with ice floes. When he does not interfere with his neighbour over the way, from the narrowness of the stream, or other cause, then he may suit himself; but, when a spinning bait disturbs the joint right in a common salmon pool, from the one using it and the other not, then it is only but courteous and sportsman-like, in the true sense of the term, to discard it and stick to the fly alone, purely out of regard to the other's sensibilities. Opinions on salmon and salmon angling lures will differ as long as the world lasts. There may not be much in the idea of disturbing salmon by putting a phantom over them, more than in disturbing them by jerking a large salmon fly after the same manner, as far as the salmon really are concerned; but as long as such an idea exists in the minds of gentlemen worthy of due respect, so long should such ideas be duly humoured by those sharing joint rights. We join issues with the dear old school thus far, and would urge upon all true sportsmen, when they find themselves thus placed, to stick to the line of least offence, and adopt the fly, and the fly alone, when there is any trouble likely to be caused in the opposite camp.

No better instance of the efficacy of the fly could be given than that which took place on a section of the Dee last spring. On the one side the Carlogie party used the fly, and the fly alone, and killed some sixty fish, most of them being got by Mr. Haslam, the lessee, and Mr. G. M. Kelson, his guest. The other side of the river was fished by three rods from "morn to dewy eve" with everything, yet they got little more than a third of the sport which Mr. Haslam's party secured, in spite of the persecution they were put to from the others "perpetually being in front of them with a shower of phantoms," as Mr. Haslam put it. That he was nettled in the extreme he did not try to hide, but he had to grin and bear, and take consolation from the fact that he was killing two fish to their one, in spite of their army of spinning baits.

This instance, without referring in the least to the merits of the case, is another proof that fish are not so easily scared as most anglers seem to imagine, and especially those who stick religiously to the fly, and the fly alone. It only shows that the fly was preferred to the phantom even in a small, clear water, and when dealing chiefly with potted fish, and that the prawn was nowhere (for it was also *en evidence*) under very favourable conditions for introducing it; and, above all, that neither the phantom, Devon, or prawn, used constantly by the one party, interfered much, if any, with the other's sport. It reminds us of the dictum of the late Mr. Fred Pickop (latterly Pickop-Dutton), a famous salmon angler of universal experience, wherever salmon were to be got, and money could purchase the right to kill them, that the popular idea of disturbing a salmon pool by fishing it with a spinning bait, or any other lure, was "bosh of the first water." He often put his belief into actual practice, and when the fish were "dour," and off the rise, he set his gillies to stone the pools to "stir them up," as he said, and was frequently successful in landing a fish within an hour of a good stoning. We have seen him at the job, and although we neither care to try it ourselves, nor recommend it to others, yet the fact remains all the same that Mr. Pickop rather liked disturbance than otherwise.

The number of spring flies is legion. If the apostolic 'plaint, that the making of hooks is a weariness of the flesh, holds good in the present age, truly the application of such a truism may without cavil be applied to the making of salmon

flies. Every district has its own *clientèle*, every river its own local patterns, and every gillie or keeper his own local favourites. Yet a goodly list of standard flies have held their own from time immemorial one might confidently assert, in spite of the eternal round of competition, and are universally adopted more or less wherever salmon are looked for. Of these, the best known are the Jock Scott, the Eagles (of various colours), the Akroyd, the Butcher, the Bumble, Childers, Druggist, Dunkeld, Durham Ranger, and other Rangers, Dusty Miller, Gordon, Highlander, Herons by the dozen, Jeannies, Jockies, and March Browns by the score; while the Popham, Rintoul, and the Doctors (silver, black, and grey) must not be omitted from any list; and white, red, and turkey wings will be found in almost every fly book, as they assuredly are in every salmon fly list.

There are over 200 named salmon flies known to Scotch anglers, and some forty or fifty of these more or less applicable to each of the more famous salmon streams, such as the Tay, the Dee, or the Spey; but we are confident that with an assortment of the various sizes, say, from 2 to 4/0 (half a dozen of each), of those named above, the early spring angler may risk going anywhere.

The same big patterns are not now so much in vogue as was once the case. At one time it was the current belief that nothing less than a 3in. or a 4in. iron would kill a spring salmon, and the idea of reducing the size of the lure as the temperature rose was little thought of. The general practice was to reduce the size of the fly as the season advanced; and with the advent of summer, or very small waters at any other time, to cease salmon angling altogether. Matters are better understood now at the waterside, and the season is not many weeks old till the smaller patterns are freely requisitioned. Of course, in frosty weather in heavy waters, and of an evening at all times, the largest patterns in the book or fly case must not be neglected.

In these northern altitudes there is a long twilight in the early spring time, called by some the "angler's chance," and very appropriately too, for it is often the only chance he gets in the round of the clock for days and weeks on end. Should he miss this last cast he misses the best chances of the day, and many experienced anglers will rather want their dinner for an hour than forego the opportunity of being at the waterside when the sun commences to dip into the western horizon, and for as long after as they can see to cast across the pool. It is then that a big Eagle (white), or a Gordon, or a Heron (with turkey wing) is requisitioned from amongst the largest patterns, in the book, and, betaking himself to the head of some favourite pool, he will carefully cover the dark and swiftly flowing current with just as much line as will reach over the fatal "lie." A flash in the growing darkness, a tug, and the bend of the rod proclaims to the expectant gillie that his prognostications of "a fish" are about to be realised. It is then that he forgets the relative positions of master and servant for the nonce, and assumes the command. It is then that familiarities are indulged in, nay, welcomed. The deepening gloom has whetted his local knowledge of the difficulties in the way; and the "keep up your rod here, sir," "mind your feet there, sir," "keep him off the other bank," "mind the kelpie-stone," "this side of it, sir," and so on, until the steel is home, and Sandy or Donald, knee deep, wades out with a wriggling, silvery beauty of 10lb. or so, and saves the day from another blank.

G. M.

THE LATE MR. WILLIAM BLACK.

"Not only by his novels did Mr. Black add to my enjoyment of life. He used to rent the Oykel for spring fishing, and invited me to go, weather permitting. The March weather did not permit; there was frost and snow. But heavy warm rain fell in Edinburgh, and I telegraphed to Brighton and went north, being joined by my host at Inverness. We had a week—delightful to me—together, in a little bleak lodge, separated from the road by the stream. She was in good order, and we actually caught salmon, shining from the Kyle whereby Montrose met his last defeat. Partly that I might have the best of it, partly

because he was rather languid from an illness, Mr. Black did not show much keenness. There was a gillie, as lithe, and nearly as long, as a salmon rod, who ran up to his cast as Mr. Kortright runs up to the wicket, and threw a monstrous long line. He could cover a swirl in the big pool which we could not dream of reaching, and always got a fish out of it. Mr. Black and I had one other difference: he was very light on a fish, whereas I believed in more strenuous measures, though never so hard on them as a lady of my friends, who drags a fifteen pounder forth with the scantest ceremony. The gillies sided with him, but in their hearts I suspected them of believing in the butt. That was one of the weeks which I should be glad to live over again."—Mr. Andrew Lang in *Longman's Magazine*.

BIG FISH IN AN OLD DUCK DECOY.

(Continued from page 56.)

FORTUNATELY I had a spare top joint to replace the broken one of the Captain's rod; so I fitted him up again with new snap tackle and a live bait, then left him to his own resources, and he was not long before he hooked and landed a 5lb. jack. My companion also was having sport; he had captured a couple of fair-sized pike, while I was trying round about likely looking pikey haunts with paternoster. My dace was very soon appropriated by what seemed to be a heavy fish, which, after some desperate trials to escape, giving me fine sport, I gaffed and landed—a fish of 17½lb., in perfect contour and condition. Thus we went on until past noon, when we saw coming across the park a lad with a basket on his arm, and an earthenware jar in his hand. This was our lunch, so we gave over fishing for awhile, and seated ourselves on the bole of an elm overthrown by winter storms, and enjoyed the meal sent us by the niece of the old Baltic captain.

Then followed the post-prandial pipe, with a "lubrication" (or two) of whisky, and we recommenced fishing. For more than an hour I tried the water alongside the sedges bordering the lake, when, on reaching the flood-gates, I got a fish of fair size. My companion meanwhile secured a couple just over the minimum weight, while the Captain caught nothing. Thus the time wore on until we were warned by a distant church clock that it was time to wind up lines, pack up rods, and return to our inn.

The close of the afternoon indicated a frosty night, and as we walked across the park next morning minute icicles glistened, gem like, amid silver traceries made by the hoar frost on the leafless trees. It was a fairy-like scene, dissipated all too soon when the sun gained altitude and diffused some warmth. Feeling sure that the big fish which had wrought such discomfiture to the Captain would most probably be somewhere near about where it had retreated on the previous day, I began fishing the deeps, and nothing would induce me to vacate the pool, where I fished on until noon, when, in the waters of my choice, I "struck ile," my roach was seized and savagely shaken, and the pike made for the island at a great rate. The fish went ahead without a pause until 60yds. of line were run off my reel, its automatic check all the while making that "music" so sweet to an angler's ears. Because of the partly submerged boughs and the sedges round the island I had to give the fish the butt and hold on, while my cane rod bent as if it must break; but it was made by Carter and Co., and it, with the salmon gut trace, stood the test stanchly. I ran along the bank, got a steady side pull on the pike, thus turning it, and then had it well in hand.

The fish made other but less impetuous rushes, and next a detour through the deeper waters of the lake, but I kept recovering and winding up line, and at length got a glimpse of the fish. I had hooked the monster pike the steward of the estate had previously told me of, which had many times been hooked, but always escaped by smashing his would-be capturers' tackles, so seeing the "tough customer" I had to fight and subdue, I played it with the tightest strain possible within the breaking strength of the line. This in time exhausted the fish, and I got it to the bank, when on leaning forward over the sedges with my gaff

it again made a desperate plunge to escape, but within another five minutes it lay, "dead beat," alongside the margin of the pool. It was much too beautiful a fish to disfigure by gaffing carelessly in its body, so I drew the point of the gaff into (but under) the pike's lower jaw, dragged it on to the green sward, "administered the priest," and laid the fish to rest among moss and ferns. Then my companions and I celebrated the capture by going through the usual ceremony, viz., "taking an observation" through the bottom of a tumbler, and I cared not for any more fishing that afternoon, but watched the others angle and capture some nice fish before we packed up rods and tackles. This big fish on reaching London weighed 30½lb. It was a female, in perfect condition, and for contour and colour the most elegant I ever saw. It measured 43in. in length, and 24½in. in girth. The "pikess" was preserved

SOME ILLUSTRATIONS FROM THE WYRESDALE FISHERY PROSPECTUS.

WE have to thank Captain Peter Ormrod, the very enterprising proprietor of the Wyresdale Fish Breeding and Rearing Establishment, near Garstang, Lancashire, for the loan of some very interesting illustrations from his New Price List and Prospectus of the Fishery.

Although the rainbow trout has been made a special feature of at the Wyresdale Fishery, we are glad to know, on the authority of Captain Ormrod himself, that the greatest attention is given to producing in large numbers our native trout of the best breeds. We notice in the price list, common trout, *Salmo fario* (the best trout in the world in our opinion) Loch Leven trout, sea trout, salmon, Windermere char, grayling, &c.; also

A VIEW OF THE LARGE LAKE, CLEVELEY.
(Wyresdale Fishery).

and set up by Messrs. Saunders and Son in their matchless way, and is acknowledged to be one of the best specimens that adorn anglers' club-rooms. It can be seen at the headquarters of the Serapis Angling Society, where also is a cast of it that was made by the late Frank Buckland, and painted to life by that clever artist, the late H. L. Rolfe.

ALFRED JARDINE.

BRITISH SEA ANGLERS' SOCIETY.

DR. C. S. PATTERSON will lecture on "Flat Fish" before the members and friends of the British Sea Anglers' Society on Wednesday evening next, Feb. 8, at their headquarters, Cannon-street Hotel.

the following coarse fish: Chub, roach, perch, and dace. So that all who are interested in fish culture, and have not yet seen this most interesting and admirably produced catalogue, should do so.

As a specimen of the illustrations we give a view on the large lake at the Cleveley Fishery, which is an extension of the Wyresdale Fishery. Certainly, Capt. Ormrod will have shortly, if he has not already, one of the largest and best equipped private fish breeding establishments in the world.

NATURAL FISH FOOD.

The following extracts and illustrations are also from the Wyresdale prospectus and price list, and give greatly magnified representations of minute forms of food which play an

immensely important part in the economy of fish life:

YOUNG TROUT:

HOW THEY FEED AND HOW TO STOCK THEM.

"Very little being really known about what constitutes the main food of trout and char fry and young trout up to, say, the first six months of their existence, a few remarks on this point may be helpful in finding out the times and places best adapted for the planting of the different trout kinds.

"Fishing hooks and fishcultural guides give far too large a place to the *Gammarus pulex* (the fresh-water shrimp shown in Figure 1) as a food for trout.

"It is perfectly true that it is readily picked up by small and adult trout of all sorts, but the very fact of its being so easily visible in the clear water of the typical trout stream and the shallow bottoms of some lakes has made us overlook the host of small animals that really stock the young trout's larder to a very much larger extent than does the *gammarus*.

"An investigation into their food will help us to realise the conditions under which the different species of trout, char, brown trout, and rainbow trout may best be planted.

"The range of the char is the most restricted. We find it in the very coldest spring water and deep clear lakes, in water showing little or no fish food to the naked eye, but under the microscope the brown frothy matter, which a very fine meshed silk muslin net will collect from

the newly laid egg. Single water-shrimps, if undisturbed, are supposed to produce some 13,000 millions of shrimps a year, but luckily the trout will account for some of these.

"The cyclops are less prolific, but whilst the shrimp stops laying eggs about June, the cyclops go on much longer; in fact, the warm summer days of July and August see them at their best, and 4400 millions is the usual estimate for one cyclops family during a summer.

"Very few trout fishers will have seen a cyclops, fewer still the allied kinds, Figs. 5 and 6 (daphnia and cypris), which are also at their best when water warms up in summer. They are not easily seen, being so small. (We give the fully-grown animal in natural size with each enlarged drawing.) Cyclops do not readily run into millions in cold brown trout water, but the lower reaches are full of them in summer time, and they appear in greenish clouds in the warmer ponds and reservoirs where the rainbow thrives."

ANGLING NOTES IN AUSTRALIA.

THE sport to be obtained by the angler in Australia is extremely varied, a number of different sorts of fish being met with, most of which are not found at home. To any fellow sportsman, who may contemplate a visit to these

town called Frankston, situated about thirty miles from Melbourne, which, we were informed, was a good locality for flathead. This is a fish somewhat akin to our gurnard, only its head is flattened and armed with two sharp spines, one on each side. The day we had chosen for our trip was not a pleasant one as regards weather, as there was a hot wind blowing, which makes one feel good for nothing. It was no use grumbling, however, as this was our only opportunity, so we had to make the best of it. On our arrival, we immediately proceeded to the pier, and after a little difficulty, it being a Bank Holiday, we managed to secure a boat. We knew nothing about the best places for fish, so, after sailing out a little way from the shore, we anchored.

It was some time before a bite was felt, and that came to my line, and proved to be a small skate. Then, after a long interval, a small shark made its appearance, which was speedily knocked on the head and thrown overboard. These small sharks are a great source of annoyance when ground fishing near the coast, and appear to be mostly of the man eating variety. Time was now getting on, and there only remained to us about two hours before the train left for Melbourne, and we had not been very successful so far. Noticing a boat sailing slowly, in which a man was catching flathead, we up with anchor and adopted the same tactics. This plan answered well, and we were soon hauling up flathead two at a time. In the excitement I got a prick from one of the spines of the fish which made my finger bleed considerably. My friend also was served in the same way. However, beyond the inconvenience, no after effects were felt, and presumably these spines are not poisonous. When extracting the hook it is best to place your foot on the head of the fish, for, if handled, it is almost certain to inflict a wound, which, if not poisonous, is at any rate troublesome for the time. When we abandoned operations for the day our catch amounted to three or four dozen flathead, and if we could have stayed longer we should have taken a lot more. For flathead the best lure is a piece of the same fish, and the boat should drift slowly over the ground, the baits just touching the sandy bottom. When cooked the next morning our fish tasted exceedingly nice, and flathead are really one of the best fish to be found in Australia from a culinary point of view. They average about 1lb. to 1½lb. in weight, but sometimes one weighing 4lb., or even more, will be met with.

Trevally is another fish which affords most excellent sport. Numbers can be had at the "Rip," a ledge of rocks near Queenscliffe, at the mouth of Port Phillip Bay. There are huge masses of long seaweed here, in the midst of which are open spaces of water. The boat is rowed into one of these pools, and made fast to the seaweed. The trevally may be observed swimming about in the clear depths, and are readily taken with hand-lines in large numbers.

In the Salt Water river, a tributary of the Yarra, large trout may be caught, and splendid specimens ranging up to 6lb. or 8lb., or even more, are occasionally secured. A phantom minnow is considered to be the most successful lure, and they will hardly ever look at a fly. Although I tried once or twice for these much valued fish, I never managed to get hold of one, and I fancy they are difficult of capture. At Healesville, an easy distance by train from Melbourne, some fly fishing may be obtained in the Watts river, and, besides being a beautiful place, should be well worth a visit by the angler.

In nearly all the rivers of Victoria there is to be found a fish called the blackfish. It is not unlike a trout in shape, but is darker in colour and slightly spotted. In some of the small creeks near Fern Tree Gully they abound, and may be caught easily on the roughest gear. A line such as is employed in worm fishing for trout in clear water will be found as good as anything. The still pools at the end of runs are the best places for catching blackfish.

I had occasion once to go on a prospecting tour to a distant part of Victoria, viz., Croajingo-long, a district little known as yet, but watered by some fine rivers. One day I determined to try a small stream of beautiful clearness, which was said to contain plenty of fish, though no one hardly ever took the trouble to fish there. The next question was how to obtain bait. Flies I had none; all that my kit contained was a few

such waters, dissolves itself into myriads of beings so small as to be practically invisible except under a powerful glass. Most of them are transparent, a few of greenish and brownish tint, all are of the most beautiful and regular shapes like tiny combs, beehives, or needles, and all rapidly moving; the large class of *Infusoria* and *Diatoms*, and may be classed as animal cells. They will live and multiply even in very cold waters and deep down in the lakes.

"Fig. 2 shows us one of their kind. They seem to form the staple food of the very young char, and serve in turn also as food to the cyclops (Fig. 3), whilst themselves living on decaying plant life and on forms of life more akin to the plant than to the animal kind. (See Fig. 4.)

"Brown trout fry do not seem to care for them much, but go from the beginning for coarser food, in the first place for the cyclops, to a smaller extent for the young *pulex* (Fig. 1). Both are very prolific, though the *gammarus* will not multiply rapidly till the beginning of May, when the waters of the lower reaches begins to warm up. Winter eggs of the *gammarus* can stand any amount of cold and great want of moisture, and in fact seem to thrive better after having been touched by frost. They do not produce the ready-made water shrimp, but only a kind of shrimp-larva.

"The summer eggs are laid every fourth day, and even every second and third day if the water warms up well, and ten days are sufficient to build up a fresh breeder from

far distant Colonies, an account of some fishing I have enjoyed there may prove interesting.

People in Australia have usually very little time to devote to the quiet pastime of angling, and it did not appear to be an amusement that was greatly indulged in. Their time is principally occupied in more exciting pursuits, such as horse racing and money making generally. However, for anyone who takes the trouble to look for it there is in most parts of Australia an abundance of fish inhabiting the sea and rivers. The harbour of Adelaide I am only acquainted with from stopping there a few hours on the voyage out, but there appeared to be plenty of fish here, and we caught a good many from the steamer without any trouble. Whiting, which somewhat resembled our own fish, and small mackerel principally made up our catch.

Melbourne is a very good headquarters for the fisherman. There is no necessity to bring out gear, every kind of tackle being readily purchased at the Melbourne Sports' Depot, or at Messrs. Chambers and Seymour's. I recollect one day journeying with a friend to a small seaside

hooks and line that I thought might probably come in useful. However, after a little digging, a worm was unearthed, which, without exaggeration, must have measured 2ft., and small pieces of this broken off lasted me all day. It was a charming stream, with lovely tree ferns growing along its banks, and the fish were entirely unsophisticated. By one o'clock I had eighteen fish, mostly blackfish, and they averaged about $\frac{3}{4}$ lb. apiece. Amongst my catch were two or three very delicate, slender fish, which I presume would be the Australian grayling; these, I believe, will sometimes take a fly.

Of course, in the larger rivers blackfish attain a much larger size, and they may be caught weighing 6lb. or more. As far as I know they will not take a fly, a worm being the best bait, though, no doubt, a grasshopper would also prove killing.

Many different species of fish inhabit the large rivers, the Murray cod being, perhaps, the most important. It grows to an enormous size—some weighing 100lb.—and quantities find their way to the Melbourne Market. But it is not a good fish from a culinary point of view, the flesh being insipid and possessing a muddy flavour. At Wangaratta, on the Ovens river, I remember catching one about 2lb., and several other sorts of fish; but the heat was intense at the time, and fishing could only be enjoyed in the cool of the evening. Even then the mosquitoes rendered life miserable. Good sized Limerick hooks should be used for Murray cod, and the line necessarily must be a strong one. As some of the rivers are very swift running, a lead is essential to keep the bait at a proper depth.

Sydney Harbour is not at all a bad fishing ground, many varieties of fish being obtained here. The black bream is one that is highly esteemed for its edible qualities, and in some parts of the harbour may be caught in numbers. One day I recollect spending two or three hours in a small boat near Mossman's Bay, a small inlet opposite Sydney. It was terribly hot, and we fished in our shirt sleeves, but still, we had excellent sport. There was hardly any cessation in the hauling, and as the fish were near the surface a yard or two of line overboard was quite sufficient. Our catch amounted to between six and seven dozen fish, consisting mostly of mackerel (identical with our own mackerel, but not so good to eat), and a few bream. Then there is excellent sport to be obtained outside the entrance of Sydney Harbour. A sort of fishing excursion steamer runs to the ground on a certain day, and tickets can be obtained for a moderate sum. A party of anglers is thus formed, who spend a pleasant holiday in this manner.

The steamer anchors on the proper marks, and strong hand-lines are used. The fish expected are schnapper, which attain to a large size, some of them weighing 60lb., and it is exciting work hauling up these monsters. Schnapper are grand fish, like a huge bream, and have a curious protuberance on the head which gives them a strange appearance. One of these fish, which possessed a larger bump than usual, I saw dressed up in a shop window in Melbourne with a pipe in its mouth, and it looked just like an old sailor who had imbibed too freely. They are considered a good fish for the table, and fetch a high price. In this kind of fishing sharks are again a trouble, and will often bite a fish in two before there is a chance of getting it safely into the boat. Large sharks are much dreaded, for they will frequently break the line, their sharp teeth soon effecting this. Fishing for sharks is carried on systematically in Sydney Harbour, which swarms with these pests. Fine but strong lines are used, and when a shark has been successfully hauled to the surface it is despatched with lances and dragged into the boat. A friend of mine caught one 8ft. long on an ordinary hand-line, and it was a long time before the fish was sufficiently played out to enable him to tow it to the shore. Any angler should be satisfied with such sport as this.

FAL., JUN.

The frontispiece of the February *Scribner* is a special portrait of Senator Hoar, taken a few months ago in his library at Worcester; and the other art features are illustrations by Yohn, Railton, Frost, Chominski, Child, and a discussion in the Field of Art of "Æsthetics in our Universities," by Henry Rutgers Marshall.

TROUT HUNTING IN THE FATHERLAND.

IN spite of the superscription, this is quite an ordinary fishing yarn, except that it is the real truth, and there is no intention in the choice of title of provoking comparison with the immortal Sir Walter by describing a hunt after the lesser *Salmonidae*, such as he tells of on the Solway in one of his histories, where the noble relation of the *Salmo fario* is pursued by a man on horseback and speared. The name should really be "Hunting for Trout Fishing in the German Fatherland;" but that is such a mouthful that I fear it would prove too large a fly for any accustomed to the *Fishing Gazette*. The way to the place is best untold; if the path to Paradise were made too easy everyone would be going there, and the place would be spoilt. You can ask Cook if you want to go, or any other agent; but they don't know—I have asked them! We (that is my better half and the baby and I) happened to have a friend in a great town celebrated for its beer, not far off, and we asked him if there were any trout in the rivers hereabout. He thought there must be, as he remembered eating some at various summer resorts; and, after due consultation of a map, advised us to go to a town where, according to its geographical representation, there were one or two rivers and a lake. This town is fairly well known to tourists, and seemed as likely a centre for our quest as any other, so we went there. We saw the lake, and so trusted that the map might also be right about the rivers. My wife, who can explain herself in German without having recourse to pantomime, interviewed the proprietress of the hotel. Of course, the landlady assured her that fishing was to be obtained in the neighbourhood when she heard we had come for that, and should not stay long unless we found some amusement in that way. However, it was getting late, and the question of dinner was almost as important for the time as the prospect of trout fishing. Daylight, however, renewed our search, and we requested more particular information as to fishing. We were informed that those who fished did so in the lake. We didn't. We had seen those, anxious rather to while time than while trout, walking sadly by the shores of German lakes, with tackle that looked like a movable warning to fish to beware. We heard of a miller who had a little bit of water on the brook which worked his mill. This sounded better, so we wrote down his name, and took some German children to show us the way. He was out, and the stream did not look very promising. However, it was better than nothing, and when we looked him up the next day he readily granted permission to fish, but told us there were not many trout. I only found one, and four weis fish, which take the fly better here than in Austria, and make more of a fight about landing when their passage is booked. They would not be so bad to eat if they had not so many bones, but these are apt to choke one off unless one is very hungry and time is no object. Well, this fishing wasn't good enough. Next we heard of an engineer who is constructing an electrical railway; he had the right of fishing in a good river. We were informed that he was an ogre, and that it would be idle to ask his permission. But feeling sure that even in the Fatherland the polizei would have no case against us if we ventured to ask for a day, we called on him and found a friend. He could not give permission, as his right was not transferable; but as there were no trout in the river he thought we should not mind. Then he kindly wrote down the name of a river two stations distant, which contained plenty of trout and grayling. We looked up a train, and were in such a hurry that I forgot to replenish my pocket, a fact which I speedily discovered at the station, some distance from the hotel. We only had about ten minutes before the train started, and, although I made a gallant offer to my wife to attempt a record of one a half miles in that time, I hoped she would say no. I am not so young as I was, and, she remembering the shortness of my breath and the infirmities of age creeping on, thought that I might do better with my watch than time my racing pace. As she is of prepossessing appearance and an open

countenance (N.B.—She is not so old as I am), she succeeded in raising a loan of 5 marks on it, and the station master pressed her to take more if she thought she would require it. So we took return tickets, and went. We did not know who had the right of fishing, but were directed to the proprietor of a sawmill. However, on asking at the mill where Herr H. might be, we heard that he was in Heaven. His widow, however, who held the right, readily granted permission when she heard that I would pay for any fish I wanted, and bring her any others that I might catch, for trout and grayling are duly appreciated in this part of the world, and sell at 4 to 5 marks per lb. Then we inquired where we could get lodging, and found she had two large rooms at either corner of the house with three windows each, in one of which apartments I am writing at present. I had not brought a rod, on the same principle that one carries an umbrella to keep off the rain. I thought if I took tackle with me my presumption might meet with its punishment in leave being refused; at all events, I find that if I make quite certain of landing a trout after he has been hooked, I am sure to lose him. So we arranged to begin our sojourn on the following Monday, but I made a note to come and fish on the very next day. Circumstances, however, remotely connected with foreign affairs, decided us all to commence our sojourn in the mill-house sooner than arranged. It came about in this wise. We had an impromptu dance in the hotel on our return, and when we did get to bed, hot and tired (for the floor was heavy, and the German girls not over light), some drunken boors, having carried on their bout until they were turned out of the wirthzimmer, continued a lively discussion on politics under our window till daylight was near, at which time my wife threw cold water on a proposal to annex the Transvaal, and the house dissolved in some haste, though some lively members resolved themselves into committee to discuss the question of whether the closure had been properly applied. Now this was very mean of my wife, for I had offered to supply the politicians with the contents of our jug at a much earlier hour, but she would not permit me to have recourse to such "common or garden methods," on the ground that it would bring disgrace on my countrymen. Then she waits till she thinks I have forgotten the idea, and enjoys all the sport of the members' discomfiture to herself. However, as this was by no means the first occasion on which our sleep had been broken and our rest had been marred, we decided to move on to our fishing tryst as early as possible the next morning. I was up at six, and really did a great deal of packing; but the luggage was not quite ready in time for me to take more than my creel, the fishing rods and tackle, and my wife's parasol, which happened to be done up in the same bundle. My better half, fearing that I should miss the train if I waited for any more baggage, most kindly undertook to bring it with her, and did not even ask me to take the baby. I was to explain in my best German that the rooms were to be prepared by the evening, and some food cooked; and after carefully preparing my sentences I think I mixed the two together in firing them off, and requested them to be sure and cook the bedclothes well and air our evening repast very thoroughly. However, the good people understood somehow. I asked for a boy to carry the fisch-lager and show me the way. This receptacle is a sort of elongated beer barrel, and is an inevitable requisition on German rivers, as the trout caught are kept alive until they are required for their true vocation in life, viz., the dinner table. As I fitted the light rod together, and got out my line and flies, I heard the boy remark to a friend that bigger hooks and worms thereon would be likely to do more execution. The mill race was the first place tried, and as the water was heavy I tried rather large flies and a medium cast, but soon discovered that I had under-rated the trout's intelligence, as the first one jumped over the line, and the second attempted to drown the fly before swallowing such a mouthful. A change to a finer cast with a Hofland's Fancy and a Dun dropper met with less ridicule, and an engagement was speedily effected, but the match was broken off, probably because the boy made certain of the engaged party landing, and filled the fisch-lager with

water for its reception. The gold tinsel did not do so much execution as the sober-coloured Dun, so a change was made, and with one or two losses and small fish returned to the brook, the first hour resulted in two brace and a half of bright, handsome fish, mostly very thick for their length. They are wonderfully game, and fight to the last, and as they have plenty of natural advantages in the shape of weeds, bushes, and wooden piles, to say nothing of an occasional snag of a fir tree, with the branches still on, their capture is by no means assured after they have taken the fly. Except where a rise was marked, I found that fishing downstream with a long line was quite as effective as the favoured dry fly from below the fish; but in parts of the stream, where it runs through a wood, there is plenty of opportunity of practising casting into difficult places under overhanging branches. One of the most curious incidents of the day was a rushing rise at the fly along the top of the water by a fair sized fish. He was half out of water for over a yard, and reminded one of the action of a duck that has been frightened. He repeated the performance when I tried for him again a little later, and on both occasions missed the fly, though, as far as I could judge, I gave him plenty of time. A fine grayling afforded an excellent bit of sport. He took the fly in the wood in a sharp running piece of water, with a weed bank in the middle, dividing the brook into two parts for about 25 yds. There was a small fir tree in front of me, which prevented my getting downstream after he was hooked. He bolted away, giving a beautiful sing to the winch, and I thought I must lose him. When he reached the end of the weed bank I checked his pace, whereupon he showed his displeasure by coming to the top and shaking his head violently, and then trying one or two leaps. Finding these ineffectual, he tried the other side of the weed bank, and I recognised that as I could not get down to him I must try and bring him upstream as soon as possible. Like most grayling, his first efforts were the best. He yielded to the strain, and came up the rapid channel more easily than I thought for. The sight of this beautiful fish and the heaviness of the fish-lager had by this time altered the boy's opinion as to the mode of fishing; his delight knew no bounds, and he made up his mind to put no more belief in worms. Another grayling joined the other just after, and as mid-day was sounding I returned to the house, for I thought the boy must be ready for his dinner, as they begin the day very early here. I picked out the smaller of the two grayling and a small trout, and asked my hostess to have them cooked for me in an hour's time. What a repast it made with potatoes boiled in their skins and the flavour of the grayling fresh upon them! "Thyme scented like Hymetus." After doing justice to these good things, and the beer of the Fatherland, which never gives a headache unless one drinks too much of it, I went with the miller's son in a boat on the upper part of the stream. The German schiff is flat-bottomed, like a punt, except that the sides are shaped so that only the stern end sits on the water. It is propelled by a paddle in the same way as a canoe of Canada, but the man stands to his work—and he has to work! This part of the river is entirely different from that below the mill. At places it broadens out into lagoons, with reeds standing high on either shore, and a carpet of strange sponge-like looking white weed, which my canoe-dler called moor. We put up a lot of wild duck. I say we, but mean he did, for all the work was done by him. I sat and smoked, and enjoyed the sun and the mirrored mountains in the blue water. At times we came on strange, deep holes, I do not say fathomless, as I promised a true yarn, but yards and yards deep, the colour of the water like the purest sapphire, and yet so clear that everything could be seen down to the coral-like growth on the bottom. I feel sure that most folk would find their faith in water sprites and Rhine maidens more easy after a visit here. When I took my wife there she remarked that it was difficult to believe that "The Water Babies" (C. Kingsley) wasn't a true story. We only saw one or two fish, and as I felt sure they had seen us, and as they were not rising, I declined to make any advances towards a closer acquaintance. After about an hour we came to the source of the stream, which bubbles out of the mountain

side quite a fair size, too big for an ordinary mortal to jump even if the land were not soft. It was a lovely spot; there was a rough chalet, where we found a couple of peasants, and the tinkle of bells on the necks of goats sounded pleasantly in one's ears. After a chat with the peasants we drifted down again, and I tried over one trout, but the boatman, being unused to long casting, got me almost on top of the fish before my line was out. The next essay met with success, much to my surprise, for the sun was bright and the water like glass. His capture was almost frustrated, however, by my too eager boatman, who wanted to get the boat down to him and net him at the first start. He would have applied my net to him (or the line) as it was lying on the bottom of the boat, but fortunately it is a folding joint and telescopic handle, which he did not understand, so the fish was saved. Another joined him almost immediately, just at the end of our trip. On returning to the mill I heard that my wife had come about two hours earlier than I expected. I was going to meet her by a train arriving at five, to make amends for my desertion in the morning.

As she had arranged to visit the lake in the watering-place we had been staying at, I thought she would not catch an earlier train. She was in the garden, and gave me whispered warnings not to awake the youngster, quaintly cradled in a clothes basket. Another brace below the mill ended the day's fishing, and a pleasant one it was, but each day leaves something more to be longed for, and in this case it was the right to fish the big river into which the Mühlbach flows. Whether that will also come I do not yet know, but we think of inquiring very soon, and if so I will write again. I fear the fish will not prove so fabulous in size as the miller's son says, but after seeing the caverns on the mill stream upper water I think I could believe in whales in the bigger river.

W. D. G.

THE REAPPEARANCE OF IZAAK WALTON.

BY "KRYPTON."

"TWAS on the banks of the silvern Lea, not far from Hoddesden, where I had been sitting for the better part of a warm August day endeavouring to lure the perch from their weedy fastness. The river was low and bright, and sport had been poor, but the beauty of the scenery amply compensated for lack of sport, whilst the glorious sun effects on the shimmering stream more than made up for the enforced idleness of my rod.

No bricks and mortar offended the eye there. 'Twas a pleasaunce of beautiful rurality, and barring an open-armed scarecrow in the field behind me the evidence of man's work was entirely missing. No one had passed me all the morning, and I fear an occasional doze had been indulged in, for the weather was sultry and sleepy.

At about two o'clock (I wish to be as precise as possible in this astounding narrative) I had put on another worm, and was seated upon a fallen pollard willow preparatory to relighting my pipe, when I saw a man approaching me, coming along the river bank. He was still some hundreds of yards away, and I took stock of his appearance, which was queer to say the least of it.

A man of medium height, more than average rotundity, and of cheerful countenance. He wore a Puritan hat with a broad flapping brim, which shaded his ruddy face; a flowing moustache failed to hide the smiling mouth, below which an imperial beard, barely turning grey, finished off his facial appearance. He was clothed in sad-coloured tunic, the dinginess of which was accentuated by a deep and snow white collar, which reached his shoulders and hung over his broad chest. The same sad-coloured knee breeches and grey stockings, finished off by stout leather shoes ornamented with great steel buckles. In his hand he carried a long willow wand, which I afterwards saw had a line attached to it. Evidently he was a brother of the gentle craft.

As he came up he saluted me politely, and I, of course, responded, and bid him good day. He made answer as follows:

"You are well overtaken, gentle sir! A good

morning to you! Are you intending to meet the pack of otter dogs of noble Mr. Sadler upon Amwell Hill?"

"No; it must be some one else," I replied. "I am not acquainted with Mr. Sadler."

"I am right glad to hear your answer," the strangely attired one said; "for, in confidence, to tell you the truth, I mistook you for a certain Master Venator, a young man with a long tongue, who grievously bores me with his puerile conversation!"

"No, sir; my name is Snooks—Richark Snooks, of Lincoln's Inn, at your service."

The gentleman bowed, and said: "My name is Walton—Izaak Walton." I started, and rubbed my eyes.

"Are you any descendant of the Izaak Walton?"

"Of whom do you speak, sir?" returned he, taking a seat beside me. "I am Izaak Walton, and know none other. I am by trade a fisherman—an angler, who, out of his poor store of knowledge teaches youthful scholars the art of the angle for a consideration. Is that your rod down there?"—indicating my "general," which lay unheeded below me—"for, sir, if it be your weapon, I have rarely seen a finer!" and he picked it up, wound in the slack line, and started a careful inspection.

"Some authorities there be who put their faith in a willow wand and a piece of twine, and, in truth, many fat fishes are caught in that manner. Are you disposed to exchange rods as a sign of mutual affection?"

He edged up to me as he spoke, and I started back with fear, for through his dull coloured tunic, through his portly form, I saw dimly the rod which was on the other side of him!

"Will you make the exchange?" he repeated, and I stammered out some excuse, something about it being an heirloom.

"Well said, master," replied my ghostly companion, "and truly thy line is so mixed that it also resembles a hair loom! Ha! ha! I thank thee for the opportunity. I see that you are using a gentle worm for a lure. Now, the way to treat this worm is as though you loved him, which truly I hope you do, for all things should love one another. Years ago I wrote a book on many things, but," said he, "the many publishers—a murrain on them—have so grievously altered mine own words that I am strangely unacquainted with all that I said therein!" and here Izaak Walton sighed deeply. "However, it will be a good beginning to your art to offer you a little advice as to the way to dress this worm. He is principally objected to not only for being full of small bones, but that he is waterish and that his flesh is tasteless. However, basted with nectar and good store of lavender water he is not to be despised!"

"Rubbish!" said I, pinching my leg hard to make sure that I was not dreaming.

"That is what all ignorant folk call this worm, but you will find him a much better dish of meat than you imagine."

"Where on earth do you come from?" I asked him, as he crouched over my rod, intently watching the red float amongst the lilies.

"I have just come over Tottenham Hill, and am weary with walking," he replied. "Now see; here comes a fine perch, or rudd as he is sometimes called, and see, I have him safe!" So saying, he hauled an over greedy gudgeon on to the grassy bank, and pounced upon it with most unghostly haste. "Come with me," he went on, "to an old milk woman I wot of, who lives with her fair daughter Maudlin, beyond yon primrose hill. She, I warrant me, will cook this fish as he should be to rejoice the hearts of two tired and hungry anglers!" And Izaak began to march off across the field.

"Stop!" I cried. "There is no house nearer than two miles away, and I'm not ready to start yet. If you are hungry I can give you a sandwich!"

"No house nearer than two miles away? Come, master, you are surely jesting?"

"No," I replied; "there is certainly no house the other side of that hill!"

Izaak Walton looked so mystified that I felt sorry for him. "There used to be a most pleasant hostel, where pretty Maudlin sang day and night," he said at last.

"Maudlin must be dead by this time," I replied,

for I remembered having seen the name in "The Compleat Angler."

"Poor Maudlin dead! Ah, well! Sir Thomas Overbury's wish came true! I hope, gentle sir, that she was buried with the good store of flowers stuck round her winding-sheet?"

"I should imagine so!" I ventured.

"Poor Maudlin dead!" the shade murmured, as he wiped a tear from his vapoury eye with the back of his nebulous hand. "She was a sweet singer. Well do I remember her sweet song:

I married a wife of late,
The more's my unhappy fate.
I married her not for love,
For her face could no man move,
But because of her worldly estate!
But, oh! her poor tenants
All left by the moonlight,
And then all her savings did fail.
But 'tis not so
With those who go
And insure, you know,
Against such a blow;
We didn't—and went to jail!"

Izaak did not appear pleased with his attempt. "There is something strange to me in those words!" said he. "Come, Master, cannot you remember the sweet song?"

I replied that I could not help him.

"Never mind!" said the ghostly angler. "Tis those cheap editions! Come now and listen, for I am sure that I both can and will tell you more than any common angler yet knows without he has read my writings. The perch is so called from his habit of roosting upon the branches of the water-lily, which so adorn yon stream: he is a fish of great reputation for his timorous habits, and is called the water-sheep on that account. Aldrovandus saith that there is a millstone hidden away in his body which will cure frost-bite and ague. The perch is born by the warmth of the sun's rays upon the moisture falling from the muzzles of drinking oxen! All this reminds me of Doctor Dun's verses on the art of the angle; they be these:

'Come fish with me, and pay me well,
For I know of a shady dell,
Where crystal sands and golden brook
Entice thy line and baited hook.

'There will the children whisp'ring run
A'throwing stones and making fun;
And so th' enamelled fish will pray
That you will drive those boys away.

'When thou wilt swim in that live bath
A hidden child will raise a laugh,
And seeing that you naked are
Exclaims "Rude man, I'll tell your ma!"

'Let others poach the river's reed,
And fill their toes and nets with weeds;
But you come to this lovely dell
And fish with me, and pay me well!"

"It doesn't sound quite correct," quoth the shade, with his cheery brow furrowed up with thought. "Tis in my book, but methinks 'tis different in the wording. There was great store of interest in all my work, but my memory sadly fails me, and my nerves have been much shaken by your news of the death of my pretty Maudlin! Before I go to meet my brother Peter I will, however, give you one song more, if I can recall it aright:

'Oh! the gallant fisher's life
Is the worst of any,
'Tis void of pleasures, full of strife,
And 'tis cursed by many
Stolen swims,
Neighbour's whims,
Soaking rains,
Worthless gains,
Losing trains,
Temper rise,
Language flies,
Catch a chill,
Taken ill,
Doctor's bill
Sums it up completely!"

The ghostly one looked vaguely at me, and I burst out laughing. He sorrowfully shook his head, and threw down the gudgeon; then, turning on his heel, walked deliberately into the river. I rushed to the bank, and saw the shadowy form proceeding along the bottom, passing through long ribbon weed without even bending it, and even saw a pike rush clean through his diaphanous head, and then the widening ripples chased Izaak Walton into ever-increasing circles! So he vanished from my view.

The dead gudgeon lay upon the bank, and the sun's rays caught its silvery side, which was un-

scaled where the master's ghostly hand had held it. I wrapped it carefully up, and put it aside on the grass; then took my rod to pieces preparatory to moving, when I became aware that someone was watching me from the opposite bank. It was a true Lea roacher, his box—slung on his rod—hanging over his stooping shoulders. He removed the clay from the corner of his mouth, and called, "That's a big 'un, mister," indicating my precious fish. "A mighty big 'un ter take sich care of!" Poor ignorant man! He little knew whose hand had taken it.

WARNER'S PATENT "HANDY" GUT-HOOK CASE.

MESSRS. WARNER AND SONS, of Hewell Works, Redditch, send us samples of their patent "Handy" Gut-Hook Case. The advantages claimed, and we think very fairly claimed, for this case are:

"Entanglement of tackle is rendered impossible, as each article is contained in a separate pocket.

"The saving of time and tackle is immense, as, when a fresh hook is required, the simple removal of the outer leaf *exposes only one*.

"The material of which the case is made is quite transparent; the contents can be seen without exposure or waste of time in opening, and it effectually preserves them against damp or change of temperature.

"Hooks and gut kept in these cases will be as good at the end of twelve months as the day they were purchased.

"Each case is plainly marked with the size and shape of hook, and strength and length of gut, and

FIG. 1.—Shows the Case closed. FIG. 2.—Case with outer leaf partially removed, as in use. Illustrations one-third actual size.

is made to contain half a dozen hooks on gut, or other articles.

"The size and shape is such that it will fit into the pockets of any ordinary fly or tackle book.

"Tackle supplied in these cases costs no more than in the old fashioned so-called protectors, and the advantages are so many that when once used anglers will have no other form of package."

The fact that the gut and hooks are in damp-proof compartments is an immense advantage. We do not see why flies on gut should not be kept in the same way. We congratulate Messrs. Warner on their very simple and admirable little invention.

THE LOWER AND MID-THAMES: WHERE AND HOW TO FISH IT.

(Continued from page 56.)

By F. H. AMPHLETT.

BREAM.

The treacherous quill in this slow stream
Betrays the hunger of a bream.

—1st Ed. of "Walton."

BREAM fishing in the Thames is very precarious. Sometimes the angler will obtain good sport, whilst at others the fish do not appear to feed for several days at a stretch. They are generally to be found in deep holes in the river, and are to be taken as low down as Twickenham. They are, however, seldom taken in large quantities in the upper portions of the river, and it is difficult to account for this, as the water is eminently suitable for them. A 5lb. fish is a very good size for those of the Thames, but some years ago one of 7lb. was taken at Datchet. Mr. J. J. Manley, in his "Notes on Fish and Fishing," says that bream are a comparatively recent introduction into the river, and expresses his opinion that they originally got into the Thames from some overflowing of the Wey. "Not long ago," he says, "two consignments of fine bream were brought from the Bedfordshire Ouse, and safely deposited

in the Thames, in the deep water above Boulter's Lock at Maidenhead, through the kindness of the Bedford Angling Club." An average sized bream will afford very good sport, and as he must be taken on fine tackle, there is more charm in the catching of him. The same tackle as used for roach will do, but the bait should be well on the bottom of the river. The early morning is the best time to fish, and the bait should be the tail end of a lob. There are other baits which bream will take, but the one mentioned will generally be found the best for Thames angling. When bream take the bait, the float, as a rule, first lies on the top of the water, and then slowly disappears. The fish must, therefore, on taking bait, temporarily raise their heads, which lessens the weight of the shots on the float, and the latter consequently lies flat on the water for a second or two. For ground bait use lob worms, which should be cut up into fragments, and thrown in as for barbel fishing. In ledgering for bream use fine tackle, and a small hook, as these fish have small mouths.

CONCLUSION.

The dainty gudgeon, ruffe, the minnow, and the bleak, Since they but little are, I little need to speak. — DRAYTON.

The small fry, such as bleak and minnows, need scarcely any reference. They can be caught by almost anybody and almost everywhere in the Thames. Gudgeon are to be found in rather rapid waters that flow over a gravelly bottom, also in weir-pools and near bridges or camp-shedding. The Gibraltar swim below Great Marlow is perhaps one of the best portions of the Mid Thames. They are taken there in enormous quantities during the season. They are special favourites with the lady anglers in consequence of the easy manner in which they can be caught, and the charm of quantity is also another element that render them agreeable to the gentler sex. Roach tackle should be used, and they will take a small worm or a gentle. A rake is sometimes used to stir up the bottom of the river and attract the fish, which can be caught during any month of the season, though August and September are the best two.

The bleak is a small silvery fish, which is easily taken by whipping with a gentle, or using a small fly. They are to be found in the summer months near the surface of the water, and often cause disappointment to the dace or chub angler, who is fly-fishing, by taking a bait intended for the larger fish. They make excellent spinning baits on account of their brightness, and they are much used as live-bait for trout fishing, the Thames trout being particularly partial to these little fish. Their scales were once used in the manufacture of imitation mother-o'-pearl, and as this caused an immense destruction of fish it is matter for satisfaction that another substitute has been discovered. Minnows are interesting little fish, and are of most use to fishermen as bait for larger species.

The brief instructions given in the previous chapters are the result of considerable experience in Thames fishing, and though perhaps some of the minor points are omitted, the object in view, namely, to give hints to those who seldom visit the Thames, has, I hope, been achieved. The map of the Thames should enable the reader to discover, without any difficulty, where he will be best able to obtain good sport, and thus avoid waste of time in searching for suitable swims. The table showing the distances between the bridges and the locks will afford him the opportunity of determining whether he has sufficient time to spare to travel from one portion of the river to another, and the publication of extracts from "The Thames Fishery Bye-Laws," which in their revised state only came into force in 1893, will save him from the risk of committing any illegality. Taking into consideration the rapid increase in the number of anglers during the past few years, I do not feel called upon to render any apology for making this addition to the extensive collection of angling literature, more especially as it deals with a branch of the subject so distinctively important and interesting as the Lower and Mid Thames.

(To be continued.)

GRANT'S CHERRY WHISKY.—This attractive "pick-me-up" is a pleasant combination of Kent Cherry Juice and very soft old Scotch Whisky. This and Grant's Morella Cherry Brandy are sold by Wine Merchants.

THE FLY DRESSER'S LIBRARY.

(Concluded from page 56.)

BY VAL CONSON.

IN 1889 Mr. F. M. Walbran, a well-known Yorkshire angler, and editor of the 1883 edition of "Theakston," published the first series of "The British Angler—Salmon, Trout, and Grayling," with an excellent list of simple Yorkshire patterns and a selection of south country patterns.

In 1895 Mr. Walbran published another work, "Grayling, and How to Catch Them," with an extensive list of flies for the purpose. Unfortunately the proofs were very carelessly corrected.

In June, July, and August, 1896, Mr. F. M. Halford contributed a paper to *Baily's Magazine* on "The Hundred Best Floating Flies," in which he extended and modified, in the light of later experience, the list which appeared in "Floating Flies, and How to Dress Them." The features of this paper were the advocacy of hackled flies tied with soft hackles from birds other than poultry over cocks' hackles, the use of three hackles to a fly, and the discarding of floss silks in favour of dyed quills.

These papers were again, with other papers contributed to the *Field*, and much new matter, boiled down into "Dry-fly Entomology," published in 1897.

It is a monumental work, but in some particulars disappointing. The pictures of artificial flies, which, in "Floating Flies," were a help to many, being accurate in size and approximately so in colour, have here given place to enlarged pictures of the patterns, with a small outline drawing of the proper size of the fly. This does not, in my judgment, assist the dresser so much as did the old coloured drawings. Then the numerous pictures of natural insects are all so considerably enlarged that the angler loses the idea of the natural insect in the contemplation of a scientific diagram. The drawings were made by means of a microscope. This was no doubt necessary to get the full details required; but I for one should have been glad to see the diagrams reduced to life size while retaining the detail. There were printed of this edition 100 copies on large paper, and a second volume, containing the actual 100 patterns mounted in panels, forms part of this sumptuous edition de luxe.

A book by Mr. Charles Edward Walker, an ultra exponent of the exact imitation theory, with ideas on the lines of Hewett Wheatley, has lately issued from the Press. It contains some of the best plates in the literature of the subject, and is a work of some interest. It carries the exact imitation theory to greater lengths than does the work of any previous writer, and even if the angler be unable to accept the author's reasoning, he may be grateful for the really admirable illustrations.

This completes the list of books known to the present writer in connection with fly dressing. Obviously they are not all of use to the modern fly dresser. Many are obsolete; certainly the great bulk of them are of no practical service to the novice. What books precisely are of most use to the novice is a matter depending upon his opportunities. A man whose limit was the Yorkshire or the north country streams might content himself with Mr. F. M. Walbran's "British Angler,"—Salmon, Trout, and Grayling," or Mr. Pritt's "North Country Flies," for his list of patterns; and "Stewart's Practical Angler," and another work, say the second or third edition of "Pulman's Vade Mecum," for his practical instructions; and Ronalds' "Flyfisher's Entomology," or Theakston's "Yorkshire Angling Flies," for his entomology.

But the man who desires to obtain a complete mastery of the art of trout fly dressing in all its branches should not so restrict himself. Strange though the advice may be that is tendered, the novice is earnestly advised to begin at the most difficult end of the art, and learn straight off to dress floating flies. Having once fully mastered this, all other methods will come easily. But to ascend from the simple hackle fly to the double dressed floater is a slow and toilsome process. The use of patterns given in books, whether ancient or modern, is not to bind the artist. It is to set him free—to make him master of the medium he works in, to teach him the effects to be got from materials. Having acquired this mastery,

he can set to work, regardless of books, to imitate the natural insect in his own way, at first hand, and from his own observations.

To begin upon, undoubtedly there is no work equal to Mr. F. M. Halford's, whether one selects the original work, "Floating Flies, and How to Dress Them," or the enlarged and improved edition known as "Dry-fly Entomology." The latter is certainly more brought down to date, while the former contains particulars of methods which the author has since discarded in favour of better ones. But from either the beginner can teach himself to dress floating flies without the aid of any other instructor.

The next work to be recommended is certainly Francis Francis' "Book on Angling." The methods of fly dressing there described are indeed not brought down to date. But there is a list of flies, both natural and artificial, which was first rate when written, and is first rate now.

A good copy of Ronalds' "Flyfisher's Entomology" should, if possible, be secured for the sake of the coloured drawings of the flies, natural and artificial. Failing this, or in addition to it, if convenient, a copy of either the original edition, or Mr. F. M. Walbran's edition of Theakston's "Yorkshire Angling Flies" should be procured, for the sake of the illustrations and the descriptions of the natural insects.

Stewart's "Practical Angler" should also be secured, as illustrating the methods of fly dressing for Scotch brook fishing.

Webster's "The Angler and the Loop Rod" should be laid under contribution, for its excellent description of a type of fly dressing in use on the Tweed and the Clyde.

Mr. F. M. Walbran's "British Angler—Salmon, Trout, and Grayling," or Mr. Pritt's "North Country Flies," or both of them should be secured, as illustrating the modern Yorkshire and northern counties methods.

For Devonshire methods H. C. Cutcliffe's "Trout Fishing in Rapid Streams" should be carefully studied, whether the angler be going to fish Devonshire waters or not, for the little work is full of suggestions and instructions.

For Derbyshire methods David Foster's "Scientific Angler" is worth consulting.

For methods of dressing grubs, beetles, grasshoppers, moths, and large Sedge flies, as well as for a good selection of fancy flies, the work of Hewett Wheatley, "Rod and Line," ought certainly to be acquired.

The above short list forms a sound basis for a practical collection, and substantially it contains all that is really required.

But the angler who takes an interest in the subject will probably be tempted to go further, and acquire a number of other books. He will wish to have Jackson's "Practical Flyfisher," Bainbridge's 1816 edition, "Arundo's" little work, Blacker's 1854 edition, and a copy of Shipley and Fitzgibbon, and of the 1853 edition of Pulman. Next he will want a good illustrated copy of Bowlker's work, a copy of Jesse's edition of Hofland, a Wade's Halcyon, and "Ephemera's" Handbook.

"The Angler's Desideratum," by Capt. Clarke, is a curious little work the amateur should pick up if he can. A Stoddart's "Angler's Companion" also might be acquired with advantage, and an early edition of Best.

All other works are more of historical than practical interest.

The late Mr. George Currell contributed to the columns of the extinct *Angling*, in the late eighties, a series of papers on Itchen patterns, which were to have been published in book form, and no doubt would have been had he lived. They are of great interest, and comprise a number of unusual dressings and little known devices. Some highly interesting papers have also appeared recently in the *Fishing Gazette* over the signature "Athenian," the pen name of the late Mr. A. G. Maclelland, a young writer of immense promise, who, had he lived, would have done great service to the art. It is hoped that they will shortly appear in volume form.

But the curious will want a selected series of Walton and Cottons, including the edition of Baxter's, with its long list of patterns, Hawkins' edition, and Major's, or the 1889 reprint, which comprises a reproduction of Jackson's "Practical Flyfisher." They will secure a copy of Carroll's naive work, "The Angler's Vade Mecum," with

its coloured pictures of flies; Lakeland's confused jumble of patterns; Aldam's quaint treatise; "Salmonia"; Capt. Williamson's book; the Taylers, Salters, Scotcher, Rennie, and Mackintosh, Brookes, Shirley, and earlier and less known writers.

To the angler who is also an entomologist may be commended Pictet's "Ephemera; and Phryganida," and Eaton's "Monologue on the Ephemera." They are not angling works, but they deal with some classes of the angler's flies.

In conclusion, what strikes the reader in all the literature of fly dressing is the partial, the almost provincial, character of every work hitherto written on the subject. It remains to someone to write a complete and comprehensive treatise on all the styles, methods, and devices that remain serviceable and effective at the present day, compressing into one lucid and logically arranged volume the sum of all the science of all the ages upon this interesting topic.

THE FLY FISHERS' CLUB.

[Extracts from the fourteenth annual report, presented at the annual meeting of members on Jan. 26, 1899, the president, William Senior, Esq., in the chair.]

The committee beg to present to the members of the club the report and statement of accounts for the past year.

The hon. treasurer (Mr. R. B. Marston) reports a balance in hand on Dec. 31 of £176 11s. 7d., and the club has also an invested sum of £196 3s. 6d.

During the year twenty new members have been elected, but the losses by resignations and death have reached twenty-nine. The roll is now 280 as against 289 last year.

The committee regret to report the loss by death during the year of several old members, conspicuous among whom is Mr. William Black, the well-known author, who will be much missed by a large circle of friends and by the members of the club.

SPECIAL COMMITTEE ON FLY-DRESSING MATERIALS.

The special committee's report will be found a most interesting document, and we hope to refer to it later on.

The committee consider that the club is under very great obligation to these gentlemen who have devoted so much time, thought, and skill to their labours, and with so successful a result. To Mr. Skues especially must be credited the chief work of procuring and classifying the feathers and materials collected, while Mr. Ohlson has carried out the laborious task of mounting the entire collection. The time and trouble expended by them have been unstinted throughout.

THE ANNUAL DINNER.

The annual dinner took place at the Hotel Cecil on the 16th February last, and was presided over by the Marquis of Granby. It was a decided success.

THE CLUB LIBRARY.

The library has been enriched during the year by many new books which will be found in the appended report of the hon. librarian, and the committee are glad to know that the library is being increasingly used by members. Mention should specially be made of four exceedingly interesting volumes of MSS. dating from 1794, recently presented by Mr. Cholmondeley Pennell, a fuller description of which appears in Mr. Norris's report.

With a view to increasing the interest of members in the club Thursday evening meetings, the committee have under consideration arrangements for establishing periodical guest nights, on dates to be announced, when members will be invited to bring their friends, and may count on always finding company and good fellowship. It is also proposed to have, from time to time, the additional attraction of papers and discussions.

GRESHAM ANGLING SOCIETY.

THE annual general meeting of the society took place on Jan. 31, under the presiding hand of Mr. Arthur Heiron. The business of the meeting was preceded by that of an ordinary meeting, at which one new member was unanimously elected, and Messrs. Davies, Emery, Walker, and Fournay reported upon a visit to Chesham, describing the great number of trout in evidence, many up to 3lb. weight each. The business of the annual meeting was then taken. The notice convening the meeting having been read, the hon. sec. was called upon to read the report of the committee and the accounts for the year ending Dec. 31 last. These showed the society to be in a flourishing condition, and they were adopted unanimously. The election of officers then took place, and resulted as follows: President, Right Hon. Lord George Hamilton, M.P.; vice-presidents, Major the Hon. E. R. Bourke, Sir Edward Birbeck, Bart., M.P., Sir W. J. Richmond Cotton, Bart. (City Chamberlain), and George Chambers, Esq., J.P.; general committee, Messrs. G. Allen, C. S. Bentley, J. P. Connellan, Mark Davies, J. T. Emery, C. E. Fosbrooke, R. Snare, J. H. Walker, and F. A. Gray; entertainment committee, Messrs. F. A. Gray, R. Snare, J. H. Walker, J. T. Emery, G. Maull, G. Hoyle, J. Powles West, and C. Buckingham; honorary treasurer, Mr. W. Marshall; honorary librarian, Mr. F. W. Norman; honorary curator, Mr. J. B. Close; honorary secretary, Mr. Alex. Wright; delegates to the Anglers' Association, Messrs. J. B. Close and F. A. Gray, and to the Central Association, Mr. C. E. Fosbrooke. The delegates were

instructed to take all necessary steps for the obtaining of privilege tickets to as many stations as possible. Votes of thanks were accorded to the officials, honorary and otherwise, for their services during the past year. The usual toasts and a hearty vote of thanks to the chair formally concluded the proceedings. Members are reminded that a Bohemian concert takes place at the above address on Feb. 14, when members are expected to bring as many friends as possible. ALEX. WRIGHT (Hon. Sec.).

Extracts from the report of the general committee to the annual general meeting, held on Tuesday, Jan. 31, 1889.

"In presenting their annual report, the committee congratulate the members on the continued improvement in the position of the society. The accounts for the past year have been duly audited and vouched by a professional accountant, and can be seen at any time on application to the hon. secretary. The year 1898 commenced with a cash balance of £32 13s. 2d., and closed with a balance of £23 19s. The liabilities of the society only amounted to £3 18s. The value of the library and museum has increased since the last report, and the balance in favour of the society now stands at £270 15s. 10d. The gross income has again increased, the number of paying members at Dec. 31 last being 120. The amount expended on renting water has been considerably augmented, and the committee are endeavouring to find fresh waters for the use of the members. There are indications that the present year will be an improvement on the last, several gentlemen having already been nominated for membership. Strict economy in the expenditure will still be maintained. The waters at Kelvedon held on lease by the society are well stocked with fish. Further stretches have been secured, and the weeds out properly over the whole extent of the water at a considerable outlay, in addition to which one of the tenants has spent a large amount of money in taking out the mud, building up the banks, and generally improving the fishing, but owing to the great amount of care exercised this time, future weed cutting, it is hoped, will cost but little. A quantity of rainbow trout (*Salmo irideus*) fry (about 5000) have been promised to the society by the Royal Aquarium Company, providing they are turned into these waters and properly looked after. The offer has been accepted, and it is hoped that satisfactory results may be obtained from the experiment. The fishing on the river Chess (rented by the society) has fulfilled all expectations, a large number of trout having been taken with the fly during the season ended Sept. 30 last, some up to nearly 3lb. in weight. The wet fly is now permitted on the water from April 1 to June 30. But from July 1 to Sept. 30 the dry fly only is allowed. Arrangements have been made for the proper protection of the fish during the spawning season. An offer has been accepted from the Royal Aquarium Company to place 5000 *Salmo fario* fry in these waters during the next few months. The takes of fish, both fresh and salt water, have been fully up to the standard of previous years. A number of specimen fish have been captured. The most notable additions during the year to the museum are a case containing a grayling, presented by W. R. Reeves, Esq., weighing 2½lb., and several cases of artificial flies, &c., presented by Messrs. Goodwin and Hoyle.

Cups and medals have been awarded for specimen fish as under: Dr. Brunton's cup to Mr. W. R. Reeves, for perch of 2lb. 2oz., and grayling of 2lb. 1oz.; Dr. Ladell's shield to Mr. J. T. Emery, for bream of 5lb., and trout of 2lb. 10oz.; Deal challenge cup to Mr. E. C. Clements. Silver medals to Messrs. E. Hesse, for dace of 15½oz.; J. T. Emery, for trout of 2lb. 10oz. (Chesham); W. R. Reeves, for perch of 2lb. 2oz.; J. H. Walker, for grayling of 2lb. 4oz.; Wrightson, for pike of 15lb. 8oz.; J. B. Close, for trout of 3lb. 9oz.; E. C. Clements, for whiting of 2lb. 14oz.; J. Dryden, for cod of 14lb. 2oz.; and Dr. C. S. Patterson, for conger of 18lb.

The Gresham Inger, presented to the society in 1897, has been re-fitted, and is now stationed at Leigh for the entire use of the members. The library has been considerably added to during the past year by gifts from members, and by purchase. It is now one of the best and most varied collections of angling books and literature relating thereto, possessed by any angling society. A fund has been formed for the purposes of re-stocking. The programme for the period ending Feb. 28th, 1900, is in course of preparation, and will shortly be in the hands of the members. It will include maps of our waters at Kelvedon and Chesham, together with a quantity of useful information. The committee would be pleased to receive suggestions in writing for the purpose of making the programme as useful and concise as possible; also to receive the name of any gentleman who would volunteer to read a paper before the society. The meetings have been well attended during the past twelve months. Every effort is made to give the members pleasant, entertaining, and instructive evenings. Papers read by members, discussions, concerts, dinners, and other functions have all passed off in an eminently satisfactory and pleasurable manner. The subscription and entrance fee to the society was raised in May last, with regard to gentlemen nominated for membership after that date. The entrance fee is now £1 1s., and the subscription £1 11s. 6d. The society has contributed to general preservation work, and the re-stocking of public waters.

READING AND DISTRICT ANGLING ASSOCIATION.

The annual general meeting of the members will be held on Monday, the 6th of February, at the Great Western Hotel, Reading, at 6.30 p.m. The annual dinner will be held at the hotel at 7 o'clock on the same day. The president, James Simonds, Esq., in the chair. Great Western Hotel, F. BROWN (Hon. Sec.).

PISCATORIAL SOCIETY.

MR. FRANK WARD took the chair at Monday's meeting, but angling news was almost nil. Mr. A. R. Matthews and Mr. F. G. Bridgman had taken a few roach and a single chub, but beyond these reports river fishing appeared to have been considerably "off." So, too, with regard to salt water angling. Dr. Patterson and six friends had been to Leigh after flounders, but between them had caught but seven fish! Mr. R. C. Blundell suggested the idea of transporting May Fly to the new water at Uxbridge. He thought the experiment was worth trying. It might be done by collecting either the larvae before the fly emerged, or by catching the fly itself and putting it in suitable places on the Colne, so that it might lay eggs, which would hatch out later on. Mr. Bywaters mentioned that the grannom had been successfully introduced on the Kennet at Hungerford, and he did not see why the May Fly should not be brought in the same way to the Colne. Here is a grand chance for the angler-naturalist to distinguish himself! It was stated that some of the members were going to Ringwood for the opening of the salmon fishing, and a promise was made that if the visitors got a fish it should grace the table at next Monday's meeting. May this become a *fait accompli*! Mr. Horace H. Brown translated in his well-known humorous style, some very funny excerpts from the last number of the French Angling journal, *La Pêche Moderne*. The first story was to the effect that a certain M. Taillard had at one cast taken two pike weighing, 14lb. and 5lb. respectively. Mr. Brown, however, added that the cast was not made with a big "Alec," but with a cast net! M. Taillard, it appeared, resided in the Rue de Foclerie, a most appropriate street for a man to live in who went jack fishing with a cast net. Another item was that at Staffa, on Lake Zurich, a pike had been taken, evidently by fair means, of 41lb. The third tale related to the spoon bait and its prohibition in the Marne and Seine, probably on account of trailing. Notwithstanding this spinner being forbidden, a certain French angler fished with it "amid the applause of two thousand spectators who lined the banks, and to the accompaniment of the excellent band of Lagny and a fanfare of trumpets." The Gnard, however, seized the tackle, and the paragraph concluded as follows: "We await with interest the outcome of this historic day." (Much laughter.) Mr. Brown lastly called attention to the fact that there is to be a grand concours of Pêcheurs International of the Amicable Society of Pêcheurs à la ligne at Arras, on Sunday, Aug. 23 next. 1000 francs are offered in prizes, specie, medals, and *objets d'art*, with special prizes for banners, flags, and devices; open to all comers. There will also be prizes for singers, and a competition fanfare of trumpets, and for the *tromp de chasse*, which will take place on the same day, 2500 francs being offered in rewards. Truly, the French anglers have fearful and wonderful ideas of the way of running a competition. It was not, however, proposed that the Piscatorial Society should send a representative to enter the lists for any of the fishing, singing, or trumpet prizes offered!

The committee will meet early on Monday evening to settle the regulations and special permits for fishing the Uxbridge water. These will be forwarded as soon as printed to those members who have paid their current year's subscription of three guineas. The annual dinner will take place at the Holborn Restaurant as usual, the date fixed being March 20 next. M. G. E. DE C.

THE LISMORE FISHERY CASE.

At the Lismore (Ireland) Petty Sessions on Saturday, Jan. 28, judgment was delivered in the important Lismore fishery case. The defendants were the Duke of Devonshire and Messrs. C. and R. Foley, described as owners of the Lismore Fishery Weir. The plaintiffs were the Blackwater Fishery Conservators, who were represented by their inspector, Mr. Thomas Drohan. The charge against the defendants was that they had neglected to make a legal free gap at Lismore Weir, in the river Blackwater, in the county of Waterford. A formal order was made by the magistrates to the effect that "the defendants do pay for fine in respect of each day during six months such sum exceeding £5 and less than £50 as amounts, in respect of the total number of days, to the sum of £1000." And it was further ordered that in default of payment of the above sum that "there be a levy by distress and sale of the goods and chattels of the defendants."

A RESTORED WATERWAY.

THE REVIVED THAMES AND SEVERN CANAL.

WE drew attention some time ago to the work that was going on for the resuscitation of the Thames and Severn Canal. That work is now complete, and the first voyage has been made from end to end, a distance of about thirty-seven and a half miles. All but about four and a quarter miles of this canal has been closed for many years, and it had fallen into such a condition of decay that £15,000 or £20,000 had to be borrowed for putting it into navigable condition again. The work has been going on for the past three years, and the waterway is now navigable throughout for boats carrying thirty tons. It commences in the west by a junction with the Stood water navigation at Wellbridge, Strood, and from thence rises 241ft. to its summit level at Daneway, seven or eight miles from Strood. In this western section of the canal there are no less than twenty-eight locks. The high level section is eight or nine miles long, and it is here, of course, that the canal is fed by a pumping station drawing 3,000,000 gallons of water a day from a well sixty-eight feet deep. There is also a feeder from the river Churn, but the free supply from this source is limited to Sundays, owing to the legal rights of millers in the district. From this high

level at Daneway it drops down by another long series of locks to the Thames at Lechlade. Altogether there are in this famous canal no less than fifty-seven bridges and forty-four locks. In our previous notice of this work we referred to the remarkable tunnel through the Cotswold Hills. It is altogether 3808 yards long, and nearly a mile of it goes through the solid rock. This is one of the many remarkable works projected by Brindley, the famous civil engineer, who thought rivers were of little practical value, except to feed canals. It was originally constructed about a hundred years ago. In 1832, or thereabouts, it narrowly escaped being converted into a section of railway that of a scheme for connecting South Wales with London and Southampton, that would have competed with the Great Western. That scheme fell through, and then the Great Western seem to have set up a private syndicate to buy up the canal, and it was subsequently proposed to close twenty-six miles of it from the Thames. Mr. Mundella, at the Board of Trade, put his foot on this project, maintaining that the canals of the country ought to compete for traffic with the railways. After a good deal of negotiation, or attempts at negotiation, baffled for a long time by the difficulty of finding out who really owned, or controlled the canal—though everybody assumed that of course it was the Great Western—a public trust has been formed, and a spirited attempt is to be made to attract traffic between the Thames and the Severn through this restored waterway. The first impression must be that any competition between water and rail between London and the West of England cannot but be hopeless, and that the attempt to revive such competition is a setting back of the clock. Perhaps it will really prove so. But it ought not to be too readily assumed. It is thought that there are some classes of goods for which this waterpassage may prove a good deal cheaper than transit by rail. The cloth manufacturers of the West of England for instance, may find an advantageous way of getting down their supplies of wool from the London docks, and sending back their finished goods to places along the Thames. Years ago, boating parties used to make trips across from the Thames to the Severn this way, and now that it has been put in apple-pie order it is hoped that they may do so again. The headquarters of the management are at Wellbridge, Strood.—*Daily News*.

EAST LIVERPOOL ANGLING ASSOCIATION.

THE members of this association of followers of the gentle art dined together recently at the Bee Hotel, under the chairmanship of Mr. Cbantler, the president, Mr. P. Macmurdrow, being unable to be present. There was a large and representative gathering of members and friends, the guests including Capt. MacNab, president of the Liverpool Angling Association; Mr. Taylor, of the Nelson Anglers; Mr. Collinson, West Derby Anglers; Mr. Ross, Central Anglers; and Mr. Taylor and Mr. Bancroft, Warrington Anglers. After an excellent repast had been disposed of, the cloth was removed, and the chairman gave the loyal toasts, which were received with musical honours. Mr. G. Attwood then proposed the toast of "Kindred Associations," which was responded to by Mr. Bancroft, Mr. Taylor, and Capt. MacNab. The prizes were then presented. There were four special and twenty-one specimen prizes. Of the former a marble clock, presented by Mr. J. W. Wright for a roach, was won by Mr. G. Barratt; a silk line, presented by Mr. Parks for a trout, was won by Mr. J. A. Porter; case of carvers, presented by Mr. Stanbury for a tench from Meols Lake, was won by Mr. Wishart, who also carried off with the same fish a guinea rod, presented by Mr. Moore, Whitechapel, for the heaviest fish from Meols Lake. A capital programme was gone through during the evening. Mr. M. V. Clyto contributed a clever and amusing ventriloquial sketch with his figure of Ally Sloper; Mr. Williams, concertina solos; Mr. Gilbert, some capital coster songs; other songs being given by Messrs. J. E. Mawdsley, W. Sutton, P. Clyto, Keefe, and J. Williamson, and a recitation by Mr. Cross. Messrs. Freeman and T. Mawdsley accompanied. A branch of this association has been formed in the north end of the city, and is called the Bootle branch, of which Mr. W. Jones, the founder of the Liverpool Angling Association, has been duly elected the chairman; Mr. J. E. Pritchard, vice-chairman; Mr. Jas. Reynolds, secretary (*pro tem*); treasurer, Mr. G. Barratt. The second meeting was held on Tuesday last, at which several new members were elected, making just on twenty members all told. This can be considered very good, and there is every likelihood of there being twenty more during the next two meetings, the first of which takes place at the Victoria Hotel, Merandia-road, on Wednesday, at 8.30 p.m. The committee of the parent association will be held on Tuesday, at 8.30 p.m.

JAMES REYNOLDS.

NORTHERN ANGLERS' ASSOCIATION.

A MEETING of the executive council took place at Stockport on Saturday last. Representatives were present from Manchester, Bolton, Wigan, Blackburn, Liverpool, Atherton, Farnworth, Crewe, Stockport, Oldham, Ashton, and Stalybridge. In the absence of the Rev. C. P. Roberts, who was unable to attend, the chair was taken by Mr. George Sutherland, J.P., of Wigan. The minutes of last meeting having been confirmed, it was reported that the proprietors of the Shropshire Union Canal had been stocking the water with young fish, and the secretary was instructed to write to the manager for particulars. It was agreed that the members of unattached clubs be required to pay the levy to the Coarse Fishers' Defence Fund along with the yearly subscription for membership, and that all centre secretaries be responsible for the levies in their districts, the same to be paid in at next

meeting. The newly formed centres at Preston and Liverpool were accepted into the association. The date of the proposed grand fishing contest was fixed for Saturday, June 24, the match to be fished in three sections on Lancaster canal, viz., Barton and Broughton, Brock, and Garstangs. A sub-committee was appointed to arrange details and conduct the match, it being left optional for any member of the council to fish if he desires to do so. The entrance fee to be 1s. 6d. each, to include the canal bank fee. The match to be open to the public, and £30 to be offered in prizes. Every competitor will be required to produce his railway ticket when weighing, to show that he has travelled by the special trains guaranteed for the occasion, and no one will be permitted to fish in the canal previously to the commencement of the contest. The next meeting of the council to be held in April, at Farnworth. Several other minor matters of interest to the members were disposed of, the meeting lasting nearly four hours, broken only for a short period to enable the assembled representatives to partake of lunch, kindly provided by the Stockport Centre, to whom a hearty vote of thanks was tendered.

THOS. W. REDFORD, Hon. Sec.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

30 min. for Chelsea.	55 min. for Kew.
40 " " Putney.	75 " " Richmond.
45 " " Hammersmith.	80 " " Twickenham.
50 " " Barnes.	85 " " Teddington.

EXAMPLE.—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Feb. 4	6.55	7.22
Sunday, " 5	7.52	8.26
Monday, " 6	9.7	9.54
Tuesday, " 7	10.41	11.25
Wednesday, " 8	—	0.6
Thursday, " 9	0.40	1.8
Friday, " 10	1.34	1.59

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, Feb. 4	7.35	8.2
Sunday, " 5	8.32	9.6
Monday, " 6	9.47	10.34

These times show high water at Houghton Bridge, Amberley. Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—The report at the weekly meeting of the Piscatorial Society, at the Holborn Restaurant, from my good friend, Mr. C. H. Wheeley, who is one of its most popular members, that he had recently seen, at Weybridge, a large shoal of bream gambolling about on the surface, reminds me of a conversation I once had, years ago, with the late Mr. John Harris, of the Lincoln Arms Hotel—and a grand old fisherman—when he told me the bream originally got into the Thames at Shepperton from the bursting of the Wey; but my recollection does not serve me now as to the great quantity he got in angling soon afterwards. But I think I have before remarked in the *Fishing Gazette* that Chertsey is indebted to Shepperton for the first introduction of bream there from the rod of the late Mr. Herelline, who I knew as a most successful angler and a thorough sportsman. The great take of bream at Chertsey, with James Haslett, of 147lb. weight in one day, must not be forgotten. When I was at Twickenham, on Tuesday, the water had much improved, and some punts were out, but up to then nothing much had been done. A fine specimen of the head of an "angler" fish was received on Saturday evening last by Mr. Charles Shore from a friend, which had been caught in the Bay of Biscay, and was on view at Messrs. Fisher and Son, 8, London-road (fishmongers to H.R.H. Duc d'Orleans), and attracted much attention. It weighed 40lb., and is being sent for preservation. At the preliminary meeting at the Black Dog Hotel, at Twickenham, on Friday evening last, it was decided to establish an angling club for the district, to be called the Twickenham Piscatorial Society, and upwards of a dozen members were enrolled—Mr. Garwood occupied the chair—and was adjourned for a larger meeting on Feb. 7. Mr. Ogden Smith informed me on Tuesday he had received some additional names to be enrolled as members, and there was every prospect of the society being made a great success. If it is carried on the same lines as the one at Kingston it cannot fail to be accomplished, and that one is due to the practical energy of Mr. F. H. Amphlett, who is entitled to the highest credit for the interest he has taken in the working of it.—B.

(Datchet).—River in first rate order. I have been out twice this week. Had a good bag of roach and perch with worm. Jack and chub might be sought after now with every prospect of success.—G. LUMSDEN.

(Hampton Court).—William Milbourne, on Tuesday, writes: "The water is now going down, and getting into better condition for angling, but there is still a heavy stream, as the weirs are only partly shut in. My son Thomas, jack fishing with a gentleman to-day, landed five jack, the three largest together weighing 14lb.; the other two were returned. The bank anglers

have been doing well with the roach the last two or three days, some of them weighing 1½lb. each. In the course of a few fine days, when the weirs are shut in the water will be in good order for all-round fishing.—B."

(Henley).—Feb. 2.—The water is now in splendid condition. It has felt to a good level, although a strong stream is running. Good sport has been had among the roach, perch, and jack, and are still well on the feed, although I can hear of no large pike having been taken. On the 27th and 28th ult., Mr. Escombe, out with G. Arlett, three jack and 20lb. of roach. On the 29th ult., Messrs. W. and S. Meyers, out with J. James, six jack, weighing close on 30lb., best fish 7lb. On the same date, Mr. Johnson, out with G. Arlett, seven jack, best fish 5lb. On the 30th ult., Messrs. Tod Pulling and W. Clisby, out with G. Arlett, four jack, best fish 4½lb., and a good bag of perch. On the 31st ult., Mr. Ward, out with G. Arlett, a nice bag of roach, perch, and a 6½lb. jack. On the same date, Mr. J. Harvey, jun., 20lb. of roach, best fish 1lb. On the 1st inst., a patron of J. James, four jack, best fish 3½lb., and a few perch; a patron of W. Vaughan, four dozen roach; Dr. Jeston, out with R. Young, of Medmenham, six jack, best fish 3½lb., and fifty brace of retainable perch; and Mr. J. Harvey, jun., two dozen roach, best fish 1½lb.; several other anglers having good bags of roach, perch up to 1½lb., and some jack up to 5lb.—STANLEY MEAD.

(Kingston).—John Johnson reports some fishing with Mr. Grimston, who creoled several nice bream. The water had gone down nicely, and is in good condition.—B.

(Lechlade, &c.).—The country around this district has been for a week past covered with floods for miles, and looking in some parts on rough days like a miniature sea. Angling matters have consequently been nearly at a standstill pending the abating of the floods and the water clearing. Some good sport should then be had with pike, perch, and roach during the remainder of the coarse fishing season. Barrelling items have been particularly quiet of late, these big fish being well down in their winter deeps, and the best time for them is practically over. The Thames and Severn Canal is again open for traffic from Inghesham Lock, about a mile above this town, right away through to Stroud and on to the Severn. The canal contains perch, roach, and jack, but at present they run small. Fine tench are met with in some of the sections, up to 3lb. each. Some Swindon gentlemen had sport with jack at St. John's Bridge on Wednesday. Water clearing fast.—RAMBLER.

(Teddington).—W. McBride, one day, with Mr. Hinton, three jack, the largest 5½lb. A few hours with Mr. W. H. Port, of Teddington, four jack, the largest 4½lb., and lost one of about 10lb. Half a day, with Mr. Stokes, two jack, weighing respectively 7lb. and 4½lb. In two hours, with Mr. Ben Giles, three jack, the largest 6½lb. The water is in splendid condition for jack fishing if the rains keep off.—B.

(Twickenham).—R. Moffatt, in three days, nine bream, the largest 2½lb., and three dozen of roach, the largest 1½lb.—B.

(Windsor).—Feb. 2. The water is now in first-class order, and anglers should lose no time in trying the jack and chub. For the first time this season everything is favourable for good bags of the latter being accounted for, the drawback all the season has been the want of enough stream to get a quick and clean swim down, which is absolutely necessary to secure a heavy bag.—CECIL HOWLETT.

Arun (Pulborough).—A fair muster visited here on Jan. 29th, who found the river in fair order considering the recent floods, though on account of frosts takes ruled small, and with the exception of Mr. W. H. Allan (St. Alban's) who took four bream, 3lb., other takes were very small. At the time of writing (Wednesday night) the river is fast righting itself.—W. G. HOLLMAN.

Barton Broad (Stalham).—Since Christmas the pike fishing has been very good, Mr. E. Rose, of Woodford, has taken a few nice fish up to 11lb. weight. Mr. Penny and friend, from Yarmouth, have had a good day, I should say one of the best this season, numbering several good fish; several other gentlemen have been fairly successful. Mr. M. H. Matthews, of Southtown, Great Yarmouth, had one of 14lb., and another on Monday last; he writes me to say prospects are good. I should say so, too. With fine weather some good fish could be taken; so far this has been a record season at Barton.—ALMA NICHOLS.

Bottisham Locks (Waterbeach, Cambs.).—The weather during the past week has been bright, with slight frost, and these have much improved the condition of the river. At present everything points to the angler for pike having good sport. Several had during the past two weeks. There is no doubt but near the waterfalls at the locks just now pike are numerous, and are working up stream. Roach fishing has been slow, having such changeable weather. The dace have been spawning the last month. Live baits on the spot. Present time of writing (Feb. 1) water in good colour, and bank angling clean. Wind W.—JOHN O. GEORGE.

Coln, Leach, &c. (East Gloucestershire).—The heavy and continuous rains we have had during January has put these trout streams bank high, and in many parts in flood—higher than known for several years. Generally on these streams this means a good spawning season, the dace being non-plused and not venturing nearly so much on the rapidly flowing streams. They can in several parts be seen contenting themselves at the water's edge or on the river banks. Reports generally speak of the big spawning trout as being unusually numerous on many of the lengths, due undoubtedly to liberal and judicious restocking with *farios* and keeping ducks off the water. The season will undoubtedly be an early one, and the 12in. fish will be in good condition by the opening of the season,

about Easter time. Have seen several March Browns, Duns, and Spinners on the water during the past fortnight.—PAN.

Dart (Totnes and District).—It is satisfactory to learn that something is to be done as regards the restocking of the river. It was announced this week to the members of the Angling Association that that body would have been prepared to devote money to the purpose if necessary. It seems, however, that the Fishery Association, who own the valuable net fishing at Totnes Weir, intend spending a considerable sum (probably £100) in restocking the river with trout, and in providing ponds for the rearing of salmon from the ova by various stages, it being proposed to do this on an extensive scale. This announcement will be hailed with satisfaction by all anglers. The question of the prohibition of the use of the minnow within 100yds. of Totnes Weir has again been brought forward, it being thought by many anglers that the regulation put in force by the Fishing Association a year or so since is a vexatious and unnecessary one. On the other hand, it is urged that if the rule is rescinded it would afford opportunities for "jigging" fish, and that probably the association's right of fishing at the weir would be cancelled.—DEVONIAN.

Devonshire Streams.—The Tamar and Plym Board of Conservators may congratulate themselves on their satisfactory financial position. Their total receipts last season amounted to £326, and they have a credit balance of £186. In all, 221 rod and line licences were issued, the average for the past seven years being 244; but rod fishermen experienced a very bad season. From observation of the spawning beds of the Plym and Meavy, it is thought that the rivers are stocked with a very fine lot of fish. In view of possible increased expenditure in acquiring additional rights, &c., the Exe Conservators are unable to recommend the expenditure of any money for restocking purposes. Last season 1961 salmon were caught by nets in the tidal portions of the Exe (a total weight of 21,571lb.) and 224 (weighing 3172lb.) in the inland waters. Rod fishermen secured 112 salmon, scaling 1101lb. in all.—DEVONIAN.

Exe and Canal (Exeter).—For the first time for four months we have enjoyed a whole fine week. Although it has been very keen, anglers have taken full advantage of the dry spell, and a number of pike have paid the penalty. The best fish of the week was a 13½-pounder, which fell to the rod of Lieut. Holland. Strange to say, this was the gallant officer's *début* in pike fishing, so that he is to be doubly congratulated.—RED PALMER.

Fen District (South Lincs. and Cambs.).—A change is apparently coming over the spirit of the angler's dream. Ten days ago roach were the feature of his basket; now, apparently, pike is to have a chance. The cold weather of last week is having its effect, and better water is said to be doing on the pike waters, especially the Forty-foot and the Welland. Several lots have been reported, but news of the big fish will come later on.—LIMPET.

Idle District (North Notts).—The frost last week deepened, until by the week-end many of the still waters were covered with ice. This damped the ardour of the canal fishers. What few anglers were out on Monday and Tuesday confined their operations to the running streams. A few chub and grayling were reported from the upper waters, whilst in the lower and Haxey way jack and pike had attention. Reports, however, up to date are very meagre.—L.

Lark (Icklingham and Lackford).—The river in this district is in very fair order for pike. Only a few rods, however, have been out. Messrs. J. Hedges and Brownfield, four pike on the 26th ult. Water in most parts is in a lovely condition for spinning. Mr. W. G. King had some good roach and dace with worm at Lackford last week.—A. E. KEMP.

Lea.—Last week I expressed the hope that in my next report I should be able to record some good catches, especially as regards the roach; but up to this (Thursday) morning I have heard of very little sport from the Lea. Generally speaking, the river has been in condition for all-round angling, and the only assumption is that the unsettled and changeable weather has affected the fish in regard to their feeding habits. The Rye House district appears to have yielded the best sport. Here I hear of a 10lb. basket of roach being obtained, and also of a pike of about 10lb. being brought to bank. A number of pike have been taken at St. Margaret's, one club angler getting three going 9½lb.; but dull sport is reported from Ware and Hertford. A few nice roach have been caught at Cheshunt, but little has been done among these fish in the Enfield Lock district. The Stort has once more disappointed anglers, the water having greatly varied. Upon one occasion parts of the upper river were coated with ice. No results worth recording are reported, but the water is in condition.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these streams have gone down, and were on a fair way to clearing at the end of last week, when sharp frosts had frozen the water over the fields, and skating was brisk; a sudden thaw set in on Monday, followed by rain, and it has been threatening every day since, and there is little prospect of any fishing being done for some days. What is wanted is some good frosts, and then fishing would be good. The Pinesley is colonised.—GWYNNE.

Nene (Peterborough).—There is a considerable improvement in the condition of the river this week as compared with the past fortnight, the water, according to the gauge at the town bridge, having fallen about 2ft., and now it is assuming its usual colour, but no particular sport has yet been indulged in. The dredging of the river in the Wisbech district is just now the subject of much interest, the Corporation having decided to purchase an Eroder dredger at a cost of about £1800; but a memorial has been forwarded to the Local Government Board asking

them not to sanction the borrowing of the money for the purpose.—E. A. S.

Otter (Budleigh Salterton).—Trout fishing on the public water at this place, as well as on some reaches higher up the river, commences from to-morrow (Feb. 2). The Bicton water does not open until March 1. Sad to relate, the netters have already commenced dragging the public water, and will, no doubt, continue to do so without hindrance, as usual. The recent floods have thoroughly cleaned the bed of the stream, and have in many places created new runs. The public water looks very well for the angler. From all accounts, there are not so many sea trout in the river as usual, but as yet nothing certain on this head can be known.—HERON.

Ouse (Great Paxton, St. Neot's).—Jan. 31. This is the jack fisher's time. We have had three weeks' flood waters rolling down the river, which has driven the fish from the middle of the river into the corners and backwaters, and near the sides, where the force of the stream has been broken by weeds and reeds, or anything that broke the face of it. The fish, therefore, will be in larger numbers in less room, and good baskets ought to be made. The water is in perfect condition.—W. DUCKER.

Ouse (Holywell Ferry).—River in thorough good condition, and some very decent jack taken daily, largest since last week 8½lb., one gentleman yesterday taking six good fish. The water is a better colour than it has been all the season, so things look very promising. The frosts have sharpened their appetites a lot.—A. SCARD.

Ouse (St. Ives, Hunts.).—Chub up to 5lb, pike 9½lb., roach 1lb. 7oz. have been taken this week. Should we get no more rain we shall have splendid water for our annual match with the N.A.P.S. on Thursday, Feb. 9.—E. COLLINSON.

Ouse (St. Neot's).—Water clearing very nicely; it is now in very good condition indeed, and by Friday or Saturday will be about perfect. A gentleman has just caught three nice jack near my boathouse, in half an hour, two of 4lb., the other rather smaller. I quite think sport may now be depended upon, conditions all round being very favourable.—W.M. NASH.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—After the recent boisterous weather we have now a complete change, and with sharp, frosty nights, followed by brilliant sunshine throughout the day, angling for grayling is now pursued under the most favourable conditions, and very good sport has been had in the Tanat with these fish. In the Severn and Vyrnwy capital sport is being had, especially with pike, and last Saturday some Liverpool anglers had a very good day's sport in the Vyrnwy, near Llanymynech, and returned home with upwards of 50lb. of pike and perch.—VYRNWY.

Stour (Bures, Suffolk).—The water has been in splendid condition for angling during the past week, and some good fish have been landed. Mr. George Root, on the 28th ult., had amongst others a roach of 1lb. 9½oz. Mr. Wilson, on the 29th, had a roach of 1lb. 12oz.; and Mr. Thatcher, of London, five pike, all taken at the Gasworks swim. A large number of anglers were out on that date, but the takes were mostly very small. On the 1st inst. Mr. Geo. Root had a jack of 4lb., and on the 2nd, 7lb. of roach, largest 1lb. 10z. The water is still in first-class condition, and with the colder weather we are now having some good bags ought to be made. Gentles or worms are the most killing baits.—W. T. BAINBRIDGE.

Sussex Rivers and Chichester Canal.—With a continuance of fine weather rivers have greatly improved, and are now in good order for all kinds of angling. From the Ouse numbers of small pike have been taken; and from the Cuckmere, bream weighing 2lb., and perch up to 4lb. A few pike have been captured from the Rother, principally with live snap; but the heaviest fish, weighing 6½lb., was caught on paternoster, baiting with gudgeon, a perch of 1½lb. taking the lower hook. The Adur is now at its normal height, and should fish all right by the 5th, as it is low tide. The canal at Chichester has been well patronised. Pike have fed fairly well, but the average fish run about 3lb. A nice pike of 6½lb. was caught in the lower water by a visitor on Saturday. Perch up to 2½lb., and bream of 1½lb. are among recent captures.—G. F. SALTER.

Taw (North Devon).—East wind for the opening day. Very few able to stand the cold, and the fish knew well where to keep. Few catches and small are reports up to six o'clock. I got only six, which a sick friend relished.—RUSTY GAME.

Teme (Ludlow).—The Teme in this part has gone down considerably, and all the water has run off the fields, but the weather has been very changeable. The frosts of last week froze the water on the fields, and made good skating; but a sudden change on Sunday melted the ice, and then rain threatened, and the weather has been very miserable. The water is still rather high and coloured, and out of order for fly fishing or bottom; and no anglers have been out for a fortnight, and there is little prospect of any fishing being had. The high water assisted the salmon to get up the little rivers to spawn, where they have not been for some years. They will soon begin to get back to the Severn. The Ony, Corve, Clun, and Ledwyche have all been running high and muddy; they have now gone down, but are still out of order for fishing, and little will be done before trout season begins.—S. LUDLOW.

Teme (Tenbury).—In this district the river is still running out of order for fishing. The sharp frosts at the end of last week caused the river to go down and begin to clear, and there was a prospect of sport being had this week, but the weather has again changed, and rain has been falling, and it is generally miserable, and no angler would think of running the risk of catching a cold instead of fish, as things are at present, and nothing will be done until the weather takes up and we have some good frosts.—WORCESTER.

Trent (Newark).—For several weeks the Trent has been almost unfishable, bank full, and of bad colour, but is now fining down, and fit for either pike or bottom fishing. During the past few days roach and chub have been taken with gentles and worms, though nothing special as specimen fish. Of pike, the best weighed 10lb., taken by Mr. W. Taylor from the Muskham Fishery, in which water pike fishing ceases on the 15th inst.—TRENTSIDER.

Witham, &c. (Mid-Lincolnshire).—The continued rains had up to the beginning of last week raised heavy floods on the Witham below Bardney. The volume from the Barlings stream contributing to this effect, angling reports, therefore, on the lower Witham were very scanty. The frost chilled the water a good deal, and on Monday it was reported that the river was running down nicely. About the only report worth mention was from Five Mile House, where some roach up to 1lb. had been taken. A few decent pike are reported from Brayford Pool, at Lincoln; and at Saxilby, on the Fossdyke, and at Torkey, at its junction with the Trent, a few roach have been taken with a worm and bran as ground bait. Sport is quiet on Boston drains.—LUCI.

Yorkshire Rivers.—THE YORE, SWALE, NIDD, WHARFE, &c.—The Hawes and High Abbotside Angling Association, who have the right of fishing the Yore from the Moorcock Inn, above Hawes, down to a short distance below the Yore Bridge, closed their waters yesterday, Feb. 1, for grayling fishing. In doing so, if the trout angling is to be kept up to its present excellence, I think they are making a mistake. It is evident the stock of grayling must be kept down to within reasonable limits, if not, they will, in a great measure, take the place of the trout! I have examined the stomachs of a lot of grayling I have caught during the past six weeks, and have given dishes to friends, asking them to make a like examination, and the result in every instance shows that the grayling were full of trout ova. The past grayling season in the Hawes Association water has been the best they have had for years, a lot of grayling have been caught, and J. Blades and other anglers have had good sport from the opening of the season up to its close, and not a single blank day has been recorded. Sport, too, in the Wensleydale Angling Association water has been good during the past week. All the fish caught in the Yore, Bishopdale Beck, and the Cover are still in fine condition, and according to their present appearance they will continue so until the end of this month, at any rate. Messrs. Dalton, Lupton, and Dent, of Harrogate, had good sport in the Yore at Aysgarth on Thursday and Friday, killing over sixty good grayling with the maggot and worm; and on Saturday Mr. Kitching, station-master of Aysgarth, and three friends had good creels from Bishopdale Beck, which joins the Yore a short distance below the falls. Sport lower down the main river has been generally of a satisfactory nature, Mr. J. E. Miller, the Rev. J. Murphey, Mr. Collinson, and others having frequently made good baskets. Mr. Riley Fortune, the well-known Harrogate piscator, had a good day on the Tanfield water on Friday, killing thirty-one good grayling. He says: "Most of my fish were caught with the gentle. I commenced with the worm, but after catching a few fish they would not take it at all, and I tried the maggot with success. Your practical Pennell tackle is excellent; I seldom lose a fish with it," and packed in Messrs. Warner and Sons' patent handy-gut hook case the saving of time and trouble is immense. The invention is a very cheap one, and one of the most useful I have seen for many years. Very few Yorkshire grayling waters will close until March 15, but the Costa Club close theirs on Feb. 23. Some nice pike have been caught in the Swale, and at Morton Bridge on Friday last three anglers from Harrogate caught over 30lb. of roach, dace, &c. Sport has improved on the Wharfe. At Newton Kyne, J. E. Miller, jun., and Mr. C. Leach had two nice pike. At Burnsall, Mr. Skerrington caught ten good grayling with the worm; and at Collingham, Mr. Pickersgill, of Leeds, had a good dish of twelve grayling. On Saturday he caught three grayling and half a dozen dace. Some snow showers have fallen to-day, and the weather is colder again. Prospects are, however, good for next week if the weather keeps favourable.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Loch Tay (Kenmore, Perthshire, N.B.).—Kenmore, Loch Tay.—On the hotel water, on Jan. 25, Mr. D. Carson killed salmon, 34lb. 30th, Mr. W. Knight killed salmon, 20lb. Loch in good ply.—KNIGHT.

Loch Tay (Killin).—Jan. 26, Mr. Hodgson, one salmon, 18lb.; Jan. 27, Mr. Hodgson, one salmon, 18lb.; Jan. 28, Mr. Hodgson, one salmon, 23lb.—H. MAISEY.

Lyon (Fortingall).—Gentlemen fishing from the Fortingall Hotel had the following sport: Jan. 16, Mr. Edmund Berry, a beautiful salmon of 19½lb.; 19th, Mr. Philip Geen, one, 10lb.; 20th, Mr. Philip Geen, one, 30lb.; 21st, Mr. A. C. Johnson, one, 18lb.; 24th, Mr. Philip Geen, two, one 19lb. and one 20lb. There are lots of salmon to be seen.—MACPHAIL.

North-East of Scotland.—In another week the Scotch salmon fishing season will be in full swing. A check has been given to the series of big waters in the low temperature which has prevailed for the past two weeks, bringing with it frosts and slight snowstorms. This will be all the better for the general prospects of the opening season. On the Dee active preparations have been going on for some time, and anglers will be forward in force on the opening day. Mr. J. C. Haslam will fish the Carlogie section, Mr. J. C. Deverell (London) the Kincardine Lodge section, Lord Gairloch the Borrowstone waters, Mr. J. Drummond the Ballachie reaches, Major Davidson the Dees water, Mr. Duncan Davidson the Inchmarlo, Sir John Gladstone the Upper Blackhall, Mrs. F. Watson the Woodend, and Mr. and Mrs. Farley the Cairnton.

Mr. L. H. Croke has taken the Invercauld private water, and a number of rods will divide the Glentana for three months as formerly. The Ythan and Ugie do not open till the 25th inst.—G. M.

South of Scotland.—The extremely mild weather prevailing over the southern part of Scotland since Christmas gave way to a severe snap of frost last week, and curling was in full swing on a number of the lochs. A thaw set in on Sunday, and at the time of writing the ice is quickly disappearing. Except there is a renewal of the frost every trace of ice will have disappeared before the end of the present week. Since the season for the rod fishing closed, on Nov. 15, very few salmon have been seen on the usual spawning beds, where in former years they used to swarm. The keepers in the higher waters of the Solway rivers report that breeding salmon have been unusually scarce this winter. The opportunity for close observation has been a difficult matter for many weeks past, owing to the continual floods in the rivers. It may be said that all the rivers in Dumfriesshire and Galloway have been almost daily in flood since the new year. Happily, so far, only two diseased salmon have been seen this winter, and it is hardly likely there will be any serious outbreak this year. The Solway rivers will open their season for rod fishing in three weeks, but it cannot be said that the spring fishing is promising. None of the Border rivers give much spring fishing for salmon, although a few odd fish are generally accounted for. In the Annan a new fish or two have been seen ascending the river within the last fortnight. Salmon netting on the English side of the channel of the Solway opens on the 10th inst., and on the Scotch side, on the 25th. Rod fishing on the Nith and Galloway rivers likewise commences on Feb. 25. In the Dumfries court last week two men pleaded not guilty to a contravention of the Salmon Fisheries (Scotland) Act. After hearing all the evidence, the Sheriff said that, taking into consideration that both the accused had been previously convicted under the Act, a fine of £2 17s. each would be imposed, or the alternative of one month's imprisonment.—HEATHERBELL.

Tweed, Teviot, and other Border Rivers.—The main rivers in the Border district—the two first named—have been running in very good volume during the past week, and in nice colour; but to-day (Wednesday), the opening of the salmon rod-fishing on both rivers, the weather has been most capricious—the previous evening we had a slight shower of snow, then frost, and this morning more of the same, while during the afternoon and evening we were treated to heavy snow and sleet showers. Thus the opening of the salmon season was not a desirable one, and no rods were out in the Kelso district. In fact, the season will not, as a general rule, begin much before the end of the month. According to all accounts that at present can be gleaned from those who are supposed, and ought to know, there seems just now to be a scarcity of clean run spring fish in the Tweed; yet this is strange, as we lately had some splendid floods, running well on for several days, and giving clean spring salmon a grand chance to ascend to the high and middle reaches of the river. What the cause of this scarcity of clean fish in such a river as the Tweed is beyond the ken of fisherman on the Borders, and kelts seem to be in the same category as the clean fish. Trout fishing has not been very brisk during the last ten days, only a few old hands having been out, and their baskets have been light, ranging from 2lb. to 3½lb., and not a bull trout amongst the lot, but a few had some very nice grayling, all in capital condition. Salmon poaching, which is now very much done away with in the Kelso district of the Tweed and Teviot, is yet carried on to a small extent. The net salmon fishings begin on Tuesday, the 14th inst., when minnow fishing also becomes legal.—MAXWHEEL.

IRISH REPORTS.

Antrim Rivers.—The season opened on the Bush on Wednesday, the 1st inst., with the stream rather high for fly fishing. The weather is more favourable, as the frost has gone. The same day the season opened on the Lagan and the Glens of Antrim streams. As a rule trouting is not much good for the first fortnight on these rivers.—J. A. B.

Boyne.—Angling opens on the 12th inst. There is plenty of fish in the river above Drogheda.—J. A. B.

Bundrowes River (co. Donegal).—Angling began on this river to-day (Feb. 1). The river is at present in good fishing ply, and as a number of fresh run salmon have recently been seen passing through the river to the lake (Melvin), some good sport should be had on the river. The daily or weekly tickets to fish the Bundrowes river now can be obtained from the manager of the Bundrowes Fishery. Owing to the manner in which the Bundrowes river has been protected against poaching for the past two years, this should undoubtedly be a sporting spring amongst the salmon, both on the river and lake, as there has been upwards of a dozen keepers constantly on the river during this period.—M. ROGAN AND SONS.

Cork Rivers.—The accounts to hand of the sport on the principal rivers go to show that matters have not been up to anticipation, though fair sport was generally had. Spring salmon are arriving in better numbers on the larger rivers since Monday. All waters are now in good angling trim, and the prospects for the next few days are good.—T. J. D.

Kerry Rivers.—Comparatively little has been done among anglers on the waters where angling opened on the 1st inst. Spring salmon are reckoned numerous, but the weather conditions were not of the best. At time of writing, however, the weather has undergone a favourable change, and the prospects for the next few days, at least, are good.—T. J. D.

Killarney.—Sport has been generally of a dull description on the lakes, and fair on the principal rivers since the opening of the season. The weather at time of writing has improved very much, and as all waters are in

better order the prospects for the coming week are very materially improved.—T. J. D.

Lough Currane, &c. (Waterville, co. Kerry).—Angling opens here to-day (Feb. 1), but as this report must be posted in time for the mail, which leaves here at 3 p.m., no accounts of the angling were to hand, as the boats will not return until nightfall. The day is favourable, and the water in good condition.—T. C. D.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River in good order for opening on the 1st inst. Weather mild and warm. I have seen a few new fish show themselves already close to the upper bridge.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—The angling season for salmon and trout opened on the river Shannon to-day (Feb. 1), but the only rod I have seen out up to now was the Rev. Mervyn Archdall, chaplain to the Forces, Belfast, who has rented my reserved water above the bridge. I am glad to say that the floods are subsiding, and if all goes well salmon fishers should have a good chance of nailing a few heavy spring fish before many days are about. The pike fishing on the lake has improved. For instance, on Friday last, Mr. Richard Hope and Mrs. Hope, of Maidenhead, killed two of the handsomest pike I have ever seen. They were as bright almost as a June grilse, and comely withal. The heads of the brace were particularly handsome. Mrs. Hope's fish weighed 20lb., and Mr. Hope's 26lb. The brace have been sent to Mr. Williams, naturalist, Dame-street, Dublin, for preservation. It was curious that only ten minutes intervened between the capture of the two fish. The fortunate captors had fished steadily up to 4.20 p.m. without getting a "touch," but at that hour Mr. Hope's rod got a whack, and after fifteen minutes' splendid play it was brought to boat. Flasks of Gilbey's best Irish whiskey were soon in requisition, and scarcely were the lines out again when Mrs. Hope's rod was bent to the gunwale of the boat, and after about seventeen minutes' brilliant sport her beautiful fish was lying on the footboards. Bravo, and bravo again, Mrs. Hope! I had nearly omitted to say that the fair lady angler got, during the week, not a few other nice pike, ranging in weight from 6½lb. to 10lb. Mr. and Mrs. Hope were attended by Tom and Jack Grimes.—S. J. HURLEY.

Tyrone Rivers.—The Tyrone streams are all in flood. The first to open are the Ballinderry, Blackwater, and their tributaries on the 1st prox., and the Mourne, Roe, Derg, Glenelly, &c., on April 1. The spawning on most of these rivers was successful, generally speaking, although there was a decided falling off in the number of salmon on the redds compared with other recent years.—J. A. B.

SEA FISHING.

THE following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, Feb. 10. Tides decrease till Monday morning.

	Sat.	Sun.	Mon.	Tues.	Wed.	Th.	Fri.
	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.
Scarborough	9.26 p.m. 9.57	10.34 p.m. 11.16	11.59 — —	0.42 1.22	1.58 2.30	3.1 3.30	3.56 4.19
Yarmouth	1.53 2.24	2.59 3.35	4.15 4.55	5.36 6.18	6.57 7.30	7.57 8.22	8.47 9.12
Lowestoft	2.34 2.59	3.29 4.4	4.46 5.32	6.18 7.1	7.39 8.13	8.44 9.11	9.26 10.0
Aldeburgh	3.23 3.48	4.18 4.53	5.35 6.21	7.7 7.50	8.28 9.2	9.33 10.0	10.25 10.49

Ballinskelligs.—Pollack anglers continue to get good sport. Bottom fishing has not yet opened here. Spring mackerel are already arriving. Sea angling does not become general here until about April 15.—T. J. D.

Baltimore.—Anglers out after pollack have had good sport at and around this station since Saturday, the red rubber eel being the best lure.—T. J. D.

Darrynane.—Pollack anglers using red rubbers have generally had good sport since last report, chiefly in the Coomaconclane direction.—T. J. D.

Deal (The Pier).—Feb. 1. The weather has lately been so inclement, and the water so much discoloured, that scarcely a line has been netted during the past week. On the 29th ult. Messrs. Sweeting, Vaughan, Watson, Moore, and Henderson, together with several local anglers, patronised the pier for several hours, but only a few small

codling were taken. Monday witnessed two pier fishermen vainly tempting sport for the day, but not a bite was experienced. On Tuesday morning the pier was without a patron, but in the afternoon four rods turned up, the only return made being two small codling. Wednesday proved only a repetition of the preceding day, for Messrs. Waddell, Meacock, Bushnell, and Filmer fished the whole afternoon for a total catch of two codlings. A few sprats were taken by a Walmer boat this afternoon, and a few whiting may yet remain in the locality, but much clearer water than at present obtains would be needed for their capture.—J. RICHARDSON.

Deal.—Owing to the high winds and gales which have been blowing, and water very thick, nothing in the way of boat fishing has been done until yesterday (Tuesday) and to-day (Wednesday), and each day a few boats put out and landed some nice codling. If weather keeps moderate, in all possibility there will be sport with this kind of fish.—NED HANGER (B.S.A.S.).

Eastbourne.—Jan. 31.—During the last week the weather has become colder and finer, and should it continue so some good sport should be had within the next two or three weeks. High tide about 4.30 a.m. and 5 p.m. on Saturday next.—J. W. S. (B.S.A.S.).

Plymouth.—There is not much to report during the last week; the wind has been from the eastward, which is always bad for fishing. A few fish have been taken from the various piers, but the weather has been too cold for the general body of fishermen. I hear some good reports from the westward, and also from my Irish correspondents. Our regular trawlers and hooking boats have had a rough time of it, for the last time or two it has either been blowing hard from the south-west, with heavy rain, or the wind has been from the eastward and off the land, which throws up a nasty cross sea in the Channel. In the bay, however, and in the Sound, it is comparatively smooth; this is an advantage that we have in this port, being so landlocked. The list of edible fish for this month includes atherine (smelt), sprat, anchovy, ling, whiting, pouting, dab, mackerel, eel, tub, piper, red gurnard, trout, salmon, and all shell fish.—WILLIAM HEARDER (B.S.A.S.).

Southend and Leigh.—Feb. 1. There is but little to report from this neighbourhood. Wet and cold have been responsible for the paucity of anglers, but I have heard, nevertheless, of some nice fish having been taken. Flat fish are returning to their old love, the lug worm, but it is advisable to take some sprat when going angling. I hope all anglers will support the efforts which are being made to regulate more efficiently the fishing from the pier. Progress will be reported from time to time in the columns of the *Fishing Gazette*. Prospects for next week-end somewhat uncertain, but on the favourable side. Barometer 29.7 in., steady; wind, N.W., light; sea smooth. Weather misty, with indications of rain.—CHARLES HUSSEY (B.S.A.S.).

Valentia.—Pollack are giving good sport at time of writing within the harbour and also close to Beguish Island on the ocean side.—T. J. D.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The renting and preservation committee meeting will take place on Monday evening next, Feb. 6, at 8.30.—R. GHURNEY.

Anglers' Association.—PRESERVATION WEEK FUND.—I beg to acknowledge with thanks the receipt of the following amounts: 10s. 6d., Isaac Walton; 10s. 6d., South London; 10s., Bermondsey Brothers; 10s., Waltonian; and 12s., proceeds of the Crown and Buckland concert.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £1 7s., Stepey Angling Society's donation box. At the last meeting (Jan. 27) £24 was granted for four applications. The next committee meeting will take place on Friday, Feb. 10, at 8.30.—R. GHURNEY.

Anglers' Association (WESTERN DISTRICT) Visiting List.—On Tuesday last a most enjoyable visit was given to the Queen's Piscatorial. On the roll call thirteen clubs were well represented. The A.B.S. box contained the sum of £5 10s. 6d. The next visit will go to the Queen's A.S., on Feb. 16, at their clubhouse, the Latimer Arms, Latimer-road, Notting-hill, when I hope to see a good muster.—J. HARRIS.

Anglers' Association (No. 2 DISTRICT) Visiting List.—A most successful return visit took place on Jan. 31 at Islington Brothers A.S., and the room was well filled. Amongst the clubs represented were the Elgin and Allason United Brothers. Mr. Ghurney, of the Anglers' Association, was also present. The following fifteen clubs answered the roll call: Amicable Waltonians, Crown and Buckland, Clissold, Islington Brothers, North London, Original Clerkenwell, St. John's, Wenlock, Sociable Brothers, Elgin, Hoxton, Royal George, Great Northern, Walton and Cotton, Allason United. On opening the A.B. box I found £1 12s. 6d. I tender best wishes to all who were present. My next visit on the A.A. List (No. 2 District) takes place at the Original Clerkenwell A.S., Sutton Arms, Great Sutton-street, Clerkenwell, opposite Anglers' Association headquarters. Date of visit Monday next, Feb. 6. I hope to see a crowd.—BEN ABRAHAMS.

Anglers' Benevolent Society (WINDSOR COMPETITION), Committee Rooms, Queen's Arms, 1A, Chapel-street, Edgware-road.—The committee dinner and select concert takes place on Thursday next at the above house. Host Keene, our respected treasurer, will supply the same at 3s. Commence at 8 p.m. sharp.—BEN ABRAHAMS.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—Our match on Jan. 29 was a success, four prizes being won out of six: Mr. Ramson, first; Mr. Osborne, second; Mr. Carey, third; Mr. Allen, fourth. Members also weighed-in for gross weight: Mr. King, roach; Mr. Arthur Smith, roach and bream; Mr. Alf Smith, roach and chub. Chairman for this month, Mr. Fenton; scalesman, Mr. Allwright. On Feb. 5, for the two remaining prizes, members go where they like.—J. A.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate.—Several members had fish on Jan. 29, but the sudden change put a stop to the roach feeding. On Feb. 1 Mr. Wells caught several pike, and one a grand specimen 25lb.; length, 3ft. 6in.; girth, 25in. It was admired by all who saw it. The fish has been presented to our club, and sent to Mr. Anstias for preservation.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portemouth Place, Lincoln's Inn Fields.—On Jan. 29 Messrs. Chambers and Montgomery weighed-in roach and dace. Members are requested to clear the books to make themselves eligible for the next outing.—J. CHAMBERS.

Amicable Excelsior Angling Society, Prince Arthur, Arthur-street, Battersea.—Our next match, fixed for Feb. 12, at Egham, from the Varnish Works to the Bells of Ousley; towpath only; to go first train on the morning. Since my last report we have had some fine shows of fish by the following: Messrs. Townley, G. Taylor, G. Pope, T. Fairclough, G. Rich, and Cooper.—J. R.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—Plenty of the members were out on Jan. 29, but success did not seem to attend them, the following only having good shows of fish: Messrs. Payne, roach; Lambarth, roach and dace; Hutchinson, roach; Shurey, roach. On the 1st Mr. Fryett was made a working member.—G. MEERY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—On Wednesday next we decide where to fish our February prizes. I hope all members will turn up, so that we may have a good muster.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—On Jan. 29 Mr. G. Mead weighed-in a nice chub of 3lb. 6oz. Other members out, but not very successful. A specimen jack, caught by Mr. W. Herant, and very creditably preserved by Mr. R. Wellman, was added to our collection. Members are reminded of roving match on Feb. 5; to go down on the morning; jack are barred.—A. JENKINS.

Battersea Piscatorial, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Our visit took place on Jan. 30, when only six clubs were represented on the list and two off, being a very poor muster, as we attend every visit on the list. We fish a match at Feltham on Feb. 5. To go by the 8.27 a.m., and return by the 6.25 p.m.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—The only member to weigh-in on the 29th ult. was Mr. J. Hobb, 12½lb. of roach. Mr. G. H. Shepherd weighed-in a splendid show of roach and chub from the Thames on the 1st inst., 38lb., two of the former fish weighing 3½lb. The competition for the February series of prizes will take place on Feb. 12.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Several members were out on Jan. 29. Mr. Merrygold, grand take of roach, chub, and dace; Messrs. Wheelhouse, Jones, and Whitey, roach, perch, and dace. Will members turn up in force next Wednesday to decide where we fish our February series of prizes? Mr. H. Heil (an honorary member) had a grand take of roach, several going 1lb. 12oz. Members in arrears kindly settle up.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Jan. 29 Mr. H. Davis weighed-in jack; Mr. J. Taylor, roach and perch; and Mr. B. Daniels, dace. On Feb. 1 the balance-sheet was read and passed as satisfactory. The quarterly pegged-down match is fixed to take place on Feb. 12 at Ware, when we fish for three prizes, under the usual conditions.—T. PATERNOSTER.

Brompton Angling Society, D'Oyley Arms, Marlborough-road, S.W.—Mr. Cecil again saved us from a blank on the 29th ult. by weighing-in some chub, heaviest just over 3lb. I hope members will turn up in force on Feb. 5 to fish return snapper match, combined with sweepstakes competition with Snndial A.S.; saloon reserved by 8.40 ex-Paddington, all to start by signal from the "Lion," and to weigh-in there by 7 p.m. at the latest.—W. H. B.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On Jan. 29 twenty-nine members took part in a pegged-down match at Bures, result as follows: John Burgess, 1st; C. Hazard, 2nd; T. Benny, 3rd; E. Wright, 4th; A. Nicholson, 5th; H. Wright, 6th. The consolation prizes are to be fished for on Feb. 12, between Rye House Bridge and St. Margaret's Bridge; roving; start fishing at 9 o'clock, cease at 5 p.m. All to get out at Rye House, Steward, H. Deverill. Show fish at Rye House Bridge not later than 5.45 p.m.—P. E. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—We had a good show of fish on Jan. 29 by Messrs. J. Andrews, W. Andrews, Whips, Adams, White, Cook, and Fowler.

We have another outing to Broxbourne on Feb. 19. On Feb. 5 we fish for the prizes remaining.—E. BOXALL.

Central Association of London Anglers.—The usual monthly meeting of delegates will take place at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday evening next, 6th inst., at 9 p.m.

Central Association Visiting List.—The return visit on this list has been arranged to go to the Original Clerkenwell Piscatorialists, held at the Sutton Arms, Great Sutton-street, Goswell-road, on Monday evening, Feb. 6.—WADE.

Clapham Junction Angling Society. The Clarence, Winstanley-road, Clapham Junction, S.W.—Members are requested not to forget our match at Cookham on Feb. 5. On the 29th ult. Messrs. J. Thorn, 6lb. 6oz. of roach (four fish 3lb. 6oz.); A. Bowater, 3lb. 7½oz. of roach; Mr. H. Moore, one jack.

Clissold Angling Society. The Cricketers, North-wold-road, Stoke Newington, N.—On Jan. 28 we had the first blank this season. On Tuesday we received with regret the resignation of Mr. J. La Monde. The date of our A. B. S. smoker will probably be altered (see next week's *Fishing Gazette*). Another final outing has been arranged. Information at the clubhouse.—THOS. FAULKNER.

Cobden Angling Society, Kensal-road, W.—On Jan. 29 the following members weighed-in, Messrs. E. Baxter, roach, dace; W. Walker, roach. A Howland had a very nice show of perch from the Thames (one perch 1lb. 14½oz. 2dr.; one, 1lb. 10½oz.; one, 1lb. 3½oz.; one, 1lb. 1½oz.). Also weighed-in: F. Melville, roach and perch; T. Twyman, roach. Will members kindly attend next Tuesday to make conditions of match.—T. TWYMAN.

Convivial Angling Society, City of London, Sidney-street, City-road.—On Jan. 29 the following weighed-in: Mr. W. Humphreys, jack; Mr. W. Braxton, perch; Mr. P. Juchan, chub and dace; Mr. R. Juchan, perch and bream. On Feb. 1 two members had 20lb. of roach and one jack. We have an outing at Rye House to St. Margaret's on Feb. 19.—PHIL.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On Jan. 29 Messrs. Brink, Curtis, and Outbush weighed-in roach, bream, chub, and perch. On Tuesday Mr. Curtis had a good show of roach, bream, and perch.—W. MASSEY.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—On Jan. 22 the following weighed-in: H. Haines, roach, 8lb. 12oz.; and W. Long and A. Anderson, smaller takes of roach. On Jan. 29 H. Haines, roach; and W. Long, roach. We fish for three prizes at Bourne End on Feb. 12; conditions at clubhouse. Mr. A. J. Pratt gives a prize for gross weight of all fish during February.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On Jan. 29 seven of the members journeyed to Cookham to compete for eight prizes. Result as follows: Messrs. H. Poore, 1st; E. Wild, 2nd; A. Morgan, 3rd; W. Thompson, 4th; S. Wood, 5th; J. Eagles, 6th; and T. Thompson, 7th. Members are requested to attend on Tuesday, Feb. 7, as I have some more prizes in hand.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Several members out on Jan. 29, but no fish were weighed-in. Wednesday's meeting. Mr. Snell's jack in case is now decorating the club-room, and was much admired. We expect many others shortly. Mr. Elton (our chairman) presented a new fish measure to the club, made by himself, which was received with hearty thanks by the members. Mr. West was made a working member.—JOHNNY EDWARDS.

Drayton Park Piscatorialists, Stanley Arms, Land-seer-road, Holloway-road, N.—The general outing on Jan. 29 was successful. On Feb. 1 several matters of importance were discussed, and another new member proposed. A vote of thanks was passed to Mr. Rowell, Railway Hotel, Kelvedon, for the excellent dinner he provided for the committee. Our weekly concerts have now commenced. Our new host is Mr. Joe Lea, and Mr. Brooker presiding at the piano. Members are requested to put in an earlier attendance on the 9th, when they will hear something worth hearing.—GREG.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—On Jan. 29 Mr. Biggs saved us from a blank with a jack, 3lb.—W. LEFFRE.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Mr. Thompson brought in some good roach and perch from Littleport on Jan. 28. The members will fish for eight prizes on Feb. 5, at St. Margaret's; all start by the 9.8 train. Our supper will take place on Feb. 14. Our caterer will be Mr. Mignott, of Hackney.—R. MURPHY.

Great Yarmouth Piscatorial Society.—At a pike and perch match, fished at Barton on the 26th ult., Mr. J. A. Williams captured three fish, weighing 26lb., 11oz., under the hour, taking first prize, and the rest of the day for him was a blank. Mr. A. J. Penny landed two fish, 13½lb., second prize. At the clubhouse, Mr. Williams weighed-in one of 10lb. 12oz. as a specimen. Mr. L. P. Garrett was the umpire, assisted by Mr. R. B. Thompson.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had a nice jack and some good roach on the trays on Jan. 29, and one of our members, fishing on Tuesday, had a nice show of roach. I trust the members will not forget Feb. 12, at Shiplake. Being almost the last match, I should like to see them all come.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Mr. W. Ford saved us from a blank with some roach. Our prize outing on Feb. 5 takes place from Ware Bridge to Ware Park Mill; peg-down; start fishing at ten o'clock, leave off at half-past

five; one rod only allowed; live bait allowed with tight line only.—E. SMITH.

Highbury Angling Society, Globe Hotel, Upper Tollington-road, N.—Mr. West, in two outings, has taken two fine perch, 1lb. 9½oz. and 2lb. 3½oz. Others have had fish, but nothing noteworthy. Our billiard handicap was concluded on Wednesday, Mr. Wymer defeating Mr. G. West in the final.—E. W.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—Our usual weekly meeting on Wednesday was again well attended. Fishing reports ruled small through the flooded state of the rivers. Mr. Caines, on Friday, had a day's jacking, but with poor results. Mr. Hawes, fishing at Shiplake on Saturday last, had one small jack. Our supper on Feb. 8 has every appearance of being very successful.—A. CLAYTON.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland Road, Shoreditch.—On Jan. 29 Messrs. J. Wiltshire weighed-in roach; H. Bailey, jack. A grand smoking concert, in aid of the A.B.S., will take place on Tuesday, Feb. 14; our president, Mr. G. H. Wood, will occupy the chair, supported by Messrs. G. H. Shepherd, W. Musgrave, sen., J. Jennings, W. J. Wade, and F. Newton, commence at 8.30. Our large room has been extended and will now seat fifty more.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—The following weighed-in on Jan. 29: Messrs. J. Croker, roach and dace; Burwash, dace; Searl, roach; Howard, roach; and Heckford, perch. The return visit on No. 2 Eastern District List was fairly attended on Tuesday, 31st ult., Mr. Cuthbert in the chair, faced by Mr. Howard. The following contributed to the harmony: Messrs. J. H. Herbert, H. Gate, G. Moore, H. Stretch, W. Stretch, Nunn, W. Ellwick, Bridge, W. Croker, E. Hunt, Fred Hilton, &c. When the roll was called fifteen clubs responded. I wish to thank all the anglers and friends who gave us their support. The A.B.S. box was opened by Mr. B. Abraham, the contents being £1 12s. 6d. Match at Cookham on Feb. 5; 8.40 train, Paddington.—J. H. HERBERT.

Isaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—As announced the members will compete for three special prizes on Feb. 5, on any part of the Lea or Thames (private waters barred). There are also three "specials" to be fished for on Wednesday next, 8th inst., on the Lea, between the Fish and Eels and Ratty's Weir.—H. B.

Jolly Butchers Angling Society, George the Fourth, Walnut Tree-walk, Lambeth, S.E.—Our match, Jolly Butchers versus Wellington, at Sunbury on Feb. 5; train leaves Waterloo 7.50 a.m.; all members to start fishing by the steward's whistle, and to cease fishing at 5 p.m. by the same; no live bait to be taken down; jack harred.—G. EDWARDS.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since last report we have had but few fish weighed-in. Messrs. Bence and Gilder weighed-in roach from the Thames on Jan. 29. I hope members will try and attend next meeting night.—J. BENCE.

Lady of the Lake Angling Society, Swakeley Hotel, Shepherd's Bush, W.—At a meeting held on Jan. 25, Mr. W. J. Jones was elected hon. secretary in place of the late Mr. Mason. Angling clubs to kindly note. An outing to Hampton will take place on Feb. 5.—W. J. J.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville.—On Jan. 29, a few members were out, Messrs. Biggs, R. Watling, and J. Cook having a few roach. Our outing of the season will take place at Sunbury for seven prizes on Feb. 26, usual conditions, all to start on the morning.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—The weather is fairly mild, but it is misty, and the frost has disappeared as quick as it came. Two of our members had a day in the Vyrnwy, at Lillanymynech, on Saturday last, and found the river in fair condition, and although in good volume, still had run down a good deal. Fifteen pike were run and ten hanked. One of them weighed 8lb., but was afterwards found to have a jack of ½lb. or more tightly jammed in its gullet. Two fine perch were also got, and one grayling, 1½lb., but in very poor condition, and evidently going off. The committee of the Liverpool centre of the Northern Anglers' Association met at the "Bee" on Monday evening last, when the election of officers resulted thus: Chairman, Mr. King (West Derby Association); vice-chairman, Mr. Wishart (member of three associations); treasurer, Mr. Woolfall; auditor, Mr. Hann (Central Association). Mr. Woolfall was asked to draw up some rules, and to call another meeting for considering them when ready. The next meeting to be held at 13B, Mose-street, the club house of the Central Association. Mr. W. H. Wright very kindly promised two guineas to the prize fund, and a hearty vote of thanks was passed to him for it.—R. WOOLFALL.

Lychnobite Angling Society, Ben Jonson, Shoe-lane, E.C.—The next competition is fixed for Feb. 11 at the Fish and Eels Fishery, Hoddeston private waters. Champion concert, March 25.—SID RAWSON.

New Albion Piscatorial Society, The Grove House Tavern, Camberwell-grove.—On Thursday next, Feb. 9, we hope to fish our annual match with the St. Ives and District Angling Society. Members are at liberty to go down overnight, and await those coming from London by the 8.40. We fish for a dinner and plate, 21s., for the heaviest one, two, or three roach caught by a member of either society. On our own side we fish for Mr. Wood's fifteen guinea challenge cup, with prizes of £2 2s., £1 1s., £1 1s., 10s. 6d., and a special prize of £1 1s. for the best roach of the day. All draw for companions, and fish from the bank, though a boat may be used for getting about. On Thursday, Feb. 16, Mr. W. J. Wade

has kindly consented to give his lantern lecture, entitled "An Angler's Rambles through Kent." Lecture at eight o'clock, followed by a smoking concert. All anglers are welcome.—A. E. BALDWIN.

North-East Brothers' Angling Society, Star and Garter, Green-street.—The remainder of prizes were taken by the following on Jan. 29 in rotation: E. Lamb, H. Hart, J. Richards, sen. H. Hart also won the 10s. 6d. prize for the largest roach, given by H. Collins. Feb. 8, special meeting. Feb. 12, outing.—A. LEWIS.

North London Angling Society, Tap House, Holloway-road.—On Jan. 29 several members were out, but only Mr. Pink was successful, he showing some good roach from the Lea, heaviest 1lb. 1oz. On Feb. 5 the members fish for six prizes at Ware. Pegged down above the cottages when I hope to see all present.—H. STRETCH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Jan. 22 Mr. S. Orrow weighed-in 8lb. 4oz. roach; on Jan. 29 Mr. W. Madget weighed-in 8lb. 6oz. jack; Mr. S. Dulieu 4lb. 4oz. jack; Mr. G. Barra, 1lb. perch. Our concert on Jan. 30 was fairly well supported, but not so well as we wished it to be. Our next concert will take place early in March. On Feb. 7 our annual supper will take place at the clubhouse, snapper on table at eight o'clock. We fish for seven prizes at St. Margaret's on Feb. 5, boundary from Rye House Bridge to Hardmead Lock. Fish to be shown at Railway Hotel at six o'clock.—E. BROCKETT.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—On Jan. 29 only two prizes were taken: Mr. Hill, first, with roach and dace; Mr. Davison, second, with perch and dace. Remaining prizes to be fished for on Feb. 5; roving. Our visit on the Central takes place on Feb. 6, when I hope to see a good muster, as it is our first visit to our new clubhouse.—A. HILL.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Only two members weighed-in on Jan. 29: Messrs. Reitz and Tracey, each with three lots of perch. Our A.B.S. concert takes place Feb. 11. I hope to have a good muster.—W. S.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On Jan. 29, Mr. Bouffler, roach from the Thames; Nobby, pike from the Welsh Harp. On Feb. 12, match for three prizes at Bourne End; particulars next week.—R. C.

Prince Albert Angling Society, Prince Albert Hotel, Woodfield-road, Harrow-road, W.—Members are requested to attend on Thursday next to make final arrangements for outing on Feb. 12. We made another new member at our last meeting. Members who had fish on Jan. 29 were W. Fayers, roach; F. Hemiford, roach; and S. Slater, roach.—W. B. F.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—Messrs. Robins and Clish weighed-in a splendid show of roach each, and Mr. Whitford a small jack. At our meeting on Monday the auditors examined the books, and congratulated the society on its financial condition.—W. B.

Queen's Piscatorialists, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On Jan. 29 only three weighed-in: J. Winsby, C. Brett, and W. Shepherd. On Jan. 31 we had our return visit on the A.A. list, when thirteen clubs were represented, and the box contained the sum of £6 10s. 6d. There was plenty of talent, and Mr. R. Norman ably presided at the piano. I have much pleasure in being able to thank all those who attended. The next visit goes to the Queen's A.S., Latimer-road.—GEO. KEENE.

Richmond Angling Society, Sun Inn, Park Shot, Kew Foot-road, Richmond.—The above society have removed their quarters to the above address. We hold our first meeting at our new house on Feb. 2.—H. E. GAYNOR.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington Cross.—Several were out on Jan. 29. The lapsed prize from the last match was won by Mr. Every. H. Allan also weighed-in bream. Our next match for four prizes takes place on Feb. 19 (roving).—H. ALLAN.

St. Thomas's Angling Society, Spread Eagle, Stangate-street, Lambeth, S.E.—We fish a match on Feb. 5 for six prizes. Hope the members will all turn up. Waterloo, eight o'clock, to Datchett; tow-path only. Return by five o'clock train. Mr. G. George weighed-in eight fine dace and roach on Jan. 29.—G. GEORGE.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—On Jan. 29 a few of our members weighed-in fish, viz.: Messrs. W. North, roach, 6lb.; S. King, roach, 2lb. 11½oz.; Campbell, 3lb. 4½oz.; Ben Smith, 1lb. 2oz. On Jan. 21 a few of our members weighed-in sea fish, viz.: dabs, &c.: Messrs. North, 4lb.; Krillie, 3lb. 12oz.; W. Aldis, 1lb. 7oz.; Pennell, 1lb. 3oz. Our next outing will take place at Goring on Feb. 12.—W. ALDIS.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—On Jan. 28 Mr. Smith had some nice roach. Next outing Feb. 26, at Hertford.—PELICAN.

South London United Anglers' Visiting List.—A return visit on the above list took place on Monday last at the Battersea Piscatorialists, Winstanley Arms, Clapham Junction, when only six clubs on the list were represented, which, I think, is a disgrace to the S.L.U.A.V.L. The next visit goes to the Peckham Brothers' A.S., Windsor Castle, Cator-street, Peckham.—ALF PAINTER.

Stockwell Angling Society, Old Queen's Head, Stockwell-road.—At a special meeting, held on Jan. 31, an entertainment committee was elected in conjunction with the H.A.C., their duties being to organise a series of entertainments during the fence months. The date of each item of the programme will be notified on notice board at clubhouse. Our next prize outing will take place at Datchett on Feb. 12.—THOS. LUCAS.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—I wish to remind members that Tuesday next, Feb. 7, will be quarterly night, when I hope to see a good muster. It was decided at our last meeting that a match take place on Feb. 19.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—During the week Mr. C. Brace weighed-in a chub of 2lb. 9oz.; and Mr. Lock, 5lb. 15oz. of roach and dace. Members going down to Bourne End on Feb. 5, to take part in the outing with the Brompton Angling Society, will go down by the 8.40 train from Paddington, and return by the 7.42. Also look out for reserve saloon carriage, and all members are to start by signal from the Lion Hotel. The scales will be closed for weighing-in fish at seven o'clock. Fish from tow-path only. Mr. King's cup and other prizes to the number of about nineteen will be fished for.—C. E. LOCK.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—On Jan. 29 Mr. J. Payne weighed-in roach; J. Sakley, roach and perch; and C. Freak, perch. Other members were out, but returned with blacks.—H. TYLER.

Victoria Brothers Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—On Jan. 29 the following weighed-in good shows of roach from Thames and Onse: Messrs. J. Toothill, F. Griffith, and W. Bond.—W. H. B.

Waggoners' Angling Society, White Lion, Albert Embankment.—Since my last report the following have had fish: On Jan. 22, Mr. Clegg, dace; on Jan. 29, Mr. Allan, dace; C. Frith, roach; W. Powell, roach. We fish a match on Feb. 5, at Datchet; roving from Albert Bridge to old Windsor Lock; both sides of the cutting included; usual conditions; cease fishing at 4 o'clock.—H. C.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Our meeting on Feb. 1 was poorly attended. Absent members please note that we travel down to Cookham on Feb. 5 by the 8.40 from Paddington. Mr. Duffield weighed-in a fine perch on Jan. 29, 1lb. 8oz.—W. BATCH.

Walthamstow Brothers' Angling Society, Essex Arms, Forest-road, Walthamstow.—The result of the January prize outing is as follows: First, Mr. W. Knight; second, Mr. W. Goddard; third, Mr. Poore. The February special prize outing will take place at St. Margaret's on Feb. 12.—H. WIGG.

Walton and Cotton Angling Association, Crown and Woolpack, 162, St. John-street-road, N.—Our members have had some fair takes lately of one jack, 6lb. 7oz.; eight jack, 3lb. 13oz.; one chub, 3lb. 8oz.; three chub, 5lb.; and 10lb. of nice roach, largest 1lb. 4oz.—M. CUDDON.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—We fish a competition on Feb. 5, for the lapsed prizes. I shall be at Vauxhall Station at 6.30 a.m. that morning, to meet my member who was not present this evening.—W.

West Green Angling Society, Black Boy Hotel, West Green-road.—The above held a tripe supper at their headquarters, the Black Boy, on Jan. 25. The room, which was beautifully decorated, was well filled, over forty members attending, besides visitors. Mr. Sparling, the president, occupied the chair, supported by Mr. Rand, the popular member for West Green on the District Council, and Mr. T. Williams occupied the vice-chair. The musical talent was all that could be desired. A collection was made on behalf of the T.A.P.S., amounting to £1 9s.—ALFRED G. HILL.

West Ham Brothers Angling Society, Coach and Horses, The Grove, Stratford.—Our members were out on Jan. 29, and the following weighed-in: Messrs. C. Miller, roach; Corley, roach; Molden, roach; John Newton, roach; Pethurst, roach; R. Lowther, roach. I hope our members will not forget our jack match at Hatfield Peveril on Feb. 12; all to go down by the first train that leaves Stratford on the morning (7.35 a.m.); and also our return visit on Monday, Feb. 13.—R. LOWTHER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—The above society's match, fished on Jan. 29, in the Lea, nearly fell through, Mr. Bean being the only member to weigh-in. He has taken the first prize.—S. J. H.

Wimbledon Piscatorials, 28, Alexandra-road, Wimbledon.—The match on the 29th ult. resulted as follows: Mr. Golding, sen., first with a fine pike of 7lb. 13oz., from club water; Mr. Salkeld, jun., second; and Mr. W. Bishop third with smaller jack. Mr. H. Golding and Mr. Thain also weighed-in perch from the Thames.—HON. SEC.

STOP PRESS.

WEATHER REPORT.

By TELEGRAPH.—FRIDAY, FEB. 3, 9.25 A.M.

DEAL.—N.W.; smooth.
DOVER.—N.; light; smooth.
RAMSGATE.—N.N.W.; smooth.
MARGATE.—N.; choppy.
HASTINGS.—N.; smooth.

A MONSTER concert will be held at the Champion Hotel on March 25, under the auspices of the Lychnobite Anglers, in aid of the Preservation and Re-stocking Societies. Miss Marie Lloyd has kindly consented to sing, as also have several other talented artists. The Lychnobites are good workers in a good cause; and it is confidently anticipated that the March 25 concert will be a "Champion" one.

Angling Fixtures.

February 5.

Albion Brothers: Lapsed prize outing.
Battersea Friendly: Roving match.
Battersea Piscatorials: Match at Feltham.
Brompton: Supper match at Bourne End.
Cambridge Friendly: Sweepstake match.
Camden: Lapsed prize outing.
Clapham Junction: Outing.
Good Intent: Match at St. Margaret's.
Hearts of Oak: Outing to Ware.
Islington Brothers: Match at Cookham.
Izaak Walton: Match.
Jolly Butchers: Supper match at Sunbury.
Lady of the Lake: Outing to Hampton.
North London: Match at Ware.
Original Alexandra: Match at Rye House.
Original Clerkenwell: Lapsed prize outing.
St. Thomas: Match at Datchet.
Sundial: Outing to Bourne End.
Waggoners: Match at Datchet.
Walham Green: Outing to Cookham.

February 6.

Anglers' Association: Renting and Preservation Committee meeting.
Central Association: Delegate meeting.
Clissold: Smoking concert.
Original Clerkenwell: Visit.

February 7.

Mildmay: Annual dinner.
Original Alexandra: Annual supper.

February 8.

Cardiff Piscatorials: Annual dinner.
Holloway: Supper.
Izaak Walton: Match.

February 9.

A.B.S. (Windsor competition): Committee dinner.
St. Ives (Hunts): Annual match with New Albion Piscatorials.

February 10.

Anglers' Benevolent Society: Committee meeting.

February 11.

Lychnobite: Competition at Hoddesdon.
Park: A.B.S. concert.

Feb.

12.—Allason United: Match at Langley.
12.—Amicable Excelsiors: Match at Egham.
12.—Bermondsey Brothers: Prize outing.
12.—Bloomshury Brothers: Match at Ware.
12.—Cambridge Heath Brothers: Consolation prize outing.
12.—Crown and Buckland: Match at Bourne End.
12.—Harcourt: Match at Shiplake.
12.—North-East Brothers: Outing.
12.—Phoenix: Match at Bourne End.
12.—Prince Albert: Outing.
12.—Seymour Brothers: Outing to Goring.
12.—Stockwell: Match at Datchet.
12.—Victoria Brothers: Outing to Bourne End.
12.—Walthamstow Brothers: Prize outing.
12.—West Ham Brothers: Outing to Hatfield Peveril.
13.—Piscatorial Society: Reading by Mr. H. Brown.
13.—West Ham Brothers: Visit.
14.—Golden Barbel: Roving match.
14.—Good Intent: Annual dinner.
14.—Gresham: Smoking concert.
14.—Hoxton Brothers: A.B.S. concert.
16.—New Albion Piscatorials: Lantern lecture.
16.—Queen's: Visit.
19.—Convivial: Outing to St. Margaret's.
19.—St. Alban's: Roving match.
19.—Stratford: Match.
20.—Piscatorial Society: Smoking concert.
26.—Lincoln: Outing to Sunbury.
26.—Silver Trout: Outing to Hertford.
March 20.—Piscatorial Society: Annual dinner.
25.—Lychnobite: Preservation concert at the Champion Hotel.

THE SEVERN FISHERIES.

THE annual report of the Severn Fishery Board, presented at its general meeting, held at Birmingham on Thursday in last week, cannot be regarded by those who are interested in the fisheries of the Severn and Vyrnwy as a satisfactory one, and the chairman, Mr. J. W. Willis Bund, who is responsible for its compilation, holds out little or no hope that matters will improve in the future. Briefly reviewed, the report set forth that the number of balliffs has had, through lack of funds, to be reduced by two, there being but fourteen only now employed; that in order to find so bad a salmon fishing season as that of 1898, it is necessary to go back to the year 1881; that the take of salmon in the estuary for the past season was very small; that all that can be said of the trout season is that it was an improvement on the previous one, but that the stock of trout in the river has largely decreased during the last few years, owing—in the opinion of the chairman—to the great facilities given for poaching; that coarse fish seem to be increasing in the rivers, particularly pike. Only with regard to salmon does the chairman endeavour to take an optimistic view of affairs, but he nevertheless candidly admits that the stock of salmon in the river is not so large as it should be. So long ago as April, 1860, two observant correspondents in a Shrewsbury newspaper, one a Shrewsbury resident and the other a gentleman writing from Montgomeryshire, complained bitterly of the excessive netting for salmon and other migratory fish, which was even then carried on in the Worcester and Gloucester district, of the consequent injury

being done to the fisheries, and the injustice from which the inhabitants of Shropshire and Montgomeryshire were thereby suffering. It was not until five or six years later than this correspondence took place that the Severn Fishery Board was formed, and, after thirty years existence, its members must perform admit that the position of the fisheries is now even worse than when their work commenced. Salmon fishing in the upper waters of the Severn and Vyrnwy is practically a thing of the past. There are now not half-a-dozen netting licences taken out above Shrewsbury. One of the licence holders who fishes in the neighbourhood of Llandrinio took but seventeen salmon during the whole of last season, where, as he states, he was wont to take about seventy. On the other hand, for the sum of about £600 in licence duty, the nets below Shropshire annually take from 15,000 to 20,000 salmon. Now, having regard to the bad state of salmon fishing in the upper districts, it might be thought that the conservators would have accomplished something on behalf of trout and other anglers in Salop and Montgomeryshire, from whom the board yearly receives over £300 in licence fees. Here, again, is a history of failure, for trout fishing in the Upper Severn and Vyrnwy was never so bad as it has been during the last few years, and, moreover, there is no promise of improvement. All that the board seems to have done so far as regards the upper water interests has been the collection and practically fruitless disbursement of many thousands of pounds. During the last fourteen years a total sum of over £15,000 has been spent, chiefly in the employment of bailiffs, and in return for so large a sum of money, to say nothing of the personal expenses incurred by the individual members of the board in travelling to attend meetings, &c., it is greatly to be deplored that the actual results achieved are of so unsatisfactory a nature.

Softings by the Way.

THE monthly delegate meeting of the Central Association will take place on Monday evening, Feb. 6, at the Bedford Head, Maiden-lane, Covent Garden. The chair will be taken at nine o'clock prompt.

LANTERN slides and literary merit were both of marked good quality in the paper on "Fishing in the Eastern Counties," which was read by Mr. T. Crumplen ("Old Izaak") on Monday evening last (Jan. 30) before the members and friends of the Anchor and Hope Angling Society at their very handsome and commodious headquarters, the Duke of Kent, Old Kent-road. The double object of giving pleasure to what proved to be a full and enthusiastic meeting, and of augmenting the funds of the Thames Angling Preservation Society, was certainly attained to an extent that must have been gratifying to the lecturer, who received a very hearty vote of thanks at the close of his paper, and had the pleasure of knowing that the society, of which he is such an active supporter, would benefit to the amount of £3 1s. 8d., the result of a collection in the room, made after the lecture (£1 of the total contributed by Mr. Simpson, of the Anchor and Hope). There would appear to be great scope for similar efforts in aid of Thames preservation. A very good concert followed the lecture. Mr. Elsmore (of the Friendly Anglers) was an efficient chairman, and was supported by four fellow members of the same society.

THE Castle Hotel Assembly Room, Hastings, was well filled on Monday night on the occasion of an interesting lecture by Mr. F. H. Amphlett on the subject of "The River Thames as an Angling Resort." The president, Councillor O. R. Travers, presided over the proceedings, and among those present were Mr. F. S. Foster (vice-chair), Mr. H. Dowsett (hon. secretary), Dr. G. Allford, Major Gooch, Dr. Deck, Dr. South, Dr. Trollope, Dr. Lough, Mr. D. W. Amore, and Mr. W. Payne Collier. The room was neatly arranged in a social fashion, and the lecture, which was illustrated by lantern views by Mr. A. Brooker, was of a most instructive character. The lecturer followed the course of the Thames from Southend right up to its source, introducing many amusing anecdotes. During an interval Mr. J. Baker Gny and Mr. Ockenden contributed some vocal items. Some good specimens of fish were on exhibition, including a 32½lb. pike caught by Mr. Foster. Three Thames trout, weighing 11lb. 2oz., 8lb., and 7lb. respectively, were also entered by Mr. E. Dangerfield, and a magnificent specimen of lamprey, captured in the Rother last summer by Mr. R. P. Smith. It weighed 1½lb. The lecturer also placed on view a fine 9lb. Thames barbel, caught by himself while roach fishing.

A PROMINENT upper water conservator of the Severn was one evening last week, in the presence of a goodly company, having a spirited argument with a droll Shrewsbury angler on the Severn licensing question. It was just after the great flood, and the angler referred to sought enlightenment on a curious point. He wanted the conservator to tell him whether the Severn Fishery Board would be justified in demanding of him a licence for fishing in the flood water, on a howling-green with which he was connected. "Certainly," replied the Conservator, "as you would be fishing in our water—in the district of the Severn Fishery Board." Smartly came the rejoinder: "What right have you to let your water come on our bowling-green?"

THE sad accident which happened off the Chapman Light the other day, by which two Leigh fishermen lost their lives, is clearly one of those which must be called

preventable. A boat with its gear down is helpless to avoid collision, and by every "rule of the road" all other ships should give way to it. The two young men who were lost, Noakes and Catgrove, were the sons-in-law of Mr. Robinson, the owner of the "bawley," and much sympathy is felt in the neighbourhood for him, his two widowed daughters, and their children. I am pleased to hear that this sympathy is likely to take a practical and tangible form.

Two sisters, widowed by the cruel sea,
Mingle their tears for dear ones now at rest.
May this their comfort and their children's be,
That whatsoever happens God knows best.

I RECENTLY came across an angling song in praise of the Norwegian salmon river Namsen. It is to be found in Parker Gillmore's most interesting book, "Leaves from a Sportsman's Diary." (Air obvious.) It runs thus:

THE LAST CAST OF THE SEASON.

Here's to the Namsen of rivers the queen,
Now to her boatman so thrifty;
Here's to the salmon of pounds just fifteen,
Though we'd rather hook one that weighs fifty.

Chorus.

The season is past, this throw is the last
I'll warrant 'twill prove an excuse for the cast.

In spring this fine stream is discoloured by snow,
Then the angler's disconsolate very;
But the water once fine, he forgets all his woe,
And kills lots of fish, and is merry.

Here's to P., who's the boy to kill fish of good size;
Here's to him who can rarely catch one, sir;
Here's to the muf who can scarce get a rise,
And to him who works all day for none, sir.

For let them he salmon or let them be peal.
So long as they take silk and feather;
The music we love is the click of the reel,
So as sportsmen we'll toast them together.

It is a curious fact that with his last cast the talented author of the above killed a splendid fish of 26lb.

I KNOW of no better digestive than a good hearty laugh, and I have had it. I have been reading "Pink Papers," edited by my "young friend" Nathaniel Guhhins, of the *Sporting Times*. The book is a collection of "wheezes" which have from time to time appeared in my rosy contemporary, and, to use the stereotyped phrase, "there is not a dull page from cover to cover." There is, as I have already said, much virtue in a hearty laugh, and, as a medicine, "Pink Papers" can give many much advertised nostrums a long start and a heating. Let us have some more wheezes, if you please, friend "Gub." I am afraid, however, that the editor must be a little bit colour blind, as some of the pink papers are distinctly of cerulean hue.

"J. A. B." writes: "Dear 'Drag.'—Last week I took the tip given in the *Fishing Gazette*, and 'sampled' the new Railway Hotel at Southend. The host is a real good sportsman, and he and his good wife vied with each other in their efforts to do me right well. That they succeeded goes without saying, and the moderation of their bill was a pleasing surprise. I can recommend the house strongly to my brother anglers. Owing to a prior engagement, Mr. Wagstaff could not accompany me on my fishing jaunt, but we have arranged to have a day together in the immediate future. Thanks once more to the *Fishing Gazette* for another good wrinkle."

It was the fighting potman of that well-known angling resort, yeelp "The Cat and Cockroach." He had not been to church all the year, his duties did not allow of it, but he got leave of absence to attend the last watch-night service, which, as everyone will remember took place on Saturday night. But "his nibs" had taken something besides exercise during the day, and once inside the church fell fast asleep. He was awakened by the church clock chiming midnight. He started up. "What's that?" he asked the man sitting next to him. "Twelve o'clock" was the reply; and then with the feeling of professional duty strong upon him, he more than astonished the clergyman and congregation by calling out in his most dignified manner, "Time, gentlemen, please!"

"LAST week," writes an old subscriber, "you gave us an Irish bull. Here is another: Some years ago, when I was staying in a Dublin hotel, the wall of my bedroom was decorated by a notice in the following words: 'Visitors are requested to lock the door on the inside before leaving the apartment.' Whether this was a genuine Hibernicism, or put there purposely for visitors to talk about, and so give the house a gratuitous advertisement, I do not know. Anyway, there it was."

I DO not know if the following is a "chestnut," but it will bear telling again. It was on a coach drive that the man who "wants to know, you know" was pestering the driver with questions. "Driver," said he, "what colour do you call your off leader?" "A flea-bitten grey, sir," answered Jehu. "Oh!" replied his interrogator, "and what sort of animal has been biting this one?" as he pointed to the near wheeler, which was a piebald.

MR. CHARLES HUSSEY writes: "Dear 'Drag.'—Owing to circumstances, to which you alluded so kindly in your last issue, it was impossible for me to see our Mayor last week, as I intended. But it will interest you to know

that on application at Messrs. Smith and Son's bookstall for a copy of the *Fishing Gazette*, to send to his worship, was informed by the genial and courteous manager of the stall that so much interest is taken in the local question raised in its columns that the paper is sold out almost as soon as received." Quite so; and I am pleased to know that Southend is not the only place where the *Fishing Gazette* is "sold out almost as soon as received," which is as it should be.

THE Cobden A. S. announce the capture of some good perch from the Thames. Mr. A. Howland had four fish of the following weights: 1lb. 14 $\frac{1}{2}$ oz., 1lb. 10 $\frac{3}{4}$ oz., 1lb. 3 $\frac{1}{2}$ oz., and 1lb. 1 $\frac{1}{2}$ oz. This does not look as though the Thames was depleted!

A NEW sportsman's song, "The Master in Red," from the pen of our river correspondent "Pan," is having a great run in the Midlands. Messrs. Gould and Co. are the publishers. I understand another new angling song, "The Angler in Brown," will shortly be brought out by the same gentleman. It is admirably suited for smoking concerts.

ONE of the stories told by a Burns's enthusiast down Ayrshire way last week, is as follows: "The man of whom the story was originally told, had been somewhat fond of the 'barley bree' (i.e., Dunriple). Through the good influence of a teetotal friend, however, he had been led to renounce the 'cursed drink,' and ultimately to become a Good Templar. As a brand plucked from the burning, the lodge was wonderfully proud of its new convert, and nothing would satisfy a few of the more enthusiastic spirits but that he should, at the first 'open' meeting, relate his experience for the benefit of those 'still without the fold.'"

"SOMEWHAT reluctantly the poor fellow consented, and the next 'open' meeting found him on the platform. His address ran something after this fashion: 'Weel, freens, I'll gie ye my experience since I joined the Templars. Before I joined I never had a broon bawbee tae my name. In three months I've saved as muckle as will huy me a coffin, an', freens, if I'm a Templar 'ither three months, as shure as anything I'll be in it.'"

I HAVE over and over again said I am no good at conundrums. The old, old fiend, "A Subscriber from the First," sends me the following puzzle: "If the earth revolves on its axis once in 365 $\frac{1}{4}$ days, how long will it take for a string of Harris's sausages to get at the bottom of a pail of pease pudding." Now, I don't profess to know everything, but this is a fair puzzle. I cannot make a rule of three sum of it, it is not practice or tare and tret, or, indeed, any of the rules of arithmetic which I learned in days "lang syne." Anyone who can solve the riddle will find that, on application at Messrs. W. H. Smith and Son's bookstalls, he can have the current *Fishing Gazette* at the very small price of twopence per copy.

ON Thursday next a most interesting match will take place on the Huntingdon Ouse between the members of the St. Ives and New Alhion Piscatorial Societies. They fish for a supper and plate and guineas. I hope they will have a real good time of it. Whether or no, I am certain that the supper will be a success. On Thursday, Feb. 16, at the home of the New Alhion's, Mr. J. W. Wade will give a lantern lecture (followed by a smoking concert), entitled, "An Angler's Ramble through Kent."

If the authorities of provincial cities and large towns followed the example of his Royal Highness the Duke of Cambridge as Ranger of Hyde Park, the Regent's Park, and possibly of St. James's Park, together with the superintendents of the People's Parks in London, in encouraging wild birds to become gradually domesticated, they would earn the gratitude of all naturalists. Early in the season as it is, a pair of ringdoves (woodpigeons) have built their nest (continues "Rus.") in a tree in the Dean's-yard, Westminster Abbey, near the Clerk of the Works' Office, and they have got a couple of young birds. Some country folk settled in London must indeed stare on seeing the numerous wood pigeons in the West-end parks being almost as tame as the house pigeons, and have been reminded, maybe, of happier days, when, earning much less wages, they had fewer wants than now, and some, perhaps, pine for the pure country air and the once familiar sights and sounds of calm village life.

The following is from the *Hatters' Gazette*: An old journal, dated January 16, 1797, gives the following amusing account of the wearing of the first silk hat in London: "John Hetherington, baherdasher, of the Strand, was arraigned before the Lord Mayor yesterday on a charge of breach of the peace and inciting to riot, and was required to give bonds in the sum of £500. It was in evidence that Mr. Hetherington, who is well connected, appeared on the public highway wearing upon his head what he called a silk hat (which was offered in evidence), a tall structure having a shiny lustre, and calculated to frighten timid people. As a matter of fact, the officers of the Crown stated that several women fainted at the unusual sight, while children screamed, dogs yelped, and a younger son of Cordwainer Thomas, who was returning from a chandler's shop, was thrown down by the crowd which had collected and had his right arm broken. For these reasons the defendant was seized by the guards and taken before the Lord Mayor. In extenuation of his

crime, the defendant claimed that he had not violated any law of the kingdom, but was merely exercising a right to appear in a head-dress of his own design—a right not denied to any Englishman."

THE Hoxton Brothers will, on Tuesday evening, Feb. 14, hold a smoking concert in aid of the A.B.S. Their clubhouse is at the Spread Eagle, Kingsland-road. Some splendid talent is promised. Chairman, Mr. G. H. Wood; vice-chair, Mr. G. H. Shepherd.

THE current number of the *Thames Angling News* is to hand, and is as bright and interesting an issue as I have ever seen of that go-ahead little sheet. The little "pome" anent the angler's wife is capital, and there are many other plums. How it is done for a halfpenny I do not know, and fortunately for me it is none of my business, but it is about the best "brown's worth" to be found.

THERE is one article in the aforesaid T. A. N. which deserves more than passing notice. It is entitled "Angling and Anglers," and is written over the signature of Marion Hobbs. Although Mrs. Hobbs modestly says she knows little of either subject, her writing rather gives the lady away, as no one can write a breezy, chatty, and entirely readable article like the one under review without knowing a very great deal of the sport and its votaries. Everyone, especially anglers' wives, should read what Mrs. Hobbs has to say on the important subject of which she treats.

HERE is a little gem from the article, which may shortly be quoted in full. "I have always said that a good son and brother makes a good husband. To this I must add if they engaged in the gentle art of angling they make especially good husbands, because as a rule, they are more patient and thoughtful for their women-kind. All the anglers of my acquaintance are most estimable husbands." Thank you, madam, we all of us, "likewise hows." If I were a letting man (which I am not), I would not mind laying a small wager that Mrs. Hobbs is as good a "sportsman" as our friend whom, with a shy humour, she calls "my better (?) half."

NOW I hope all my young lady friends will read, mark, learn, and inwardly digest the moral which Mrs. Hobbs draws from her own experience. When Prince Charming comes along and tells you the "old, old story," you should, before answering the most important question, ask another, "Are you a good angler?" If he says "No," have nothing more to do with him, and look out for some one who is. I should not have dared to give this advice "on my own," but now that it is given by a lady who evidently knows, it is with the greatest pleasure that I endorse every word that Mrs. Hobbs has written. Once more, thank you, madam.

"MALAPROPISMS," says the *Daily News*, "are not confined to either side of the Atlantic. An American technical journal prints some of the queer orders received by a Jersey City chemist in the course of his business. Here they are:

"This child is my little girl. I send you five cents to buy two sitless powders for a groan up adult who is sike."

"Dear Dochter, ples gif bearer five sense worse of Auntie Toxyn for to gargle baby's throat and oblage."

"You will pleas give the leetle boi five cents worth of epecac for to throw up in a five months' old babe. N.B.—The babe has a sore stummick."

"I have a cute pain in my child's diagram. Please give my son something to release it."

"My little hahey has eat up its father's parish plaster. Send an antedote quick as possible by the enclosed girl."

"I haf a hot time in my insides and wich I wood like it to be extinguished. What is good for to extinguish it. The enclosed money is for the price of the extinguisher. Hurry pleas."

MR. ARCHIBALD W. DANE (of the Piscatorial Society writes me from Torcross Hotel, Devon: "Dear 'Drag.',—I have had a week here, and found the hotel very comfortable and the feeding A 1; in fact, everything has been good except the wind, which has been E., E.N.E., and E.E.E.E. My hest fish is a nine-pounder, and one a little smaller; so to-day I tried for rudd and roach, but there was too much wind. However, I am finishing up my time with the capture of a few rabbits and wildfowl." [Good, Mr. Dane; but would you mind saying what bait you used? Also what hooks, and define the swims, so that some of our poor town-pent brethren could secure some specimens for "casing"?]

THE Drayton Park Piscatorials are, I hear, holding their Wednesday "Popular Concerts" at the Stanley Arms, Landseer-road, Holloway, N. Anglers "passing that way" will receive a hearty welcome. There are two pianists and ten professional singers amongst the members of this club.

DRAGNET.

SCHOOL BOOKS, DICTIONARIES, &c., including Mr. Jackson's Upright Writing Copy Books, in English and other Languages, published by Sampson Low, Marston & Co., Limited, St. Dunstan's House, Fetter Lane, London. Can be had on application.

FOREIGN BOOKS AND PERIODICALS.—Messrs. Sampson Low Marston and Co., St. Dunstan's House, Fetter-lane, London, supply the Trade with Foreign Books and Periodicals. Fast train consignments from their Continental agents twice a week. Catalogue gratis.

BRITISH SEA ANGLERS' SOCIETY.

The usual weekly meeting was held on Feb. 1 at the Cannon-street Hotel, a large number of members being present; Mr. W. Browning in the chair. Members present gave unsatisfactory reports of the sport of the past week. An interesting report was read on a non-tuberculated turbot, and also on two specimens coloured on both sides. Mr. Eldred then gave a very interesting and excellent paper on "Fish Hooks," of which the following is an abstract:

Mr. Eldred commenced his paper by saying that iron in a pure state is only found in the laboratory of the chemist, and he then deduced that as steel is produced from iron, it followed that impurities, such as carbon, sulphur, phosphorus, &c., were always more or less present in steel. He then showed that carbon, however, could hardly be considered an impurity, as the characteristics of steel depended upon this element. He next described the three principal methods of converting iron into steel, these processes being the Catalan, Cementation, and Bessemer, or decarburising process, illustrating his remarks by diagrams, &c., and showed that this latter had almost entirely revolutionised the older methods of steel production. From this he passed to the various operations necessary for converting the steel into a fish hook. Barbing by cutting and filing were treated of, the actual operations being performed by the lecturer. Bending and kerbing were similarly treated, the moulds and tools for which were kindly lent by Messrs. Alcock, of Redditch. He next took his audience through the hardening and tempering processes, which he again illustrated by actual experiments. Finishing, blueing, tinning, rust-proofing were all explained, and exemplified by reference to specimens. He exhibited, in connection with tempering, a bar of steel, which showed in a very beautiful and striking manner the colours, running from pale yellow to blue, purple, and black, due to the effect of cooling the bar at different temperatures. These colours, he explained, were the result of the combination of oxygen with the steel, and gave the result of Sir Humphrey Davy's experiments to prove the truth of his statement. The shape of the hook was next taken into consideration, and he argued that if the pointed or entering portion of the hook was much out of parallelism with the shank, its penetrative power was lowered. The barbing, he pointed out, was the part of the hook which necessitated great care in its manufacture, as this was generally the weakest portion of the hook. To illustrate this particular part of his paper he showed brass models which he had made to show good and bad forms of bending and kerbing. The shape and size of the eye were then discussed, and he illustrated his remarks by referring to the Norwegian hooks of Messrs. Ogden and Scotford as capital specimens. The methods of attaching hooks to gut were briefly touched upon, and he was very emphatic in saying that hooks for sea fishing should never be whipped on, the jam, Turle, or hitch knots being amply sufficient for the purpose. Regarding the quality of hooks, he quoted the following from Bickerdyke: "It is the worst of economy to buy cheap hooks." "Not only," he said, "will the best he found the cheapest, but will certainly be provocative of less bad language. He concluded his paper by giving the essential qualities of a good hook, which were: 1. Steel of the best quality; 2. Well tempered, the maximum of hardness consistent with elasticity; 3. Good penetration; 4. Good holding power; 5. Rust proof, if you can get them; 6. Well finished. Before sitting down he said he desired to express his thanks to the following manufacturers who had supplied him with such a variety of hooks and other material to illustrate his paper: Messrs. J. and P. Kirk, Sheffield; Alcock and Co., Redditch; Hardy Bros., Alnwick; Ogden and Scotford, London and Cheltenham.

An interesting discussion took place, in which Messrs. Minchin, Mignot, Parker, Matthews, Ive, Lane, Litchfield, and the hon. sec. took part. Mr. Minchin proposed, and Mr. Canton seconded, a very hearty vote of thanks to the lecturer. The hon. sec. stated that he had received a letter from M. de Gobart, our agent at Blankenburghe, in which he stated that he was awaiting the arrival of our members after April 1, that he might look after them. A hearty vote of thanks to the chairman closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

ANCHOR AND HOPE ANGLING SOCIETY.

The Anchor and Hope Angling Society (one of the most popular South London clubs) had a splendid gathering at their headquarters, the Duke of Kent, Old Kent-road, on Monday last, when their president, Mr. T. Cromplen ("Old Isaak") gave a lantern lecture, entitled "Fishing in the Eastern Counties." Mr. W. H. Elsmore (president Central Association of London Anglers) occupied the chair, supported by Messrs. W. Meakin and J. McDermott (Friendly Anglers), Mr. T. Cox (West London A.C.), Mr. A. R. Matthews (New Albion), Mr. J. Dunn (Collingwood), Messrs. W. Streton and P. Allum (South Bermondsey), Messrs. J. Smith and W. Kervell (Bermondsey Brothers), Mr. W. H. Lawes (Deptford), Messrs. J. W. Simpson, C. Watkins, H. Mallett, B. Booth, &c. The lecturer gave a brief account of the Lea, Stort, Storr, and other rivers to which the Great Eastern Railway gives access, and concluded with a rapid survey of the famous Broad of Norfolk, also places along the coast where sea fishing is chiefly to be had. Prior to the lecture some beautiful views of Pnborough, Amberley, and other angling resorts were shown upon the screen, and Isaak Walton and the famous fishing house upon the Dove also came in for attention. A number of illustrations of the Thames were equally well displayed. The lecturer gave some practical hints as to fishing, particularly on the rivers and broads of Norfolk and Suffolk, and jokingly remarked that when fantastic tackle was recommended, a lesson as to fishing fine might be gathered from Walton, who some-

times only fished with Cotton. Many of the slides shown were from original photographs, and all were much admired, the lantern being supplied and cleverly manipulated by Mr. F. Lee, of the Grange Angling Society, to whom, with the lecturer, hearty thanks were accorded. Some excellent snap-shots (taken by Mr. W. J. Wade) of leading members of the society and the Central Association, after which a collection was made for the Thames Angling Preservation and Re-stocking Society, which resulted in the addition of £3 3s. to the funds of that excellent institution. Mr. T. Cromplen then moved a vote of thanks to the chairman, which was carried by acclamation. Mr. Elsmore, in reply, thanked the members for the handsome contribution made to the good work of Thames preservation, and expressed his good wishes for the continued prosperity of the Anchor and Hope. A capital vocal and instrumental concert was carried out under the direction of Mr. F. W. Martin, with Mr. J. King as accompanist. The proceedings, which had been enthusiastic throughout, concluded, with the National Anthem and Auld Lang Syne.

Notes from the North.

THIS (Saturday) day week and angling will be in full swing on the bulk of Scotch waters. Most of the Dee waters will be covered on the opening day; but, of course, much will depend on the state of the weather prior to the opening.

A spell of severe frost has been experienced for some six days on end, the minimum readings not having been so low for some four years back. The streams have accordingly sunk to normal level and the run of fish partially checked. This is, on the whole, acceptable to all, the only dissentients, perhaps, being the far inland proprietors, who prefer open weather all through.

The Ythan opens on the 25th inst. It and the Ugie are late salmon rivers, but some splendid early sea trout angling is got on the tidal waters during the opening weeks and right on through the spring, till the smolts appear in the middle of April or beginning of May.

The summary of the decision in the reclaiming note in the Spey pollution case was given last week, confirming Lord Kyllachey's decision, and remitting the case back to him to proceed with. The inference to be drawn is that where pollution exists action should be taken at once, as there is little fear of the money being lost in raising such. As the law stands pollution in any shape or form may be put a stop to, especially if it has been created within recent years.

A most desirable little property on the right bank of the Ugie, near Peterhead, was bought last week by Mr. Garden T. West, Balmoor, Peterhead, for £9710 by public roup. The estate carries along with it excellent sea trout angling, with an occasional salmon and grilse after the nets are off in the autumn.

A monster skate was landed the other day at Fraserburgh, measuring 8ft. 2in. by 5ft. 10in., and weighing 2½cwt. It was purchased for the English market. Small skate are preferred in the north by housewives, especially the small brown skate.

The East Coast Fisheries Association, presided over by Mr. James Johnstone, of Montrose, has its little quarrel with the Scotch Fishery Board for being too stern and logical in the anti-trawling policy. Some of the fishermen themselves have been "trailing" nets along the bottom of the sea in the territorial waters and firms, and the board has put its foot down on their little game.

It is currently believed that Professor D'Arcy Thomson, C.B., will be offered the Natural History chair in Aberdeen University, vacant through the death of Professor Nicholson.

The Tay salmon fishing proprietors are up in arms against the proposed Highland Water Power Company, and the chiefs are shouting "claymore."

The netting stations on the east and north coasts commence operations on the 11th prox., when the bulk of Scotch salmon waters then open. As the eleventh falls on a Saturday, the nets will have only from twelve on Friday night till six on Saturday, when they will have to lift their leaders again for the weekly slap.

An assessment of 13 per cent. has been imposed by the proprietors of the Tay Upper Salmon District to meet the expenses of the current year in taking off the nets above Campsie falls. Lord Breadalbane's withdrawal from the combination has reduced the rateable value, and so increased the rate, in spite of a revision of many of the rentals, which have hitherto been absurdly low.

SPECIAL SCOTCH.

A GREAT INJUSTICE is very often done because some self-assertive people imagine it is next to impossible to make an error. Shakespeare must have made an analytical study of the human heart before he uttered those warning words, "Man know thyself, then others learn to know." This is a lesson we should all try and perfect ourselves in, and when this has been done we have to face the significant fact that unless we cultivate good health, prosperity and happiness cannot abide with us. Holloway's Pills will aid us to do this. The most eminent medical men agree that for the preservation of good health and cure of disease there is nothing to equal them.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The quarterly meeting of the Severn Fishery Board was held in Birmingham on Thursday, Jan. 27 last, when the chief business transacted related to the salmon and trout, and the claims of the coarse fish anglers were again treated with indifference. This is a state of things I am very sorry to see, as it is the wish of the coarse fish anglers to come to some terms with the board in order to get some kind of protection for this class of fish as is given for the salmon and trout. The opinion of all true anglers is that they are willing to pay a licence to fish for coarse fish, providing the board will observe a proper close time, and refuse to issue permits as they do for the taking of the fish during the close season. In the yearly report as just issued by the board, mention is made that since the Provincial Angling Association have taken up the cases of the members being summoned for taking coarse fish without a trout licence, it has induced certain people to go in for netting. Now, this is one of the great things which the association would not give their countenance to under any conditions, and would like to see such offenders punished. Our aim is to benefit the rod and line fishermen, and it is an insult to all true anglers to say that it is their fault that these netting operations have been brought about through their refusal to take out the trout licences for the taking of coarse fish. The board themselves are to blame for allowing the water to be depleted in such a wholesale manner, and I am sure the anglers would assist the board in trying to put a stop to such unsportsmanlike practices. Such statements as these are calculated to do more harm than good to all parties concerned. Messrs. Coles and Wingfield, the P.A.A. representatives on the board, spoke very strongly upon the matter, and moved a resolution that the matter mentioned in the report be struck out, but little or no notice was taken of the resolution, and so the breach still remains as wide as ever. I, together with many more, would like to see some settlement to the question we are so interested in, and that the coarse fish should come under the same restrictions as the salmon and trout. Until this is done the same unpleasant feeling will go on for ever. Messrs. Wingfield and Coles have again been elected by the Worcestershire County Council on the Severn Fishery Board. The newly formed Cradley Association have been visited by a representative of the P.A.A., and found in every way properly constituted. A list of stations that they require the privilege to travel to on the Great Western Railway Company will in due course be forwarded to the company. We have two more new clubs being formed in the Birmingham district, one at Erdington, and the other at the Salmon Inn, Severn-street. The latter is a good name and place for a fishing club. Several of our clubs are arranging concerts in aid of their prize funds. The Vine Unity hold theirs on March 21 and 28 next, at their clubhouse. The Queen's Head Club hold theirs at the Crown Hotel, Snow Hill, on Feb. 14; W. Butler, Esq., will take the chair. The St. Paul's Club will hold a open concert, on Feb. 21, at the Chapel Hotel, Great Charles-street. A committee meeting of the P.A.A. will be held on Saturday, Feb. 4, at the Drawbridge Hotel, Bristol. Chair taken at six o'clock.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

Remarkably good sport continues to be obtained in the Fen district. The waters have now got into capital condition for trolling, and a large percentage of the rods out this week have been in quest of pike. Those who have patronised the Witham have done very well on the various lengths between Lincoln and Boston. Near Dogdyke, on Tuesday, one angler captured three brace, weighing 27½lb., and another, in the same district, landed two and a half brace weighing 19lb. The heaviest fish coming under notice was captured near Kirstead, and scaled just over 9lb. Trolling tackle has also been successfully employed on the Forty-foot, where fish weighing 6½lb., 5½lb., two of 4½lb., and 4lb. have been captured this week. The mild weather has again favoured roach fishing, and those disporting themselves on the minor drains in the Boston district and on the Glen at Surfleet have met with a good measure of success.

FROM HULL AND DISTRICT.

The river Hull and its tributary streams are in much better condition for angling this week, especially in the top stretches. Pike fishing has been pursued at the back-ends with a fair amount of success, but the fish taken have only run small. This class of angling still continues good on the Market Weighton Canal and the delphs and ponds in the immediate vicinity of Staddlethorpe Bridge and Newport; and as the river Ludd is reported in fair condition, the stretches between Firebeacon and Thoresby Bridge should be worthy of a visit. The ponds in the vicinity of the bridge, and at Tetney, are also well stocked with pike and perch. A few roach have been taken during the week above Hempholm Lock, in the Hull; but at the time of writing (Wednesday) we are having a fall of snow, which will, no doubt, put a stop to roach fishing for a time. The lower waters are still of a bad colour, and running in volume. Flounders and eels of good size continue to be taken with worms and shrimps in the Waine and Cicey district, and odd pike have been taken in this district, Mr. J. Cheesman taking four fish on Monday. The Wednesday Angling Society held their annual dinner at the Marrow Bone and Cleaver, in Fetterlane, on Wednesday evening, Jan. 25; Mr. Councillor Cooper occupying the chair, and being supported by Councillor Parrott and the president and officers of the society. The secretary's report showed the society to be in a first class position, both financially and otherwise. Mr. R. H. Barlow is the winner of the gold medal for most

points during the past season. On Monday evening next the members of the Derringham Angling Society dine together at the Botanic Hotel. Mr. George Cheeseman is the winner of this club's gold medal for the past season. On Jan. 25, before the members of the Hull Scientific and Field Naturalists' Society, Mr. H. M. Foster, ("The Angler-Naturalist") delivered a lecture on the "Structure of Fishes," which was much appreciated. At the annual meeting of the Old Senleates A.S., Mr. J. Arnold was elected president; Mr. J. Calvert, treasurer; and Mr. C. Brown, hon. secretary. The Victoria Angling Society decided at their last meeting to hold their annual open match at Dunsell, on the river Hull, on Saturday, April 29th; Mr. Alfred Wrightson has been re-elected to the presidential chair for this season, to be supported in the vice by Mr. B. Hill; Mr. C. Warr, treasurer; and Mr. A. H. Dahle, hon. secretary. On Feb. 9th the Alexandra A.A. will hold their annual *soirée* and hall; and at the Central Hall, on Monday evening next, the Hull Angling and Preservation Society will hold a like entertainment. On Jan. 23rd the North Myton A.S. held their second annual ball, when over 200 anglers and their friends took part in the proceedings, which were most enthusiastic throughout, and will, no doubt, greatly augment the funds of the society. The Waltonian Angling Society held their annual meeting at their new headquarters, the Station Hotel, Stepney, when the officers were elected, and other matters arranged for the season. From statistics just published for 1898, the fishing industry has increased enormously in Hull during the past ten years. For instance, in 1888 the quantity of fish

landed at Hull Billingsgate was 403,693cwt., value £304,892, whereas in 1898 the gross weight was 1,097,001cwt., value £875,151. This does not include salmon, herrings, and other foreign produce, of which large quantities are landed.

FROM LANCASHIRE.

The travelling cards of the Northern Anglers' Association for 1899 will shortly be ready for circulation, being now in the hands of the railway companies for authorisation. It is gratifying to note that the cards contain some 300 additional privileges, which the hard working executive have recently obtained for the benefit of the association. Mr. Pendrigh's promised lecture, descriptive of his last season's "Fishing Trip to the Donegal Highlands," is to be given at the headquarters of the Levenshulme Angling Society on Feb. 20. The subject speaks itself interesting, and the lecturer may be expected to deal with it in his usual capable manner. The travelling cards for 1899 of the County Palatine Angling Association are now ready, and contain some very valuable additional privileges. They are to be obtained from the treasurer, Mr. Peacock, or from the financial secretary, Mr. S. J. Higginson, 6, Northumberland-street, Hulme, to whom application should be made as early as possible. The Lancashire and Yorkshire match, which is to take place at Wyresdale next month, is exciting a great deal of interest, and already the applications for places on the teams far exceed the number required. Those responsible for the final selection have an arduous task before them, and in the end someone is sure to be disappointed.

FROM MANCHESTER.

Many of our clubs are still busy replenishing their private waters with mature coarse fish, calculated to afford good sport after the termination of the ensuing close season. The Moss Side Social Angling Society have recently been paying great attention to this department of club work, and received a few days ago a consignment of 600 very fine fish, some of which were perch of 2lb. and upwards each. Owing to exceptional care exercised in transit, these have been successfully turned into the society's private waters without loss, and to the general satisfaction of all concerned. The Good Intent Angling Society are rapidly coming to the front. The roll-call already registers twenty-four members, and more will shortly be added. A contest has been arranged to take place early in March, as a pleasant means of closing the present coarse fishing season. A fairly extensive programme is being arranged for the coming season, and with the idea of gaining reduced anglers' fares to popular resorts, as well as other privileges, the society have recently affiliated themselves to the County Palatine Angling Association. The Kingfisher Angling Society are noted for usual monthly business meeting at headquarters, the Crescent, Salford, on Tuesday evening next, 7th inst. The South-West Manchester Angling Society are sanguine as to result of existing negotiations for valuable private waters within easy reach of the city. A meeting was recently held (the first of 1899) to discuss this as well as other important items, and every hope is cherished that their efforts will meet with ultimate success. The meeting was well attended, and an extensive agenda disposed of.

ANGLERS' HOTELS, FISHING QUARTERS, &c.

FORTINGALL HOTEL, GLENLYON, PERTSHIRE.

8½ miles from Aberfeldy Railway Station and 2½ miles from Fearnan Pier, Loch Tay.

This new First-class Hotel is beautifully situated near the "Famous Pass of Glenlyon, with Mineral Well." Good spring salmon fishing on the River Lyon opens Jan. 15. Trout fishing free. Posting. Post and Telegraph Office two minutes' walk.

PAUL MACPHAIL, Proprietor.

SALMON FISHING ON LOCH TAY.

For Boats, apply to

H. J. MAISEY, Killin Hotel.

FOYERS HOTEL, LOCH NESS.

Re-decorated and most comfortably re-furnished throughout. Electric light.

THIS Hotel, which is most beautifully situated, overlooking Loch Ness, and commanding finest views of the Great Glen, has the right of Salmon Fishing on Loch Ness, which will be free to visitors staying at Hotel, also Trout Fishing on River Foyers, Loch Bran, Loch Garth, and Loch Farraline. Boats for use of visitors. Terms moderate. S. TILSTON, Proprietor

ROSSES WHITE AND BROWN TROUT FISHERY.

Croly and Loughanure Salmon Fishery. HAVING obtained a lease of above excellent SALMON FISHERY, and the sole rights of fishing, anglers can now fish the Croly and Loughanure. Splendid salmon and sea trout fishing can be had on the Croly and Owenatorr rivers as well as on Loughanure lake, three miles in length, and three miles from Dungloe. There are over 100 lakes in the Rosses Fishery alone, with about twenty boats and first class gillies. Sea trout run to 6lb. and brown trout to 4lb. Large numbers of Loch Leven and Rainbow trout turned out of hatchery every season. Dungloe, in the Highlands of Donegal, is centre of fishery, ten miles from Fintown railway station (Donegal Railway Company). Best fishing lakes within easy reach of the three hotels in Dungloe, where excellent accommodation can be had. Travellers can leave London at 8.30 p.m. and reach Dungloe at three o'clock next day. Mail and day car to and from Fintown station. Good sea fishing, rock pigeon and seal shooting. Telegraph office, bank, post office, &c. Fishing terms: Rosses Fishery, April 1 to June 30, 2s. 6d. daily; 12s. 6d. weekly; 30s. monthly. July 1 to Oct. 31, 3s. 6d. daily; 16s. weekly; 40s. monthly. Croly and Loughanure, March 1 to Oct. 31, 5s. daily; 20s. weekly; 50s. monthly; and 6s. per day man and boat, which holds two anglers. All information can be had from

S. HANLON, C.P.S., Manager and Salmon Licence Distributor.

HANLON'S PRIVATE HOTEL, DUNGLOE, CO. DONEGAL.

S. HANLON, Manager of Rosses Fishery.

ROSAPENNA HOTEL, CARRIGART (Co. DONEGAL).

THIS Hotel, built in 1892 by the late Earl of Leitrim, is situated on the Rosagull Peninsula, midway between Sheephaven and Mulroy Bay. Tourists and Anglers will find superior accommodation at the above Hotel. It contains over sixty bedrooms, spacious billiard, drawing, and public rooms. Salmon fishing in the famous Glen Lough, Owencarrow and Lackagh Rivers, is free to Hotel visitors from Feb. 15 to end of July. Salmon licences can be had at the Hotel. Free access to numerous lakes and rivers on the estate for white and brown trout fishing. No charge for boats. Excellent sea bathing. Golf links, eighteen holes in a circuit of 3½ miles, encircle the Hotel. For terms and further information apply to the Manager.

"Among the best and cheapest Hotels special reference should be made to the Arundel."—Charles Dickens.

THE ARUNDEL HOTEL,

CLOSE TO THE TEMPLE STATION ON THE DISTRICT RAILWAY, THE LAW COURTS THEATRES, STRAND, THE RIVER, &c.

(HEAD QUARTERS OF THE FLY FISHERS' CLUB.)

VICTORIA EMBANKMENT, STRAND, LONDON.

One of the finest positions in the Metropolis.

BED, BREAKFAST, AND ATTENDANCE FROM 6s

LAKE VYRNWY.

Splendid trout fishing in the lake and rivers; fish average 4lb., and give grand sport. Easy of access. Every comfort and luxury provided in the Hotel. Good boats and steady boatmen. Splendid cycle track (twelve miles). Bracing climate, and magnificent scenery. Season begins on March 1. First-class Grouse Moors and Rough Shootings to Let. Railway station, Llanfyllin.

Post and Telegraph Address: "LAKE VYRNWY HOTEL, OSWESTRY."

SHANNON & LOUGH DERG, KILLALOE, IRELAND.

MOST reliable information as to Salmon, Grilse, and Trout Fishing in free and preserved waters, river, and lake, at this station; also as to accommodation and board in private cottages close to river. Expenses, shortest route from England and Scotland, on application to S. J. HURLEY, Killaloe, Co. Clare, Ireland. N.B.—The Green Drake season on Lake Commences about last week in May, when the big trout are about in thousands.

MAELOG LAKE HOTEL,

TY CROES, ANGLESEY (L.N.W. Main Line).

BRIGHT bracing climate; no east wind. Trout fishing: rivers and lakes open Feb. 1. Snipe, Duck, Wildfowl, and Rabbit Shooting till March 1st, excellent sport in dry and frosty weather. Capital Golf Links surround hotel, and adjoin sea coast. Furnished apartments in Private House for a large family. Moderate inclusive terms. Proprietor, T. J. COTTRELL.

THE FOX & HOUNDS HOTEL, Eggesford Station, N. Devon.

TWENTY MILES of FREE FISHING on the private waters of the Earl of Portsmouth and other gentlemen on Mid Taw and Little Dart to hotel guests only. Rivers recently re-stocked. Moderate inclusive tariff.

R. PORTMAN MARSHALL, Proprietor. Season commences March 1.

SHIP HOTEL, LEIGH, ESSEX

Local Headquarters of British Sea Anglers' Society.

THIS Hotel, which is now under entirely new Management, can offer high class accommodation at moderate charges to Gentlemen visiting Leigh for Fishing or Commercial purposes.

F. HOMEWOOD

(Agent B.S.A.S.), Proprietor.

Boats and men engaged on receipt of wire or letter.

TORCROSS HOTEL,

Near Kingsbridge, S. Devon.

GOLF, GAME and RABBIT SHOOTING, SEA FISHING. Fishing for Pike, Perch, Roach, and Rudd. Billiards and Tennis. Dark Room for Photography. Five Coaches leave the Hotel daily.

W. VICKERY, Proprietor.

GOOD FREE

PIKE and GENERAL FISHING

EVERY ACCOMMODATION. HOME COMFORTS. Baits and all requirements. Punts free to visitors. Moderate charges. Wire or write:

A. SCARD, FERRYBOAT INN, HOLYWELL FERRY, HUNTS.

30 Miles Preserved TROUT FISHING

Free to the guests of the HOTEL DES ARDENNES, Diekirch (Luxembourg). Opening day April 1.

For all particulars about hotel and fishing write for the illustrated prospectus, sent post free. Inclusive pension terms 4s. 2d. a day. Proprietor, A. HECK.

FROM NOTTINGHAM.

The weather has been more favourable, and the Trent has fished down considerably. Pike fishing has engaged marked attention at Kelham and Averham, above the railway bridge, and amongst others taking fish mention may be made of the names of Messrs. Herbert Baker, T. Essex, W. T. Hodgson, H. Ridgard, F. J. Lindley, H. Jorxon, W. Foulds, R. Fryer, G. Clarke, and W. Rayson. In private waters Mr. Jas. Lee, of Beeston, has killed a roach of close on 20lb. At Shardlow, Messrs. E. Saywell and J. Greaves have done well. Pikeing here closed for the season on Tuesday night, and the campaign was understood to be at an end as regards the Kelham stretch. On his great quantities of pike have been secured since last September. At Staythorpe, on Thursday, Mr. R. Grainger creeled a handsome lot of roach with the cock-pur worm; and since my last numerous remarkably fine roach have fallen to the rods of subscribers to the Wilford and Clifton fisheries. Sport amongst roach has also improved at Beeston and Trent Lock.

FROM SHEFFIELD.

The weather during the past week has been much more favourable for fishing, and with the frosty weather continuing, better sport was obtained. Sheffield anglers went out in larger numbers, and, generally speaking, secured air sport. Satisfactory sport has been obtained in the Hathersage and Chatsworth club waters, several brace of heavy fish having been taken, and these waters are looked upon as being amongst the most fruitful in Derbyshire, as complaints are being made that fish are getting scarcer every year both in the Derwent and the Wye. One or two Sheffield anglers did fairly well during the middle portion of last week in the private waters near Matlock Bridge, a few nice heavy grayling being taken by means of brandling worms. Bottom anglers who have visited the neighbourhood of Ambergate, Holmesford, and Whatstandwell, have had moderately good sport amongst roach, worms being the most successful bait, whilst grayling have also been fairly well on the feed. The Trent is just now in first-rate order for fishing, the river having run down considerably, and fishermen have taken full advantage of their opportunities. At Beeston roach have been well on the feed, and several fishermen have accounted for heavy takes, in addition to a goodly number of perch. At Laneham Ferry several nice roach have been secured. In the Boston district roach have provided the staple amount of sport, and in the Mount Pleasant drain any number of these fish have been taken, with worms as bait, whilst at Saxilby some decent sized roach have also been killed. A little pike fishing has been carried on at Brayford pool near Lincoln, but very little sport has been found in the Lower Witham, although the Sincil Dyke has been visited with a fair amount of success. The river Bain has furnished some first-class roaching, maggots and the tail ends of dew worms having been used with the best results. The officials of the Sheffield Trout Anglers' Association still continue their endeavours to improve the condition of the waters they rent, and a week ago 400 healthy two-year-old brown trout, from Milton Fishery, Burton-on-Trent, were turned into the Amber at Wingfield. The fish were in excellent condition, averaging from 8in. to 12in. in length.

FROM WORCESTER AND DISTRICT.

The flood has passed a way, and the rivers nearly down to their winter level again. The weather being so mild, a number of anglers have been out since Saturday trying their luck in both Avon and Severn. Some good sport has been had among the pike, and some good fish up to 14½lb. were taken; and some excellent dace and roach have been had, maggot, worm, and paste being used as baits. Chub not on the feed yet. Salmon fishing commences on the 2nd inst., that is, legally; but some of the fishermen, knowing the Severn Fishery Board has no bailiff within miles of Worcester to look after the fishing, have been busy with their nets for some days, or rather nights, on several of the draughts, and no doubt has some fish ready for the market to-morrow morning; but it is a practice that should be stopped. Some members of the District Angling Association watched these fellows at work two nights, and know who they are, but on account of the pronounced antagonism of the Severn Fishery Board to the anglers' interests they refuse to take any action towards bringing these fellows to justice. This I much regret. The Malvern Club have had their annual meeting. There was a good attendance of members. The hon. secretary (Mr. L. F. Higgs) gave in his report of the past season, and the balance-sheet, which shows this popular club is in a very satisfactory condition, and likely to have another year of prosperity; the officers were elected and the committee appointed, and everything looks promising for the coming season. The "Good Intent" (Worcester) had their annual meeting at their new headquarters, the "Gloucester Arms," Copenhagen-street, on Friday evening. There was a good few members present; Mr. Reynold occupying the chair in the absence of Mr. Jackson, who was unable to be present until late in the evening. This club is in a good position financially, and likely to make headway in their new quarters. Mr. R. Wingfield, secretary Worcester and District Association, was present, and gave an account of the meeting of the Severn Fishery Board on the day previous, and stated that the unhappy estrangement between that board and the anglers was by the board increased and not healed, which was regretted by all. He also gave information respecting additions made to association rules, the issue of travelling cards, and other matters. A collection was made towards the "Coles' Testimonial." The Crown Inn Club had their annual dinner on Monday evening last, the room was full; the president, Stephen Smith, Esq., in the chair. The secretary, Mr. A. Attwood, had everything in excellent form and the balance-sheet

reveals the fact that they have a nice little nest egg to commence the present season with, although the expenses of the past year were unusually heavy. A capital spread was put on the table by Host Attwood, which was heartily enjoyed; the usual toasts were duly honoured, and a capital variety of songs and recitations were given in excellent style during the evening and the end came all too soon, and the company dispersed after lustily singing the National Anthem.

FROM YORK AND DISTRICT.

Attention of anglers just at present is directed to the various club and association meetings which usually take place about this time of the year. At the Middledale Club meeting, on the 25th ult., an increased membership was reported. There had been moderate sport during the past year, and several good baskets of trout were taken. The question of stocking the river with young trout was discussed, the chairman (Mr. Passavant) remarking that until they, as a club, tried to improve their river, they could not expect help from the Yorkshire Fishery Board. On the 28th ult. the annual meeting of the Esk Fishery Association was held at Whitby. Mr. Rastell, on behalf of Mr. C. Marks, moved that no wading, except for the purpose of crossing the river only, be allowed on the Egton Quarry Pool before Aug. 31. The motion was lost. It was resolved to raise the annual subscription from £2 2s. to £3 3s., and the entrance fee from £2 2s. to £3 3s. The rivers have run down considerably during the past week, and angling prospects in consequence have much improved. The few frosty and sunny days experienced towards the end of last week were delightful, and the conditions have been well suited for pike and grayling fishing, chub, roach, and dace also affording nice sport. Anglers may well hope that they have seen the last of the heavy rains and floods which have prevailed more or less for three months. Notwithstanding such conditions the prospects of trout fishing are encouraging. Not only are nearly all the club waters well stocked, but the fish are in excellent condition.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

RE FLIGHT'S FANCY.

DEAR SIR,—We thought this matter had been "threshed to death," since some weeks have elapsed since our last had appeared, and no response had been made. It appears, however, there is one writer so "hard up" for a subject that he takes pen in hand to produce and send a belated contribution—which adds nothing whatever to what has already been said on this matter—to your last issue. He trots out the same three books, and gives the same quotations as we have had before, and—nothing more! But stay! There is one little item of intelligence for which we stand indebted to him, viz., that the fly is not claimed by the present representative of the family of the name of Flight. Well, now, when one makes a protest against any unwarrantable claim or other, the most that one expects to get in response is a repudiation, and we, having got that, are now content, since that is all we wrote for, and, indeed, more than we expected to get, and we tender our apologies to the present honourable head of the house of Flight, though there was need—but through no cause of his—for our protest.

The next edition of the "Scientific Angler" is already printed, therefore it is too late to eliminate our protest from the eighth edition of this standard work; but after the avowal we have had from Mr. Flight, we promise to do this from subsequent editions.—Yours obediently,

W. H. FOSTER.

P.S.—If Mr. Skues will take a cue from me, he will not waste powers of such strength of originality as are his upon such a hair-splitting "Tweedledum and Tweedledee" matter as is this. He talks of "breaking a fly upon a wheel" (!) Where's the use of throwing "pearls to the pigs"? He's had his smack at the fly (or was it a wasp?), but I think he'll admit that he hasn't squashed it.

GRAYLING EAT TROUT EGGS.

DEAR SIR,—Please accept the inclosed dish of grayling, part of a basket caught in the Yore this afternoon. Kindly, before giving them to the cook, dissect their stomachs, when I think you will find them full of trout ova and dew worms, the trout spawn, however, predominating. This has been my experience with a large number of grayling caught during the past week. It is therefore clear you cannot have a good trout and grayling river combined, and if any of our friends wish for a good trout river they must discard grayling. Of course, the ova of the grayling is well developed, but they will not spawn here until April or the beginning of May. They are in capital condition for the table, and will continue so for some time to come.—Yours truly,

J. E. MILLER.

P.S.—Our people cook them with their jackets on. Serve hot. You will find them fine.

[We are much obliged to Mr. Miller. We examined the contents of some of the stomachs of the grayling, and found many trout eggs, many larvae of different kinds, and many worms, also a few spiders and odds and ends. It was astonishing to see so much food in small grayling of 8in. or 9in. at this time of year. We never had much doubt about grayling eating trout eggs, but after this display the question is settled. Doubtless the trout take their revenge in April, when the grayling spawn. The grayling eggs were well developed, and slightly larger in diameter than the O in VICTORIA on a penny. Many of the trout eggs were alive and perfectly healthy, so they could not have been swallowed long before the fish were caught.—Ed.]

FISHING ON LOUGH MELVIN, &c.

DEAR SIR,—By the time this note appears in print Lough Melvin and Bundrowes river will be once again released from their legal fetters. Twenty-five years ago the above lake and river were famous for salmon fishing—perhaps second to none in Ireland—but for the past few years, owing to disinterestedness and bad management on the part of parties responsible, its name, once famous for salmon fishing, has come down almost to half mast.

That very prolific and remunerative box and net fishery, rented and worked by Carty and Cleary for past twenty years, is now purchased and owned by Mr. Singleton, an enterprising London gentleman. He intends to work it now in the interest of sport; fishing neither nets or boxes; letting all fish up to the river and lake.

He proposes to issue daily and weekly tickets of leave to fish the river at a very moderate tariff considering the sport likely to be had. He is also expending perhaps £1000 on the preservation of lake and river, where heretofore £30 was not expended. So, from an angler's point of view, forecasts for lake and river looks very promising. Good fishing can be had on the river any time after Feb. 1. Fishing on the lake will probably be in full swing after March 1.—Yours truly,

P. GALLAGHER.

Rossfriar, Kinlough, co. Leitrim,
Jan. 27, 1899.

TROUT FISHING WANTED.

DEAR SIR,—I want to have some good trout fishing at Easter, and I am not at all particular what distance within the British Isles I go for it. Where would you advise for really good sport for about a week?—Yours, &c.,

TROUT.

SALMON FISHING.

DEAR SIR,—Will any of your readers kindly recommend me where to go the end of the second week in April for three weeks' really good salmon or sea trout fishing? A reasonable sum would be paid.—Yours faithfully,

SALMO SALAR.

JOHN KIRBY.

DEAR MR. MARSTON,—The *Sporting Magazine* of his day credits John Kirby with being a celebrated angler and keeper of Newgate Gaol. No mention of hooks. His patrons, no doubt, wished they could "sling their hooks."—Faithfully yours, JOHN HOBSON.

Leamington.

A PRIZE QUERY.

DEAR SIR,—A prize was offered at a meeting of the Kingswood Blackhorse Angling Society for the largest scale fish caught before Dec. 31, 1898, by any member. A bream weighing 3lb. 6½oz. was weighed in by one member, and a pike weighing 4lb. 13oz. by another. Which do you think is entitled to the prize? Your answer in next Saturday's issue will greatly oblige.—Yours truly, W. ORCHARD (Hon. Sec.).

[Unless the pike was a freak of nature and had no scales why not give him the prize? We never saw a pike without scales. Some people think eels have not got scales, but they have. If Mr. Orchard means which fish is the best specimen fish, of course the bream is.—Ed.]

THE FLY DRESSER'S LIBRARY.

SIR,—Through the courtesy of a correspondent I have had an opportunity of reading the 1860 edition of John Younger's book, "River Angling for Salmon and Trout." This edition was intended to be a recast of the 1840 edition, and the author had got as far in rewriting the book as p. 75 when his death intervened. This was a calamity, as pp. 76 and 77 contains the author's method, not very perfectly stated, of dressing trout flies. It is noticeable that he used upright split wings, and even had the idea of pairing the wings from corresponding feathers of the two wings of the same bird; but this he calls an "extreme nicety." Hackles, apparently, he did not think necessary, though the hooks he used—6 and 7 Adlington, round bend—are large enough to justify the use of hackles. It would have been an advantage if he had restated his method with the added knowledge and experience of the years which had elapsed since the previous edition. His list of trout flies is a very short one, comprising five winged flies, and a hackled pattern of one of them. There was a further edition in 1864.

VAL CONSON.

FLY-TYING SILKS.

DEAR SIR.—In last week's publication of the *Fishing Gazette*, where "Val Conson" has under review the past works on angling, he alludes to a very valuable book, published by the late Mr. W. H. Aldam in 1876. It was a very large and elaborate work, the price being four guineas. One feature of the book was the standard makes of the best known killing flies—these flies lying in small sunken recesses in cardboard.

"Val Conson" deplores the fact that Pearsalls and others do not produce to-day these beautiful imitations of colours. We, however, beg to mention that Mr. Aldam was a life-long friend of our late Mr. Geo. Davenport, who supplied Mr. Aldam with all the silk he required for dressing flies. Mr. Davenport himself being an expert angler and fly dresser for upwards of half a century. These excellent silks we are supplying to-day, and whether for fineness, strength, or colour cannot be excelled.—Yours truly,

Hope Silk Mills, Leek.

[We reprint here notices of these silks, which the *Field* and the *Fishing Gazette* gave fifteen years ago.—Ed.]

Mr. Wm. Senior ("Red Spinner"), piscatorial editor of the *Field*, says: "I was so struck with the excellence of your fly-tying silks that I took the samples you gave me down to the club, and there happened to be present

three of the best amateur fly dressers in the country. They pulled it off the reels, handled it, examined it closely, and were loud in their admiration of its strength and fineness. The lasting quality of the colours was testified to years ago by the veteran Aldam. The silks are really of the very highest quality."

Vide Fishing Gazette, Oct. 25, 1884: "Mr. W. H. Aldam, of Chilcomb, Winchester, has a quantity of these silks, in all colours, the best that ever were made, specially manufactured to his own instructions by a personal friend at Leek, viz., Mr. Geo. Davenport; and the silks cannot be procured from any other manufacturer, so strong, yet so fine, and with fixed lasting colour."

WIRE LINES.

DEAR SIR,—I have very little to add to what I have already mentioned in previous letters, except that it ought to be apparent to your readers by this time that the wire lines I have introduced are different to those mentioned by some of your correspondents, theirs being complete failures and mine a great success, as many reliable and representative anglers can now substantiate. It seems absolutely absurd for gentlemen to advance theories to prove these wire lines worthless when practical tests prove the reverse to be the fact.

If, as Mr. Hearder affirms, I did not originate these lines, I have, at least, shown anglers the tackle necessary to add to their rods to enable them to use them with comfort and success. It took me over seven years to induce the Gresham Angling Society to adopt sea fishing, by the reading of papers, example, and general recommendation; but although wire lines have only been before the public a few months, they are now being bought up as fast as they can be made, and it is a case of first come first served. They just suit the taste of the members of the B.S.A.S., who are ever on the look out for refined tackle of every description.

In conclusion, I should like to remind your readers that I am not attempting to make anything by these lines.

The only question that remains to be settled is the size best suited for the different fish and modes of fishing. The lines now being made are composed of sixteen strands of fine phosphor-bronze braided wire. There are three lines now being used. They are numbered 5, 4, and 4. The strands of No. 5 are the largest, and No. 4 the smallest. No. 5 can be purchased at 1½d. per yard; its breaking strain is 28lb. No. 4½ costs 1½d., and breaks at 24lb. No. 4 costs 1d., and breaks at 22lb. Another line will shortly be produced. It will be numbered 8, and consist of eight strands of No. 4½ strand thickness. Its breaking strain will be 11½lb. It is calculated that these lines, with due care, will last about seven years. Braided wire lines are really very fine tubes of wire, and are consequently elastic—50yds. will stretch about 1yd., and thus counteract the effect of sudden strains. I find the Thames Conservancy have adopted stout phosphor-bronze lines for plumbing the depths, and I understand they are perfectly satisfied with them.—Yours faithfully,

A. W. PARKER.

WIRE SEA LINES.

DEAR SIR,—In reply to Dr. Charles S. Patterson's three questions: Firstly, as to what kind of wire lines—I have used annealed copper wire, wire of the make used for hanging pictures; bottle wire; and the more up to date 39-thread three ply bronze wire, sample of which I inclose for your inspection. I used a heavier make than that inclosed, but have used it all up for binding oars, gaffs, &c., for which it is much more suited than for reel and hand lines.

Secondly, as to where I have used wire lines: On the coast of North Wales, mostly in eight to twelve fathoms, and four to five knot tides, over 18ft. rise and fall; Le Havre, France, mostly in shoal water, fairly swift tides; the Baltic, which is no great criterion as regards tide, &c., I used the wire lines as reel lines for bass, &c., the hand-lines for conger, cod, and pollack. (I also tried them for trolling for pike without leads on the Danish lakes.)

Thirdly, as to weather I have "troubled" to try the new sixteen strand braided phosphor-bronze lines.

I have received new samples since my last letter. I do not like the way they run on reel and through the rings, but am trying them as reel and hand-lines very soon.

I would remind Dr. C. S. P. in answer to his other remarks, that we are discussing the value of wire sea lines and not merely wire reel lines.—Yours truly,

"VIATOR."

[We have sent the samples "Viator" sends to Dr. Patterson.—Ed.]

BIRDS OF PREY AT BATTERSEA PARK.

SIR,—Some time since I was informed that "penguins" were abroad in Battersea Park, and were devouring the fish in the lake wholesale. Information received, however, caused me to fix a visit for Sunday last, and in drizzling rain, accompanied by Mr. H. Archer, a fellow member, I made a circuit of this well-known "Paradise for the People." And "paradise" it is, for the powers that be (John Burns, I believe, in particular), have amply fulfilled their promises in every respect, and nothing appears to be wanting to give the people of Battersea real recreation and genuine amusement.

After a deal of wandering we came across the aforesaid "plunderer," but the "penguin" turned out to be a "cormorant." There are two of them, and in my presence one of them caught and devoured about three dozen fish, roach and dace, I believe, in about forty minutes.

But we were afforded a little amusement at the finish in rather an unexpected manner. Hundreds of young sea gulls appear to have made the park their rendezvous for the winter months, and three of these birds were intensely interested spectators of the "cormorant's" performance,

Watching an opportunity as the fisherman emerged from the water, they one by one swooped down, and managed to snatch from him five or six decent-sized fish.

The cormorants have only quite recently been introduced into the park, and are part of a very beautiful collection of foreign species well worthy of a visit, but when we come to consider that many places (Wimbledon Park, and even homely Clapham Common, for instance), owe part of their stock to these waters, the question naturally arises: "Should not this kind be put a stop to?"—I am, sir, faithfully yours,

HON. SECRETARY
(Lychnobite Angling Society).

A LARGE LAMPREY.

DEAR SIR,—We had on view at Mr. Amphlett's lecture on Monday last a lamprey weighing 1½lb., captured by one of our committee (Mr. R. P. Smith) in the Rother—Robertsbridge, Sussex—last autumn. It attracted a great deal of attention, and was considered of rather exceptional size. Can you inform us as to whether lampreys grow much larger than this?

This one has been snaped in a large glass cylinder containing methylated spirit, and is in excellent preservation.—Faithfully yours,

HV. DOWSETT
(Joint Hon. Sec. Hastings Angling Society).

[Buckland says the average size of lampreys which come into the London market is from 1½lb. to 3lb., and Dr. Day says specimens up to 5lb. weight have been taken.—Ed.]

ANGLERS' ASSOCIATION RE-STOCKING FUND.

DEAR SIR,—Since last report I beg to acknowledge receipt of 5s. Brunswick Brothers, and 10s. 6d. from Izaak Walton Angling Society.—Yours faithfully,

ALEX. WRIGHT, Hon. Sec.

AN ANGLING SOCIETY FOR NICE.

To the Editor of the *Riviera Daily*.

DEAR SIR,—While there are clubs and societies in Nice representing almost every form of sport and recreation, I find that there is no local angling association. This is somewhat remarkable, as there are a fair number of anglers in the town, and admirable opportunities are given both by river and sea for obtaining magnificent sport. At very little trouble and expense some of the streams in the vicinity might be stocked with trout, and converted into valuable properties, while there are other waters which would well repay re-stocking with coarse fish. I should, therefore, be glad to hear from any anglers, French, English, and American, who would join with me in forming an angling association for Nice. Such an institution might be carried on on the lines of the British Sea Anglers' Association, and become one of its corresponding branches. In this way much valuable information might be obtained in regard to the fish of the Mediterranean.—I am, yours, &c.,

G. EDWARDS.

Hotel Française, Rue d'Amérique.

SEA FISHING AT SOUTHEAD.

SIR,—In reply to Dr. Morris and Mr. Frank Moore, all I can say is that it was wholly on account of the Southend report, published in *Fishing Gazette* of Jan. 14, which reads, "Splendid sport has been enjoyed with the flat fish, which are just now very large," that I journeyed thither on the 15th, hoping to obtain a share of the above sport, but was entirely disappointed. I am aware that it is often the case when nothing may be doing at the pier-head, outside the boats are having sport both fast and furious. Hence I qualified my remarks by saying, "unless report simply applied to boat fishing," which I came to the conclusion it did. I may say I noticed that my experience was borne out by "Dragnet's" remarks in *Gazette* of 21st, as he states, "Ben Abrahams was getting an occasional dab, not many, not very large."

Of course, I no doubt should have noticed that Mr. Hussey's report was retrospective, as fishing changes so much from day to day it is not in mortal man to tell us our luck to-morrow. And it being Sunday, perhaps the fish, the larger ones especially, pay greater regard to the day than some of the fishermen.

I am pleased, indeed, to see that Mr. Hussey has taken up the matter of immature fish in such an energetic manner, and wish him (as I am sure every sportsman will) every success.—Yours truly,

OBSERVER.

A CURIOUS TROUT.

SIR,—Under the above heading I see an inquiry in your paper of Jan. 28 regarding the 11lb. trout caught in Loch Tay on the opening day. The trout in question was not a "hybrid," but a very fine specimen of the common loch trout. One side was much brighter than the other, but that was owing to the fish lying for some time in the bottom of the boat or among damp grass, probably the former. As for its tail, I did not see any difference between it and the tails of other trout of the same size.—Yours truly,

ORANGE HACKLE.

FINS OF FISH GROWING AGAIN.

SIR,—With reference to the question of the fins of fish growing again after injury, I should like to state the following instance which has come under my personal observation.

In January, 1895, three out of four gold fish, which I had then kept—two since 1889, and two since 1890—developed fungus upon their tail fins. I did not know of any reliable remedy for the disease, but, still, was unwilling to

lose the fish after keeping them for so long. I therefore determined to operate upon the tails. This I did by cutting away so much of the edge of the fin as was affected, and which, in the case of the smallest fish, amounted to nearly the entire lower lobe of the fin.

Turning to a few rough notes which I kept about my aquarium, I then find this entry: "May 28th, 1895. By now the cut tails have grown to their normal shape and there have been no more signs of S.F." I may add that the fish which underwent the severest operation is at my elbow at the present moment, and that the lower lobe of his tail perfectly resembles the upper one.—Yours, &c.,

C. A. C. JEFFCOCK.

THE DESTRUCTION OF TROUT AND SALMON IN NORFOLK STREAMS.

To the Editor of the *Eastern Daily Press*.

SIR,—The failure in Norfolk of the Birds' Protection Acts is notorious, and judging by what happens in certain parishes hereabouts, the laws for the protection of fish are treated with equal contempt.

I have just seen a salmon taken out of a little brook which was full of spawn, and measuring 27in. in length and 15in. in girth. Two years ago I heard of two salmon being taken, one weighing 11lb. and another 9lb., and in 1893 I am told one was taken weighing 13½lb. Ignorant of the crime I was committing, the first winter I was in North-West Norfolk I assisted at the capture of two trout weighing 5½lb., and I bought another freshly caught one weighing over 3lb. for a few pence. I also hear that some visitors from London to a neighbouring parish captured many trout and salmon in the spring of 1897, and I have more than once bought trout weighing from ½lb. to 1lb., in March, by the half pailful. There has been no secrecy about the catching of these fish. All have been caught in broad daylight, within sight of public ways; some of them in water next to the highway, or even running underneath it. The brook I specially allude to is partly fed by our well; it averages about 18in. in depth, and the fish are easily driven into its shallower parts, and then taken. As the winter caught fish are caught while they are seeking to lay their spawn, the damage done by their destruction is incalculable. The March fish are taken by beating the water and so driving the fish into pole nets.

I do not know if similar occurrences take place generally in Norfolk. If they do, we need not wonder at this increasing scarcity of fish in our streams, but, on the other hand, we may wonder at the exclusive attention bestowed upon game birds and beasts by landowners, policemen, and magistrates.

There is little doubt, from what I have heard, that if the streams in these parts had one-tenth of the protection bestowed upon them that is bestowed upon every little spinney and rabbit burrow they would abound in game fish, and so give this corner of the county quite a distinctive character, and also afford both profit and sport to those living in the neighbourhood.

On this ground, if on no other, I venture to call the attention of those concerned to the means which the law provides for preventing the cruel, foolish slaughter of fish that goes on at this time of the year.—I am, sir, yours obediently,

ROBT. C. NIGHTINGALE.

Beechamwell Rectory, Swaffham, Jan. 24.

GUT CASTING LINE DAMPER.

SIR,—Every angler has experienced the difficulty and annoyance connected with getting his casting lines into a proper condition for casting when commencing to fish. The lines have been wound in a coil, are dry and kinky, and obstinately refuse to get into the straight, and it takes a good deal of straining by hand, and then several minutes' immersion in the river before the lines are safe to fish with; the usual course, mors especially with beginners, being to commence casting though the lines are in corkerew fashion. If, however, a salmon or trout takes the fly while the tackle is in this dry and brittle state, the chances are you lose your fish, and your line into the bargain. This simple invention is the idea of Mr. James MacKenzie, of Dublin, an angler of considerable experience and success, and quite gets over the difficulties and annoyances referred to. When you start off in the morning for your day's sport—or the night before—you place in the damper the lines which you are likely to require during the day, and when you are ready to mount them they are in a nice soft, pliable condition, and your first cast falls on the water with the line as outstretched as if you had been fishing all day. Mr. MacKenzie has applied for a patent, and the invention is thus described in his provisional specification: "A flat box of tin or other material, having a circular compartment; outside this circular compartment is a lining of felt for the purpose of holding moisture to soften the gut casting lines which are placed therein. Inside the circular compartment is a dry pad of felt, in which the fishing hooks and flies connected with the lines are placed, so that while the lines are damped in preparation for angling, the hooks and flies are preserved from injury by moisture." Hitherto any attempts in this direction have failed, owing to the want of a dry compartment to keep the flies and hooks from suffering by being shut up in the damp.—Yours faithfully,

J. MCKENZIE.

[We certainly years ago have seen combined cast and fly boxes which exactly answer to this description.—Ed.]

Several letters unavoidably held over.

TO SPORTSMEN—Burberry's, of 20, Haymarket, London, are now offering, at half price, their 1898 model and stock sporting garments, in gabardine, combination, and rain-proofed tweed; shooting coats, 26s. 3d. and 31s. 6d.; breeches, 15s. and 21s.; Burberry capes and long overcoats, 31s. 6d.; farmers' overcoats, 15s.; Scotch stockings, 2s. 9d. Sent on approval on receipt of cheque covering.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
„ Six Months ditto	5s. 4d.
„ Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

SATURDAY, FEBRUARY 11TH, 1899.

SPRING SALMON LURES.

SPINNING for salmon is now a recognised art in the world of sport. It was not always so; and the time is not so far distant when it required not a little nerve on the part of the younger generation of sportsmen to defend their position when killing salmon with anything short of the orthodox fly. Probably, much of the opposition met with was the direct outcome of the reckless use of the spinning rod at all times—in season and out of season—when it was first introduced into the rivers and streams in the north. It caught on like wildfire among the younger and keener spirits on the Dee some fifteen years ago, and for a season or so there was nothing seen but the spinning rod and the minnow can on almost every other reach in the hands of these freer spirits. Their sole object was to kill fish, and that speedily; and the advent of the live bait seemed a veritable God-send to them at the time.

There is no denying but that it was phenome-

nally successful when first introduced. At a time when few fish were being got to the fly, the news that two Englishmen, on the Dee, with live minnows were killing eight, ten, twelve, and even fifteen fish daily, could not but have had an electrifying effect on these hot bloods eager for sport at all hazards, and the result was that the minnow boom went up by leaps and bounds. It was minnow here and minnow there, minnow above and minnow below. The best sorts were imported from southern lakes and ponds then, as they are now; and while the boom lasted the supply was nothing equal to half the demand. Mr. Garden, tacklemaker, Aberdeen, would have a score of telegrams any day before nine o'clock in the morning, asking for minnows by the thousand, which he could not meet by fifties or a hundred, at most, to his most favoured customers, while the trade otherwise were equally harried to partially meet the demands of their patrons. Every burn and streamlet where a minnow of acceptable size was known to breed was scoured to augment the supply, and yet the cry was still for more.

It was no wonder then that the angler of the old school felt his back hair rise whenever he caught side of the hated minnow can, and reeled up in disgust when splash in front of him, sometimes under his very nose, came the hated minnow. The ill-feeling then engendered has not even yet subsided in the breasts of not a few, and although they may not object to the minnow *per se*, they cannot get over the very unsportsmanlike manner in which it was so freely used, and the rough-shod way in which their sentiments were trod on when objections were raised against it. From whatever cause, the live bait craze in a season or two spent itself. Some say that the phenomenal success attending its first introduction was due to a series of favouring circumstances—a combination in fact only met with now and again, viz., fine fresh waters and a continuous run of small shoals of fresh spring fish, and that when these favouring conditions disappeared the phenomenal catches also melted away. Another theory put forth was that it was all very well on these reaches where the fish saw the minnow for the first time for the lucky anglers to run up a big record, but when minnow fishing became general all over the river, and the fish had minnow presented to it in every second pool it entered on its way upstream, that it got "educated," and so fought shy of a lure which had become so common. Much may be said for both theories, and, like most other matters pertaining to salmon angling, there may be a grain of probable truth in each.

The result, however, was that the fly did not pass into oblivion as a defunct salmon lure, in spite of the prophets of evil who were so cocksure of its speedy ruin. It weathered the storm bravely, and probably occupies a more prominent place in the army of lures to-day with the expert spinner even than ever it did before, and is preferred by him above all others as a sportive lure of the first water whenever and wherever he can reasonably give it the preference. The true sportsman prefers to kill his fish to the fly, as certainly giving more sport and requiring more skill to manipulate; but he will not disdain other lures when the chances are all in their favour; and so the "minnow can," although it has now taken a back seat compared with its former prestige, is still *en evidence* at the waterside, and the phantom, the spoon, the Devon, the prawn, and the worm all have their turn when the fly is out of it, and, *ceteris paribus*, sport would be a minus quantity without them.

The native minnow has been used as a salmon lure from time immemorial. It was used in big summer waters (a time of the year when it is most easily obtained in its best condition) to lure grilse, and in the autumn for back-end fish; but it never seems to have been artificially bred and kept for spring fish. That luxury is quite a modern discovery. It was impaled on a very large salmon hook, usually an old one stripped for the purpose, and worked over the pool much after the manner of a large salmon fly. Some old anglers still delight in having a go with the phantom after this ancient fashion, and Mr. Wm. Blacklaws, sen., who has fished the Dee for nigh the allotted span of man's lifetime, and is probably the oldest angler on the water to-day, for he never misses the opening, prefers it to all other methods, and is more successful with a 3in. phantom at the end

of his 18ft. greenheart, worked after the manner of a large salmon fly, but with a shorter line, than others alongside of him with the best of spinning rods and the latest up to date tackle.

The silk phantom is probably next to the fly as a standard salmon lure. In a rising water there is nothing like it for getting a fish; and, again, in a very low temperature, and when working among icefloes, the phantom stands supreme. Spun with 30yds., or 40yds. of line, little thicker than a good lint thread, from the Malloch reel, it gets in between the cakes of ice where the fly would be useless, and searching the pool or "lie" proves an irresistible attraction.

In a small spring water again, or in a rapid at any time, the phantom is always a very safe change from the fly. Most anglers have their spinning flight always in readiness, and, as a rule, when the pool or stream has been well covered with the fly the heavier fly rod is handed to the gillie and the lighter wand takes its place. It is a welcome change, either in fishing a heavy water or on an otherwise hot day, when too much exertion becomes a pain.

In working the phantom, or other spinning lure, for that matter, of the same order, the angler should strike on the first contact with the fish. While it may not be always necessary to follow this rule, and while the fish may be as fatally hooked by its own initiative on the triangles of spinning flight as ever it was on a fly hook, yet the most experienced spinners find it to their profit and their chances of sport to reply at once to the proffered invitation. If there is but a slender hold the hook will come away at once, often bringing tangible proof of the contact in the shape of a scale or bit of skin, and better a parting sooner than later; while, on the other hand, a sharp reply will send the barbs well home, and make "certain doubly sure."

An expert fly fisher was asked why he never tried the phantom when in a flooded water he was all out of it with the fly.

"So I have," he replied, "but I always lose my fish after the first rug or so. I have accordingly discarded it altogether."

"Perhaps you do not strike when you get the pull or feel the fish," replied his friend.

The remark was a revelation to him. He had treated all invitations alike up till that time, but he at once saw where his weakness lay, and now there is no more successful phantom spinner on the Dee.

Many improvements (*sic*) have been tried with the phantom, but as yet none find so much favour as that of the original pattern given to the angling world some thirty years ago by the inventor, the late Mr. Brown, of Aberdeen. It is a phantom in reality, for the fish gets nothing but a mouthful of hooks when it seizes its prey.

Mr. Brown never patented his phantom, although others have from time to time patented improvements on it, and contented himself in his day and generation with the chance profits on the work which his invention brought to his own counter. He was professionally a tackle maker, and a keen angler to boot, and the stories of the wonders wrought by the phantom when first introduced into northern waters by Mr. Brown or any of his many angling friends and patrons are still current on the Dee, Don, and other streams.

The rubber phantom introduced by a London firm runs the silk phantom a very hard race for supremacy as a taking lure at times, as it certainly does many of the "makes" now on the market as a lasting lure. The rubber phantom has the advantage of being easily loaded with shot or the opposite, and from its duller texture is more acceptable in certain changes of the water than the brand new silk phantom, whether in blue or brown. The red rubber phantom—an imitation of the prawn—has never taken on in the north. I cannot say what the success of others may have been with it, but I fished it off and on for two seasons and never struck a single fin. Some of my friends have had even more patience than I had, but with a like result. Some other forms of the phantom have been more successful, but none of them have come near to the universal popularity and success which has constantly attended, in all conditions of weather and water, the original invention of old Brown, which still holds the field against all comers by whatever firm it may be made.

G. M.

A FEW LAKELAND NOTES.

THE following notes are suggested by the entries in my diary, and relate to a few days spent by the writer at the lakes during the past season.

The water fished extends from Lakeside to Newby Bridge, and is the river Leven, which forms the outlet of Windermere Lake. Below the bridge is a weir, and after that streams and pools abound. This water is strictly preserved. All my fishing was done in the open water above the bridge, except one day, as will appear.

June 11, 1898.—Arrived at Lakeside by train, 11.15, and took the Swan Hotel 'bus to Newby Bridge. (Note.—If there is no 'bus at the station, don't hire, but get a boatman at Lakeside to row you down the river to the hotel, distant about a mile. It is much pleasanter, and cheaper, as I once found.) By 12 o'clock I was fully equipped in waders and mackintosh, and commenced operations immediately opposite the hotel. The rain was continuous until four. Flies were scarce, but fish were stirring freely, or rather bulging, as I frequently saw a big back fin above the water. Not knowing what fly to try, I put up a March Brown (Holland's dressing) and fished it dry. I did this because the wind was blustery and a small fly would soon have been swamped. My first satisfactory cast to a rising fish came off, and a merry fight ended in the trout escaping the net. The fly did not float very well, and soon became waterlogged. I put up another March Brown, well paraffined, and was soon into another fish. A gamier fish I never pricked. He made for every obstruction and weed bed possible, but eventually reposed in the net, a good 1lb. 8oz. About 1.15 a strong hatch of Iron Blue Duns came out, and the fish had a merry time. I tried every shade of that fly in my box, but could not suit the fish. One rise only rewarded me, and that I missed. After an hour of such sport I retired into the Swan for a hasty lunch, returning to the attack with a March Brown. The Iron Blues were still abundant, and were being taken. The March Brown, however, answered, and another good fish, better than the first, was added to the basket. At 4.30 I finished, having caught four trout, weighing 5lb., and having put two small fish back. Dined at the Swan and took train. Missed my connection at Carnforth, and had seven miles' walk in the wet. Note.—A visitor at the hotel took, after I left, a 2lb. 9oz. trout in the evening with spinning minnow.

June 18.—Fished from twelve to five. Weather overcast at times; wind from south, strong; water low and very clear. Flies on, little yellow May Dun, a few Olives, and an occasional May Fly. Tried all these and many others, including the March Brown. Got four fish, all on the March Brown. One fish turned the scale at 1lb. 8oz., the others a little under 1lb. average.

June 20.—Got to the water at twelve. West wind, very strong at times. Water very low. Rain after 2 p.m., continued all day. Fished hard until six, and got two fish (about four o'clock), weighed 1lb. 6oz. Fish again showed freely throughout the day, but could not tell what they were taking. The Silver Sedge captured the two. Back fins very conspicuous. Stayed all night, intending to go out trolling for lake trout, but the incessant heavy rain discouraged me.

June 21.—Out at 6.30; lovely morning. Saw two trout on the shallow where the boats were beached. They were smutting, so offered the nearest a Black Gnat Hackle, No. 000. Hooked, and lost after two or three lively runs. Found another fish rising, result as before; the third I got. After breakfast plenty of smuts about, but the trout were not on feed. At twelve I got a can of minnows, and crossed to the island opposite the hotel, and tried live baiting in the hole at the end nearest the bridge. Got three small perch. Went to the upper end and spun with a minnow, getting three jack from the edge of the weeds, average weight 1½lb. Tried fly again in the afternoon, when rain came on. Two trout again fell victims to the March Brown.

June 27.—Water high and slightly coloured; wind north and strong; sun bright; wading very bad. By the courtesy of Mr. Bigland I had a ticket for the club water, so went below the bridge and tried wet and dry fly by turns. Could get nothing but small fry. Returned to the open water and

got two ½-pounders in quick succession with Silver Sedge. After luncheon commenced with artificial minnow below the weir, but only small fish came. As the water was so high, and wading so very difficult in the coloured water, I decided to return to the hotel and have an early meal, so that I should get the evening rise. At 5.30 I resumed fishing. The wind had fallen entirely, and the water was both clearer and lower by many inches. From the weir I saw a fish feeding on the flat above it. Offered him a Sedge, which he promptly took. I thought he was a moderate fish only, but found that after the first rush I could really do nothing with him. I thought that he must have hung me up, so solid did he feel. Getting well below him, I put on as much pressure as I dare, and then he came very slowly. Before I had gained many feet of line away he went again upwards to the bridge, as though he would go through. Again the utmost pressure was put on, and in less than a minute the game was up, for a limper, tamer fish of ½lb. never came into a net. On handling him I found the explanation of his strange behaviour. He was bleeding from a very deep gash on both sides. He had been tackled by a pike after being hooked. Going below the weir, I tried the "white water" under the apron with the Devon minnow, fetching out in quick succession three good trout, and breaking in a fourth. Fish were rising lower down, so I put up a Sedge, which accounted for another three. The last was a very game ¾lb. fish, and gave me some trouble to net, as he got into the rough water below. The water bailiff had been a silent and unknown spectator for the last half hour. He had been standing knee deep in the rushes at the side of the river. He then asked me to try a cast of his flies, which he gave me. They were decidedly large, and seemed in the half light to be Snipe Hackles. He advised me to try the higher water. I did, and the result was something I shall remember. I could not see the flies, but the fish could. I had, therefore, to trust to feel entirely, and by letting the flies drag across and down stream I got several fish. Many were small, but an occasional ½-pounder or ¾-pounder was taken. Landing these fish in the bad light was anything but easy work, and not much to my taste. As the fish seemed to be going off, I gladly abandoned the sport, and joined the keeper on shore. At the hotel we emptied the basket and weighed the contents, which were: Sixteen fish, weight 10lb. 2oz. Stayed all night.

June 28.—Out at 6.30 a.m. Water lower, and very clear. A few fish smutting. Got one and lost two on Black Gnat. After breakfast no signs of fish to be seen, so got a boatman to row me up to Lakeside to meet a friend coming by train. Took trolling rod and baits and fly rod. Opposite the late Col. Ridehalgh's house hooked and lost a good fish with fly and secured a small fish. After meeting my friend, and despatching him by steamer to Ambleside, I returned to my boat and put out spinning tackle. Halfway between Lakeside and the Swan we had a short run, and then, 50yds. astern, we saw a noble trout leap high out of the water, and away he went *liber et exultans*. No doubt he was only lightly hooked—the hooks being, in my opinion, too large. In this opinion my boatman, Millray—an experienced hand—did not agree. I resumed the fly rod after luncheon, and although flies were plentiful the sport was poor. Two trout were placed to my credit by five o'clock, both victims to a March Brown.

July 4.—My last day. Fished from twelve to three near the Swan. Weather fine, hot, and slight breeze. For two hours did no good. About 2 p.m. I saw a good fish rising at the head of the island, and covered him with an alder hackle. He rose, and I missed him through casting too long a line. Nothing further being visible, I sat down on a seat by the water and had a pipe and chat with a visitor at the hotel. Presently, immediately opposite, below the island we saw a grand rise, which was quickly repeated. Entering the river near the bridge, after putting up my favourite March Brown, I carefully made my way up the middle of the stream. It was deep wading, and many a nasty stumble occurred before I got into position. At last I made my cast, and the fun began. There was a quiet, deliberate rise, and my fly disappeared before it had drifted 6in. As I struck my Moscrop reel gave off line and

music. At first the fish did not seem to realise the situation exactly, and I gradually gathered in line and retraced my steps until I reached shallower water and better foothold. Then as I continued to bring him towards me he came in sight, and his tactics were changed. He rushed all over, jumped and plunged by turns, and eventually was landed in view of a number of visitors, who enjoyed the sport. My thanks were certainly due to a young lady who very kindly got me a larger landing net, as mine was decidedly too small to negotiate with safety an active trout of 2lb. 4oz., which he scaled. An offer of a drive with friends to Grange was accepted, and thus closed my angling at the Lakes for 1898.

It will be observed how partial these trout are to the March Brown. As I never saw one of these flies on the water, I can only assume that they retained some memories of the fly from the early spring. I am told that it was very plentiful early in the year. During my visits I never saw anyone try with a fly for these fish. The visitors were content with spinning in the evening, and I know that at times they had good sport. One fish of 3lb. 6oz. was taken, and another, much bigger, was lost through a novice reeling up his line until he pulled the gut through the top ring, when the knot stuck and a smash ensued—and language. Many fish this water from a boat, but I prefer to wade. Trousers are necessary for this, and even then the fishable portions are limited. The May Fly season is the best, but I was too late for it. The Swan is a thoroughly comfortable hotel, where a good table, obliging attendants, and a courteous host and hostess combine to make a visit very enjoyable. B. E. F.

MORE JOTTINGS OF AN AMATEUR FLY DRESSER.

WHY the pike scale Black Gnat should have so bad a reputation as a hooker it is difficult to imagine. Complaints are general that trout taking the Black Gnat constantly get away owing to the insecurity of the hold, and these complaints come from sportsmen who think nothing of landing a 2lb. trout on a double cypher hook with a short shank, and most pike scale Black Gnats are dressed on the same wires. I am inclined to think that it must be connected with the way in which the fish takes the Black Gnat. I have been on a bank and watched three or four fish within a few feet of me taking down Black Gnats, and anything more dainty and leisurely it would be difficult to conceive. The surface was scarcely broken, and the fly was sipped into a scarcely open mouth by the current produced by the expansion of the gills. A fly thus taken can be rapidly rejected, and the extreme hardness of the pike scale Black Gnat is liable to lead to its rapid rejection. Hook body and scale wing, all are hard. I am inclined to think that the wing, which "Athenian" recommended for Red Spinners, made from the outer skin of the root of a rook's quill feather, would, cut down, be an improvement on the pike scale because it softens so readily when wet. A soft body with the requisite brilliancy is, I fear, beyond the art of the fly dresser at present. Ostrich herl would not do. The Black Gnat, so called, with starling wing and ostrich herl body, with or without a black hackle, is a purely conventional pattern, and is not much use when the fish are smutting, whereas the pike scale Black Gnat will frequently be taken.

BEETLES.

Beetles have long been made for fly fishing, but for some reason they are not popular with fly fishermen. I have had excellent sport with a beetle dressed thus: *Body*—Copper-coloured peacock's herl and ostrich herl mixed. *Hackle*—Black. *Wing case*—Brown partridge tied in at the tail and fastened down and cut off at the head. It killed on Coquet and Tweed and tributaries, and in reservoirs. Another version is to have the wing case of the mottled feather of a guinea fowl dyed deep pinky red. The white spots, standing out conspicuously, give a very attractive effect. Another neat device is to suggest that the beetle is folding his wings by adding a short tag of palish starling or landrail feathers.

In 1849 Hewett Wheatley, in "Rod and Line," gave high commendation to beetles as lures, and directions and illustrations how to make very elaborate coleoptera are contained in that ingenious little work. The old firm of Chevallier and Co., which had a shop in Bell Yard before the Law Courts were built, had a musty collection of beetles of various hues some eighteen or twenty years ago. Their successors, Messrs. Bowness, I believe, still make some of them.

Mr. Geo. Holland, of Winchester, is another maker of beetles. I have dressed with orange and yellow floss a representation of the long soldier beetle that haunts the flowers of umbelliferous plants in summer and autumn. The hackle rendering of this is the Soldier Palmer, and when the insect is in flight its resemblance to a Soldier Palmer is astonishing. In like manner the Coch-y-bondhu is really an admirable imitation of the Marlow Buzz in flight. But as the trout seldom see either insect in flight, and never in flight in the water, it is difficult to see why the fish should take either the one or the other buzz patterns for its natural prototypes.

In the interesting article by "Blackbeetle," which occurred in the *Fishing Gazette* of Jan. 14, 1899, there is an excellent description of a simple method of dressing blackbeetles. But why does he wind the hackle after he has tied down the wing covers? Surely, the simplest and most natural course would be to wind the hackle after tying down the body, and then to tie down the wing covers over all.

Limerick hooks and round bends are not good shapes for beetles. Snecks or Kirby's, with shortish shank and good gape, seem the most useful shapes.

While he sticks to facts I can go with "Blackbeetle"; but when he soars into the realms of imagination, and suggests that the Alexandra and the Zulu are taken for their likeness to beetles, have not wings to follow him.

Mr. Charles Walker's Corixa is not, it is true, a beetle, but it is of beetle-like shape and action.

The worst of the beetle is that it is apt to fall on the water with rather a smack. It should, therefore, be cast a little behind, or at the side of the trout, or it is apt to scare him. In lochs, reservoirs, and cauld pools, where there is enough wind to produce a ripple, this is not very material.

FLIGHT'S FANCY.

Mr. Foster, of Ashbourne, writing lately in the "Correspondence" columns to claim for his father, the late David Foster, the invention of this pattern, made one observation on the subject of this pattern with which I agree, namely, that it is an error to call it a fancy fly. Mr. Halford, in "Dry Fly Entomology," though he keeps the ancient name of Flight's Fancy, classifies the pattern under the heading of "Imitations of Natural Insects." But why, then, did he put the No. 1 Whitchurch, the very best imitation of the small Light Olive of May, June, and July, among the fancy flies.

FANCY FLIES.

Mr. Halford is so clear a thinker that one hesitates to infer that there can be any confusion of thought in his grouping under the head of "Fancy Flies." Yet here we find, along with the Wickham, the Pink Wickham, and the Golden Dun (not Mr. Foster's pattern), such flies as the No. 1 Whitchurch, the Badger Quill (an undoubted Dark Spinner), Saltoun, and Greenwell's Glory. It seems to me that the logical course is to make two divisions of this group, and to call fancy flies such flies as the Wickham, which are not referable to any known insect whatever, and such flies as are adorned with some eccentric addition such as a topping or a tag of golden pheasant's tippet; and to call such flies as the undyed Red Quill (which, curiously enough, Mr. Halford omits altogether), Greenwell's Glory, and any other flies generally typical of a class, general flies. I suspect, indeed, that a great many of our standard patterns are in truth general flies.

VAL CONSON.

TO SPORTSMEN.—Burberrys, of 20, Haymarket, London, are now offering, at half price, their 1898 model and stock sporting garments, in gabardine, combination, and rain-proofed tweed; shooting coats, 28s. 2d. and 31s. 6d.; breeches, 15s. and 21s.; Burberry capes and long overcoats, 31s. 6d.; farmers' overcoats, 15s.; Scotch stockings, 2s. 9d. Sent on approval on receipt of cheque covering.

GRANT'S CHERRY WHISKY.—This attractive "pick-me-up" is a pleasant combination of Kent Cherry Juice and very soft old Scotch Whisky. This and Grant's Morella Cherry Brandy are sold by Wine Merchants.

THE DARENTH IN JANUARY.

FLY FISHERS who only see the Darenth in her gorgeous summer dress of green and gold would hardly recognise their favourite as she appears, attired as for a ball, in white and diamonds. This winter the effects have been less brilliant, as snow has been absent, but white frost has sometimes almost supplied its place.

When this has melted, and the water, swollen by recent floods, runs sullenly between bare banks, lined with the ungainly forms of leafless pollards, the Darenth certainly is less attractive than when rejoicing in her summer beauty.

Yet, to the angler, a walk by the riverside always has charms, especially if he can see signs that copious rains have at last partially restored the level of the depleted springs.

I am far from sure that this is the case, and can only suggest that there is at least good hope of some improvement in the condition of this over "water-company'd" river. It is, of course, chiefly in the lower reaches of the stream that

OLD TWEED

mischief has been done by sinking wells to tap the springs which help to feed the river.

From the appearance of water at Hawley and below, there must be a certain amount of pollution still going on, but if the supply of water were ample this would not be so serious.

With regard to stocking, it is likely to continue on most parts of the river; and our old favourite, *Salmo fario*, is the breed selected, Loch Levens and rainbows being considered inferior for the purpose. Some years ago a large number of the former were introduced, and proved free risers; but as soon as floods occurred they made their way downstream, and were only heard of in the neighbourhood of Dartford, where occasional specimens were caught.

The spawning season having been an open one, and the floods not very heavy, a good lot of fry will probably be seen in May, and a few may survive the voracity of the young jack, which are far from being exterminated at present. In the course of my walk I climbed the hill beyond South Darenth, and saw the boys in "The Home for Little Boys" at work at boot-making, and noticed the admirable arrangement of the schools, and

playgrounds with their giant-strides and swings, and the football ground. It seems to me that on a non-rising afternoon the angler, while waiting for the evening rise, might well pay a visit to this well-managed institute, which is certainly well worthy of any support he may care to give it. Charities like these, which help the helpless to learn to earn their bread, are among the most deserving; and this in particular, which has the Princess of Wales among its patronesses, is quite above all suspicion of abuse or inefficiency.

J. PAUL TAYLOR.

SOME OLD TWEED SALMON FLIES.

THE illustrations of salmon flies given herewith are copied from the coloured plate in "Stoddart's Angler's Companion," published more than fifty years ago.

A FAMOUS SALMON FLY.

THE MAJOR.

WE give an illustration of this famous salmon fly, taken from "Jones's Guide to Norway," published in 1848, with the original dressing, viz.:

THE MAJOR (original dressing).

Tail.—Golden pheasant topping.

Tip.—Silver twist and crimson silk.

Body (in patches).—Pale blue, orange, and claret pig's wool (or seal's fur), and dark blue ditto under the shoulder.

Legs.—Claret hackle.

Throat.—Guinea hen and bustard.

Ribbed.—Silver twist and gold twist.

Wing.—Two golden pheasant tippets, two claret hackles, two snipe feathers, sprigged with bustard and Argus pheasant feathers; two golden pheasant toppings over, and a dyed yellow hackle surmounting the whole.

A standard favourite on the Namsen according to Jones.

JOHN KIRBY.

In noticing the portrait of "John Kirby, the celebrated angler," in a recent issue of the *F. G.*, we mentioned that it was from a scarce little book, "The Angler's Museum," which was, we thought, not mentioned in the "Bibliotheca Piscatoria." Among some old angling books advertised as for sale by Mr. Wm. Brown, 26, Prince's-street, Edinburgh, in his catalogue No. 125, we notice "The Angler's Museum" by

Thomas Shirley, offered for 18s. On turning to S. in the "Bibliotheca Piscatoria," we find a full account of the book as by Thomas Shirley, with a note that his name was omitted from the third edition, the one we have; and another to the effect that John Kirby was "Keeper of Newgate, and died in 1804, aged 80."

THE LOWER AND MID-THAMES: WHERE AND HOW TO FISH IT.

(Concluded from page 74.)

By F. H. AMPHLETT.

TABLE OF DISTANCES.

LOCKS AND BRIDGES ON THE LOWER AND MID THAMES.

This table shows the distances of the various locks from Teddington, and bridges from Richmond:

THE TIDAL WATER OF THE THAMES.

To find the time of high water in the tidal portion of the Thames at those places where the best fishing is to be obtained, one must first ascertain the time of high tide at London Bridge, and then add fifty-five minutes for Kew, seventy-five minutes for Richmond, eighty minutes for Twickenham, and eighty-five minutes for Teddington.

EXAMPLE.—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or, eighty-five minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

EXTRACTS FROM

"THE THAMES FISHERY BYE-LAWS." 1893.

ILLEGAL OFFENCES.

Trailing.

"No person shall allow any rod and line, or line to which any bait or hook, natural or artificial, is attached, to be drawn or trailed from any vessel on the River Thames."

Live and Dead Gorge Fishing.

"No person shall fish for pike with any device or tackle that does not admit of the pike taken therewith being returned to the water without any serious injury."

Snatching or Snaring of Fish.

"No person shall use any rod and line, hook, wire, snare, or other device, either alone, or in connection with a rod and line, or in any other way so as to take fish by means of foul hooking, snatching, or snaring in any part of the River Thames."

Night Lines and Fixed Hooks.

"No night hook, night line, nor fixed hook or line shall be used in the River Thames above London Bridge."

Illegal Device.

"No spear, gaff, strikehawl, or other instrument of a like nature, or any other device used in the manner such instruments are usually employed, shall be used in any part of the River Thames, provided that this Bye-law shall not apply to any person using a gaff, or auxiliary to angling for pike with a rod and line."

Illegal Possession of Fish.

"Any person who shall have in his possession, on, near, or adjoining the River Thames, any fish of less dimensions than those specified in the last preceding Bye-law shall be deemed to be guilty of an offence against such Bye-law, unless he

prove to the satisfaction of the court before which he is tried that he was lawfully in possession of such fish."

Obstruction of Fish.

"No person shall put down in any part of the River Thames, at the mouth of any brook, creek, river, or back-water, communicating with the River Thames, or running into the said River, or at any mill, sluice, race, or branch of the said River, any net or device whatever to stop, catch, or hinder any fish, spawn, or fry of fish from coming into, or going out of the River Thames."

Fixed Nets.

"No net in any part of the River Thames shall be fixed or attached to the soil, or made stationary in any way, and a net held by any person or persons in a boat or boats, that is or are moored or anchored, shall be deemed to be a fixed net for the purposes of this Bye-law."

INFORMATION TO ANGLERS.

Sizes of Fish.

Pike or jack (all extreme length), 18in.; perch, 8in.; chub, 10in.; roach, 7in.; dace, 6in.; barbel, 16in.; trout, 16in.; bream, 10in.; carp, 10in.; tench, 8in.; rudd, 6in.; gudgeon, 4in.

Close Season.

"In that part of the River Thames as is situated above London Bridge, no person shall fish with or use any rod and line between March 15 and June 15, both inclusive, except a rod and line for taking trout, and fished with an artificial fly, or with a spinning or live bait."

"No fish found in the part of the River Thames above London Bridge may be taken between March 15 and June 15 following, both inclusive, except trout, and roach, dace, gudgeon, bleak, and minnows, taken as herein provided, as bait for trout."

Season for Trout Fishing.

From April 1 to September 10 inclusive.

Bait for Anglers.

"Roach, dace, gudgeon, bleak, or minnows, for use as bait, provided that no person shall be entitled to have in his possession, or under his control, more than fifty of such fish for use as bait at any one time, or to take by himself, his servants, or agents, more than fifty of such fish, on any day."

Limit in the Number of Rods.

"No rod and line shall be used except when fished with either a natural or artificial bait in a proper manner, and no person shall fish with more than two rods and lines at the same time."

Nets allowed to Anglers.

"The following nets and no others may be used by all persons, for all fish: a minnow net, a landing net, and a hand or well net."

"A LANDING NET by a person angling, or by an assistant to a person angling, and as auxiliary to angling with a rod and line, to land fish hooked on a line by the person fishing."

"A MINNOW NET by a person angling, or about to angle, or his servant, or agent, for the purpose of providing minnows for bait, to be used for angling in the River Thames."

Use of Bait Net.

"A CASTING or BAIT NET may only be used by Assistant River-keepers, in obtaining bait to be used by persons for angling in the River Thames."

Night Fishing Limited to Bank Anglers.

"No person shall fish for, take, or attempt to take, by any means whatever, in that part of the River Thames as lies above the City Stone at Staines, nor from any vessel in that part of the River Thames as lies between the City Stone and London Bridge, any fish between the expiration of the first hour after sunset, and the last hour before sunrise."

GENERAL.

Taking of Fish for Scientific Purposes.

"Nothing in these Bye-laws shall prevent any person, provided he has the previous consent in writing of the Conservators under their common seal, from obtaining fish for the purpose of artificial propagation, and other scientific purposes, from any part of the River Thames, or from having in his possession salmon roe or trout roe

for any of these purposes, or from taking, or attempting to take salmon or trout when spawning or near the spawning beds."

Abolition of Netting.

Section 9 provides there shall be no nets used by the netsmen, "except in that part of the River Thames as lies between Isleworth Church Ferry and London Bridge."

Penalties.

"Any person acting in contravention of the foregoing Bye-laws, or any of them, shall, for every such act be liable to a penalty not exceeding £5, and may, on the direction of the Court, forfeit any net, engine, device, apparatus, or fish, found in his possession or control. Every such penalty shall be recovered in manner prescribed by the Summary Jurisdiction Act, and shall be applied in manner directed by the Thames Acts 1857 to 1885

Rewards

Will be given by the Thames Angling Preservation Society on the conviction of offenders.

CONCERNING DACE, &c.

MANY anglers often go to considerable expense and waste much valuable time in fishing for dace at certain periods of the year in swims they do not frequent. At the opening of the season, and all through the summer, anglers may often be seen fishing for dace in eddies from 8ft. to 9ft. in depth; comparatively quiet eddies, which would be excellent swims for winter fishing with the float, and baiting with the tail end of a well-scoured maiden lob, "cockspur," brandling worm, or a small bunch of gentles, according to the state of the water. At the commencement of the season dace will be found for the most part in swift currents, in rather shallow eddies, in close proximity to sharp streams from 3ft. to 5ft. in depth, near where two streams join, or where the under current causes the water to dimple as it gurgles and swirls along, by broken banks and bends of rivers, and swift runs from weirs and mill pools, where the purest water can be found. Having for certain discovered the habitat of dace, they may frequently be captured by either ledgering with or without a float. In the former case the run should be a moderately fast gravelly swim or scour about 4ft. or 5ft. in depth, baiting either with caddis grubs, gentles, or worms. In the latter style, the bullet should be just large enough to enable the angler to feel and keep a hold on the ground, with a hole as wide as possible to reduce the resistance in striking; and to prevent the line from being frayed the sharp edges of the aperture should be rounded off with a penknife. The fine 2ft. gut tackle should be without weight, and the only split shot used should be one nipped on the fine line about two inches above the loop of the gut on which the bullet should rest. If a pellet of ground-bait be squeezed round the bullet, it should always be made stiff and adhesive enough to remain on the bottom for a few minutes, so that the swim may get the full benefit of it. By using a No. 1 plait line the angler can feel and keep a hold on the ground with a comparatively small bullet with a tolerable length of line out, even in rather sharpish streams. The fine line offers very little resistance to the current, so little, in fact, that on many occasions I have had capital sport both with roach and dace when pursuing this style of ledgering. The bullet should be cast gently downstream with a regular, even sweep of the rod, where one wishes the bait to be held, where one knows from past experience that it can be held, and where a fish can be struck from the firmly skidded reel. It requires considerable skill to strike, say, a roach, from 20yds. to 30yds. from the rod tip when using a bullet with a small bunch of gentles. Let him strike how and when he likes, I need scarcely tell the novice that a rod too whippy is an absolute nuisance. Harking back to fishing for dace with the float, as described above, if the rod be sufficiently stiff to enable the angler to strike a dace very quickly at the slightest bob or twitch of the float, nothing more need be said; but I have sometimes heard an angler say, "The rod I use for bottom fishing for roach and dace weighs only 8oz., 9oz., or 10oz.," as the case may be. More often than not a 12oz. rod is recommended, and very proper too; but it was

only the other day I read of someone advising anglers to use an 8oz. rod. Very well, I wish all those who use similar rods joy of them. Personally, I prefer a rod possessing a little more backbone for the job. I have frequently seen an angler using a rod so whippy that, on striking, the point has dipped forward so sharply that slack line ensued, and it was impossible for him to strike his fish. In other words, the rod was not stiff enough to enable the angler to send the hook home in a moment. With respect to hooking fish successfully, either when ledgering or floating, an angler should be able to tell from the feel and action of a rod whether it possesses the exact rigidity required or not. If he cannot, he might just as well use an 8oz. fly rod for the purpose mentioned.

Pegging.—When holding a 6in. or 7in. thin porcupine float still in a moderately fast current, with the butt of the rod pressed in the left groin, and the rod held straight out from the surface from 2ft. to 3ft., with the nose of the float standing out like a snag, and no other portion of it can be seen, with the two lowest shots resting on the bottom, with the bottom shot ten or twelve inches from the hook, the angler should strike directly from the reel with his left hand at the merest pluck, dip, or bob of the float with a sharp twitch of the rod top upstream. Not an upward stroke as in ordinary angling, but with the rod held almost level. Everything required should be ready before commencing this "pegging" business—landing net, basket, ground and hook baits—and the angler should remain seated as low down and out of sight as possible, until he finally leaves the swim. Unless one is very clever at striking, many fish will be missed. On the other hand, striking can be done with such ease and quickness that, when one is even dozing, fish can sometimes be struck from the feel alone. I say, use a long thin porcupine float, because not only does it extend the slope or slant of the line and tackle better than a short stubby float, but offers much less resistance to the current, and enables the angler to strike more successfully. By adopting this method, and sitting very still, not only dace, but several sorts of fish can be caught from 5yds. to 8yds. in a clear, and from 2yds. to 3yds. from the rod in a discoloured water. Of course fish can be caught at longer distances, but from 5yds. to 8yds. is a good length for all practical purposes. In this style of fishing the novice should not forget that the further off the float is held the more difficult it is to hook his fish. Carefully take the depth, and fix the float so that, say, the two lowest shots rest on the bottom, for you must understand that the gut and hook below the lowest shot have nothing to do with forming the true slant from the bottom of the float to the shot, lead, or weight resting on the bottom. What I mean is, if the novice fixed the float, say, 15in. or 18in. deeper than the water in a fastish stream, from the uppermost cap to the hook, instead of to the lowest shot, he would find this not sufficient, and have to increase the distance; on the other hand, the float should be anchored as lightly as possible, not only to allow the current to play on the tackle and bait, and thus reduce the resistance in a fish taking it next to *nil*, but also to enable the angler to be at them in a moment.

The bait may be allowed to go downstream any distance the novice pleases by casting out into the deeper water, but when the reel is stopped the float will soon make to the side, until nineteen times out of twenty it will, or at any rate should, remain with its nose out like a snag in a direct line with the rod top. Ledger tackles can be constructed from a single barleycorn to a heavy Thames lead, to suit almost any swim, but this method of ledgering with a float is admirably adapted for straight level runs of water, with a sandy, gravelly bottom, from 4ft. to 6ft. in depth, where the angler can sit close to his swim and hold his float as described, and where the best fish can often be caught, either in a discoloured or gin-bright water; but it should be remembered that dace have a knack of ripping up worms, and also biting off any loose hanging ends without being caught, and a tyro will be surprised to find what a number of fish may be missed on this account, and act accordingly. For this reason he should not forget to let his worms be well scoured and as tough as possible.

OLD ANGLER.

THE FLY FISHERS' CLUB.

THE annual dinner of this club took place on Wednesday evening at the Hotel Cecil, and was most successful in every way, thanks in no slight measure to the admirable arrangements of the hon. secretary of the club, Mr. T. B. Vernon.

Sir Samuel Montagu, Bart, M.P., presided, the vice-chairmen being Mr. William Senior (president of the club), Mr. R. B. Marston (hon. treasurer), Mr. Hedley F. Norris (hon. librarian), Mr. Basil Field, Mr. Frederic M. Halford, Mr. D. Wilson, and the hon. secretary, Mr. T. Bowater Vernon.

The committee was also represented by Mr. Reginald E. Booker, Mr. C. H. Cook ("John Bickerdyke"), Mr. Henry Fennell, Mr. Arthur N. Gilbey, Mr. H. E. Gribble, Mr. T. P. Hawksley, Mr. N. Lloyd, Rev. G. E. Mackie, Dr. G. H. Orton, Mr. Arthur Price, and Mr. G. E. M. Skues; and among the members present were: Mr. W. C. Allen, Mr. Harold Ansdell, Mr. L. W. Bangs, Mr. A. B. Blythe, Mr. J. J. Bolding, Mr. C. G. Burrow, Mr. G. J. Chatterton, Mr. J. W. Collingham, Mr. G. L. Dickinson, Mr. W. J. Donbavand, Capt. R. Dymond, Mr. W. Edmonds, jun., Mr. A. E. Franklin, Dr. E. C. Frend, Mr. A. Godwin, Mr. Henry G. Green, Mr. H. W. Higgins, Mr. H. H. Holt, Col. W. W. Hooper, Mr. A. Gwynne James, Rev. F. G. Johnson, Mr. A. C. Kent, Mr. D. E. Laurie, Mr. W. F. Laurie, Mr. W. B. Leaf, Mr. Montagu Luff, Mr. D. Mackintosh, Mr. F. R. Ohlson, Mr. John Paterson, Mr. C. A. Payton ("Sarcelle"), Mr. W. H. Pope, Mr. C. G. J. Port, Mr. E. J. Power, Capt. T. Burnett Ramsey, Mr. P. St. Quintin, Mr. R. S. St. Quintin, Dr. W. J. Seward, Mr. B. W. Smurthwaite, Mr. J. P. Taylor, Mr. A. R. Ticehurst, M.R.C.S., Mr. N. F. Ticehurst, Mr. Charles Walker, Mr. R. W. Walker, Mr. E. Williamson, Mr. Johnson Watson, Mr. H. D. Willock, Dr. J. Young, &c.

The visitors and guests present included Sir Thomas Wardle, Louis S. Montagu-Franklin, Lt.-Col. H. J. Robbins, Mr. Kennedy Jones, Mr. E. P. Marston, Mr. Alfd. Holcombe, Mr. H. Malins, Mr. G. H. Howard, Mr. P. Budy, Mr. A. E. Bennett, Mr. E. P. Landon, Mr. F. H. Gould, Mr. W. A. Hawkins, Mr. R. J. Forrest, Mr. J. Attenborough, Mr. A. Williams, Mr. A. R. Matthews, Mr. H. M. Thin, Mr. L. Davis, Mr. L. B. Rawling, Mr. C. Schofield, Mr. Dalgety Henderson, Mr. G. E. Nathan, Mr. C. Mackintosh, Dr. Fox, Mr. A. Matthews, Mr. W. Tatham Hughes, Major Cumberland, Mr. R. M. Montgomery, Mr. W. A. Cockerell, Mr. W. B. Tegetmeier, Mr. Neil McNeil, Messrs. A. and C. Nuthall, Mr. G. E. Nathan, Mr. P. St. Quintin, Mr. Mark Morton, Mr. H. C. Willock, Mr. W. J. Mills, Mr. S. Knight, Mr. S. Allcock, Mr. J. Watson, Mr. W. Russell, Mr. W. M. Colles, Mr. R. A. Hewat, Mr. C. Collette, Mr. R. Cuthbert, Mr. J. Bremner, M.D., Mr. G. J. Leslie, Mr. W. Jesser Coope, Mr. O. Hicks, Mr. H. L. W. Godwin, Mr. T. Plummer, Major Hon. W. Coke, Mr. C. A. M. Skues, Mr. W. H. Haslam, Mr. R. O. Smith, Mr. T. M. Hawksley, Mr. H. J. Lyall.

The programme was illustrated with portraits of the chairman of the evening, and of the president of the club, Mr. Senior. On the back was a copy of the excellent group of fish from Stoddart's "Angler's Companion," lent by the editor of the *Fishing Gazette*.

Grace having been said by the Rev. G. E. Mackie, an excellent dinner was served, and at the conclusion, "For these and all Thy mercies given" was sung.

THE CHAIRMAN, who was received with loud applause, said: Mr. President and Gentlemen,—I have the honour to propose the "Health of Her Majesty the Queen and the Royal Family." (Applause.) It is a pleasure to us to know that so many members of the Royal Family are fly fishers. I have recently heard that the Duke of York—our future King—has taken to fly fishing, and he will make none the worse a King for that. (Loud applause.) But perhaps you are not aware of the fact that Her Majesty in olden times took an interest in salmon fishing. (Hear, hear.) Her Majesty and Prince Albert honoured by a visit Mr. Thomas Fleming, the former owner of the place I have in Hampshire, and she and the Prince went to what is now my salmon pool and witnessed the capture of a salmon, Her Majesty graciously accepting the fish. (Cheers.) I feel

sure some of the descendants of that fish still inhabit the pool, and I am sure they would sacrifice their lives—at any rate, I am sure their lives would be sacrificed—(laughter)—for the service of Her Majesty. I am sure you will all join with me in expressing our sympathy with the Royal House in the loss that they have just sustained, and trust that they may sustain no further bereavement.

The toast was loyally received, and the National Anthem sung.

THE HON. SECRETARY read a letter from the Marquis of Granby, much regretting his inability to be present, and announced that similar letters of regret had been received from many other members, among whom were the Hon. Sir Ford North, the Rev. G. Glover ("Cotswold Lays"), the Rev. H. G. J. Veitch, Lieut.-Col. H. Murray, Major Traherne, Major Turle, Mr. Archd. Young (who had sent the club a present of his recent book, "Summer Sailings by an Old Yachtsman"), Dr. Wyman, Mr. Arthur Batchelor, Mr. R. E. Brandt, Mr. J. A. Nicholas, Mr. J. T. P. Pechey, Mr. W. Pingo Horton, Mr. R. H. W. Leach, Mr. Alfred Roscoe, Mr. H. S. Thomas, F.R.S., and Mr. J. T. Hodson.

THE CHAIRMAN then proposed the toast of "The Fly Fishers' Club," which was received with loud cheers. He said: Mr. President and Gentlemen,—I am glad that we have now begun to smoke, because if I should make a slip a puff or two will serve to restore my balance. (Laughter.) I have now to propose the principal toast of the evening, "Success to the Fly Fishers' Club." (Cheers.) In doing so let me explain in a few words how it comes to pass that I preside for the first time in my life at a West-end banquet. (Laughter.) Perhaps one reason may suffice: that I have never been invited before. (Laughter.) At all events, I have never been invited to anything in a similar line. I have been invited before, but it has always been to a charity dinner, and I have contented myself by sending my mite and sparing the charity the cost of the dinner. (Hear, hear.) I have always considered it a barbarous idea to think that you must fill a man's stomach before you can empty his purse. (Laughter.) In this case there is no such purpose and no such waste. It is simply a gathering of sociable men, and would be perfectly enjoyable to me if I occupied a less onerous position. Your hon. secretary kindly sent me a report of all the speeches of my predecessors. It was done with a kindly intention, but I found them very painful reading. (Laughter.) In looking through them I was filled with despair, only modified in one respect, because the speeches were commendably brief. I found all my best points were anticipated, and had to cast about to try to find some bye-path of my own. Several chairmen lamented their inexperience in public speaking, but my position as a member of Parliament cuts off even that excuse, although there are in both Houses many silent members, and also members who cannot speak and yet do so. (Laughter.) Well, I will honestly say I am glad that my speech precedes that of your President, Mr. Senior, who is a born orator and a mighty angler. (Applause.) I was very much impressed on one occasion when I heard him return thanks—I think, for the Press—and I recognised his skill as an angler when he hooked me, I think, eighteen months ago. (Laughter.) That was a long cast up the river of time, but from his point of view it was successful. I do not know whether it was so successful from yours—(laughter)—and he landed "a fifteen stunner," whom you see at the present time. (Laughter.) I suppose I was hypnotised and gave my acceptance recklessly, like the spendthrift who, when he gave his acceptance, said, "Oh, that matter is finally settled!" (Laughter.) You may have heard of the Sultan who wanted to get rid of a minister, and with that object commanded him to teach his dog to speak. The minister, or I should say grand vizier, agreed to teach it, but asked for a year for the purpose. His friends reproached him for undertaking such a task, but he said, "My friends, a year is a long time; before the end I may die, the Sultan may die, or, what is still more likely, the dog may die." (Laughter.) Now, your President, Mr. Senior, appears to me to be very much alive, and quite as well as eighteen months ago when he sought me out.

He made one omission. He did not prohibit my introducing my fads. He did not prohibit my introducing the two things with which I have been most associated, bimetallism and decimal weights and measures—(loud laughter)—and having been forestalled in so many points by my predecessors, I assume I am at liberty to introduce those interesting subjects. (Renewed laughter.) All anglers, in my opinion, ought to be bimetallists. They think a lot, and are men of moderate means, and rely on silver for their daily expenditure. They like their sport to have a silvery appearance, and prefer the clouds to be silvery rather than golden, except, perhaps, at lunch time. (Laughter.) Let me tell you a story about a fish. When the bimetallic controversy was at its height in the House of Commons, it was about the time that I sent a salmon to my near neighbours, including Sir William Harcourt at Malwood. I sent him a fine fish about twenty pounds in weight, and he wrote me in reply: "Dear Montagu,—I have received your bimetallic fish. It is as bright as silver, and worth its weight in gold." (Laughter.) Now I will leave bimetallism for decimal weights

and those stories frequently contain exaggerations as to the number and weight of the fish which they have lost. (No, no.) I do not think that as a rule those exaggerations are premeditated—they are natural exaggerations. (Laughter.) Disappointment acts like alcohol, and tends to increase the vision, and so to increase the number and weight of the fish that have been lost. It is asserted that in all countries there is a similarity in the evolution of fables and folk-lore, and even in Japan there is a proverb that the fish is larger in the water than it is on land. (Laughter.) Possibly water has a magnifying effect. At any rate, it would be most interesting if you gentlemen here could tabulate the natural exaggerations of fish that are lost and afterwards recaptured. If you were to do this, and strike an average, we might easily rectify the weights given of fish lost. If I were pressed to fix a figure which would indicate the natural exaggeration in that respect, I should say a third. (Laughter.) The actual weight of the fish lost, if tested, would prove about two-thirds of the imaginary weight. If a friend said he had lost a 6lb. fish I should put it down at 4lb., and if he

the gratings and the bank, by which it was evident they had escaped and gone up the water. We searched with a cast net, and got some hundreds of fry, which we put back, and the process of fattening went on. I was very proud of these fish, but my pride had a fall. Mr. Andrews paid me a visit, and I showed him, with great glee, these fish which I was fattening, and what do you think he said? You will never guess. He said they were sticklebacks; we call them in the North "jack sharps." (Laughter.) After that display of ignorance on the part of my keeper—(laughter)—I gave up all attempts at pisciculture. If I am not boring you, I should like to tell you one more story. I have told it to some of you already, but I trust to their altruism to allow me to give it again to-night. I call it the story of my "political fish." In a non-political gathering like this wild horses would not drag from me the name of the party to which that fish properly belongs. It was in 1892, after my third political contest. I was worn out, and took the best course, you will say, to recuperate by going to fish in Hampshire. It was a miserably fine day—sunshine and no wind

SIR SAMUEL MONTAGU, BART., M.P.

(Chairman at the Annual Dinner of the Fly Fishers' Club on Feb. 8, 1899).

WILLIAM SENIOR, Esq.

(President of the Fly Fishers' Club for 1898-99).

and measures. I am sure these weights should be recommended to anglers, who like to be most accurate in the weights of the fish they capture. (Laughter.) Therefore they should use centigrammes and millimètres in giving the weight and dimensions of the fish they capture. I take this opportunity of expressing my gratitude to the Scottish fishermen, because the Scottish Fishery Board is the first Government department to use the metrical system in dealing with fish. Now, let me turn from my fads and come back to my toast. The success of the Fly Fishers' Club depends a great deal upon your having a clubhouse of your own. (Hear, hear.) I myself would hardly like to live in a flat. I prefer a dwelling-house with a street door of my own, and I feel sure you think so too. (Hear, hear.) But all this has been said before, and unless you keep pegging away nothing will be done. I have a neighbour who would be willing to become a member if you had a 'clubhouse of your own—I fancy he will not wait for that, but still it is a most desirable improvement. Now, anglers, as a rule, enjoy more than any other people the stories of their fellow anglers,

said 9lb. I should put it down at 6lb. I will give an illustration of that theory. A friend of mine, who was an expert fisherman—and he must have been expert because he hooked a fish in my salmon pool—(laughter)—insisted on my playing it. I could not resist the temptation to let the fish take the line freely off the reel, and it got off with half my friend's cast line. He had caught sight of it, and said, "Oh, you have lost a grand fish. It weighed at least 9lb." Shortly afterwards we netted the fish in the pool, and we found one with the fly in its mouth, and we found it was a grilse, and weighed about 5½lb. (Laughter.) One of my predecessors in this chair spoke about fishculture. Allow me to give you an account of my first and last attempt at fishculture. The late Mr. Andrews, whom many of you knew, presented me with ten thousand sea trout. I had a suitable place prepared in the river, with fine gratings above and below, and my keeper said it was necessary to feed them on mincemeat, to which I consented. After a few days we found they had all disappeared, and my keeper showed me a small space between one of

—and I did not get a touch the whole day long. About seven o'clock I thought I would give up and go home and dress for dinner, but, like other disappointed anglers, I thought "One more brace of flies!" I opened the book, and my eye was attracted by a bright blue fly. I had never heard of such a fly taking a fish before; but blue was my election colour, and I thought, "I won with the colour yesterday, why not try it?" I put it on the tail, and then I thought I ought to give my opponent a chance, and I put on a red fly for him. I got a pull almost at once, and after twenty-five minutes or half an hour landed an 18½lb. fish. Gentlemen, there is not an ounce of exaggeration there. I wish I had centigrammes, to give it you more exactly. I landed it with the blue fly. I told my constituents that that colour was successful both on land and water. But the story has a sequel. I afterwards ungratefully discarded the blue fly but kept the red. I saw a sea trout jump for that fly, and it laid hold of my opponent and took him off. (Laughter.) He could not stand, and the event was prophetic, because he has never been able to stand since that

time in 1892. (Laughter.) Now I must bring my remarks to a close. I would have liked to speak to you, if there had not been the statement about speeches being commendably brief, about those two enemies of fly fishers—pollution and pike. (Hear, hear.) I could tell you how I fought against pollution almost single-handed at Eastleigh and Stoke. I was told that the effluent would be pure enough to drink, but I did not believe it, and made them carry it down several miles by pipe to the tideway. I am told it is coming out so black that I would not wish my worst enemy to drink it. (Laughter.) I tell you that to show that many of you can resist single-handed the pollution of the rivers in which you wish to catch fish. As for pike, they occasionally take a fly, but they are very unlikely fish, and I think you will agree with me their absence is better than their presence. (Hear, hear.) Mr. Senior and others have been good enough to reduce their number in my river, and I wish they would vanish altogether. Allow me, in conclusion, to wish prosperity to the club, and as fishing is my only sport, and I am told by an all-round sportsman that there is nothing so delightful as having a fish pulling at your line, I wish prosperity to the club, and each and all of its members, both in their club house and on the river-side, where they can get health and pleasant enjoyment. (Loud cheers.)

The toast was honoured with unusual heartiness, and

The PRESIDENT (Mr. William Senior) responded. He said: I must first thank the chairman of to-night for the very kindly way in which he has spoken of me as president of the Fly Fishers' Club, and I think a little explanation is necessary. The hon. baronet described what I am sure you would all imagine as a scene in which I, while making a cast for a trout or a salmon, or something of the kind, hooked him by the ear. (Laughter.) Allow me to tell you that Sir Samuel was speaking in parables. I have often thought I should like to write a book in my declining days on "Chances I have Missed." (Laughter.) But please let there be no mistake; if it were my good fortune to hook with a good salmon hook a wealthy banker of the City of London whose word was his bond, he should not get away until there was ransom talked about. (Laughter.) Unfortunately, that is one of the chances I have missed. What Sir Samuel Montagu means is this—that two years ago the committee of the Fly Fishers' Club decided to ask him to be our president for last year. You do not often hear our chairman's takes of fish proclaimed through the Press—(laughter)—or on the housetops, but the committee knew perfectly well that, both as an angler and as a riparian owner, our chairman was the man we wanted to preside over one of our annual dinners. Mr. Peachey (who, I am sorry to say, is absent to-day on account of ill-health) and I were appointed as a deputation to wait upon Sir Samuel in his solemn sanctum in the city and ask him to honour us. Well, he could not do so at the time, but he so expressed his sympathy with the club, and his admiration of certain members whose names modesty forbids me to mention at present—(laughter)—that we elicited a sort of promise from him that he might possibly preside this year, and so it was that we cordially invited Sir Samuel to take the chair to-night. (Laughter.) He is here in body and spirit, and I venture to say that the speech he has made to us shows, first of all, that the committee were perfectly right in inviting him two years ago—(applause)—and also that the committee were right in repeating the invitation. I thank Sir Samuel personally for the kind things he has said of me as president of the club, and I thank him on behalf of all fly fishing members and sporting guests present for the admirable tone of the speech he has made. (Applause.) It must strike you as a very curious thing that this is the first of our annual dinners during the fourteen years of the existence of the club that the toast of the club itself has not been responded to by our dear old friend, who is practically the founder of the club—Mr. R. B. Marston. (Cheers.) I got into great trouble two years ago for making a speech out of the programme. It was voted a dreadful breach of discipline, and I insisted that my offence should be recorded on the minutes in excellent hand-

writing. (Laughter.) But, as president to-night, I can assure you that no serious or criminal consequences will follow if you insist on friend Marston telling you all he has to tell about the finances of the club. (Applause.) I am not a financier myself, and my only knowledge at present is that we have a good balance in hand, and that I have paid my subscription, although I have not got a receipt for it. (Laughter.) It has been said before at this gathering that the Fly Fishers' Club is like the country which has no history—it is happy; and, after fourteen years of existence, it is really a matter for honest congratulation that such a society, without the usual advantages of a clubhouse, having no fishery of its own, and being kept together by nothing more tangible than sentiment, should be able to boast of a membership of 280, a financial balance on the right side, and a cohesion of enthusiasm as freshly sympathetic as ever. (Applause.) The wonder is, with its somewhat unexceptional character, especially remembering that it is only at the annual dinners there is any considerable muster of members, not that the club has lost a small proportion of its old members, but that the roll-call is so good as it is. (Hear, hear.) I do not say that we should not endeavour by every possible means to add to the numbers; on the contrary, we ought to, and we mean to try our hardest to do so. All I wish to urge to-night is that we meet once more with every right to congratulate one another upon increased prosperity. (Cheers.) Our country members will like to know that there are this year two special points for congratulation. They will be found set out in the annual printed report; and the first is with reference to the conclusion of the labours of the Special Committee on Fly-Dressing Materials. Mr. Marston, who has been Chairman of that Committee, could tell you much more than I can of the interesting history of the work done by Mr. Skues, Mr. Ohlson, and Mr. Hedley Norris, and their report will, I think, be found to be one of the most valuable documents ever presented to the club. (Cheers.) The collection of feathers and materials for fly making has been to these gentlemen a labour of love for years, and now they rest from their labours. "Something attempted, something done, has earned a night's repose." Better than that—their works do follow them, and the handsome cabinet in the club-room, in which the collection is classified for the service of fly dressers, is the monument of their services. Their report is a very modest one, very modest for these days, when no man who is not his own trumpeter is living up to the spirit of the times, but we shall all be in one accord as to the final sentence of the report: "They commend their work to the kind judgment of the club in the earnest hope that it may be of service and interest to more than one generation of fishers with the fly." (Cheers.) Then there is the library, which, thanks to the increasing exertions of our librarian, is becoming more and more valuable. We have now an excellent collection of angling books, new and old, and already it is an invaluable and permanent reference for us all. The bulk of these works are acquired by purchase, and few will say that a better way of disposing of our modest surplus funds could be devised. Some of our most precious objects of the bookshelves are, however, gifts from members and friends, and the present company surely will not be offended if I turn beggar for the nonce and declare that the smallest contribution will be thankfully received. (Cheers.) This is a sentiment worthy of the applause you give it, but let me remind you of the story told on the missionary platform by way of stimulating the collection. A certain gentleman ran through his property, sank lower and lower, and at last was discovered by an old brother officer selling pies in Drury-lane. Much shocked, the latter expressed his horror at the plight of his once fashionable comrade. "By Jove, old fellow, I am sorry," he said, "this is very sad; I assure you you have my full sympathy." To which the other replied: "Oh! 'cuss your sympathy; buy a pie." (Laughter.) Now, gentlemen, we don't 'cuss your sympathy, but buy a pie—send us any books or specimens you can spare. Even rare MSS. would not be refused; and, indeed, one of the most interesting presentations of the year has been a very curious MS. diary of four volumes, compiled a hundred years ago by James Williamson, and given to the

Fly Fishers' Club by Mr. Cholmondeley Pennell. It is thus described by our librarian in the new catalogue, which you will have sent to you: "Not only do these diaries contain neatly written tables showing the weight and number of fish caught on specified dates in specified places, but they also set out the exact details of expenditure on the various fishing tours, and every item of clothing and paraphernalia taken with him by the angler, from 'four shirts (one spare),' down to 'one pocket compass.' The four volumes embrace the following subjects: 'Notes of Fishing Excursions,' 'Notes relating to Authors on Angling,' 'Extracts from and relating to Works on Angling,' and 'Notes and Notices of Works on Angling.'" In the making of books on angling there is verily no end, and it is matter for pride that many of the best modern makers are of our own household. I will not for a moment suggest that if there had been no Fly Fishers' Club the world would not still have had the benefit of their experience, and technical and literary skill, but it is not to be doubted, I think, that they have received, besides fraternal and cordial appreciation, stimulus and encouragement from association with the club. This is neither the time nor the place for comparison between the angling books of past and present, yet I cannot refrain from quoting a bit of preface, reprinted by Mr. Norris in the catalogue from a little fishing book published in 1714, and entitled "The Whole Art of Fishing." Many people accuse us of being a little forward in these days, but what do you think of this slice from this nameless gentleman's preface? "This treatise is a collection of all that has been writ upon the subject of fishing, digested in a better method than any before extent, and cleansed from all superfluous and useless observations, for very few writers on this head have forebore some favourite impertinences of their own, which they generally stile curious." (Laughter.) In a club of this character there must of necessity be divers opinions amongst the members upon the principles and practices of their sport. Although it is a club which writes "Fly fishing" upon its banner, there are probably few who are able to boast that they have never used, and never will use, anything but a fly rod; some of us take our angling as we can get it; if the opportunities do not run to salmon, trout, and grayling, then the humbler pursuits of the coarse fish are not disdained. I must confess that I am not laying any such charges against our masters in the dry-fly Israel; nor, in truth, have I ever seen "Detached Badger" sitting on a campstool handling a roach pole, and with eagle eye following the monotonous swim of the trembling quill; nor his 'once pupil, Lloyd, now a Gamaliel on his own hook, raking up the bottom for gudgeon. (Laughter.) Yet, as I say, some of us continue the pleasures of our youth, and reckon all fair fishing as legitimate sport. Our discussions and conversations are, therefore, of a miscellaneous character, and there is always charm in their variety. But it has become a question whether we might not add to the attractions and value of the club—which we must nevertheless not forget is distinctly of the social class—by establishing some sort of system by which these interchanges of opinion may be made something more than a mere chat around the fire. If only we could strike a happy mean between this and the cut-and-dried formality of papers or lectures, it is worth considering. This we know to be the opinion of many members; and in the report which was adopted at the annual meeting on the 26th January, there was a clause which was intended to meet the existing feeling. It was this: "With a view to increasing the interest of members in the club Thursday evening meetings, the committee have under consideration arrangements for establishing periodical guest-nights, on dates to be announced, when members will be invited to bring their friends, and may count on always finding company and good fellowship. It is also proposed to have from time to time, the additional attraction of papers and discussions." (Hear, hear.) It was hoped that this clause would have been fully discussed, but, owing to an unfortunate combination of accidents, a number of members who are generally present were kept away. I may, however, take this opportunity of stating that the annual meeting was adjourned for the election of president, and at the meeting fixed for this purpose, on the 23rd of this month, these subjects

may be fully debated; and it is much to be hoped that all who really have the interests of the club at heart will come to the club room and fully and freely offer their suggestions to the general good. One of our country members, an angler of the very first order in all respects, for example, has been thinking over a scheme for the formation of a national society for placing all matters relating to our fresh-water fisheries upon a practical footing which has never before been attempted, and that might be laid before the meeting. Then, at our annual meeting, another member introduced the subject of stocking the Thames with salmon, and I hope he will be present to place his views before the club. It may not seem as if all these matters would be in order on the election of President; but each member with a question to raise can argue that the president should be a man who will influence the club for good by supporting this, that, or the other proposal. (Laughter.) As president of the Fly Fishers' Club—a very poor president (No, No)—whose will to serve the club has been much greater than his opportunities, I have to thank you for listening to the longest and prosiest speech I ever inflicted on you, and I have only this to repeat: After fourteen years of existence the Fly Fishers' Club, as a mere glance at this company will show, is a society to which any fisherman may be proud to belong—(cheers)—a club over which any gentleman of any class or rank might be proud to preside. But the old figures are gradually fading away into the distance, gentlemen, and we want the new members of the club, the strong and willing juniors amongst us, to come forward and take the reins in their own hands and continue and go on increasing the success, the truly gratifying success, which has attended the work of the club up to the present time. (Loud cheers.)

Mr. R. B. MARSTON said,—Mr. Chairman and Gentlemen: After speaking at fourteen of these annual entertainments I had hoped that I should not have to inflict any remarks upon you, but Mr. Senior has called upon me, and therefore, with your kind permission, I will detain you for one or two minutes. You want to know how the club stands in regard to its finances. At the end of the year we had in the bank £106 lls. 7d. and £196 invested in the funds, and in addition to that we have a collection of books on angling which are certainly worth a great deal more than we gave for them. (Hear, hear.) If our assets were totalled up I think they would amount to a very fine sum indeed. Mr. Senior mentioned that we have now this collection of materials for trout fly making. I can assure those who have not seen it that it is quite the finest collection ever got together in the world. (Cheers.) We must cordially thank those members who have assisted in preparing it, more especially Mr. Ohlson, Mr. Skues, and Mr. Norris, for the time and trouble they took to bring the collection together. It is a unique collection, which I do not think could possibly have been got together except by a society like this. I congratulate myself that it was I who in 1894 suggested that we should have such a collection, and I am glad the proposal has been so successfully carried out. There was another proposal which I made at the same time, that we should have a collection of feathers for salmon flies (hear, hear). I hope that those members interested in salmon fly fishing will come forward and assist us to make an equally good collection of materials for salmon flies. (Cheers.) We all want to do what we can to increase the attractions of the club, and as we have so many country members present I would like to make another proposal which was suggested to me by one of our country members. We have a great many volumes in our library which we all wish to read, but at present country members are debarred from making any use of the collection. Town members can walk in, take away a book, and bring it back in a fortnight, and I want to propose to-night—I hope our librarian Mr. Norris will not think I am trying to put too much work upon him—I want to suggest that country members should be able to write to him and ask for a book, and that he should send it to them by post. I hope that country members will support me in urging that this would be a good thing. (Hear, hear.) Although we have a large collection, it might be necessary to duplicate the books most in demand, but there would be no difficulty in

doing that. As an instance of the way the concession would be appreciated, I may tell you that the country member I have already referred to, said to me, "I could get you six new country members if you would carry that suggestion out." (Hear, hear.) If we can say that any member can have a book by writing, it will be an incentive which will bring new members at once. I hope before our next annual dinner we shall be able to say to members in the country that they may have the books, but in that case we must make some arrangement to give our honorary librarian help. I am sure the step would do a great deal to increase the interest our country members feel in the club and secure new ones. (Cheers.)

Mr. BASIL FIELD said: Mr. Chairman, Mr. President, Vice-Chairmen, and Gentlemen,—Happily for you all—and no less happily for me—the toast entrusted to my hands needs no artistic seasoning to make it palatable to the most fastidious taste. It is the health of "Our Guests." Now, sir, it has often struck me that those visiting us on these occasions may, broadly speaking, be divided into two classes—the "curious" and the "sympathetic." Of those who have been induced by sympathy to join us to-night, and by their presence to add brightness to our gathering, I need say but little. They are our younger brothers—fly fishers in the embryo or immature stage. The warmth of our welcome and the gentle current of our converse, babbling of "troutful brooks and gravelly shallows" will soon perfect their development as yearlings of the club; but of the visitor who has been tempted by mere curiosity—by the passing whim to learn what manner of men these fly fisher-folk may be—these so-called "Brothers of the Angle"—as yet known to him only as the butt of sneering jest and scornful tale—of him I would say it is exceeding well he is here. For let him turn where he will he can hardly fail to note that the angler, bereft of his dropical waders and prodigious brogues, stripped of creel and trappings, shorn of that crown of glory—his felt hat with its halo of fur, feather, silk, and steel—(laughter)—the angler, to be brief, in "muft" is not very unlike that well-known animal, the common or domestic gentleman of everyday life. When he has got over the first shock of this discovery, he may be tempted to pursue his investigation a little further. He may examine the roll of our members; and what will he find there? Variety. Infinite variety, locally and socially. Men from every known climate and country; men of every known profession and calling—and some whose profession or calling is unknown to all, save possibly to themselves. (Laughter.) He will find the army mustering in force. Generals, colonels, majors, and captains holding commanding positions on every page. It has been suggested to me that this may be accounted for by their perfect familiarity with every variety of *line* manœuvre. But I repudiate the frivolous explanation. No, sir, I love rather to think of these brave men of blood and war—who in time of need have stood between us and our country's foes—quietly reverting to their boyish taste for our peaceful craft; cheerfully renouncing the proud flutter of their colours on the field for the soft rustle of flags on the riverside; the angry boom of cannon for the gentle boom of humble bees; to think of them kneeling in a "wilderness of sweets," welcomed by the friendly twitter of swallows, and showing as much tact and strategy in dislodging an old trout from a bed of weeds as they would in driving a pestilent "sniper" from his cover in the bush. But with this difference, mark you!—they are much more nervous over the fish than over the foe. (Laughter.) Of naval officers we have few, and the reason, I venture to think, is not far to seek. They have another and a better audience elsewhere. If they have a choice fish story to relate, they naturally "tell it to the marines." The Church, he will find, sends us some of her noblest sons, earnest yet modest withal, loving our peaceful craft next to their sacred calling, and making us the more gentle by their sweet companionship. The name of "Cotswold Isys," the Poet Laureate of those that go down to the rivers with rods, will rise unbidden to the minds of all; that many-gifted man—a happy blend of piety, poetry, and piscary—speaking as a fly fisher, I should perhaps rather link his name

with angling literature; but I have no heart to speak of literature at all since the sad death of William Black, that charming writer, who took us captive to the wild west of Scotland with her silent lakes, her brawling rivers, her mountains wreathed in mist and clad in purple heather, and held us there with as light yet firm a hand as that with which he drew the struggling salmon to his gaff. Happily his memory lies with us still; and happily there lives with us still his close friend and constant companion—William Quilter Orchardson, that grand painter, honoured by his Queen and country and beloved by all—whose successes on the line at Burlington House in oil are all but equalled by his successes on the line in water not a hundred miles from Dartford. (Cheers.) But perchance our inquiring guest is growing weary! Let him borrow of our proverbial patience, and search but a little further. He will find a learned judge, whose decisions on the bench are as sound as his judgment on the banks of the Spey; doctors of medicine who, in spite of skill in the healing art, find fish must be killed before they can be cured; engineers who learn with surprise that in fishing the "catchment area" is by no means always co-extensive with the watershed. (Laughter.) And lastly he may even find a modest lawyer, who, as an angler, lays aside instead of laying down the law, and gives as little law as may be even to a troublesome and unruly fish. Upon these discoveries a new light will flash across his brain—a new world hitherto undreamed of will be revealed to his delighted senses. What was at first but idle curiosity will become serious interest. Interest is rich in promise of sympathy, and if sympathy be but once awakened, his lot is cast. He will soon come a humble suitor for admission to the portals of that glorious palace of truth—"The Fly Fishers' Club." (Great laughter.) In full assurance that such will be the case, I venture to give the toast in this amended form: Our present Guests—Our future Members, and with this toast I have the happy privilege of associating the name of Mr. Spence, of whom I need say nothing, as he is here to speak for himself, and to speak for "Our Guests."

Mr. E. F. SPENCE responded to the toast, and said:—When my friend Mr. Cook announced to me to-night that I should have to have the honour of responding for the guests, I must confess I thought for the moment he was taking a rise out of me, not the kind of rise this club rejoices in, but the kind the fish does not rejoice in. (Laughter.) However, it proved to be a fact. I listened to the graceful speech of Mr. Field in the hope of discovering, and did discover, somewhat to my surprise, what was the qualification I possessed for responding—the fact that I am a modest lawyer. (Laughter.) I may admit in confidence that I never suspected myself of modesty, and did not think any of my friends ever suspected me of it either. (Laughter.) But that is the qualification in virtue of which I am responding for the guests—the army men, the navy men, the engineers, and even for the church. I did suspect from some questions that were indiscreetly put to me that it was for the Press I was to respond; but, after the remarks we have heard, I suppose it was thought indiscreet to refer to the possibility of any pressman being present. I am proud of being a member of the Press as well as a lawyer. It secures for me an amount of prestige. When I tell a story and say, "I have been a solicitor, I am a barrister, and write for the Press, and I go fishing," why, the credibility of the story is beyond dispute. (Laughter.) In responding for the guests I might have said something about fishing; but, although my ignorance of the subject would not deter me, being a modest lawyer, I have on the whole a feeling that it is not a discreet subject of discussion. There are two particular qualities which result from fishing—one a charming sense of fellowship among fishermen, and the other a prodigious combative instinct that is aroused the moment one talks about the subject. When you go fishing with a man you are the best friends in the world, but also the fiercest combatants. We all have theories, and those theories never seem in harmony with the theories of anybody else, and the curious thing is that though we fish with diametrically opposed theories we all manage to catch fish—sometimes. (Laughter.) It proves something, although what

it proves I don't know. It proves to me that I, the most ignorant of all, should say nothing about fishing. I should like to say something about fellowship as one of those who go fishing merely for the distraction and to secure relief from overwork of the brain, and whose fishing is a source of amusement to his fellows. Apart from the catching of fish, which is often irrelevant, there is a splendid sense of fellowship. We come here not animated by a feeling of death to the fish, which some of us drink when we go fishing, but by the fellowship that arises from the pursuit. On behalf of your guests whom I have the honour to represent without their desire or consent, allow to me to say that we have had a very charming evening, an excellent dinner, and charming speeches, which have diffused amongst us in the inexplicable fashion of great meetings the sense of fellowship, and which has given us the greatest pleasure. We thank you, the members, most heartily for your hospitality, and assure you that we have had a delightful evening. (Cheers.)

SIR THOMAS WARDLE then proposed the health of the Chairman. He said he was not accustomed to addressing such a gathering as that, and must ask their kind indulgence while he tried to do as much justice as he could to the toast. He had the pleasure of having three friends who came down into his part of the country to fish, and one of them had written asking him to propose the toast, so he would do his best to obey. He was proud of seeing those friends down in a country dear to him, the country of Walton and Cotton. Mr. Senior was one of those friends, the one whom he was trying to obey by proposing the toast. Mr. John Bickerdyke was another, and he hoped that gentleman would not be offended if he (the speaker) had his little revenge on him for what he wrote about something that occurred during the visit. A great part of what occurred was purely imaginary. It was a magazine article headed "Walton and Cotton's Country," and in it appeared the following passage: "Almost at the end of my visit to this beautiful and interesting country, occurred an incident which Walton would have loved to describe, and Cotton would have enjoyed, though perhaps in different fashion. Nearly at the end of my friend's fishing, a stone bridge carried across the river that road which leads to Alsop-en-Le-Dale. I had pushed ahead, and was standing on the bridge experimenting with Yorkshire trout flies on three very shy fish which were rising in the pool beneath me, when I saw my friend, the luncheon hour being near, coming to join me, his rod over his shoulder, and May Fly waving in the air. Just then there came over the bridge, in a farmer's dog-cart, a pretty girl in cream-coloured attire—(Oh, oh, and laughter)—with a blue ribbon round her neck. Now, what should that erratic wind do—assuming the wind was altogether to blame—but carry my friend's May Fly just under her chin, and hook her full and fair in the bow at her throat. The youth who was driving, and who, maybe, hoped to hook that fair fish himself some day, scowled as he pulled up his nag. The maiden blushed, as maidens will, and still more rosy did she become as my friend's fingers played about her neck in the vain endeavour to extract the barbed hook from the blue ribbon. It was a pretty scene; the rosy-faced girl leaning over the side of the cart, her face, surely needlessly close to that of the angler, who seemed to have lost his usual dexterity of finger. The river splashing down the valley overhung by alders and aspens and ash, and the woodland background. Finally, the youth scowling ferociously, my friend standing on the dogcart steps, in desperation pulled out his scissors, and in a moment the fly was released. Now, there were three witnesses to this scene, other than the parties more particularly interested, to wit, two gamekeepers and myself. And it is a significant fact that my friend bought of one gamekeeper a dozen flies, which, admittedly, he had no use for; treated the other to an extraordinarily stiff glass of whisky and soda; while upon me he pressed his choicest cigars during the rest of the afternoon. Corruption notwithstanding, the story leaked out, and was in due course enlarged and amplified, as is customary among anglers—even fly fishers. After dinner that evening, my friend, who had been for some time pensive, quietly remarked: 'Talk-

ing of paradoxes, for forty years I've fished the Dove, and yet to-day I made my maiden cast.'" (Loud laughter.) That story, like much of the work of those who wrote poetry and fiction, was almost pure imagination. The young man did not scowl ferociously, but smiled, and the maiden did not blush. (Loud laughter.) And the author of that story was the friend whom he had cured of a dangerous attack of influenza (Laughter.) It was wonderful how some people showed their gratitude. The other friend was a distinguished literary man, who had been very hospitable to him (the speaker) in India. Some years ago he was asked to go to India on Government service, to report on the silk industry of Bengal and other subjects. He was sent into the jungles of Western Bengal to visit a missionary interested in silk culture, and he suggested to that gentleman that it would be a very good thing if longer lengths of the silkworm gut were obtainable. Two years afterwards the missionary sent him a collection of gut which absolutely astonished him. From two species of worm there were lengths of 15ft. to 20ft. (Hear, hear.) He had arranged the specimens in a little book, and would be pleased to present them to the club. (Cheers.) Since that time attention had been given to the subject, with very good results, and instead of having ordinary silkworm gut about a foot long, they could obtain lengths of over two feet. He had mentioned this visit to India because it was then that he met the third friend of whom he had spoken. That was the gentleman whom Mr. Senior and Mr. Cook met at his little cottage, and they all had a delightful time. This third member of the party was a man versed in literature and poetry—Tennyson and Herrick, especially Herrick. Now, the little fishing cottage was at the foot of a steep hill on the river Manifold, and to break the sky-line he had had a castellated turret put up, hardly big enough to hold a thimble. And this was the sort of thing that his friend had written about the little turret on the cottage:

THE LADY OF WARDLESTEIN.

Oh, say, have ye heard of the gay Sir Thomas,
And, say, have ye been at his hall so fine;
And have ye heard aught of the lonely ladye
That dwells in his castle of Wardlestein?
Where Manifold steals amid caverns darksome
Till he rises again in the arms of Dove,
On the mountain crest, like a falcon's eyrie,
There stands the bower of a ladye-love!
Oh, a hazel nut in the autumn season,
A blue-ribboned damsel of Beresford Dale!
When a gallant knight hooks a winsome maiden—
'Tis easy to reckon how runs the tale!
So pass on your way with eyes averted,
Nor seek such a valiant knight to cross;
For a dungeon drear and a vengeful dagger
Await him who enters the lonely Schloss!

(Laughter.) In conclusion, he asked them to drink to the health of their chairman, whose name and fame were deservedly held in honour among fishermen. They wished him long life and prosperity, and that he might successfully fish for his bimetallic salmon and sea trout for many a long year to come. (Loud cheers.)

The toast having been enthusiastically honoured,

The CHAIRMAN said: Brother Anglers—I thank you heartily for your reception of this toast. I remember hearing of two men who had been to a meeting talking about the collection, and one of them said, "When the plate went round I got half-a-crown out of it. What did you get?" (Laughter.) Well, out of this entertainment I have got a very good dinner. I came recklessly prepared to pay for it, but am prohibited by your Hon. Secretary; and I had not only the dinner, but the hearty and pleasing reception you have given me. (Cheers.) I am the last person to return evil for good, and after all the kindness you have shown me, I do not intend to inflict another speech upon you. I suggest that you should go on having these annual entertainments, and selecting other chairmen for thirty-three years, and on the thirty-fourth, when I hope to reach my hundredth birthday, ask me again. (Laughter and cheers.) I hope to be still a fly fisher, and I will tell you all particulars of the fish I have caught and those which I have lost in the meantime. (Cheers.)

Shortly afterwards the Chairman had to leave on business, it being after eleven o'clock, and the

chair was then taken by the President, Mr. Senior, loud cheers being given for the departing Chairman. Mr. Senior, in taking the chair, remarked that they might well register that as one of their successful nights, and he again expressed the hope that the younger members would take up the reins and see that the club should never sink below the splendid level they had maintained for the past fourteen years. (Cheers.)

The musical programme was arranged by Mr. Dalgety Henderson, and gave great satisfaction, the following being among the artistes: Mr. Dalgety Henderson, Mr. Charles Colette, the Troubadour Glee Singers (Messrs. Shiner, Marriott, Vincent, and Dearth), Mr. Mel. B. Spurr, Mr. John Saunders; Mr. Arthur Fagge making an excellent accompanist.

THE ROACH.

THE roach forms a frequent topic for writers on piscatorial matters; but though a common subject in this respect, it is by no means a trite one. Commonest amongst the fish that give sport to the fresh-water angler—and now that sea fishing has taken such a vigorous existence one must begin to use distinguishing expressions between the two kinds of anglers—the roach and its habits form a matter of study to most members of the angling brotherhood, and hence the frequent recourse of writers to a subject that otherwise one would have thought had been discussed to exhaustion. The facts of the case are not so, however, and he would be a bold man who should assert that he had nothing to learn even with respect to a fish that may engross all his attention as a sportsman. The purpose of the present article is to present a few remarks on the roach inhabiting still, or comparatively still, waters, as distinct from the fish of the same species to be found in waters with strong currents.

There is a very distinct difference between the methods to be adopted in the two cases, and it can fairly be said, without likelihood of dispute, that the habits of the roach when living in still water and the differentiating factors in the two cases are such as to render the taking of this fish a more skilful undertaking in one case than in the other. First, then, to discuss some of the differences to be borne in mind. Usually the volume of water in the quiet stream is a much more limited quantity than in the reverse case. This has one great bearing on the fish that should be fully appreciated. It is, that the shoals of this gregarious fish must necessarily be more limited in the number of individual fish comprising them. Hence, to take a dozen fish from a smaller shoal is to commit a greater proportionate havoc than to take the same number from a much larger one. Now I have often heard an angler boast of sticking to a "shop" the whole day through, fish or no fish; and to look with contempt on the brother who is wise enough to change a spot after a reasonable stay, is usually the accompaniment of the boast. If one has committed what I have termed as havoc after remaining in a spot for a length of time, surely it is much more wise and reasonable, when the inevitable lull in the sport has set in, to change quarters rather than to continue in that spot to "stick it out," simply because it has yielded its full quota of sport. Yet the "sticking it out" view is by no means uncommon. One would have thought it an obvious fact that the fewer the remaining fish must be, the more thoroughly must they be alarmed at the dis-

appearance of their comrades. Then, too, the mere taking of a fish in quiet water creates such a comparatively large amount of disturbance that that fact alone would cause a wise man to be content when the sport declines, and to consider that his interests would be better served elsewhere. If no fish are being taken, or only one at long intervals, the stronger the argument for a change. I would, therefore, commend this to the thoughtful roach angler as worthy of practical consideration, and especially would I do so to the "sticker."

Another observation that I would wish to make as characteristic of the quiet water, is that the roach there becomes an extremely localised fish. It has long been my opinion that he is no traveller or explorer, and observation has confirmed, as it founded, the belief. Even when on the feed I am convinced that his movements are most limited, although they may at the same time be active. A good illustrative case occurred to me three weeks ago when fishing in the Lea at the Angel Road end of the long length into which the fish taken from the East London Company's reservoirs in the summer were deposited. I had selected a spot after some minutes of careful observation up and down the banks in the immediate neighbourhood. Twenty minutes of fishing did not produce any tangible result, but it confirmed me in my choice, for at the end of that time a roach rose exactly over the spot I was fishing. Fully another twenty minutes elapsed before I found my first fish; but I had been well on the *qui vive*, for I was confident that my labours would be rewarded, and I was not disappointed. A couple of hours of perseverance found me in possession of ten fish. The evidence of that rising fish was sufficient for me to be satisfied that there were fish in that spot, and fish, too, likely to repay the attempt at capture, for I am convinced that a rising roach is a good omen to the angler who is fishing that spot nine times out of ten. But the case in question is stronger evidence in support of my theory. During those two hours I had possessed myself of further observations. A fish or two had risen both a few yards above and a few yards below me, the second and succeeding fish in the two directions rising within a couple of yards of the first. My conclusions were that there were two distinct shoals of fish in those two places, besides the intermediate shoal on which I was engaged. This knowledge I put to practical use when at length I deemed that sport would be better served by a change of place. I moved to the lower spot, and presently found myself into a fish. Four more followed at intervals, though not so quickly as in my first place. I had already done very well for an afternoon's fishing on a short day, and was making up my mind to finish the rest of the available time in this spot rather than begin at the top shoal of fish I had marked out, when a nice fish rose over my original position. That decided me. I was satisfied that whatever state the remaining fish there might have been in when I left them, they at least had no fears now. I accordingly returned to finish up some half hour of remaining daylight, and when I finally packed up, three more fish had been added to my take, the three being of about 14oz., 11oz., and 6oz. respectively. A week later I went to Angel Road again, and, considering that I had sufficiently depleted the spot from which I had obtained the bulk of my fish the week previously, I did not even try it. Many men would have gone straight to it, as though the possibilities of the place were inexhaustible. Instead, I went above it, and when it was time to change I moved to the spot below. The total at the end of that afternoon was thirteen fish. During the fishing I marked yet another spot higher up for a future occasion, the tell-tale being, as before, the repeated rising of a fish within a little of the rising place of a previously moving fish. On the other hand, I did not observe a single rise over the spot I had intentionally avoided. A fact, I take, which confirmed the wisdom of my conduct.

I have attached great importance to the story to be deduced from a rising roach in still water fishing, and also on the wisdom of not remaining too long in one place. Let me now give my views on these two points a little more exactly. As I have said, the roach is no traveller. With this observation as an hypothesis, I build my theory. It is a most interesting question to enter upon—

this localising of the fish. Why, when to all appearance the favoured places are widely different, should one place be accepted by the fish to the absolute exclusion of all others? Personally, I cannot give a satisfactory reply, though I have had the matter under careful observation for a long time. It is generally accepted that the roach prefers a quiet, secluded retreat. There are, to my mind, as many exceptions as cases which support this. My own observations are that in one place a clear gravelly bottom is the apparent cause of the preference; but against this I can set off many cases in quiet waters of my experience where the reverse conditions prevail to a marked extent—mud, or mud with the usual accompaniment of freely growing weed, being the most evident characteristic of the chosen habitat. Sometimes a flow of pure water from some side stream will apparently be the accountable cause, but in that I have not much confidence. I have found it a common idea amongst some anglers that in winter the fish are especially favourable to such a spot. I have not found any decisive proof of this, though I have had some waters under close and continuous observation for years. In some cases the alterations of depth seem adequate to account for the preference, while, it must reluctantly be said, other places are most certainly chosen because of the influx of sewage or impure matter. Altogether, it seems to me that no one cause is adequate to account for the extreme differences of locality which roach will select for permanent occupation. I am inclined to think that the question of food is really at the root of the problem; but when one finds a continuous length of gravelly bottom inhabited in one part and perhaps fishless in another—such, for instance, as one may find in parts of the Lea—the problem is all the more difficult of solution. In two cases a change of locality occurs. In the spawning season the fish seek haunts as free from molestation as possible, and in deep winter they prefer the quieter of two sides of water when barge traffic, if such occurs, would otherwise compel them to move from one side to another. For this reason it is always best in mid-winter fishing to choose the uninterrupted side of the water from which to fish. To return. A rising fish, on the hypothesis already advanced, must then indicate the habitat of a shoal of fish. What, then, is the practical lesson to be drawn from this? Surely the obvious one that such a spot should at once cause the angler to set to work there if he is looking out for a place, and if not so doing to make a mental note of the occurrence for a future necessity. Further, I quite believe that if any fish are to be taken, rising fish indicate a favourable activity amongst them. I am convinced that if an angler cannot succeed when and where fish are rising, he must look to himself for the cause, and not complain of the fish. One cannot be always fishing one piece of water, and the prime difficulty when making the acquaintance of a new water is to know where to fish. Better than to trust to the evidences of former anglers having selected any spot is to look out for the tell-tale of a rising fish. If none such can be seen, then other considerations must avail. First and foremost for one's own comfort when fishing, preference would then be given to a clean, gravelly looking spot, independent of any opinion as to such being a likely habitat. If, after a reasonable trial—say, anything over an hour—a fish is not forthcoming, my advice is to shift. The time will be more profitably spent in making observations whilst deliberately moving along the bank. It is a grand motto for the angler to "make haste slowly" to catch fish when first making the acquaintance of a piece of water. Another useful hint in selecting a spot is to take into consideration the varying volumes of water in different parts. It will often happen that, owing to an expansion in width, one spot will have in it double the amount of water that obtains in a corresponding length along another part. If increased width does not lead to a long expanse of shallow water from the bank outwards, then such a spot should most certainly be tried. If, however, wide and shallow is the case, then the spot would be better avoided, for although there is increased width there is no proportionate increase of volume of water; and though roach, as I have said, are no travellers, yet they show a partiality, which seems to me natural, for places

with increased volume of water—that is, *ceteris paribus*. A useful caution, too, is not to be influenced by the charming appearance of this or that part of the banks. I do not, of course, mean that you should have no soul above the mere capture of fish. Far, indeed, from that! Foster the sensitive mind of the poet in yourself; let Nature appeal to eye, and ear, and heart; soliloquize as deeply and inconsistently as Jacques; feel yourself a little better man from the inspiration of noble thoughts that the loveliness and solitude of the waters must ever engender; have a musician's ear for the mellowing overtones in the song of the thrush, and the marvellous strength of the carol that such a microscopic glottis as the lark can produce; have an artist's eye for the picture contained in that flowering iris nestled amongst those rushes over there with that background of willow and hazel—but with all that observe a due proportion amongst so many delights. Think of the undisturbed reverie you can have as you regretfully, yet happily, wend your way home in the gloaming with the peace and rest settling all around. Think of this, I say, and relegate to that hour, so far as you are able, those thoughts and feelings that may otherwise seduce you from your primary purpose. How often have I sat down in a most unlikely spot for successful fishing, too captivated with the charms around to be any cause of terror to unwary fish! And have not you, reader, done the same, and will do the like again yet, despite this warning? Yes, we admit it is folly from the angling point of view, but we do it. I think Schubert must have been a fisherman, or he could never have so perfectly drawn that masterpiece of analogy as is to be found in his setting of Goethe's words in that too rarely heard "Chorus of spirits floating over the waters." But this is digressing.

When you have used all your judgment in choosing a spot that is most likely to favour your purpose you have still to catch your fish. And but too often to some "there's the rub." Anglers who would approach the bank on bended knee if fishing for trout will forget that, in its way, as much respect is necessary to allure the wary roach. Elementary amongst elementary principles in the practice of the gentle art, how often have I seen its practitioners most utterly ignore it! There is some extenuation to plead for the casual stroller along the bank, who, seeing you land a fish, forthwith innocently stands on the extreme edge of the bank to watch for the success to be repeated, though, in effect, to prohibit it for the next hour! But in an angler such acts are barbarous. Then bear the moral in view whenever you have intentions against fish. Sit down, whatever you are doing, or else get away from the bank till you can proceed about your business without the necessity of being in the standing position.

Let your ground-bait suit the hook bait—on this point I must regretfully be brief though it is vital—and do not cross bait. If you think you will be likely to change the kind of bait, then begin with that bait which can be correctly followed by the bait to which you will change. For example, you can quite correctly follow potato or bread fishing with gentles, but to reverse the order would be monstrous—that is if you had been using your gentles as you should have been. Then be very judicious on the amount of ground-bait you use. It must not only suit the hook bait, but it must also be used more or less sparingly according to the character of that bait. Further, you would not think of always using the same amount of ground-bait to the same hook bait, surely! You would, of course, distinguish between the requirements of a gravelly bottom and a muddy or weedy one, as you would also if your spot was raked over by passing craft or was undisturbed. Other considerations, that I cannot even mention here, would also meet with their due regard from you.

And now let me say a few words on tackle and manipulation before drawing this long article to its close. Whatever style you adopt, you must fish "light and fine." And I mean what I say. Unless under exceptional circumstances, you are ruining all your chances of success, and all your other judicious actions will avail you nothing, if your tackle does not end with the finest drawn gut, or if it is shotted, at the outside, with more than two of the smallest shots. Many times have I had a show of fish when men who could

manipulate their tools as well as myself had only blanks, simply and entirely due to the coarseness of their tackle and the weight of their shooting. And now comes the grand distinction between roach fishing in strong and in still waters—ninety-nine times in every hundred you will succeed best in still water fishing by laying your bait and resting your shot on the bottom. I leave the odd case as a reserve against the opinion of any who differ from my experience. FOSSDYKE.

REPORTS FROM RIVERS, LOCHS, &c.

 River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

30 min. for Chelsea.	55 min. for Kew.
Add 40 " " Putney.	75 " " Richmond.
45 " " Hammersmith.	80 " " Twickenham.
50 " " Barnes.	85 " " Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Feb. 11	2.23	2.45
Sunday, " 12	3. 8	3.29
Monday, " 13	3.49	4.10
Tuesday, " 14	4.31	4.51
Wednesday, " 15	5.11	5.29
Thursday, " 16	5.43	6. 7
Friday, " 17	6.23	6.50

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, Feb. 11	3. 3	3.25
Sunday, " 12	3.48	4. 9
Monday, " 13	4.29	4.50

These times show high water at Houghton Bridge, Amberley. Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—One of the greatest difficulties for some time has been to gather anything of interest in the form of news as to the grand old river in reference to matters piscatorial, and I can say with truth, after a lengthened experience, I cannot remember a period when a similar dearth prevailed. Some few intervals have, however, relieved the monotony, and the items at the end of last week from Mr. McBride, of Teddington, came as a great relief, and his successes amongst the jack inspired one with the hope that jack fishing had made a good start, and getting well on the feed. The idea of feeding reminds me of the Friendly Anglers' dinner at the Hotel Cecil, at the end of last week, when, as reported in one of the sporting newspapers, some one was heard to remark across the table I was referred to as being the hero of one thousand dinners. It is now some time since I was designated as the "hero of five hundred dinners," and I think I remarked at one of the club dinners I considered it was something under the mark. I do not think I can make the same remark now as I did then. The weather still continues in a very unsettled condition, and it is difficult to speculate as to its future character. According to the veteran William Milbourne's report, on Monday last the river was in good order, and had been for some days, affording the best evidence there would be some good perch fishing, as those fish were well on the feed. In my angling days perch fishing was my favourite sport, and I have had many successful days amongst them. It will be a matter of great satisfaction to find the perch are giving sport to the anglers, and the good old days of angling for them have again returned. For the last three or four years there has been some evidence they were still in the river, and some have been taken of a good size. There was a time when they could be found in all portions of the river, and the take of the late Mr. James Forbes, fishing for a couple of hours at Borough Head, Laleham, I do not think will ever be eclipsed as regards the character and quantity of fish, and I had the pleasure of seeing them.—B.

—(Datchet).—John Keene, one day, with Mr. G. Shepherd, seven dozen of roach and four chub (many of the roach weighed from 1lb. to 1½lb. each; the largest chub, 3½lb.); another day, with Mr. Phipps, 30lb. of good roach; another day, with Mr. Jones, 20lb. of fine roach; and another day, with Mr. O'Dowd, three brace of chub and two dozen of roach.—B.

—(Datchet).—No sooner does the river get in good trim than down comes the rain. To-day, the 8th, the river has risen 4ft. since the 5th, and every prospect of it being still higher.—G. LUMSDEN.

—(Hampton Court).—William Milbourne at the beginning of the week writes: "The water is now in good order for all fishing, but I am afraid if we get much more rain it will put it out of order again. The perch are well on the feed, and one day in the middle of last week Mr. Gann creelred eighteen of them, from ½lb. to ¾lb. each. Thomas Milbourne, fishing with a gentleman for two days, landed seven dozen of perch, of which only forty of the best were kept. The private boats have been all doing well with the perch. The bank anglers have done well amongst the roach."—B.

—(Hampton).—Mr. and Mrs. Palmer, of London, fishing one day with J. Langshaw, creelred 35lb. weight of

perch, the largest weighing 1½lb.; there were six brace weighing over 1lb. each, and over three dozen were returned to the river again. Langshaw says both perch and jack are well on the feed, but is in want of anglers to come and get amongst them.—B.

—(Henley).—Feb. 8.—Owing to the heavy rain of the last few days the river is again quite out of condition. Marsh Weir is drawn. A very heavy stream running, which is rising fast. I do not think it will even be fit for bank fishing by the end of the week, there being a lot of snow in the water. Sport continued good while the frost lasted, but little has been done since. On the 2nd inst., Mr. S. Meyers, out with J. James, took four jack, the best two fish weighing 10lb. On the same date, a patron of G. Arlett, ten jack, best fish 6lb., and a few perch. On the 3rd inst., Mr. J. Harvey, jun., five jack, best fish 8½lb., and six brace of perch; Mr. A. E. Hobbs, out with W. Vaughan, four jack, best fish 6½lb., and twenty perch weighing just over 10lb.; best perch 11h. 7oz.; Mr. Woodhouse, out with G. Vaughan, five jack, best fish 4½lb., and six brace of perch, best perch 1½lb.; Mr. W. Clisby, jun., out with J. James, twelve brace of perch, best brace 3lb.; Dr. Jeston, fishing with Boh Young, at Medmenham, took thirty brace of retainable perch, besides returning fifty of the same fish, best three perch weighing just over 3lb. On the 4th inst., Mr. Hawes, fishing the Loddon, accompanied by W. Vaughan, secured a nice pike weighing 13lb., and another 4lb. fish. On the same date, Messrs. Coborn and Jones, out with G. Arlett, a bag of roach, perch, and four jack weighing 12lb. On the 5th inst., Mr. W. Meyers, out with J. James, three jack, best fish 5½lb. On the same date, Dr. Riley, out with W. Vaughan, three jack, best two fish 10lb.; Messrs. Coborn and Jones, out with G. Arlett, twelve dozen roach. On the 6th inst., Mr. Goodwin, accompanied by J. James, braved the stormy weather, and succeeded in taking three jack, the best fish weighing 4½lb. Bank anglers have had some fair takes of roach up to 1½lb. A tench of about 2lb. has been taken while roach fishing with red worms. Feb. 9.—The water is bank high this morning.—STANLEY MEAD.

—(Kingston).—John Johnson during the week has been doing fairly well with the bream; J. Knight, one day with Mr. Wells and friend, four dozen of roach and dace, and during the week he has had similar sport; J. Jennings has been creelred some fine roach, one of them weighed close on 2lb.—B.

—(Richmond).—Job Brain reports he has been getting a nice lot of bream.—B.

—(Staines).—The only report I have received from this district is the water has been very high and a good stream, but the anglers have managed to get a few roach.—B.

—(Sunbury).—Messrs. T. and A. Stroud report there are plenty of fish but a great scarcity of customers, and if they will only come they are sure to make some satisfactory results, the perch and jack being on the feed. The bank anglers have been creelred some fine roach.—B.

—(Twickenham).—Mr. Ogden Smith says: "The river has been rising fast and the water thickening. Several bream have been taken, also roach and dace. Lee, fishing with two clients one day, landed 275 roach and dace. Mr. Barrow and friend got twelve brace of good perch." R. Spong, in three days, twenty bream and 10lb. of roach and dace. R. Moffat, twelve dozen roach and dace and eight bream. The other fishermen in raking have been getting a good quantity of dace.—B.

—(Windsor).—Feb. 8. Just as we were getting the pith and brains prepared, and seeing that the live bait were in good order, all our plans were upset by the rapid rise in the river, which is now in flood and still rising rapidly, and should the rain continue for the next two days nothing can prevent the river overflowing its banks, "not even the watchful eye of Mr. Stoneham and his floods committee." During the few days the water was in order good sport was had. Mr. Carey had several good shows of roach; Mr. W. Giles had a nice dish consisting of twenty-one fish on the 7th; Mr. Paice good perch, several over 1lb.; Mr. F. Sharratt, of Surly Hall Hotel, has been taking about three dozen roach each day after his mid-day repast; R. Gray had eight jack on the 5th; and on the same day Mr. T. Saunders, of Bray, had four in Surly Hall pool, the best fish turning the scale at 7½lb. I hear Lumsden left his favourite haunts at Datchet for a couple of days last week, and came up and sampled our water, and succeeded in taking back some good perch. James Bunce has had some good chub and roach with his patrons, and Franks, the obliging lock-keeper at Romney Lock, has creelred several jack during the short leisure time he has at his disposal.—CECIL HOWLETT.

Anchorage District.—There is not much coarse fishing going on. The Market Rasen Trout Club is progressing vigorously. They have three fine rearing ponds at Millingham, covering a total of about two and a half acres. The lower one contains two-year-old fish, the middle one yearlings, and in the top one they have this week turned out 10,000 fine trout fry. The fish already therein have done remarkably well. The bottom pond last year contained fish well up to 1½lb.—THOMAS FORD.

Arun (Pulborough).—Feb. 8.—Only a few anglers visited here on the 5th, who experienced a cold, wet day. Mr. Wigley, Bermondsey Bros., took 8lb. bream and roach; Mr. Woods, St. John's, 5lb. roach and dace; Mr. Brelsforth, Amicable Waltonians, a 2lb. roach; Mr. Salfeld, Silver Trout, a 3lb. 13oz. bream; Mr. R. Smith, same club, four bream, about 8lb.; Mr. Burt, ditto, two fair-sized roach. Since Sunday it has rained almost incessantly, and at the time of writing (Wednesday night) the river has already overflowed, and as the water is rapidly rising and still raining there will be another flood. I advise anglers not to visit here on the 12th, as bank fishing will not be possible. THURSDAY, NOON.—Almost incessant rain. Land under water for miles, and water still

rising. Fishing out of the question on the 12th.—W. G. HOLLMAN.

Cefni River (Anglesey).—To prevent disappointment, this river is not open till the 1st of March. After such a mild winter sport should be good in Anglesey.—W. H.

Dart (Totnes and District).—In conversation with one of the keepers I ascertained that in spite of the severe floods recently experienced the spawning (in the lower waters at any rate) has been fairly prolific. The fish have also spawned well in the Hems and Harbourne, two tributaries well patronised by anglers. Altogether there is every prospect of a good season, the run of fish having been greatly facilitated by the new passes which have been provided at Totnes and Buckfast by the conservators at great expense. Although last season's salmon fishing by rod and line was considered poor, yet, when compared with many other Devon streams, sport on the Dart seems to have been about the best obtained.—DEVONIAN.

Derwent (Malton, Yorks.).—The water still keeps running high and very thick, with no sign of improvement, as we have had a fall of snow. Two otters were seen sporting a few days ago close to the town, a good sign as to plenty of fish being about.—H. S. HARLAND. (Feb. 6.)

Devonshire Streams.—Although a good deal of damage has been done to the spawning beds by the heavy floods, yet reports from many rivers are more favourable than would have been anticipated. Fly fishing on some rivers opened last week, but the preserved portions of the Otter will not open until March 1. Fly fishing on the waters under the Up-Exe Association commences on Tuesday next; minnow and worm fishing opening on May 1 and June 15 respectively. No trout under 7in. are to be retained.—DEVONIAN.

East and West Cleddau (Fembrokeshire).—The salmon season (rod) opened on the 2nd of this month. We hear that a great many salmon went up the rivers during the recent heavy floods. No sport as yet. The forthcoming trout season should be good, owing to the mild winter we have had.—H.

Exe and Canal (Exeter).—The rainy period has again resumed its sway, rendering the rivers quite unfishable. Prior to this several pike of small size were killed, a catch of four (largest 5lb.) falling to the rod of Mr. A. J. Roberts, on Thursday last. Our anglers are now anticipating the opening of the trout season, which, on the two lower association waters, will be on Tuesday and Wednesday next week. Following a mild winter and tons of water a fair opening is confidently expected.—RED PALMER.

Fen District (South Lincs. and Cambs.).—Sport on the Fen waters was gradually on the wane owing to the deepening of the frost. On Saturday there was more talk of skating than fishing. Then came the snow of Monday and its thaw. Present appearances indicate work for the week-end. Up to the closing of the waters sport was fairly good, particularly among pike.—LIMPET.

Idle District (North Notts.).—The cold has had an effect on fishing on the Idle. Some anglers on the waters below Retford failed to raise a fish, and the snow this week will not improve the outlook. Some few dishes of grayling were obtained from the higher waters, whilst odd reports are to hand of roach and dace from the lower districts. Trout fishing opened on Thursday according to law, but it will be a month at least before anything is done worth recording.—L.

Lark (Lackford and Flempton).—The river is in good all round order, though only a few have been trying their luck, in consequence of the cold east winds prevailing all last week. Mr. W. G. King, out on the 2nd inst., killed five roach weighing 3lb.—A. E. KEMP.

Lake Corron (Bodorgan, Anglesey).—This lake opened on the 1st inst. for trout fishing, but the presence of ice kept anglers away. Now all traces of it having disappeared, good sport may be anticipated.—W. H.

Lugg and Arrow (Leominster).—Both these streams have been running out of order for some weeks, but had gone down and cleared at the end of last week, and there was a prospect of fishing being had until Saturday afternoon, when snow began to fall, and this was followed by falls of sleet and rain, and the snow was soon all rushed off the hills, and came down into the rivers, and they are now running high and muddy and bank full, and quite out of all order for fishing, and will be so for some time. The Pinsley is running high and muddy.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—A little more than a fortnight since we had the highest flood recorded for forty-seven years. It was running down nicely, and just getting fishable, when on Sunday and Monday heavy snowstorms prevailed, followed on Tuesday by rain, the effect of which is that the rivers are now overflowing their banks, and at time of writing (6 p.m. Wednesday) they are still rising. This will settle the grayling fishing, and can only look forward to the trout, whose season commences March 2. Am much afraid that, owing to the long continued swollen state of the rivers, the fish will rot in as good condition as usual.—R. T. WILLIAMS.

Maelog Lake (Tycroes, Anglesey).—This lake and adjoining Crygyl river are now opened. I would strongly advise anglers to stick to minnow fishing rather than fly for a month. A Brown Devon tait is as good a killer as any pattern.—W. H.

Nene (Peterborough).—The pranks of the weather must be held responsible for a large share of the petty annoyances of our everyday life; but, of course, the disciples of Izaak Walton are prone against this kind of thing. However, their particular sport is interfered with to such a degree that they may very well be pardoned for now and then losing all patience. Since last week, when I was able to report an improvement in the river, matters

have again taken a backward course, and at the present time (Wednesday evening) the water is a foot higher than it was last week, with every likelihood of a further rise. Yet, notwithstanding this, I noticed two of our old anglers out in their boat this morning near Peterborough Bridge, and they were doing fair execution by landing some good specimens of roach.—E. A. S.

Ouse (Budleigh Salterton).—Trout fishing on the public water here, and on one or two reaches of private water higher up the river, opened on last Wednesday, the 2nd inst. The river was in good order for the fly, but there was a very sharp frost and bitter north-east wind, and consequently few anglers were out. A few fish moved in the warmest part of the day, about 1 p.m., and one rod took two brace. They were not in very good condition. The Ouse is certainly a very early river, but February is really too early to begin fishing. Since the opening day the sharp weather has quite disappeared, and heavy rains have fallen, and at present time of reporting (Wednesday, Feb. 8), the river is in flood.—HERON.

Ouse (Denver).—Angling in this locality has been of a very indifferent character since the autumn, the rodsters having been very few, and those far between; but the past snap of frost has apparently put them upon the warpath once again, several being out last week with very fair success; the pike running well in the Ten Mile river, where several decent fish were secured. There was a slight fall of snow on Saturday night, with some heavy rain since, particularly so on Wednesday morning. Notwithstanding this, the water appears to be in good condition, and those by the riverside, and in a position to do so, say that capital sport should now be forthcoming.—WATER WAGTAIL.

Plymouth.—We shall soon now have the commencement of the trout and salmon fishing, and we certainly cannot complain of a scarcity of water through the spawning season and winter, in fact, I am told that on some of the rivers the bed has been literally changed, so that we shall have to look for fresh fields and pastures new, instead of our old pools which we could almost find in the dark. Everything bids fair for a good season, although I have no fault to find with the last.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—Angling visitors in this neighbourhood have had a very bad time, owing to the floods and unpropitious state of the weather, which has been most unfavourable. Rain, hail, sleet, and snow have been in the ascendant, but it is somewhat comforting to know that a few days ago another pike was captured in the River Vyrnwy near Llanymynech which weighed 8lb., and more gratifying still to find that on being dissected there was found inside him another baby pike, 2lb. in weight, only partially digested. What cannibals pike must be.

Stour (Bures, Suffolk).—Sport has been very slow in this district during the past week, snow water being in the water no doubt being the chief cause. Several anglers were out on Feb. 8, but nearly all had blanks. A few roach up to 1lb. each have since been taken by local anglers, but fish are not in good biting humour. On Wednesday night we had a heavy fall of rain, and the river this morning (Thursday) is running thick and strong, and, whatever weather happens, will be running with plenty of colour on Feb. 12.—W. T. BAINBRIDGE.

Stour (Christchurch, Hants).—Mr. F. G. Lloyd, fishing Newlyn's subscription section, had the following sport with pike, catching on Feb. 3, 16lb., 14lb., 11lb., 11lb., 5lb., 4lb., 2lb.; and on Feb. 4, 2½lb., 16½lb., 14lb., 9lb., 5lb., 5lb., 4lb.—HENRY NEWLYN.

Sussex Rivers and Chichester Canal.—The sudden break up of the frost, with a heavy fall of rain, has quite upset rivers, which are now high and thick. A few small pike were taken from the Ouse early in the week in the Barcombe district, and a brace of 5lb. fish from the Fletching portion of the river. Sport before the break up of the frost was fairly good in the Rother. Two anglers from Brighton secured a brace of pike, weighing 5lb. and 4½lb. respectively, and some smaller fish averaging 3½lb., all taken with paternoster. A perch of 1½lb. was taken with worm. The Adur on the 5th was unfishable. The canal at Chichester was frozen over in parts at the end of the week, but the hope of skating was dispelled by the rapid thaw. A few pike have been secured with live bait, but nothing exceeding 4½lb. has come under my notice. The board of conservators of the Ouse have decided to spend the sum of £50 this year towards re-stocking the river. With the myriads of bream, perch, roach, and pike in Chichester Canal, a few could well be spared, and permission, doubtless, granted to net the water.—GEORGE F. SALTER.

Teign (Newton Abbot).—The Lower Teign Fishing Association and Mr. St. Maur, who owns a good deal of water, are, unfortunately, at cross purposes. The latter, in terminating the arrangement which has existed between himself and the association for an exchange of waters, wrote that he was tired of the methods of the association, and should retain the whole of his water for the future, or rent portions of it to private individuals, but never again to the association. He further stated that he had arranged to rent the fishing on a good deal of the river formerly held by the association. The result of a meeting of the association was that Mr. St. Maur has been informed that they considered he has been treated with every courtesy, and characterised his conduct, in renting water previously theirs as very unsportsmanlike. The association also denies the allegation that they have done nothing towards "clearing" the banks. It is now reported that Major-General Mackay-Heriot and Mr. J. Webster have withdrawn from the committee of the association in consequence of the undignified action in writing to Mr. St. Maur in such terms as that body did. The rod fishing report of the board of conservators shows that only nineteen salmon, averaging 10lb. each, were caught by rods last season.—B.

Teme (Ludlow).—The Teme in this district was running in fair order by the end of last week, and the weather showed signs of being suitable for anglers to get out; but on Saturday snow began to fall, and on Sunday and Monday rain, snow, and sleet fell at intervals, and the ground was covered to a depth of several inches. Rain fell on Tuesday, and in the night a very heavy fall of rain washed all the snow away, and caused the rivers to begin to rise, and they are now in a flood and bank full, and full of snow water, and there is not the least prospect of any sport for at least a week. Friday last was the first time the river was in any order for fishing, and an angler took a few roach, which have been the only fish landed in this district for weeks. The water is still rising, and is getting out over the fields. The Ony, Corve, Clun, and Ledwyche are all bank full and muddy, and are quite out of fishing order, no fishing being done in them for some time.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part has been subject to several changes of late. Last week it was getting in fair order for fishing by Friday, but snow fell on Saturday evening and covered the ground, and on Sunday there was some rain and sleet, and rain has been had every day since, and the water is now running very high and muddy, and quite out of order for fishing, and there is a quantity of snow water in it, and it will be some days before there will be any prospect of any fishing, and little will be done before trout fishing begins.—WORCESTER.

Trent (Newark).—Down to Wednesday the Trent remained in good condition for bottom fishing, and some good roach, ranging up to 1lb. 5½oz., were shown at the Piscatorial Club-room, taken chiefly with the tail end of a dew worm, but a flush of Leicestershire water has again brought about a disappointment, and the present is one of the worst experienced for years. Previous to the change of water pike were taken, live-baiting; several from the Muskham and Holme lengths, though nothing heavy.—TRENTSIDER.

Usk and Tributaries (Senny Bridge).—Our trout season commences Feb. 15; at present there is every prospect of good sport this season again. The present floods will most likely take all the late spawning salmon back. The best flies for the beginning of the season are March Brown and Dark Blue.—D. POWELL.

Witham, &c. (Mid-Lincolnshire).—Reports from the Witham district have fallen off considerably of late. Little was done last week. Prior to the hard frost there was roaching on the Sincil Dyke for the Lincoln anglers between Bardney and Five Mile House. Some specimens up to 1lb. each were obtained. Snow will doubtless have affected the river, but better things are expected towards the week-end. Pike fishers had a pretty good time of it about Kirkstead and the lower lengths, and a specimen fish taken reached 10lb. or 11lb. A visitor, besides roach, caught two and a half brace (his best 11lb.). Other districts are very quiet.—LUCI.

Wye (Builth Wells).—Feb. 8.—Salmon fishing commenced on Feb. 2, but none have been caught yet, though there are many fresh run fish up. The spawning season was very good. The number of pike killed was over 230, from 1lb. to 13lb. in weight. River high with snow water; weather mild.—W. B. ROBERTS.

Yorkshire Rivers.—THE YORE, SWALE, WHARFE, NIDD, AIRE, OUSE, AND OTHER YORKSHIRE RIVERS kept in good trim for grayling, pike, roach, and other fishing up to yesterday, and sport continued very fair during the week-end, although ponds and lakes were coated with ice in many places and prevented some of our friends indulging in pike fishing; in some instances as many as fifteen degrees of frost were registered during the nights, but the temperature rose considerably in the daytime, making grayling fishing in the bright sunshine very enjoyable indeed. No fresh-water fish is so susceptible to atmospheric changes as the grayling, and an approaching storm caused a falling off in sport on Saturday; and Mr. J. Blades, fishing at Aysgarth and Askrigg on the Yore, did not make a dish up to his usual standard, and he found many of the pools icebound. Lower down the river was clear enough from ice, and I made a nice basket of grayling in the streams between Wensley and Middleham; at Danby the Rev. J. Murphey also met with fair sport. At Masham, on Friday, Mr. Dent caught twenty-three grayling, and Mr. Dalton fifteen, but the dish of the week was the one made by Mr. R. Fortune, of Harrogate, who, at Ripon, in two hours' angling, caught fourteen grayling weighing 12½lb., all were taken with the cockspur worm, on my practical Pennell Tackle. The best dish caught on the Wharfe to my knowledge is the one basketed by Mr. Pickersgill, who on Friday last had sixteen good grayling at Collingham. At Ilkley sport was not good on Saturday. Only meagre accounts of sport reach me from the Swale, the grayling fishing in the neighbourhood of Catterick being reported as moderate; this will apply to the Codbeck. Few anglers have been out on the Wike; and members of the Black Ox Club and others, fishing the main river in the neighbourhood of Morton Bridge, only return moderate takes in the way of roach fishing. Complaints are made of the depredations of otters in this neighbourhood, and anglers hope Mr. Wilkinson will again pay the Swale a visit with his pack of otter hounds when the season for hunting comes round again. Bottom fishing in the Derwent was fairly successful up to Saturday last, and a few pike were caught by spinning and live baiting. Nothing particular comes to hand from the Nidd up to closing this report; and the best takes of roach, &c., made in the Aire have fallen to anglers using bait and gentles. Sport last week, both in the upper part of the Ouse and lower stretch of the Yore, in the neighbourhood of Boroughbridge, is reported as good, anglers returning with a nice show of pike, not remarkable for size, but in

fine condition. The weather changed on Sunday, the north-east wind being bitterly cold. On Monday snow fell the whole of the day, and on Tuesday and Wednesday fogs and rain prevailed. Angling, therefore, this week, so far, has been practically nil, and this evening all our rivers are running high with thick snow water the colour of road scrapings.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAM.—The weather although moderating is still wild and showery, and all our rivers are bankfull this morning, and the water is very thick. It will be Monday, even if it keeps fine, before there is any chance of angling.—MIDDLEHAM.

SCOTCH REPORTS.

Deveron (Banffshire).—Anglers look forward to a most favourable season on the river Deveron, and that not only on the lower reaches of the river, but throughout its entire course. The circumstance is due to the recent removal of the cruipe dyke at the Rack on the Duke of Fife's section of the water, which, combined with the exceptionally mild nature of the winter season, has allowed most of the clean fish to ascend to the upper reaches, and there is no accumulation of fish in the lower pools, as was always the case before the removal of the dyke. The fact, of course, will reflect on the fortunes of the net fishing, but it is understood that when the change was made there was a modification of rental, so that the lessee is in very much the same position as before. Grilse were very scarce last summer, and the circumstance will probably react on the number of fish got during the first month. On the spawning beds fish were numerous, especially in the upper portions of the river, the number seen on the lower fords being somewhat fewer than usual. Fish are quite healthy, and few dead or diseased have been seen. The excellent angling prospects—the best for many years—seems to be a complete justification of the large expenditure in buying up the Duke of Fife's right of the cruipe. The net fishing on the river and along the coast will commence to-day (Saturday). Preparations are going on for the opening, and the lessee of the fishing has secured about 400 loads of ice.—H. W.

Loch Tay (Kenmore, Perthshire, N.B.).—On the hotel water, Feb. 1, Mr. H. Buchanan killed salmon, 16lb.; Mr. Knight, one salmon, 22lb. 2nd, Mrs. Knight, one salmon, 19lb. 3rd, Mr. Harry Tangye, Remoney, killed salmon, 19lb.; keeper, on the reserved water, killed salmon, 16lb.—W. KNIGHT.

Loch Tay (Killin, N.B.).—On Feb. 3 Mr. Sloan had a nice salmon, weighing 18lb.; Feb. 7, Mr. Timbrell, two fine salmon, weighing 14lb. and 20lb.; Feb. 8, Mr. Timbrell, one salmon, 18lb.—H. J. MAISEY.

Lyon (Fortingall).—Mr. Philip Geen, fishing from the Fortingall Hotel on Feb. 1, landed a beautiful salmon of 23lb.; on the 2nd, one, 20lb.; on the 3rd, one of 19lb. The river is now in good ply, and lots of salmon to be seen.—MACPHAIL.

North-East of Scotland.—To-day (Saturday) the bulk of Scotch salmon angling waters will be freed of the legal close time—some eighty odd rivers and streams. A few late streams will be some weeks later still. The Scotch netting stations are also open for the first time to-day, even where angling has already begun. The prospects of the opening are on the whole fairly hopeful, although they have often been much brighter. There has been a scarcity of fish on the east coast since the new year, but they are again showing signs of their presence, and with anything like open weather fairly good sport should be got during the opening weeks. Her Majesty the Queen will not in future include the north bank in her waters, having declined to renew her lease from the estate management of Invercauld, the rent having been advanced from £900 to £1500. She has still the Balmoral, Aberfeldie, and Birkhall waters on the south side. Mr. H. L. Crake has taken the private Invercauld waters, and will get good sport as the spring advances. Mr. Biistow will fish the Ballater waters for February and March, and Mr. Tyingham and Mr. Grauville the Cambus O'May waters, which they rented last year. Sir Wm. Brooks, Bart., has again let the Glentana waters for the early months, and Mr. Sandison is full up for the most of his Aboyne waters. Sir John Gladstone has taken the Woodend and Comonty section, in addition to the upper Blackhall, for the first two months; and Hon. W. A. Orde-Powlett, Yorkshire, and Mr. R. B. Wilson, Cornwall, have the run of the Blackhall Castle waters, which they are to fish right off from the start. Mr. and Mrs. Farley will be in at the opening on the Cairnton water. Mr. Davidson has let the Sluie section, and will fish his home beats of Inchmarlo along with Capt. Gaskell. Mr. Baird and party retain the Durris waters; while Mr. George Davidson, of Mellwood, will open the season on the Park water; Mr. Perry on the Drum; Sir Duff Gordon, on the Maryculter; Mr. Kinloch, on Altries; and Professor Cash, on the Kingcausie water. The prospects on the Don are better than has been the case for many years back, and a good few fresh fish are expected to be got about Kintore and Inverurie during opening weeks. Disease has been comparatively absent from the Dee during the close time. Anglers have been arriving by every train during the past week.—G. M.

South of Scotland.—A heavy fall of snow occurred on Monday over the south of Scotland. The wintry weather of last week, with ice-bound lochs, has now changed. To-day (Wednesday) the temperature is mild, and more like angling weather. The ice on the lochs is not yet melted, and it will be the end of the week or the beginning of the next week before it disappears. The melting of the snow on the hills has discoloured the rivers, and to-day they have a milky-looking colour. The salmon netting on the English side of the Solway opened on Friday (yesterday), 10th inst. The prospects are not very bright for the nets. On the Scotch side of

the channel the nets do not come into play before the 25th. On the latter date angling on the Border rivers will be open for the season.—HEATHERBELL.

Tay.—On Friday, Mr. R. Thomson, out from Fishers' Hotel, Pitlochry, landed two nice salmon of 13lb. and 19lb. On the same stretch Mr. Praed, on Saturday, killed one fish of 22lb. On Mr. Leaf's lower Delvine water, on Tuesday, the boatman had a fish of 16lb.; and on the upper water, on Wednesday, the same boat had another of 17lb.—A. M.

Tweed, Teviot, and other Border Rivers.—Weather prospects piscatorially in the Border district have during the past week been very unfavourable to the angler. We have had some days of very heavy rains, then clearing away to frost, hence again mingled with snow showers, and to-day (Wednesday), between 5 o'clock in the morning and 7, a perfect deluge of rain occurred. At 4 o'clock this afternoon, both the main rivers were flooded, the Teviot being mud red, while the Tweed was of a "snow broo" colour; and the Tweedometer at Kelso Bridge registered a flood of fully 2½ft. The conditions of the other Border rivers and tributaries are in much the same state. Since the opening of the rod angling season on the 1st inst., a few rods have been out, but up to the present time my reports only account for one baggot salmon having been landed on the Hendersyde water, which, of course, was at once returned to the river. Salmon anglers in the Border district seem, in the meantime, to think that the clean run fish which have come up the river with the recent floods have gone to the higher reaches, while those who are now making their way up from the sea have not as yet got to the middle casts, but there is yet time enough for a spring salmon to be caught, and there is "luck in leisure." On the whole, however, there does not seem to be a very great amount of clean spring salmon in the Tweed and Teviot as yet, but matters are bound to improve very shortly in this respect. Seeing how well the rivers in the middle and upper districts, as well as the tidal mouth, of the Tweed, have been preserved and looked after by Superintendent Smith, of the River Tweed Commissioners, and his officers and men, it is on all hands thought that the present salmon angling season will turn out a good one before its close. As to trout fishing, baskets have not been heavy during the past week, the average weight being just about from 2½lb. to 3½lb., although one dish of 8lb. was killed on Tweed; but this included three grayling weighing 2½lb., and one bull trout of 2½lb. Two or three of the pike fishers have been out here lately with the spoon bait, but their efforts resulted in coming home with a "clean creel." What trout were killed were, for the season, in capital condition, and should we now have a spell of good weather I am certain that large baskets will shortly be made. All the legal trout anglers are getting ready. They begin here when the net salmon fishing opens, 14th inst., they having observed a trout close time since the middle of October, and some from Nov. 1, although they could have been fishing all the year long. But it's always the same with them. Their shout is, "Get us a five months' close time for trout, and we won't at all grumble." Of course, there are others who would not for the world have any closetime at all, and snarl at those who uphold the preservation of the fish which, in season, give sport and food to hundreds.—MAXWHEEL.

IRISH REPORTS.

Bandon River (co. Cork).—This river does not open for salmon and trout fishing until the 15th inst. The water is most suitable for fish to pass up, and good sport should be had on the opening day. The outlook for trout anglers is most encouraging, as the river, especially near Innishannon, is reported splendidly stocked, and some of a very large size.—WILLIAM HAYNES AND SON.

Blackwater (co. Cork).—Fishing in this district opened on the 1st inst., but with the exception of the first two days the river has been in high flood, and very little sport has been had, nor can it be expected until the water settles down; a good run of fish are reported. Trout anglers on the Bride, Fanecheon, and other rivers, have had fair sport, but the fish are not yet in good condition.—WILLIAM HAYNES AND SON.

Boyne.—The season opens to-morrow, the 12th inst., and just now the prospects are very good. Mr. Fletcher has rented the lower Blackcastle water, and Mr. Ley the upper Blackcastle water. In the past season some 350,000 salmon ova were placed in Blackcastle hatchery, and the first batches have come out well, and over 10,000 trout ova have been hatched. A supply of *S. irideus* is also in the hatchery for experimental purposes.—J. A. B.

Bundrowes River (co. Donegal).—In consequence of a severe frost, which set in in this locality on 2nd inst. and continued to 5th inst., when a change took place, and some heavy snow and sleet showers fell, accompanied by a strong north-east wind, and intensely cold, no fishing of any note has been done since last report. At time of writing the weather is more settled looking, and prospects of sport better.—M. ROGAN AND SONS.

Caragh Lake.—The fishing has been rather disappointing this past week, very few spring salmon running. Major Corbett took nine white trout on the lower Caragh on the 2nd inst., and one and a half dozen on the 4th inst. The prospects for the coming week are better. The hatchery at the Southern Hotel is well stocked with salmon and trout ova this year.—G. C.

Cork Rivers.—Sport has been very poor on all the Cork rivers where angling has opened. The waters are in fair order, though high, and better sport is expected next week, as the weather is improving, though still unsettled.—T. J. D.

Corrib (Galway).—The season of 1899 opened on the Corrib on Wednesday, the 1st inst., in fairly favourable state of water and weather—the water being rather high

—but up to date very little has been done. Spring fish are dilatory in putting in an appearance. The past spawning season was pretty successful, and most of the kelts have gone seawards. This week the weather is moist and foggy.—J. A. B.

Kerry Rivers.—Sport continues dull on all the Kerry rivers open for angling in consequence of bad weather and thick and full waters. Salmon are reported fairly numerous on the majority of the rivers however, though they do not appear to be yet up in anything like big numbers anywhere.—T. J. D.

Killarney.—Sport has been poor on the Killarney waters, but the prospects are improving at time of writing, as the conditions are more favourable, though still far from being good.—T. J. D.

Lee (co. Cork).—Salmon and trout fishing in this district opened on the 1st inst. under rather unfavourable circumstances, the continued north-easterly wind of the previous three weeks having run the river down to almost summer level, and stopped the run of spring fish. However, the weather changed on the 4th inst., and since then the river has been in flood, and a magnificent lot of fish have been passing up. The entire river must be very well stocked, and when the river settles down into fishing order good records are sure to be made. The kelts are not all cleared out yet, in fact, they are most numerous. The following fish have been taken on Mashonaglass, rented by officers of 60th Rifles: Mr. W. H. Allgood, one, 20lb., on Ashton water; Col. Rooke, two, 18lb. and 15½lb., on Oak Grove water; Mr. G. M. Gevers, one, 11lb., on Farran water; Mr. Maurice Lyons, one, 14lb., on Castlelynch water; Mr. James O'Brien, two, 7½lb. and 16lb.; and Mr. John Sullivan, two, 7lb. and 9lb. On other portions of the river a few good fish were taken, including Mr. Ned Murphy, one, 10lb.; Mr. J. H. Gribble, one, 9lb.; Sergt. Grey, R.I.C., one, 7lb.; Mr. J. McAuliff, two, 7½lb. and 10lb.; R. Dunscombe, one, 10lb. The numerous trout anglers have been doing well, but the fish are not yet in good condition.—WILLIAM HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—Sport has been very bad since the opening on Feb. 1, only two salmon having been had up to time of writing, viz., one of 15lb., had on Feb. 2 by Mr. Smith, and another of 18lb., had on the 5th by the same gentleman, who fished with Tim McCarthy. The weather since the start has been unfavourable, and is getting worse at time of writing (Tuesday), so that the chances of sport are not improved. Spring salmon continue to come up in average numbers, as is evidenced by the numbers being got at the weir on the river.—T. J. D.

Lough Mask (Clonbur, co. Galway).—The spring fishing on Lough Mask and its tributaries began on Feb. 1. Local anglers are making nice baskets. One English gentleman here, Mr. Smith, of Worcestershire, caught a grand trout, turning the scale at 6lb. The year promises well on Lough Mask, as the rivers were well preserved during the spawning season.—J. A. J.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—Heavy frost here for the most part of the week has prevented fish from rising to the fly. Mr. John Garvey, on 3rd, tried for few hours; hooked two kelts. Mr. J. H., on 4th, lost a spring fish after fifteen minutes' play. They have had some beauties at the salmon weirs, ranging from 12lb. to 20lb. Trout anglers on the lower part of the river are making good baskets.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—Mrs. R. Hope, of Maidenhead, whose grand exploits among the pike in the lake I recorded in last week's *Fishing Gazette*, has this week followed up her great success by killing the largest trout ever angled at Killaloe, so renowned for the size and beauty of both brown and gillaroo trout. Mrs. Hope's magnificent specimen was a genuine brown one, and thumped the scale down at 14lb. 1 Congratulation to the amiable lady on this great achievement. The fish is now in the hands of Mr. Williams, Naturalist, Dame-street, Dublin, for preservation, and will make a glorious addition to the two big pike which Mrs. and Mr. Hope killed here—20lb. and 26lb. respectively—and which, as I stated last week, have also been entrusted to the same gentleman for preservation. I should have mentioned in my last report the measurements of the 26lb. pike which Mr. Hope landed. Here they are: Length, 44½in.; girth, 21in.; length of head, 12in. The dimensions of Mrs. Hope's big trout are as follows: Length, 31½in.; girth, 17in.; width of tail, 8½in. During their three visits to Killaloe Mr. and Mrs. Hope very kindly entertained many of the inhabitants with their gramophone and splendid collection of over 100 records of songs, dances, recitations, solos, band pieces, &c. No spring salmon have yet been taken—water too high. The Rev. Mervyn Archdall, fishing my water on Saturday, landed a gorgeous brown and yellow trout of 6½lb.—S. J. HURLEY.

STOP PRESS.

WEATHER REPORT.

BY TELEGRAPH.—FRIDAY, FEB. 10, 9.57 A.M.

DEAL.—S.W.; moderate.
DOVER.—S.W.; moderate.
RAMSGATE.—S.W.; smooth.
MARGATE.—S.W.; smooth.
HASTINGS.—S.W.; moderate.

Mr. F. H. AMPHLETT telegraphs as we go to press that the Thames is again in flood. The water is exceedingly thick, and a very heavy stream is running. Prospects of sport look very poor.

SEA FISHING.

THE following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, Feb. 17. Spring tides. Highest on Sunday.

	Sat.	Sun.	Mon.	Tues.	Wed.	Th.	Fri.
	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.
Scarborough	4.41 5.3	5.24 6.4	6.4 7.4	6.44 7.4	7.25 8.31	8.8 9.20	8.65 9.20

Ballinskelligs.—On a few favourable days good sport was had at pollack near Horse Island, on the ocean side. Spring mackerel are now coming in, and should give good sport when the weather gets more favourable.—T. J. D.

Baltimore.—Sea angling has been suspended here since last report in consequence of strong winds and a generally rough sea.—T. J. D.

Darrynane.—On a couple of days fair sport was had at pollack and gurnard within the headlands, but at time of writing (Tuesday) angling is suspended owing to strong southerly winds.—T. J. D.

Deal (The Pier).—The few visitors on 5th inst. were Messrs. Handley, Preston, Gardner, Wood, Vaughan, and Croft Handley, and though the day was fairly fine, and the water much clearer than has lately obtained, yet their united efforts for the day only resulted in the capture of nine small fish, among them being a five-bearded rockling, which fell to the rod of Mr. Vaughan. Monday morning opened with a strong south-east wind, and not a single angler put in an appearance during the entire day. Mr. Bushnell and Mr. Cooper each fished for three or four hours on Tuesday, the former taking one small codling and the latter one pouting. The wind blew strong from the south-west, with heavy driving rain, on Wednesday, which caused the pier to remain vacant for the whole day. Angling prospects for the near future are anything but bright.—J. RICHARDSON, B.S.A.S.

Plymouth.—In this month dabs and flat fish are in their prime, and they continue so through March and April. There is a great difference in the appearance and taste of a dab, whether it is eaten in the above months or later on during the year; they spawn, as a rule, in May and June, and after that they become very flabby and tasteless. In this month also mackerel begin to make their appearance; in fact, they have come in so early this year that one of our boats last week lost a whole fleet of nets valued £100 through so many fish being meshed. The tremendous weight took the nets to the bottom and parted the warp. These nets, of course, will never be recovered. In addition to the nets being lost, there must be some tons of mackerel. Another of our boats, fishing for herrings, had shot several nights and scarcely made enough to find provisions for the crew; on Thursday night last they took so many in the nets that they also lost them by the weight of fish taking the net to bottom.—WILLIAM HEARDER (B.S.A.S.).

Southend and Leigh.—Feb. 8. There is not much to report here. Fish are scarce and shy, and but little success has rewarded the few anglers who have been out. Unsettled weather with rain is probable, and prospects for the week-end are not of the brightest. Barometer 29.55in., steady; wind S.W., light; sea moderate; weather clear.—CHARLES HUSSEY (B.S.A.S.).

Valentia.—Sport at pollack continues good though the weather conditions have been unfavourable. Mackerel are reported numerous already, and some of the mackerel fishing fleet are already assembling in the harbour.—T. J. D.

SCHOOL BOOKS, DICTIONARIES, &c., including Mr. Jackson's Upright Writing Copy Books, in English and other Languages, published by Sampson Low, Marston & Co., Limited, St. Dunstan's House, Fetter Lane, London. Can be had on application.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening**. Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly finance committee will meet on Monday evening next, Feb. 13, at 7.30, and the general committee at 8.30.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £ [amount not stated in report] from the Islington Brothers' A.S. donation box.—R. GHURNEY.

Anglers' Association (No. 1 EASTERN DISTRICT) Visiting List.—The next return visit on the above will be to West Ham Brothers A.S., Coach and Horses, The Grove, Stratford, on Monday next, Feb. 13. I hope we shall have a good meeting.—G. MANNING.

Anglers' Association (No. 2 DISTRICT) Visiting List.—The return visit on 6th inst. was a great success, and a crowd of anglers and friends were present, including the veteran secretary (Mr. R. Ghurney) of the above. At 11 p.m. Mr. Wade called the roll, and thirty-three societies responded. Ben Abrahams also spoke re the A.B.S., and their A.B. box was well responded to. I will announce my next return visit later.—BEN.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On Feb. 5 several members were out for the remaining two prizes. Messrs. C. Osborne, good perch and fine roach; Jagot, sen., perch; Worsfold, perch; but were too late for weighing-in for prizes. On Feb. 8 it was decided to go where you like for the remaining two prizes. Another new member proposed. All members please note business of great importance on Feb. 15, which is quarterly night. Please don't fail to attend. Also note fish for special prizes must be at the clubhouse before ten o'clock.—C. J. KING.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—At our last meeting we elected another working member, A. Campion, who offers 5s. worth of tackle for largest dace, any waters, S.O., P.S.O. Our pike match is off, there not being many who care to enter. I am awfully sorry, as I thought several were going to try for that big 20-pounder which is about the vicinity of Langley A.A. waters.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portsmouth Place, Lincoln's Inn Fields.—On Feb. 5 the following weighed-in: Mr. Drew, roach, 4lb. 12oz.; Mr. Boothby, roach and perch, 3lb. 10z.; and Mr. Montgomery, roach. Mr. Drew, jun., showed two chub, heaviest fish 2lb. 6oz.—J. CHAMBERS.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—The following weighed-in some good shows of fish: Shurey, roach; Hutchingson, roach; Lambarth, roach. Messrs. Millin and Hulme also had shows of roach. The next outing has been arranged to take place at Shiplake on the 19th, for six prizes. At our last meeting Mr. Drooker was proposed as a working member.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—Our match for the February prizes will take place at Wraysbury and Datchet on Feb. 12, when I hope all members will attend. A special meeting is called for Wednesday, Feb. 22, to consider supper and other business.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—In our roving match of the 5th inst. Mr. W. Hersant was the only successful member—taking 1st prize. The remaining prizes will be fished for on Feb. 12, same conditions. Mr. G. Mead had a capital take of chub and roach on the 5th inst.—A. JENKINS.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—On the 5th inst. Mr. J. Martin weighed-in 10lb. of roach from the Thames. The competition for the February series of prizes will take place on the 12th in the Thames, at Datchet; radius from Albert Bridge to end of lock cutting. Members not to leave London until the first train on the morning, and to return by the 5.5 p.m. from Datchet. The prizes are five in number.—ALF CONN.

Blackfriars Angling Society, Imperial Hotel, Southwark-street, S.E.—Several members were out on 5th; Mr. Merrygold, chub and roach; Mr. Wheelhouse, jack. We fish our February series of prizes at Datchet; starts, 8.15 Waterloo; return, 5.5 from Datchet. Start by signal from Albert Bridge to Bells, Ousley.—WHEELHOUSE.

Blackwater Angling Society, Welcome Sailor, Maldon.—We had a fishing competition on Jan. 22 and 29 (peg-down). Mr. W. Wiggins took a beautiful rod (presented by Mr. Dennis) as first prize; Mr. H. Cuthbe took second prize, and Mr. H. Howlett third prize. The members kindly presented the secretary with a nice table-lamp on his recent marriage. The secretary would be pleased to see a better muster at the fortnightly meetings.—J. J. YARKER.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Feb. 5 Mr. J. Taylor weighed-in jack, perch, roach, and dace, 8lb. 24oz., one jack weighing 5lb. 14oz.; Mr. F. S. Pavett, roach. The quarterly peg-down match takes place on Feb. 12 at Ware, when we fish for three prizes under the usual condition.—T. PATERMASTER.

Bomore Angling Society, The Britannia, Clarendon-road, Notting Hill, W.—Since my last report Messrs. J. Weeks, H. Dagworthy, and Mr. A. Lowe (a member of the Queen's, Latimer-road), out on the 4th, all had a splendid catch of roach and dace from Uxbridge. Members not in attendance last meeting night please notice change of clubhouse to the above. Trusting members will show up in great force next Tuesday, meeting night, as there is a lot of business to be got through.—H. DAGWORTHY.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—Some of our members were out on Feb. 5. Messrs. Bissell and Kelley weighed-in roach. A prize outing to Ware is arranged for Feb. 12, when I trust all members who are able will compete.—F. RANDALL.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On Feb. 5 Messrs. Baines weighed-in roach; R. Hubbard, jack; Jao, jack; T. Benny, bream and roach. A consolation roving match takes place between Rye House Bridge and St. Margaret's Bridge, on Feb. 12, for those members who have not won a prize this season; start fishing at 9 a.m., cease fishing at 5 p.m.; show fish at Rye House Bridge not later than 5.45 p.m.; steward, H. Deverill; all to get out at Rye House on the morning. A smoking concert takes place at the above house on Feb. 20, on behalf of the Anglers' Benevolent Society; ladies invited, and all anglers and friends.—P. E. LOFT.

Central Angling Association (Liverpool), Original Prince of Wales Hotel, 13B, Moss-street.—On Feb. 2 a meeting of this association was held, with a good muster of members. The most important matter under discussion was the amount of levy that should be paid towards the Coarse Fishers' Defence Fund which is being raised by the Northern Anglers' Association. It was decided that each member pay a levy of 3d. for this purpose.—GEORGE W. HANN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Our match at Hampton Court on Jan. 25 resulted as follows: Mr. Ball, first, with perch; Mr. Beames, second, bream; Mr. Jarrett, third, perch. On Feb. 5 Messrs. Jarrett and Ball weighed-in bream and roach from the Thames. A vote of thanks was given to Mr. Ford, the retiring secretary, for the services he rendered the above society. Will members muster next Wednesday evening for important business.—W. H. STAFFORD.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On Feb. 2 Mr. Curtis had a good show of roach. On Feb. 5 Messrs. Cuthbe and Curtis weighed-in roach, dace, and perch.—W. MASSEY.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—On Feb. 5 we

fished a competition at Cookham, when the following were successful in taking prizes: Messrs. Bowater and Ward. Our next day's outing will take place on Feb. 26, at Windsor, for six prizes. Boundary from Eton Bridge to boathouse (Surly Hall); train from Clapham Junction 8.27, return from Windsor 8.45. Any member losing the first train, and coming by the second, will be eligible to fish in same on reporting himself to one of the committee.—G. T. JAMESON.

Clerkenwell and District United Visiting List.—A successful visit was paid to the Royal George A.S. on Feb. 4, Mr. Holder in the chair, the following nineteen societies being well represented, viz.: Crown and Buckland, Eustonian, Amicable Waltonian, Bloomsbury, Alma, North London, Camden, Phoenix, Royal George, Mitre, Queen's Piscatorialists, Prince of Wales, Didden, Harcourt, Brompton, Islington Brothers, Original Clerkenwell, Sociable Brothers, and Westminster. The next visit will be to the Queen's Piscatorialists, at the Queen's Arms, Chapel-street, Marylebone-road.—F. CASTELL.

Glissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On Feb. 5 another blank, but I hope to see a better result on the 12th. The date of our A.B.S. concert is unavoidably held over until the committee meet next week, as we intend to make it a success. Secretaries who have been notified please observe.—T. FAULKNER.

Cobden Angling Society, Kensal-road, W.—On the 5th the following weighed-in: E. Baxter, 21lb. roach; W. Walker, 6lb. roach and perch; E. Haddock, 6lb. roach; A. Howland, 5lb. 12oz. roach and perch, one perch 1lb. 74oz. and one 1lb. 64oz. On Feb. 26 a roving match will take place from Henley Bridge to Hambledon Lock; towing-path side only; to go down by the 9.3 from Westbourne Park, and return by the 8.10 from Henley; two rods; all fish to weigh; each member to catch his own live bait; to register names in saloon, and register fish not later than 7.15 sharp at Ye Lion, in Friday-street and Queen-street Corner.—T. TWYMAN.

Drayton Park Piscatorialists, Stanley Arms, Landseer-road, Holloway-road, N.—Concert very successful. Outing on the 19th.—GREG.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Wednesday's meeting; nothing of importance to communicate. All out on Feb. 12.—JOHN EDWARDS.

Eagle Angling Society, Red Lion, Tottenham.—On Feb. 6 Mr. W. Denton, sen., had a nice show of roach, best weighing 1lb. Mr. Denton, jun., had over 6lb. roach and dace, and some nice perch. Members are reminded that there are many prizes to be fished for by March 15.—W. J. PRICE.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—Our outing on Feb. 5 resulted in the first prize only being taken. The attendance of members at the outing was very small. Mr. Fulton secured the major prize with two nice jack, weighing respectively 64lb. and 63lb. Messrs. Mathews and Hulbert had several runs, but did not succeed in landing a fish. The outing for the silver challenge cup has been arranged for Feb. 12, at Byfleet, Park Bridge to Wisley Bridge, all fish to weigh. Members leave Clapham Junction at 8.40 a.m. and return from Weybridge at 8.25 p.m.—A. S.

Elgin Angling Society, Blenheim Arms, Blenheim-crescent, Notting Hill, W.—Several of our members were out on Feb. 5. Messrs. Carroll, Wilson, and Ryell had a good show of roach and perch from the Thames, and Mr. Bayliss had three fine pike from the Welsh Harp. The concert in aid of the A.B.S. is fixed for Tuesday, Feb. 21, to commence at eight o'clock. The chair will be taken by Mr. J. Harris, and the vice-chair by Mr. B. Abrahams. I hope all angling friends will try and give us their support on this occasion. Our last match of the season will take place at Henley on Feb. 26. All members to go by first train from Westbourne Park.—G. KING.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—The following members weighed-in on Feb. 7: Messrs. Harne, dace and roach, 3lb. 2oz. (one specimen dace 104oz.); Pheasey, dace, 1lb. 124oz. Other members were out, but had poor sport. We have decided to hold a return visit on Wednesday, March 1, at the above.—W. LEFEVRE.

Forest Piscatorial Society, Rose and Crown, Hoe-street, Walthamstow.—We were saved from a blank on Feb. 5 by Mr. G. Beaumont weighing-in two nice roach.—H. TISLEY.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Our members fished for eight prizes on the 5th inst., at St. Margaret's. They were all taken, Mr. T. Hanson being first. Our snapper takes place on Tuesday next, the 14th inst. Mr. J. Williams will be chairman; Mr. A. Coker, vice. Our caterer will be Mr. Mignot, of Hackney.—R. MURPHY.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had a nice show of roach on Feb. 5, one member weighing-in 15lb. 74oz. I must remind the members that outing takes place on Feb. 12 at Shiplake, when I hope to see them all.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—At our outing to Ware only one prize was taken (by Mr. Smith). We fish for the remaining prizes (roaming) from Rye House to St. Margaret's Lock, commence fishing on arrival of first train, show fish at Rye House not later than 6.30, all to get out at Rye House in the morning.—C. SMITH.

Highbury Angling Society, Globe Hotel, Upper Tollington-road, N.—Our outing to Sandy is fixed for Feb. 19; dine at the Greyhound 4.30 after fishing; will members intending to go down overnight please let me

know at latest by next Wednesday. Not much has been done this week, Mr. Saunders having two jack, largest 7½lb.; Mr. West, roach and perch; and myself, jack, roach, and perch, largest of the latter 11b. 7½oz.—E. W.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On Feb. 5 Mr. H. Bailey saved us from a blank with jack. On Feb. 14 we hold a grand smoking concert in aid of the A.B.S. Our president, Mr. G. H. Wood, will occupy the chair, supported by several well-known anglers. As our last series of concerts were such a success, I have been asked if this is to be a ladies' night; anglers please note this is only a smoker, our next will be the ladies' turn.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—Our match at Cookham was not a success. Only five of our members turned up. The result was a blank. The only members weighing in were Mr. Holden, roach; and Mr. Burwash, roach. The prizes will be fished for on Feb. 12 at the same place; 8.40 train from Paddington. I hope to see a good muster, and that we shall be more successful.—J. H. HERBERT.

Isaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—Only two of the three prizes competed for on Feb. 5 were taken, Messrs. Martin and Hayward being the winners, and only one of the three "specials" competed for on Wednesday last was secured. Some interesting business will be placed before the meeting on Wednesday next, when I hope there will be a good muster.—H. B.

Jolly Butchers Angling Society, George the Fourth, Walnut Tree-walk, Lambeth, S.E.—Our match took place at Sunbury on Feb. 5—Jolly Butchers versus Wellington Angling Society—when the Jolly Butchers were the victors by 10z., nearly all competitors having fish. We heartily thank Mr. Wilson for acting as steward on this occasion, also in the way he carried out the same, giving utmost satisfaction to both sides.—G. EDWARDS.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since my last report we have had two shows of fish weighed in by Messrs. Bence and Harris. I hope members will try and attend next meeting night.—G. BENCE.

Junior Piscatorial Society, Rosemary Branch, Lewisham High Road, S.E.—Owing to the very unpropitious weather on Feb. 5 very few members took part in the competition, which resulted in one fish being taken. Under the change of proprietorship we are coming forth as the lion from his den, with leaps and bounds; four new members being proposed last Thursday.—J. R. F.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville.—On Feb. 5 Mr. Biggs saved the club from a blank with a few roach. I must request members in arrears to turn up next week to make themselves eligible for our outing on the 26th, at Sunbury.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—Several members fished the Dee on the 2nd, but although the river had run down to almost its normal level the sport obtained was very poor, only a few small fish being obtained. The heavy fall of snow on Saturday last, and again on Monday, would spoil river-fishing for some days, and we must wait until the snow-broth has disappeared before fish will freely feed again. A couple of members quietly dropped off to the Vyrnwy on Friday evening last, to try for pike the next day, but I have not heard how they got on, though I should imagine not as well as they did the previous week-end. Trout-fishers should now be preparing for their campaign, as there are a good few streams open, and the relative merits of Match Brown, Blue Dun, Red Spinner, &c., as best killers, can be put to the test once more. A competition is arranged to take place in the Dee on the 16th, and one of the prizes is a silver-mounted fly rod, presented by that far-famed Isaac Waltonite, Mr. H. Wood, who also gives another prize on this occasion. Good old Harry, he is always about, and is a very useful man for any angler to make a friend of. One of the two members who went to the Vyrnwy writes: "Have had another week-end with the pike at Llanymynech—this time with small success—the river being very low and gin clear, and, I fancy, impregnated with snow water; managed, however, to bag four fish weighing in the aggregate 20lb., the largest turning the scale at 7lb. Heavy snowstorm put a stop to further operations, and I should say the stream will not be in good order for fishing again for at least another week.—R. D. WOOLFALL.

Liverpool East End Angling Association, Court House Hotel, Commutation Row.—Angling in this district remains very quiet, only a couple of anglers turning out, who have reported that the Dee is dead off. This is generally one of the best months for that river, but if the present weather continues good sport may be expected during the following week. A matter which is causing great interest, and which is a item which should be understood, is how long has the Provincial Angling Association had a centre in Liverpool? This question has caused proof to be obtained, and which is now in the hands of the representative of the centre, that the centre was established in the year 1837.—JAMES REYNOLDS.

Maldon and Meybridge Angling Society, White Lion Inn, Heybridge, Maldon, Essex.—The competition for the cup given by Mr. Ben Lees, of the Brunswick A.S., was finished on Saturday last, and Mr. S. Vince was the winner with 6lb. 10½oz. of roach, and T. Springett second with 3lb. 13oz. of roach. During the past fortnight very few fish have been taken. The Langford waters have been disappointing, owing to the cold winds. Anglers have had a few fish from the tidal waters at Beeleigh. One angler secured a sea trout; on the 5th inst. some dace were taken. At the time of writing there is a better prospect of sport. The weather being much milder and the water a bit coloured, should be suitable for roach fishing. The time of high water at Beeleigh on the 12th

inst. will be at 2.8 p.m., suitable for afternoon fishing. Anglers may fish the Langford waters at 1s. per day or 3s. up to the end of March. Tickets may be obtained from F. Keen, 26, Spital-road, Maldon, Essex.—F. KEEN.

Mildmay Angling Society, Clarendon Hotel, Mildmay Park, N.—The fourteenth annual dinner of this society was held at the Clarendon Hotel, Newington Green, on Tuesday last, when close on forty members and friends sat down to an excellent repast admirably put on by Mrs. Courtin, the hostess. The chair was occupied by Mr. J. A. Strachan (president); vice-chairman, Mr. Harold W. Lane; these gentlemen being well supported by several well-known people in the angling world, notably Messrs. J. Starkey, A. Howes, Capt. Payne (Dobb's Weir), T. Wigginton, J. Hobinstock, A. R. Matthews, &c. A short interval after dinner was occupied by the company in inspecting the many fine specimens of fish which adorn the club-room, after which harmony reigned supreme until the wee small hours of the morning. Amongst those who assisted at the really excellent concert were Messrs. Ernest Skerten, E. Banks, Percy Bell, H. W. Lane, Fred Wilson, Prof. Crannis (ventriloquist), J. Wells Wood, J. Trieber, W. Goodwins, &c. Accompanist, Mr. Albert Jordan; musical director, Mr. H. Biddlecombe.

North-East Brothers' Angling Society, Star and Garter, Green-street.—Outing to Shiplake on Feb. 12; all to start by the nine o'clock train from Paddington; all fish to be Thames measurement, and fish from bank only. A fishing rod will also be added to prizes for most weight of fish during match.—A. LEWIS.

North London Angling Society, Tap House, Holloway-road.—On Feb. 5 the members fished for six prizes at Ware, only one prize being taken, by Mr. Hayes, with roach. The remaining prizes will be fished for on the 19th. Conditions to be arranged next meeting, when I hope to see all members present to settle the same.—H. STRETCH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Feb. 5 we had a fair show of fish from the Lea. Seven prizes were fished for and won as follows: Messrs. S. Dulieu, first with one jack, 11lb.; A. Birch, second, one jack, 3½lb.; G. Barrs, third, jack and dace, winning two prizes; J. Franks, fourth, perch; S. Orrow, fifth, roach, winning two prizes. Messrs. Page also weighed in one jack, 9½lb.; W. Madgett, one jack, 4½lb.; D. Seal, perch; R. Brockett, perch. Our annual supper took place at the clubhouse on Feb. 7, thirty members and friends partaking of an excellent repast, provided by Mr. J. H. Bennett, 81, Finsis-street, Bethnal Green. The cloth removed, the remaining part of the evening was spent in harmony and booking prizes for the coming season, the latter being well responded to. Twelve o'clock brought a very enjoyable evening to a close.—E. BROCKETT.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—Our visit on Feb. 6 was a decided success, thirty-three clubs being represented, chair being taken by Mr. Bouffier; faced by Mr. Harvie, vice. Messrs. Stretch, Mike O'Leary, Hilton, James Roberts (cornet soloist), Owen, Fennell, and a host of others kindly supplied the harmony of the evening. Mr. Ben Abrahams made a few remarks on behalf of the A.B.S., and Mr. Wade gave the members of the club some good advice, and also stated that the next visit goes to Peckham Brothers on the 5th. Messrs. Widmer and Hunt had roach and jack, winning the remaining prizes.—A. HILL.

Ormonde Angling Society, Royal George, Carlisle-street, Westminster-road.—In our prize outing on Feb. 5, at King's Langley, the following proved successful: Mr. W. Lawrence, first prize; Mr. W. Turner, second prize. Will members kindly attend on Wednesday, Feb. 15, to decide outstanding prizes.—A. H.

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Sumner-road, Peckham, S.E.—The return visit on the Central and S.L.U.V. Lists comes to the above club on Feb. 28. It being the first visit we have received from the Central List, I trust the clubs will rally round and give us a bumper on that occasion. Our next match takes place at Pulborough on Feb. 12. Mr. Childs had 12lb. of splendid roach on Feb. 5.—GEO. ETHERINGTON.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On Feb. 5, Messrs. Austin and Bouffier, had roach and perch from the Thames. Members are requested to catch the first train, on Feb. 12, to Bourne End, as a saloon has been engaged. Three prizes, bank only, one rod, all to go down on the morning, no entraining.—R. C.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—There was a capital show of roach, perch and jack contributed by Mr. Robins, Whitford, Clist and Haynes; Mr. Whitford having amongst his take 16lb. of perch. Members are requested to show up early on Monday next for important business.—W. B.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On the 5th inst. only a few members weighed in. Will members please make an appearance on Tuesday next to consider outing before the season is over.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—On Feb. 5 the following returned with fish: Messrs. Webber, Pope, and Burrell, each gentleman showing an excellent tray of fish. On 2nd Feb. we took a visit on the C. & D.V. List, and it proved an unqualified success, nineteen clubs being represented. The following artists appeared on the occasion: Messrs. Steptoe, King, Desmond, Bean, Chambers, Heckit, and Frankling. I wish to thank all clubs for their attendance at our last visit.—J. GIBBONS.

St. John's Angling Society, The Empress, St. John-street-road, Clerkenwell.—We have arranged an outing to Shiplake on Feb. 19, for four prizes. There is also a special prize for the gross weight of roach for the month. Full particulars at clubhouse.—F. THORLING.

Stockwell Angling Society, Old Queen's Head, Stockwell-road.—In the event of flooded banks, our match at Datchet will again have to be postponed to Feb. 19. Same train, 9.44 Vauxhall. Mr. W. J. Wade (Central Association London Angling Clubs) has kindly consented to give a lantern lecture in our club-room on Thursday, March 2, entitled, "Fishing and Holiday Trips by the South-Eastern Railway," in aid of the T.A.P.S. Anglers and their friends will receive a cordial welcome.—THOS. LUCAS.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—We fish a match at Hatfield and Peverel on Feb. 19. All to leave Stratford on the morning. Conditions to be the same as last match at Ware. Cease fishing at five o'clock, and dine at Sportsman at 5.30 p.m. On 5th, Mr. T. Sandilands saved the club a blank with a bream, 3lb. 8oz.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Our outing with the Brompton was a success, although the weather was cold. All the prizes were taken, viz., sweepstakes. First, Mr. Quilter; second, Mr. E. Briggs; third, Mr. Hare. Private prizes were taken by Messrs. Quinn, Quilter, F. Briggs, E. Briggs, and Halt. Club prizes for Sundial members, Mr. Quilter, first; Mr. Hare, second; Mr. Halt, third; Mr. F. C. Gerrard, fourth; Mr. Lock, fifth. The gross weight for the sides were: Brompton, 12lb. 14oz.; Sundial, 10lb. 12oz. Members are requested to attend next meeting, as there is very important business, also to arrange for the next outing.—G. E. LOCK.

Twickenham Piscatorial Society.—An adjourned meeting of this society was held at the headquarters, the Black Dog, London-road, on Tuesday evening last, for the purpose of electing officers, formulating rules, &c., and enrolling members, which was presided over by Mr. George Barrow, and there was a good attendance. Mr. Garwood was elected treasurer, and Mr. John Marsh Brougham as hon. secretary. A committee of seven members was also formed, with power to add to their number. The hon. secretary was requested to draw up the rules, and submit them at the next meeting. A sportsmanlike standard of the sizes of fish to be weighed in was adopted, the perch and roach being 9in.; jack, 22in.; and Thames trout, 17in. Nearly forty members were enrolled, and it was agreed to affiliate the society to the Central Association of London Angling Clubs.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—Several members were out on Feb. 5. Mr. J. Payne, roach (best fish 11b. 5½lb), and Mr. J. Oakley, roach. Other members were out, but returned with blanks.—H. TYLER.

Waggoners' Angling Society, White Lion, Albert Embankment.—We fished a match on Feb. 5 at Datchet, with the following result: Messrs. Allen, club and dace, first; J. Clayton, roach and dace, second; Clegg, roach and dace, third; J. Clayton, jun., dace, 4th. Our usual weekly meeting took place on Tuesday last, but was poorly attended. I have some special business to bring before the club on Tuesday next; all members are requested to attend.—H. C.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Our snapper outing on the 5th inst. was a complete success. Fishing ceased at 5.30 p.m., after which we adjourned to the White Hart, Cookham, where Mr. Cocking very ably supplied us with a good leg of mutton supper, to which our members did ample justice. He also promised us a prize for some future outing. Mr. Templeman was first with a fine show of perch, 7lb. 4oz.; Mr. Glass, second, with roach and dace, 4lb. 3½oz.; Mr. Haydon, third, with 4lb. 1½oz. roach and dace.—W. H. BATCH.

Walthamstow Brothers' Angling Society, Essex Arms, Forest-road, Walthamstow.—On Feb. 5 Mr. Moore weighed in a nice jack, 5lb. 6oz.; Mr. Ecott, jack, 4lb.; Messrs. Knight, Skelsey, and Thompson, perch. On Feb. 12 we have an outing to St. Margaret's.—H. WIGG.

Warrington Anglers' Association, Roebuck Hotel, Bridge-street.—A meeting of the committee of the above association was held on Feb. 2 at the headquarters. Nine new members were accepted. A very fine roach, scaling 2lb. 4ozs. 6dr., was caught by one of our members, Mr. N. Hamblett, on Feb. 5, whilst fishing in the River Gowy at Mickle Trafford. On its being shown to our chairman, Mr. J. Lyon W. Little, he had it at once forwarded to Manchester in order that it might be set up. It will, in all probability, eventually be placed in the local museum.—FRED J. EMSON.

West Ham Brothers Angling Society, Coach and Horses, The Grove, Stratford.—Our members were out on Feb. 5, but sport was very bad, for Mr. W. Burling was the only member that weighed in fish, saving us from a blank. I hope our members will not forget our match on Feb. 12, at Hatfield Peverel; all to go down by the first train that leaves Stratford at 7.35 a.m.; and I hope all clubs on the No. 1 Eastern District Visiting List will not forget our visit that takes place at the above house on Monday, Feb. 13, at 8 p.m. sharp.—R. LOWTHER.

West London Angling Club, Dartmouth Castle, Hammersmith.—The members of this club had a large attendance at their social supper on the 2nd inst. Covers were laid for fifty and with their friends sat down to a capital repast, provided by their host Mr. Dean. The president, Mr. W. H. Elsmore occupied the chair and Mr. C. J. Carter the vice chair, both gentlemen doing their duty in a very able manner. Mr. Carter weighed in 5lb. 7oz. of dace, taking second prize in the match, and Mr. Martin, 3lb. 12oz. taking third prize. Mr. Elsmore

also weighed in 3lb. 6oz. The fish were displayed on the supper table. A long musical programme was got through with the assistance of the company present, and Mr. Martin with his friends contributed towards the evening's amusement, by selections with their string band. Mr. Cox, jun., weighed in for the match on Feb. 5, 4lb. 5oz., taking third prize. Mr. Peart, 1lb. 15oz. taking sixth prize, and Mr. Warrington also weighed in 1lb. 1oz.—J. J. HUNTER.

Westminster Angling Society. The Telegraph, Regency-street, S.W.—On Feb. 5, Mr. Eccarius weighed in roach, largest 1lb. 2oz. On Wednesday Mr. Robinson weighed in roach and Perch.—S.H.

White Hart Angling Society. The Volunteer, Chesnut-road, Tottenham.—On Feb. 5 a few members were out. Mr. Butler saving us from a blank, with a good show of roach. Will members please note we fish for three prizes on the 12th, the same not being taken on the 5th?—W. E. BEAUMONT.

Wimbledon Piscatorialists, 28, Alexandra-road, Wimbledon.—The usual fortnightly outing will take place on the 12th inst. on cluh water; usual prizes, train, and conditions.—HON. SEC.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—Having completed our arrangements for the end of the season, after having some good meetings, we intend having a prize outing to Woking (8.40 from Clapham Junction) on the 12th for three prizes, when we hope all members that can will compete.—N. LINDEN.

Toffings by the Way.

THE Fly Fishers' Club annual dinner on Wednesday evening at the Hotel Cecil was a record one. Under the chairmanship of that well known sportsman, Sir Samuel Montagu, Bart., M.P., and the vice-chairmen, W. Senior, R. B. Marston, H. F. Norris, Basil Field, and F. M. Halford, the function passed off in the most delightful manner. A good dinner, excellently served; good wines and cigars; speeches such as only anglers indulge in—full of anecdote and business. A programme of music provided by that well known angling tenor, Dalgely Henderson, was a feast for the gods. I am not a fly fisher, but I wish the Fly Fishers had two dinners a year instead of one, and that my chief would invite me, as he has done for years past.

THE honorary secretary, Mr. T. Bowater Vernon, is to be congratulated (as also are the entertainment committee) for the really admirable manner in which the whole of the arrangements for such a grand dinner had been carried out. The programme was an illustrated eight-pager. Elsewhere will be found what the dinner consisted of. The horse's doovers, as my little girl calls it, was just in my particular line (huitres)—oysters I call them. (Ask Dr. Patterson and Mr. J. W. Zaehnsdorf how many we can "arrange for" at Craig's!) I was to have dined at Cardiff on the same evening, but my doctor would not allow me to travel so far during this changeable weather. I hope they enjoyed themselves at Cardiff as much as I did at the Cecil. The motto on the first page of the F. F. programme was "By this rose maketh money—only contentment." Like Sir Samuel, I made no money—and spent none—and was more than content.

THIS arrived on Thursday afternoon, and was sent by "Ben" Abrahams: "Dear 'Dragnet,' are you going to favour us with your presence at our A.B.S. dinner to-night? Never mind your evening suit or long-sleeved hat. I know you are busy, but come and have a jolly good feed—soup, chickens, jellies, &c., &c. Come on your bike or motor, anyhow you like, but come." Thanks, "Ben" and Co., but I never go out on Thursdays; besides, did I not have a good dinner on Wednesday evening at the Cecil? Surely one good dinner a week is sufficient for any honest angler?

THAT go ahead, up-to-date corporation, the Great Eastern Railway Company, has issued a little book, entitled, "Marsh Leaves from the Norfolk Broad Land." It is written by P. H. Emerson, and, like all the other works which have come from the pen of that genial artist, sportsman, and litterateur, shows the keen observance of men and things for which Dr. Emerson is famous. It contains a series of short articles on country life and manners, and is just the book to read on the way to the "breamy Broads," or anywhere else for that matter. Its moderate price (gratis on application at Liverpool-street) places this altogether charming book within the reach of the most modest purse.

WHEN I first read this book I must confess that I was not altogether pleased at the thought of how much it will popularise the dear old Broad land, that every one who has been there loves so well. But after all, such a thought is a selfish and unworthy one, and why should we not desire to share our pleasures with others, even if we do not always give away our best swims? So I hope that the G.E.R. will reap all the benefit that their enterprising policy undoubtedly deserves, and if we find the Broads more popular and crowded year by year, as they assuredly will, we must put up with it and rejoice that others as well as ourselves can, owing to *fin de siècle* enterprise enjoy that sweet piece of "nature unadorned."

Mr. Cecil Howlett writes: "Mr. Bob Plummer, of Monkey Island, is, like his late father, a keen observer in

all matters where the interest of anglers is concerned, and he informs me that in several places he has noticed perch spawn deposited on the boughs at this early period. It is therefore to be hoped, in the interest of all, that anglers taking any of this class of fish will at once return them, and thereby help the preservation societies to carry out their desire to get a good stock of these fish in the river again. One of our greatest enemies is the dab, which has increased in large numbers during the past few years. 'Boh' succeeded in catching two of these sinners in his landing net last week, one of which he has still alive on the island."

Mr. JOHN BICKERDYKE has just completed a romance entitled "The Passing of Prince Rozan." It is to a certain extent a story of the sea, and will have some interest for yachtsmen, but the author has utilised some of the revelations in recent bankruptcy proceedings. It will be published in New York by Messrs. Putnam's Sons, and in London by Mr. Thomas Burleigh.

A BOHEMIAN Concert will be held at the home of the Gresham anglers, Masons' Tavern, Masons'-hall-court, on Tuesday evening next, Feb. 14. Mr. Gray has the programme in hand, and some first-rate talent will be provided. Ladies are specially invited. A most enjoyable evening may be looked forward to.

WELSH anglers will learn with delight that Mr. R. J. Edwards, North and South Wales Bank, Holyhead, the champion angler of the island, has been appointed on the Commission of Peace at the recommendation of the Lord Lieutenant. Mr. Edwards is to be complimented on acquiring the deserved dignity, and I feel sure "that wce betide" the Alaw salmon poachers who may appear before him.

Mr. J. T. HANCOCK writes: "On Saturday last, Feb. 4, Mr. J. Hales caught a pike at Ponders End weighing 13lb. 1½oz.; 37in. long (extreme length), girth 17in. The weight was checked by Mr. F. Homer, of Forest Gate, who is setting the fish up."

THAT interesting little monthly, "The Word on the Waters," is to hand, and from it is culled the following: "Mr. John Carstairs, skipper of the fishing boat *Providence*, writes to *The Scarborough Post*: 'For myself, and on behalf of all the Scotch fishermen frequenting the port of Scarborough, I desire to publicly thank all who have in any way contributed to the maintenance of the Seamen's Institute. This year it has been the means of keeping many from spending their hard-earned money in the public-house. The facilities given at the institute for writing, reading, &c., have brought cheer and comfort to homes in Scotland, and have kept a home influence round young and old which no one can calculate the benefit of. We desire also to thank Mr. Tinley and all those associated with him in the management of the Seamen's Institute. We feel that nothing could exceed the kindness, courtesy, and attention they have given to the strange fishermen. We desire also to thank all those who have contributed to the Saturday night entertainments.'"

"A FEW days ago," says my friend the editor of *Scraps*, "I ran across an old 'salt' who ought to be on the staff of a fishing paper instead of portering down at Billingsgate, as he now is. Judging by his profound knowledge of the habits and customs of the finny occupants of the 'deep blue sea,' I fancy the old fellow must be a modern edition of Neptune himself. He told me lots of things which made me raise my eyebrows, but which, of course, demanded that full measure of belief and faith which it is the inalienable privilege of every fisherman to expect. For instance, he assured me on his solemn oath—as a fisherman—that pollack actually use parasols to protect their delicate complexions from the hot summer sun. He didn't go so far as to say that Messrs. Cod and Haddock ran a submarine 'Swan and Edgar' establishment, but that's a mere trifling detail of no importance. The salient fact remains, and that is, that certain fish use parasols."

"I AM not going to disgrace the whole finny society of the coast, however, for it is only one branch of a very sensible and hard-working family that puts on such airs, but even among the pollack this parasol craze is merely a childhood affliction. Moreover, it's most likely only the young ladies of the tribe that affect it, and when they grow older and more sensible they drop the nonsense, and divide their attentions between food-hunting and hook-dodging. Whether they like to lie near the top in shoal water, and the heat of the sun hurts them; or whether they are infected with the passion of the seaside holiday girl, who has a penchant for waving multi-coloured sunshades, I do not profess to say; but I am told that if I use my eyes the next time I go to the seaside, on a sunny day I shall find the harbours and inlets alive with young pollack, all swimming around under the shade of the most gorgeous jellyfish umbrellas imaginable—green, yellow, pink, orange, red and purple, fringed, emroidered, and scalloped, and notched with knobbed, carved, curved silver and gold handles."

THE following shows how it is possible to make money by publishing even a first book of poems. A budding poet took this step—at his own cost, needless to say—and was agonised when good-natured friends said, "You'll be half ruined." At last, in fear and trembling, he wrote to the publisher to know the worst (which he calculated at £70). "Let me know how many of the edition have gone off," ran his humble epistle, "and what is the balance I owe

you." The publisher wrote back: "Dear Sir,—Your whole edition has gone off, leaving a balance of £25 in your favour; cheque inclosed." The poet was delighted. He rushed to the publishers to obtain particulars of the unexpected sale. "My dear sir, I think you had better not ask." "Not ask. Why not? You wrote to say the edition had all been sold; it must have been sold to somebody." "Pardon me. I wrote that it had 'gone off'; so it had, the whole of it. There was a fire in the warehouse, and the contents were insured."

THE seventh annual Yachting Exhibition at the Royal Aquarium, which is now open and will continue until March 2, is the best display yet held there. For variety of craft, excellence of appointments, and splendid launches of various types and motors it is unique. It does not interfere with the excellent entertainments, which continue throughout the day, and will next week include a clever couple of comedians—the Wedburns.

EVERYONE who knows "Truthful Tommy" is aware that so far as hair is concerned he has lost "a little hit off the top," so he tried a well-known remedy to repair damages. "I say," he remarked to his Teutonic chin scraper, "I thought you told me that 'Tatcho' was a good hair restorer! Well, those two bottles you sold me have done no good." "Soh! Zen you haf not persevere viz eem." "Now look here, sonny," was "T. T.'s" reply, "I am a bit of a sportsman, and I will just *drink* one more bottle, but it's the absolute last. You can put your money on that and win every time." As the astonished Deutscher afterwards remarked to a friend, "You couldst have knock me downs mit ein mangle!"

THE Anchor Fishing Society, of which I am president, held a competition for the largest roach on the Thames, on Feb. 5 and 6. The first prize was won by Mr. F. H. Amplett (rach 1lb. 2½oz.), Mr. Charter being second, and Mr. R. House third.

OUR Newmarket correspondent, Capt. W. Howlett, chief officer of the Newmarket Jockey Club Owners' and Trainers' Fire Brigade, whilst superintending a big blaze at Chippenham recently, was severely burned about the face and arms. I am pleased to hear, however, that he is well on the way to recovery.

SIR W. WEDDERBURN, Bart., M.P. for Banffshire, has been kind enough to send his pamphlet on "North Sea Fisheries." This is a reprint of the paper read by the hon. member before the Moray Firth Fisheries Association at Buckie. It contains an account of his tour of inspection, and is full of much valuable information, which will be of the greatest interest to those who have a proper respect and regard for the North Sea as a source of our food supply, and regret its depletion by the suicidal policy which is now adopted with regard to it.

"ON Feb 9 (writes Mr. Howes, of the Bull Hotel, Barton Mills), I went jack fishing on the Lark, and caught six; largest only 6lb. Roach and dace are well on the feed in the deep waters. Gentles are the most killing just now."

A NEW monthly, commencing March 1 next, and conducted by Edward Oates, entitled "The British Journal of Health and Recreation," will be published at 27, Ivy-lane, Paternoster-row, E.C. Price fourpence. In presenting the prospectus of this new journal, the publishers are "firmly convinced that they are about to supply a long-felt want on the part of not only that section of the community who possess the necessary means for a summer or autumn sojourn by the 'silver sea,' or amid mountain and lake, but are hopeful of meeting the requirements of invalids, the man 'out of sorts,' the pent up tradesman, and denizens of our hazy towns and crowded cities. In short, to place the most reliable information at a cost and within a compass nowhere else obtainable."

'Tis the voice of the angler, I heard him complain,
"Well I'm—hanged if it's not started raining again";
As the door on its hinges so he on his bed
Has another turn over, and wakes up again—
Too late to go anywhere.

[And a good job *three*, considering the state of the weather when this was written.]

"IN the recently issued 'Transactions of the Zoological Society of London,'" says the *Echo*, "appears a report by Mr. Boulenger on the fishes collected by Mr. J. E. S. Moore, the leader of the expedition, from Lake Tanganyika. According to Mr. Moore, there are two faunas in the lake, one a normal fresh-water one, and another evidently of a marine origin. This was proved by the study of the splendid collection of molluscs which he obtained. But the same fact is not brought out from the study of the fish, which, although very novel and very remarkable, do not include any marine fishes; this may be due to the incompleteness of the collection. The finny inhabitants of many of the African lakes are apparently practically wholly unknown—from the great Albert Nyanza, for instance, only one species of fish has yet been brought."

THEY had been "Dunripping" not altogether wisely; the host was unable for *reasons* to see his guest out, and after expressing his sorrow, added "When you get to the front door, Jock, ye'll see twa cabs; tak' the first yin, the second yin's no' there." DRAGNET.

DAVID SLATER

S. Fario, Fontinalis, and Rainbow Trout.

WANSFORD, NORTHANTS.

TO THE DEAF.

DR. NICHOLSON'S Patented Artificial Ear Drums have stood the test of 20 years, curing 1,000,000 persons, and are still acknowledged to be the only real cure for Deafness, Noises in the Head, and other Aural Troubles. Doctors say these Ear Drums have done more for humanity than any other medical invention. A Descriptive Book in any language sent free by J. H. NICHOLSON, 17, Bury-street, London, W.C.

PISCATORIAL SOCIETY.

THINGS were exceptionally quiet at Monday's meeting of this society, at least as far as angling was concerned. Three of the members, Messrs. Frank Ward, C. H. Bywaters, and H. Harden, had been to Ringwood for the opening of the salmon fishing there, and had been on the water two days. On the first day there were altogether fourteen rods out, and the catch was nine kelt's. On the second day the same number of gentlemen fished, but the result was an absolute blank, not even an unclean fish being caught. The three Piscatorials returned home disappointed with their fishing, but having otherwise spent a very jolly couple of days on the Avon. Mr. A. R. Matthews had taken some fair roach on the Thames, and Mr. H. A. Rolt roach from the Colne, the heaviest weighing 1lb. 3oz. The committee met on Monday evening to draw up the regulations for fishing the Uxbridge water, and it is confidently expected that at the smoking concert to be held in the Piscatorial saloon on Monday, the 20th inst., the date when members may fish the new acquisition will be announced. Next Monday there is a treat in store for members and friends, inasmuch as Mr. Horace H. Brown will descend upon "The Birds of the Kennet Valley." The paper is sure to be interesting and instructive. M. G. E. DE C.

GRESHAM ANGLING SOCIETY.

MR. C. S. BENTLEY occupied the chair at the usual weekly meeting on Feb. 7. Mr. Hesse brought a matter before the society which was satisfactorily dealt with. Mr. A. W. Parker reported fishing at Deal in anything but pleasant weather, securing few fish. Messrs. Emery and Scott pike fishing, but all fish ran small; Mr. Scott one, 8lb. Messrs. Marshall and Emery had a most enjoyable outing in the Lea Valley, and somewhat surprised our members by the description of the animal life met with so close to the smoke of London. Several fish were secured, largest 7lb. Mr. Short, at our waters at Kelvedon, sixteen roach over 1lb. each. Several gentlemen gave their experiences spinning, live-baiting, floods, frosts, and blanks, the last rather prominent catches. Mr. Emery had the honour of showing the first trout and salmon of the season. A gentleman was proposed as a member. A Bohemian concert will be held on Tuesday next, a fine programme has been arranged, and is in the hands of Mr. Gray. Ladies and visitors are specially invited. The usual toast and vote of thanks to the chairman concluded the meeting.

BRITISH SEA ANGLERS' SOCIETY.

The usual weekly meeting was held on Wednesday evening, Feb. 8, at the Cannon-street Hotel, J. Wrench Towse, Esq., in the chair. The usual fishing reports were given, and the hon. sec. announced that, despite all reports to the contrary, the S.E.R. and L.C.D.R. tickets for members were available by either route on the return journey.

It was further announced that papers by Messrs. Minchin ("Lobsters, Crabs, and Shrimps") and Matthews ("Rambles of a Sea Angler") would be given at early dates.

In the report of the lecture on "Hooks" by Mr. F. E. Eldred last Wednesday, Messrs. Bartleet and Sons' names were omitted from the list of those gentlemen who so kindly lent specimens to illustrate his paper.

The hon. sec. then read his paper on "Flat Fish."

The usual votes of thanks to Dr. Patterson for his paper, and to the chairman, closed the meeting.

C. S. PATTERSON (Hon. Sec.).

The following is a brief abstract of Dr. Patterson's able paper from notes taken by Mr. Eldred during its delivery:

The lecturer commenced his paper by saying that all flat fish fell into one or other of these two classes, viz., those with equal-sided jaws and those with unequal-sided jaws. He pointed out by means of fresh and preserved specimens their structural differences, the reasons for, and how these differences were brought about, and the points of agreement in common to both classes.

He next showed that, as developed from the egg, flat fish, in common with other fish, swam in an upright position; but that while fish like the haddock, herring, cod, pollack, &c., developed their fins proper, the family of flat fishes had theirs developed to so small an extent as to become almost useless. Their back and belly fins, however, became very large, but by reason of the non-development of the breast fins the flat fish lost its balancing power, and thus instead of swimming in a vertical it gradually assumed a horizontal position.

With this altered change in its position he next showed that one of its eyes was thus rendered almost useless, and, as Nature never makes a thing without giving it its proper use, it was shown that of necessity the eye must come to the upper side.

He next took his audience through the various changes in the development of the fish's head, and the effect upon their jaws consequent on this movement of the eye to the upper side, and he pointed out the differences which exist in various fishes of this class.

The colour of the fish was now taken in hand, and the lecturer showed in a very skilful and able manner that this colour was directly due to the altered position of the eye.

He gave at some length the experiments Professor Agassiz performed to prove this. Fish when young were placed in a glass vessel lighted from below as well as from above. As development proceeded the under part became pale, the upper part darker in colour. They were now blinded, and as a result the colour development ceased.

The lecturer here exhibited a specimen which was

piebald in colour, and which on examination proved to be partially blind in one eye.

Equal-jawed fishes were, he said, right-sided and left-sided, the chief representative of the former class was the halibut.

This fish, he pointed out, sometimes attained a weight of 100lb. This, he showed, was the most fish-like of all the flat fish family. Its chief characteristics, habitat, food, and method of capture were pointed out, and its respective proclivities enlarged upon.

Small specimens were sometimes taken on the rod of the sea angler, but rarely fish of any size. Specimens of this class of fish were recorded at Billingsgate in 1897 of 25lb. and 22lb., but weights exceeding 300lb. must be looked upon as more or less apocryphal.

Of left-sided fishes the most valuable example was, he said, the turbot. The habits, names by which known in various parts of the country, description, and localities in which found, were all fully given, and a rough and sure test for the buyer of this fish was given, so that one might have turbot instead of brill at turbot price.

The brill, he said, had a row of cockatoo-like spines extending a short distance from, and commencing at, its head; the spines of the turbot going much further along its back, and lying closer to its skin.

The turbot, the lecturer said, rarely exceeds 12lb. in weight, 4lb. to 8lb. being more common. Turbot were rarely caught by the amateur fisherman, though it takes the hook readily. It is a deep sea feeder.

He incidentally described it as the peasant of the sea on account of its "keeping" qualities, some even preferring it "high."

There was, he said, much confusion in the classification of unequal-jawed fishes, owing to differences of environment. He gave the flounder as a typical example of this class, and showed that it lives and flourishes in both fresh, salt, and brackish water, being found as far north as Norway, and as far south as the south of France, living in water varying from ten to 730 fathoms.

He pointed out the chief differences between the flounder and sole, the flounder having a larger mouth and jaws, snout not protruding, back fin just above the eye teeth present, eyes prominent; those of the sole being deeply placed, and its mouth placed farther back. He next pointed out the unreliability of the spot test for distinguishing the flounder from the plaice, the flounder having being taken at Leigh both spotted and unspotted.

A reliable test was to count the anal fins. In the flounder the rays were less than forty-six, in the plaice more. Both have less than eighty-five rays in the back fin.

The life-history, habitat, food, &c., of the flounder, plaice, and sole were fully gone into, and much useful information given on all these points. The lecturer warned his listeners that flat fish, if for the table, should be cleaned immediately upon being caught. Being gross feeders, chemical changes took place very rapidly in the food undergoing, or about to undergo, digestion, and these changes were soon manifest in the flesh of the fish.

The dab, lemon sole, and many more examples came under the lecturer's notice, and all were treated in a thoroughly scientific and workmanlike manner.

The paper throughout was capitally illustrated by diagrams, tables, specimens, &c., and was delivered in the usual masterly style which is so familiar to those who have the privilege and good fortune to hear the doctor's lectures. F. E. ELDRÉD.

KINGSTON PISCATORIAL SOCIETY.

THE members of this society, at a meeting held on Monday (Councillor T. Lyne presiding), decided to hold a competition for jack on Feb. 19 and 20, for chub on Feb. 26 and 27, and for roach on March 5 and 6. The latter prize has been given by Dr. Broomfield Bateman, and the club has added a second prize of 10s. 6d. The annual dinner will be held on March 20, and prior to the next meeting (Feb. 20) a committee meeting is to be held at 7.30 to finish the discussion re the dinner. The ordinary meeting will be held at 8 p.m. At Monday's meeting the following gentlemen were elected as members: Mr. R. O. Atcherley, St. Margaret's; Mr. Evans, of Kingston; and Mr. George Firth, of Kingston.

READING AND DISTRICT ANGLING ASSOCIATION.

THE annual meeting and dinner of this association were held on Monday at the headquarters, the Great Western Hotel, Reading, the president, Mr. Jas. Simonds, occupying the chair at both gatherings. At the annual meeting the following officers were elected: President, Mr. James Simonds; hon. treasurer, Mr. Charles Stephens; vice-presidents, Messrs. J. Herbert Benyon, A. C. Butler, H. Creed, C. H. Cook, W. Ferguson, A. Hurley, R. B. Marston, G. W. Palmer, M.P., W. W. Ridley, and W. Senior; auditors, Messrs. H. Creed and W. Ferguson; committee, Messrs. W. Bonny, A. H. Bull, W. Collins, M. Cundell, W. G. Flanagan, W. Hickie, G. Higgs, J. W. Lindars, T. Mackrill, W. G. Millar, W. Moore, A. McNeil, E. H. Simmons, W. J. Stapley, and H. W. Verey, with Mr. C. H. Cook and Dr. Jeston as representing the Henley-on-Thames Association, and Messrs. R. Nicholson and H. W. Russell the Maidenhead, Cookham, and Bray Association; and Mr. F. Brown, hon. secretary. The following is an extract from the annual report of the committee: "This the twenty-second annual report of the committee to the subscribers to the Reading and District Fisheries Protection Association is brief, and consequently of less interest, than most of its predecessors. The object of the association is the improvement of angling

in the Thames between Goring and Shiplake, by the prevention of illegal practices, by additions to the stock of fish in the river from other sources, by the recovery of 'stray' fish from ditches and backwaters, &c. Years ago the first branch of the work was arduous, the objects of the association being misapprehended by the general public; but for a long time a better feeling has prevailed, and prosecutions consequently have been rare. Indeed, the numerous angling clubs which have sprung up in the district are proof at once of the success of the association in improving the fishing, and of that confidence in the aims of the committee which practically renders legal proceedings a thing of the past. Nevertheless, a strict watch is kept over the whole district, not only by the bailiffs, but also by several members of the association who act as honorary river keepers. Unusual difficulty has been experienced in procuring stock fish, but among the items to be recorded in this connection are the placing in the upper reaches of the district in March of a consignment of Wycombe trout ('spawners') running from 12in. to 15in. in length, and the distribution at suitable spots in the district of 4000 cray fish, the generous gift of Mr. Henry Lewis. Between three and four dozen good carp bream were kindly given by Mr. Frederick Groves, from a private water. Important results have attended the onerous work of netting backwaters, ditches, &c., the record showing that by this means there were restored to the Thames no less than 1½ cwt. of barbel (sixteen of them weighing over 5lb. each), ten trout between 2lb. and 1½lb. each, and about 100 ditto up to 8in., about 2000 small perch, averaging 4in. to 5in., many good roach and chub, some 3cwt. of fry of various kinds, and a basket of cray fish. Netting operations after the late floods are not included in this statement. A gentleman resident in the upper portion of the river has during the season turned in at his own charge seven dozen large Wycombe trout. Your committee are confidently expecting, shortly, a nice lot of fair sized Kennet perch and roach. A reward has lately been paid for the destruction of an otter. A pup, found alive near the otter, which was shot, has been sent to the Zoological Society's gardens." The annual dinner was, as usual, a very pleasant gathering. The president was in the chair, and Mr. W. W. Ridley, V.P., vice-chairman, and nearly thirty gentlemen sat down. The toasts were: "The Queen, and Other Members of the Royal Family"; "The Mayor and Corporation of Reading," proposed by Mr. H. Creed, and responded to by the Mayor (Mr. W. G. Wellman); "The Reading and District Angling Association and Kindred Associations," given by the president and acknowledged by Mr. A. C. Butler, V.P.; "The Visitors," proposed by Mr. W. Ferguson, and replied to by Mr. W. Bowman; "The President," submitted by Mr. Ridley; and "The Vice-chairman," proposed by Mr. Bull. Mr. A. Beeson very kindly arranged an excellent musical programme, and also contributed one of his admirable ventriloquial sketches.

DARLINGTON ANGLERS' CLUB.

THE annual general meeting was held on Tuesday evening last at the King's Head Hotel, when the balance-sheet for the past year was confirmed, showing a balance in bank of £24 5s. 9d., an increase of £6 3s. 7d. over 1897. There was a full muster of members present, and the election of officers for the current year took place, when the following gentlemen were chosen, most of them being re-elected: President, H. Gawan Taylor; vice-presidents, Dr. Fothergill, E. M. Turner, H. Robinson, and J. Henderson; committee, J. Coverdale, C. J. Coleby, J. McDermid, A. Lascelles, F. Spreckly, T. Hutchinson, J. Adams, and R. V. Stewart; hon. treasurer, W. G. Chilton; hon. secretary, J. F. Smythe; assistant secretary, P. Hutchinson; auditors, M. Hornby and H. Marshall. Then followed a discussion on the fishing rented on the river Tees, and fresh water rented on the river Skerne, and the means to be adopted to improve the same by putting in yearling trout.

Arrangements for the annual dinner were entered into, and fixed for Feb. 16 at the King's Head Hotel, when a number of influential gentlemen have promised to attend. The satisfactory statement of accounts show the amount of interest the executive have taken in the welfare of the club generally. A vote of thanks was passed to the chairman, H. Gawan Taylor, Esq., and the secretaries. J. F. SMYTHE.

TEES FISHERY BOARD.

THE annual meeting of the Tees Fishery Board was held on Friday, Feb. 3, at Darlington. Canon Tristram moved that the Right Hon. Jas. Lowther, M.P., be re-elected chairman. The resolution was carried. The Finance and Watch Committee was re-elected, with some additions necessitated by the deaths of members. The Finance and Watch Committee presented an abstract of the receipts and expenditure for the year 1898. It showed the receipts to be £656 8s. 6d. Of this, all but between £16 and £17 was revenue from the sale of licenses, and these latter embraced 1,558 trout licenses at 2s. 6d. The abstract of assets and liabilities showed that £1820 19s. 9d. was due to the treasurer, a gain on the year of about £80. The report of the Finance and Watch Committee stated, regarding the pollution of the Tees at Newport, that a letter had been received from Sir B. Samuelson and Co., saying they had found out the cause of the pollution, and were taking steps to abate it. In the question of the Stockton and Middlesbrough Water Board's application to Parliament, it was reported that satisfactory terms were in process of arrangement on behalf of the board. A joint report was presented to the committee by the chairman (Canon Tristram) and the secretary, stating that

they had visited Stillington Beck, and found that a very serious nuisance was being caused by discharges from the Stillington Ironworks into the Tees. It was ordered that the attention of the company be called to the nuisance, and that they be informed that, unless steps were taken to prevent a recurrence, proceedings would be taken against them, and the chairman was authorised to take such proceedings, if necessary. The report was adopted. According to notice of motion, Col. Wilson moved the following resolutions:—"For each and every single rod and line, per day, 2s. 6d.; for each and every single rod and line, per week, 10s.; also, that the existing scale of duty on trout licences be amended by adding thereto the following: For two house season tickets to be issued only to a resident riparian owner or resident fishery lessee or the use of any two of his guests, and available only for the water over which such riparian owner or lessee has fishery rights—provided that not more than two such house tickets be issued to any individual riparian owner or lessee—for the whole season, £1." The first was seconded by Mr. Bainbridge, and carried. The second, after some debate, was withdrawn. The third, after discussion, was amended to read "resident" riparian owner or "resident" fishery lessee, "guests" instead of "friends temporarily residing with him," and the above addendum in dashes inserted, and passed.

"THE GLORIOUS ATBARA."

SUCH was the late Sir Samuel Baker's remark on seeing the great river in full flood so far back as 1861.

Now that civilization has penetrated to the heart of the Sudan, and the organization of tourist trips to Khartoum are promised in the near future, it is worth while to consider the sport to be found in that region. Not only are there lions, elephants, giraffes, hippopotami, rhinoceri, crocodiles, and the various kind of deer, but the Atbara and its tributaries contain game fish of enormous size and unknown genus, and here the angler, while fishing practically virgin streams, is sure of glorious sport.

It is probable that Sir Samuel Baker is the only English sportsman who has fished the Atbara, when on his great hunting expedition; his outfit, of course, including a good supply of tackle. Fastening his winch to a stout bamboo rod, with 200yds. of line, and a treble set of hooks, he set to work. A natural hole or well in the rock near the water's edge was converted into an aquarium for live bait from half a pound upwards. From this Sir Samuel selected his fish, and dropping it into the river had an almost immediate run. Preliminary results were somewhat disappointing; after a broken line he succeeded in hooking a fish of only 12lb. in weight, of a species known by the Arabs as the "bayard"; it has a blackish green

back, with bright silver belly and sides, and very peculiar back fins. Four long barbules hang from the upper jaw, and two from the lower, while its flesh is excellent. His first big catch (not without further loss of tackle) had better be told in his own words:

"I once more had a grand rush and hooked a big one. There were no rocks down stream, all was fair play and clear water, and away he went at racing pace straight for the middle of the river. To check the pace I grasped the line with the stuff of my loose trousers, and pressed it between my fingers to act as a brake, and compel him to labour for every yard; but he pulled like a horse, and nearly cut through the thick cotton cloth, making straight running for at least 100yds. without a halt. I now put so severe a strain upon him that my strong bamboo bent nearly double, and the fish presently so far yielded to the pressure that I could enforce his running in half circles instead of straight away. I kept gaining line, until I at length had him in a shallow bay, and after a great fight, Bacheet (his servant) tugged to the shore a magnificent fish of upwards of 60lb."

This fish measured 3ft. 8in. to the root of the tail, and 2ft. 3in. in girth of shoulders, while the head was 1ft. 10in. in circumference. Four days later he again took a rod, and fixing a fish of 1lb. weight on a large single hook had splendid sport. This capture took 100yds. of line

MANCHESTER BRANCH: 12 to 14, MOULT STREET; EDINBURGH BRANCH: 5, SOUTH ST. DAVID STREET.

out of the sportsman's hands before he was challenged, and to this he gave a splendid reply; several times he leapt from 5ft. or 6ft. above the water and made tremendous play, shaking his head furiously, darting hither and thither with 80yds. or 100yds. of fresh line, he was at last compelled to yield and a fifty-pounder came to bank. This fish, which is called by the natives "el baggar" (the cow), resembled a salmon in colour, the back was like that of a perch, with seven rays; the second dorsal fin had fourteen rays; the head was well shaped, and small in proportion; the eyes were bright red, and shone like rubies, and the teeth were very small.

Later, this keen sportsman landed a fifty-pounder known by the Arabs as the "coor"; not so edible as his previous captures, but a determined opponent when hooked, while his next excursion resulted in the capture of two splendid fish of 40lb. and 80lb. respectively. He thus describes his fight with the heaviest one:

This was a magnificent fish, and his strength was so great, that in his violent rushes he would take 60yds. or 70yds. of line without my permission. I could not check him, as the line burnt and cut my fingers to such a degree that I was forced to let it go, and my only way of working him was to project the butt of the rod in the usual manner; this was a very feeble break in the rush of such a fish. At last, after about half an hour of alternately bullying and coaxing I got him into the shallows."

Here after much struggling two of his servants succeeded in bringing to shore an enormous "baggar" of 80lb. weight. A 20-pounder caught subsequently he naturally despised.

Our author relates many other stirring fishing ventures, but we have quoted enough to show even to those who have fished the Volga for sturgeon of well nigh fabulous size, or taken the giant tarpon in the rivers of Florida, there remains yet this river, whose inhabitants may yield up their lives to the angler amid surroundings less wild but scarcely less fascinating than those enjoyed by this pioneer of all-round sport.—*County Gentleman.*

Notes from the North.

THE prospects for the opening of the salmon angling season on the Dee, Don, Deveron, Nees, and bulk of Scotch waters are not of the brightest, unless a favourable turn in the weather takes place soon. The streams are literally frozen up up country, and at the best the rivers will be crowded with ice.

There are few fish in the lower pools of the Dee, but the middle and upper waters should fish well with fresh weather. A splendid run of early spring salmon was noted running the Dee early in January, and these have lately been seen in the Kincardine O'Neil, Aboyne, and Ballater waters. There is a certainty of sport at Braemar by the end of the month at latest.

Sir John Gladstone, Bart., of Fasque, has the first two months of the Wooden and Commonly waters, in addition to the Upper Blackhall section, which he has now so successfully fished during the last two years. If Sir John did not make the record score on the opening months he was very near it. If I mistake not, he had some 200 fish to his own rod last spring.

Very few spring fish have been seen on the east coast since the advent of the new year till lately, when they again began to put in an appearance. The watchers know by the leaping and splashing when the fish are about, and it was only the other night that the welcome sounds were again heard, particularly on the Nigg and stations south of Aberdeen. Since then the signs have been steadily on the increase.

The fry in the Drum hatchery are beginning to hatch out, and the first hatchings were observed just ninety days after the ova were deposited in the boxes. The temperature has been kept at an average of 45 degrees, and this and the fine open winter generally accounts for the early hatching—some five days in advance of the normal time.

The Drum hatchery can accommodate some million and a quarter eggs on the grills and boxes; but Mr. Duncan, salmon fishery inspector, has found from experience that it is better in the end to have the boxes and grills sparsely filled than overstocked, and so he has for one or two years limited himself to a million eggs instead of the full complement, and his hatchings out have been attended with less loss than when overcrowded.

A spell of hard weather just now will be very fatal to the young fry just leaving the eggs, i.e. after their kind; but fortunately the bulk of the natural deposits will not be ripe yet for some considerable time. It is the spell of hard spring frosts we had four years ago which is chiefly blamed for the scarcity of young salmon now being experienced.

A good few heavy fish are being got on Loch Tay. On the Lochay water, on Friday last, Mr. Russell, Paisley, killed a fine fish of 24lb. Mr. Geen, the famous spinner, is also having fairly good sport on the Lyon.

At a largely attended meeting of the inhabitants of Fort William, Inverness under the presidency of Provost Young, the scheme of the Highland Water Power was highly approved of as likely to bring grist to the highland's mill,

in the shape of opening up a new field of labour. The chairman said the taking of water from Loch Erricht would not effect the supply of water to the Tay. More than a bucketful from Loch Ness would affect the Ness.

"The season opens on the Don," says my Kintore correspondent, "on the 11th inst., and already rods and tackle are being overhauled for the occasion. Those who know predict a very successful season." It is earnestly to be hoped so. The Burgh Kintore water may be fished for 1s. 6d. a day or 3s. 6d. per week for salmon, trout, and snipe, when they can be got.

There comes to me as I write excellent accounts of the prospects on the Ness and Loch Ness, where there has been an early and prolific run of salmon. Anglers residing in any of the numerous hotels on the loch side, may have free fishing there.

The Garry is one of the best early Scotch salmon rivers for large fish in the very early months.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

A fully attended meeting of the committee of the Birmingham Angling Association was held at the headquarters on the 2nd inst. Mr. T. Coles presided, and Mr. J. A. Dance occupied the vice-chair. In opening the meeting the president complimented the members upon their election to office, and said he hoped the same unity would exist during the present year as in the past. The minutes of the committee meeting, held Jan. 5, were read and adopted. A letter was read by the secretary, in which the Princess of Wales Club again applied for affiliation. The application was referred to the Visiting Committee. Mr. C. White, the general secretary, brought before the notice of the meeting the advisability of the members of the committee having special credential cards signed by himself and the president, the idea of this being that the ticket can be shown any time as an authority to railway officials, landowners, and others, when occasions may require. The suggestion was unanimously adopted. The Queen's Head and West Bromwich clubs were each fined 5s. for not sending representatives to three consecutive meetings of the association. Messrs. Rabone, Hughes, Holding, Bagley, Foster, and Gumbley were appointed on the visiting committee. A question was raised by a member of the Good Intent Society re an arbitration committee being appointed, but the matter was referred to the next committee meeting for future consideration. The question of the advisability of the association renting private water on the Avon, in the Defford district, will also be considered at the next committee meeting. The date of the association annual dinner was fixed for March 11 next, the arrangements for which were left in the sub-committee's hands. A committee meeting of the Provincial Angling Association was held at the Drawbridge Hotel, Bristol, on Saturday last, Feb. 4. Mr. T. Coles, of Birmingham, presided; and Mr. R. Wingfield, of Worcester, and Mr. R. D. Frost, of Bristol, occupied the vice-chairs. All members were present. The minutes of the railway sub-committee meeting, held on Nov. 12 last, were read, when they were adopted; the minute relating to the wives of members enjoying the privilege of travelling at the reduced fare was ordered to be continued. The secretary was instructed to forward cheque to Mr. E. Moore, solicitor, in payment for defending certain prosecutions instituted by the Severn Fishery Board and others for fishing the Severn for coarse fish without a trout licence. The expulsion of a member of the Bristol Association for lending his travelling card for an indefinite period was approved of. A member of the Kidderminster Association was also expelled for making false statements against the leading officers of that association. The balance sheet and auditors' report for the year ending Dec. 31 last was in every way satisfactory, the amount laying in the bank to the credit of the association, after all liabilities had been paid, amounted to £97 7s. 2d.; to this sum is to be added the entrance fees of four new branches, bringing up the total to £101 11s. 2d. The balance sheet and auditors' report was received and adopted. The auditors' fees were raised to 10s. per audit, owing to great increase of members, which now amounted to 9000. Messrs. Coles, White, Dance, and Miller were again elected on the sub-committee. Messrs. Coles and Wingfield gave in their report of the last meeting of the Severn Fishery Board, and spoke upon certain proposed new bye-laws, which the committee decided to prevent coming law. With this in view, it was resolved to send Messrs. Coles, Sadler, and Wingfield as a deputation to the Board of Trade, if necessity arises, to oppose the proposed bye-laws being made absolute. The committee tendered their thanks to Messrs. Coles and Wingfield for their services. It was resolved to present the proposed testimonial to Mr. T. Coles on the occasion of the next committee meeting at Kidderminster, the presentation to be made by Mr. R. Wingfield, of Worcester. Four new clubs were accepted. A vote of thanks to the Bristol Association for the manner in which the committee had been entertained, and also to the president for conducting the meeting were passed, after which the meeting came to a close. Netting operations are going on largely in the Stourport district, all fish being taken that come to the net. The water bailiff has been dismissed by the Severn Fishery Board for this part of the river. On Sunday, Jan. 29 last, the netters brought to the bank the body of a young woman from the river below Limcomb Weir.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

In some parts of the Fen district there was a tremendous downpour of rain on Tuesday and Wednesday, and as the rivers have since been in a state of flood, angling arrangements have been again upset. Specially was this the case on the Forty-foot, where, prior to the rainfall, subscribers had been getting capital sport amongst pike. On Saturday two rods accounted for four and a half brace of fish, weighing in the aggregate 34½lb. The same two sportsmen on Monday secured five brace, averaging about 3½lb. each, the best going up to 7½lb. Roach fishermen have been most successful on the Witham, and at most of the river-side stations between Lincoln and Boston quite a number of rods were at work during the fine weather. The drains in the Boston district have been principally fished for roach, and so has the Glen at Surfleet. In some cases the bags have weighed up to 13lb. and 14lb. per rod. On the Welland, in the Deeping district, sportsmen have mostly been in quest of pike.

FROM HULL AND DISTRICT.

Several good catches of roach were shown at the different anglers' rendezvous in the city during the early part of last week from the top stretches of the river Hull, many of the fish scaling from ½lb. to over 1lb. each; and amongst others Mr. A. Marshall, of the Victoria Angling Society, had one of 1lb. 3oz., also a dace of 8½oz.; and Mr. A. Finlay, of the Sheffield Arms A.S., a roach of 1lb. 3½oz.; but since Wednesday the weather has been so wintry in this district that little has been done in this class of angling, and worm fishing for flounders in the lower portion of the river received a certain check; but at the time of writing the weather is much milder, so there is a better prospect of sport. Pike fishing has been pursued with a fair amount of success, both on the Market Weighton canal and the river Ancholme, and odd fish have been met with in the upper water of the river Hull; but the best fish reported so far this year is one of about 15lb., caught one day last week by Mr. W. Learie, of the Zoological Hotel, in the river near to Swing Bridge; a friend of his, Mr. J. Thorpe, taking one on the same day of about 4lb. weight. The committee appointed by the Hull Amalgamated Anglers' Association to net the Stoneferry Reservoir and transfer the fish to the river Hull, have decided, weather permitting, to commence operations to-day (Saturday). The anglers' privilege tickets in connection with the Hull Amalgamation are now being issued, and members can have them on application to the financial secretary, Mr. C. H. Haddenby, at the headquarters, the Queen's Hotel. On March 11, both the Bowling Green and the Brunswick Angling Societies will open their season at Weelferry, on the river Hull. At the February council meeting of the Hull Amalgamation several applications from the affiliated clubs to fish their matches on the Holderness drains were granted, and the Central Hull Angling Society was affiliated to the association. On Feb. 17 the East Hull Brass Band A.S. held their annual *soirée* and ball; and, on the 24th, the Bowling Green A.S. have their annual dinner at headquarters. Another new angling society is being formed in the city, at the White Swan Hotel, in Wincolme; Mr. J. Simmonds is the secretary *pro tem.* On Tuesday last (Jan. 31), under the joint auspices of the Hull and Grimsby Fishing Vessel Owners' Association, a representative conference was held at the Hull Town Hall, the Right Hon. Lord Heneage presiding, being supported by a large and influential gathering of gentlemen connected with the fishing industry of Hull, Grimsby, Aberdeen, North Shields, Boston, Sunderland, and Scarborough, when resolutions were passed relative to the alteration of the rule of the road at sea, and the much vexed question of closing the waters of the Moray Firth to British trawlers. Those attending the conference afterwards dined together at the Imperial Hotel, Mr. Charles Hillyer, of Hull, presiding. On Monday evening a most enthusiastic and large gathering of anglers assembled at the Central Hall, in Pryme-street, to celebrate the annual *soirée* and ball of the Hull Angling and Preservation Society. The room was tastefully decorated with anglers' paraphernalia, and not the least attraction of the evening was a grand display of cases of specimen fish, lent for the occasion by angling clubs in the city. The affair will no doubt again assist to augment the funds of this useful society.

FROM THE LAKE DISTRICT.

With the approach of the open season anglers, and others interested in fish and fishing, are preparing for the advent. There is the usual putting together and testing of rods, fly books and tackle are being overhauled, and there is, with some at any rate, a general spirit of putting the house in order. Amongst the last named class it is to be hoped the Derwent Fishery Board may soon be found. The board's finances, and also its reputation, are not in an enviable condition, and a vigorous effort should be made to improve both. This can best be done by a return to a broader policy, instead of the present prohibitive system of issuing licences. The doubling of the price of tickets has told upon the funds of the board, many anglers being unable or unwilling to pay 10s. for that which formerly cost them only five; others again have refrained from taking out a licence as a protest against the Board's action. The result is that a limited income has placed the board in difficulties, and unsavoury repute among a certain class, a class, too, that they will do unwisely to further ignore. There are also other matters—notably the supply and protection of fish—that should receive careful consideration. The brief spell of beautiful wintry weather enjoyed during the past fortnight seems to have come to an end, judging from appearances at the time of writing, but we know the danger of prophesying and shall refrain. Suffice it that heavy showers on Tuesday and Wednesday have had the effect of clearing away the ice and snow.

ANGLERS' HOTELS, FISHING QUARTERS, &c.

ROSSES WHITE AND BROWN TROUT FISHERY.

Croly and Loughanure Salmon Fishery. HAVING obtained a lease of above excellent SALMON FISHERY, and the sole rights of fishing, anglers can now fish the Croly and Loughanure. Splendid salmon and sea trout fishing can be had on the Croly and Owenat rivers as well as on Loughanure lake, three miles in length, and three miles from Dungloe. There are over 100 lakes in the Rosses Fishery alone, with about twenty boats and first class gillies. Sea trout run to 6lb. and brown trout to 4lb. Large numbers of Loch Leven and Rainbow trout turned out of hatchery every season. Dungloe, in the Highlands of Donegal, is centre of fishery, ten miles from Fintown railway station (Donegal Railway Company). Best fishing lakes within easy reach of the three hotels in Dungloe, where excellent accommodation can be had. Travellers can leave London at 8.30 p.m. and reach Dungloe at three o'clock next day. Mail and day car to and from Fintown station. Good sea fishing, rock pigeon and seal shooting. Telegraph office, bank, post office, &c. Fishing terms: Rosses Fishery, April 1 to June 30, 2s. 6d. daily; 12s. 6d. weekly; 30s. monthly. July 1 to Oct. 31, 3s. 6d. daily; 16s. weekly; 40s. monthly. Croly and Loughanure, March 1 to Oct. 31, 5s. daily; 20s. weekly; 50s. monthly; and 5s. per day man and boat, which holds two anglers. All information can be had from

S. HANLON, C.P.S.,
Manager and Salmon Licences Distributor.

HANLON'S PRIVATE HOTEL, DUNGLOE, CO. DONEGAL.

S. HANLON,
Manager of Rosses Fishery.

SHANNON & LOUGH DERG, KILLALOE, IRELAND.

MOST reliable information as to Salmon, Grise, and Trout Fishing in free and preserved waters, river, and lake, at this station: also as to accommodation and board in private cottage close to river. Expenses, shortest route from England and Scotland, on application to S. J. HURLEY, Killaloe, Co. Clare, Ireland. N.B.—The Green Drake season on lake commences about last week in May, when the big trout are about in thousands.

FORTINGALL HOTEL, GLENLYON, PERTHSHIRE.

8½ miles from Aberfeldy Railway Station and 2½ miles from Fearnan Pier, Loch Tay. This new First-class Hotel is beautifully situated near the "Famous Pass of Glenlyon, with Mineral Well." Good spring salmon fishing on the River Lyon opens Jan. 15. Trout fishing free. Posting. Post and Telegraph Office two minutes' walk.

PAUL MACPHAIL, Proprietor.

ROSAPENNA HOTEL, CARRIGART (Co. DONEGAL).

THIS Hotel, built in 1892 by the late Earl of Leitrim, is situated on the Rossall Peninsula, midway between Shapaven and Mulroy Bay. Tourists and Anglers will find superior accommodation at the above Hotel. It contains over sixty bedrooms, spacious billiard, drawing, and public rooms. Salmon fishing in the famous Glen Lough, Oweacarrow and Lackagh Rivers, is free to Hotel visitors from Feb. 15 to end of July. Salmon licences can be had at the Hotel. Free access to numerous lakes and rivers on the estate for white and brown trout fishing. No charge for boats. Excellent sea bathing. Golf links, eighteen holes in a circuit of 3½ miles, encircle the Hotel. For terms and further information apply to the Manager.

LAKE VYRNWY.

Splendid trout fishing in the lake and rivers; fish average 3½ lb., and give grand sport. Easy of access. Every comfort and luxury provided in the Hotel. Good boats and steady boatmen. Splendid cycle track (twelve miles). Bracing climate, and magnificent scenery. Season begins on March 1. First-class Grouse Moors and Rough Shootings to Let. Railway station, Llanfyllin.

Post and Telegraph Address: "LAKE VYRNWY HOTEL, OSWESTRY."

MOORSIDE FISHERY, WARDLE, near ROCHDALE, LANCASHIRE. TROUT FOR STOCKING.

Ova, Fry, Yearlings and Two-year-olds, Fario, Levenensis, and Irideus.

Write for Price List.

MOORSIDE FISHERY CO.

SALMON FISHING ON LOCH TAY.

For Boats, apply to

SAMPSON LOW, MARSTON & COMPANY'S NEW BOOKS

BIOGRAPHY AND HISTORY.

LIFE OF VICE-ADMIRAL LORD LYONS, G.C.B. With an Account of Naval Operations in the Black Sea and the Sea of Azoff, 1854-5. By Capt. S. EARDLEY-WILMOT, R.N. (retired). Author of "The Development of Navies," "The British Navy," &c. With Maps, Portraits, and other Illustrations. 1 vol. royal 8vo. cloth, One Guinea.

CATHERINE GLADSTONE: THE LIFE, GOOD WORKS, AND POLITICAL EFFORTS OF. By EDWIN A. PRATT, Author of "Pioneer Women in Victoria's Reign." With Photogravure Portraits and other Illustrations. Crown 8vo. 6s.

* * Lady Frederick Cavendish has, on behalf of the family, revised the proofs of the above work.

LIFE OF W. E. GLADSTONE. By G. W. E. RUSSELL (late M.P.) Fourth Edition, Revised, and with an Additional Chapter, bringing the Life down to its close. ("Queen's Prime Ministers Series.") Crown 8vo. with splendid Photogravure Portrait, cloth extra, 3s. 6d.

"The best biography of Gladstone that at present exists."—*Daily Chronicle*.

THE FOUNDING OF SOUTH AUSTRALIA. As recorded in the Journals of Mr. ROBERT GOUGE, First Colonial Secretary. Edited by EDWIN HODDER, Author of "A History of South Australia," &c. Crown 8vo. 6s.

THE ROMANCE OF A REGIMENT. The Giant Grenadiers of Potsdam, 1713-1740. By J. R. HUTCHINSON, B.A. With Coloured Frontispiece, 6s.

"As entertaining, witty, and spirited a book as one could wish to read."—*Pall Mall Gazette*.

"Mr. Hutchinson's entertaining account of one of the strangest forms of lunacy which ever dominated the mind of a king is readable to the last page."—*Daily News*.

Vols. I., II., and III., now ready. Royal 8vo. 700 pp. 25s. net each.

Vol. III. contains a long contribution by Captain A. T. MAHAN.

THE ROYAL NAVY FROM THE EARLIEST TIMES TO THE PRESENT. By WM. LAIRD CLOWES. Each volume will be complete in itself, with an Index, and orders will be taken either for Sets or for separate Volumes. In five handsome royal 8vo. vols. 25s. each net.

THE CONTRIBUTORS.—The present work, in the preparation of which Mr. LAIRD CLOWES is being assisted by Sir CLEMENTS MARKHAM, K.C.B., P.R.G.S.; Captain A. T. MAHAN, U.S.N.; Mr. H. W. WILSON, Author of "Ironclads in Action"; Mr. THEODORE ROOSEVELT, Mr. CARR LAUGHTON, and many other competent writers, aims at being a trustworthy and, so far as space allows, a complete history, from the earliest times to the present.

The first volume of the history brings the narrative to the reign of Queen Elizabeth, the second to the year 1714, and the third to 1793. It is hoped that Vol. IV., bringing the history down to 1815, will be ready early in 1899, and the final volume in May.

IRONCLADS IN ACTION. By H. W. WILSON. With Introduction by Captain A. T. Mahan; and a Chapter on the American Navy. Sixth Edition. Fully Illustrated. 2 vols. 8vo. 30s.

"In a word, the work is worthy of the subject—the most important subject, as we think, which can command the attention of Englishmen, for it involves no less than national safety and national life."—*Daily Chronicle*.

MALABOCH: or, Notes from my Diary on the Boer Campaign of 1894 against the Chief Malaboch of Blaauwberg, District Zoutpansburg, S.A.R., to which is appended a Synopsis of the Johannesburg Crisis of 1896. By the Rev. COLIN RAE, late Chaplain to the Malaboch Forces. With Map and Illustrations. Demy 8vo., cloth, 14s.

FROM LANCASHIRE.

Word is to hand of the capture of a splendid roach, caling 2lb. 4oz. 6drs., caught by a Warrington angler, Mr. W. Hamblett, whilst fishing the river Gowy, at Mickle Trafford, on Feb. 5. This specimen is now in the hands of the taxidermist. The Warrington Anglers' Association, of which the above gentleman is a member, is steadily increasing, and at the recent monthly business meeting nine new members were enrolled. The County Palatine Angling Association are still very busy with tacking operations. On Saturday last a number of splendid roach and other fish were transferred with very little loss to the Peak Forest Canal. One of the many clubs who have recently affiliated themselves to this association is the Izaak Walton Angling Society; membership already about twenty strong. The St. Helen's Anglers will be busy at headquarters on the 16th—an important event in the form of a knife and fork tea is down for decision. The evening will be spent in the usual way, harmony, &c., and a good time is expected. The prospects of the Gorton Angling Society are very bright, and the coming season promises to be even more successful than was the last one. Several vacancies exist, and any anglers wishing to join should communicate with the secretary, Mr. G. W. Boothroyd, 5, Bowness-street, Higher Openshaw, who will willingly furnish particulars of entrance, &c. The executive is as follows: President, Mr. T. Stanton; treasurer, Mr. F. Rufus; committee, Messrs. J. J. Kay, W. Watson, and C. Gosdon. It is no disappointment to our trout fishers to hear that there is every prospect of early sport. Many of these fish are now in good condition, and the mild weather, combined with abundance of water in the priogs, is greatly enhancing prospects.

FROM MANCHESTER.

Some few days ago the Moss Side Socials were on the var-path, not stocking this time, but removing headquarters from the Marlborough Hotel, Moss-lane, Hulme, to the Alexandra Hotel, Bradshaw-street, Moss Side. The first meeting at these new headquarters will be held on Monday next, Feb. 13, when important business will be down for disposal. Thursday last, 9th inst., saw these only anglers doing justice to a good repast at an evening tour at a Manchester restaurant. A club rapidly getting into order for the coming season is the Old Standard Angling Society. At their last meeting several new members were enrolled, and prospects of more to follow. The members are summoned for a business meeting on the 13th. The Victoria Angling Society recently held an important business meeting at headquarters, when a somewhat lengthy agenda was got through. Members continue to be enrolled, and the coming season's programme is to be commenced with a contest and smoking concert. Their private waters are not productive of much sport, but better results are anticipated. March 11 will see this society fishing for prizes left over from a previous contest and one offered recently by Rev. C. P. Roberts. A venture of an educational character is on foot at the headquarters of the Ben Brierley Angling Society. Every month lantern exhibitions are to be given; the scenes will be from photographs of favourite angling resorts. The first of these meetings will take place on Tuesday evening next, 14th. Mr. E. J. Wardleworth has kindly consented to operate. At the last meeting of the society on the 10th a deputation of officials of the County Palatine Association attended, the ultimate issue of which visit was the affiliation of the club to the aforesaid association.

FROM NORFOLK.

Pike have been feeding well in some parts of the country during the past few days. Several parties have been out and have had excellent sport, bags ranging from four to twelve fish, of 4lb. to 15lb., having been taken. On Tuesday a party, fishing on private water near Norwich, were successful in landing ten nice fish, ranging from 4lb. to 3lb. each. Waters are all in excellent condition, and with a continuance of the present open weather, good sport may be anticipated.

FROM NOTTINGHAM.

There was a tremendous fall of snow on Monday, and rain afterwards setting in caused the Trent to rise rapidly on Wednesday. Another big water is, therefore, imminent. Coarse fish anglers have not enjoyed much sport since my last, and all complain of the apathy of the roach to feed. Whatever the cause, certain it is that the winter season has, so far, proved one of the worst known for years past. At Shardlow, Mr. F. W. K. Wallis and Mr. T. Spray (hon. secretary of the Wellington Society) have taken, with the worm, sundry bream and chub; and at Hawley a few chub have been creeled by Mr. G. Tilley. Here, on Feb. 3, Mr. J. Baker landed three pike with the live bait; and on the same day pike were caught at Lintham and Hoveringham. Operating on the latter length with pith and brains, Mr. T. Large secured a dozen and averaging about 1lb. each, and some fine fish fell to the attractions of the same class of bait at Kelham. Kelham is one of the best chubbing waters on the Trent when the river is running in low and bright volume. At Eveston, in the pool, Mr. Jas. Birkin has killed a brace of pike of 16lb., and on the following day nine were caught by Sergeant Jones and friends. At Shardlow, on the coming day, pike were taken by Messrs. W. Stevens, F. Lather, E. Saywell, J. Greaves, I. W. Foster, and J. Neal. Mr. Mather lost a fish estimated at 14lb. Members of the Waltonian Society have engaged in a friendly competition at Beeston. Not many put in an appearance, and only three or four small roach were, I understand, caught. The executive of the Wellington Society have in and a netting case from the Guntthorpe district. Netting has been rife of late on the river, and it is a great pity that anglers have not more water bailiffs to look after their interests.

FROM SHEFFIELD.

The weather up to the beginning of this week was very favourable for fishing, but the heavy downfall of snow on Monday put a stop to sport for a day or two; but as the snow is rapidly disappearing, it is hoped that the rivers will soon recover from the bad effect. Previous to Monday little fault could be found with the condition of the Trent, which was running in capital form for both pike and chub fishing. As was only to be expected under the circumstances, the opportunity for some good sport was taken advantage of to the fullest extent. A large number of rods have been at work in the Kelham section, near Newark, and some splendid fish have been secured. The season ends in this section on Feb. 14. The season in the Shardlow stretch closed about ten days ago, and the last day saw anglers out in goodly array, and several fine specimens were killed. Anglers will be able to patronise the river at Averham until the beginning of next month for pike, and several heavy fish have been had from this portion. Roach anglers have obtained an amount of sport which is looked upon as satisfactory, and Mr. W. Arnold, fishing the other day at Dunham, accounted for a lot of first-class roach, maggots being the most effective bait. A goodly sprinkling of pomeranian bream have also been taken from the same stretch of water. The Bain has provided good sport at Coningsby, but the Idle has not been so successful. Complaints are still made with regard to the netting carried on in the Trent, and it is high time stringent measures were taken to put a stop to this evil practice. Very little has been done recently in the Witham, although a few anglers have done fairly well amongst roach at Tattershall. The high winds, combined with the enormous quantity of water in the Wye and Derwent, have been altogether against fly fishing, but since the frosts several nice takes of big grayling have been secured. Glowing reports are given as to the prospects for the coming trout season, the keepers reporting that the rivers contain any amount of fish. The private waters, and those belonging to the various clubs, which are strictly preserved and carefully looked after, are said to promise exceedingly well, and it is to be hoped that such is the case, as last season turned out somewhat disappointing.

FROM SHROPSHIRE.

"February fly dyke" is not an invariable verity, but this year the old time phrase is fully justified. Snow, rain, or the two combined have rendered outdoor pastimes very unattractive for some time past, and the grayling fisher has scarcely had a fair day. Pike, perch, and roach have at times yielded sport, but on the whole, what with frequent floods and unpropitious weather, Severn coarse fish anglers have had an exceptionally poor season.

FROM WORCESTER AND DISTRICT.

We have had wretched weather in this district for some days, heavy snows, torrents of rain, and, early this (Wednesday) morning, a hurricane and a tremendous storm. Rain is still falling, and a heavy lot of very high-coloured water is rolling down the rivers, and it looks as if we are in for another flood, as the water is rising very rapidly. Angling is out of the question. Salmon fishing this season, so far, has been very disappointing; the take of fish far behind that of last season, both in size and numbers. There was one fish, 17½lb., taken the opening day, and a capital fish it was, and was bespoke for a London Hotel I was told. With the high water we have had, a great number of fish have headed up stream, and salmon-fishing in the upper part of the Severn should be better this season than it has been for some years. Very little news from the clubs; there are two new ones in the course of formation, and the St. John's Angling Society had their annual dinner on the 3rd inst. at their new headquarters, the "Grosvenor Hotel," and it was altogether a capital affair. The catering of Host James was first class, the musical programme excellent, and it was a success all through. The Jubilee angling society (Eversham), had their second annual meeting at their headquarters, the Trumpet Inn. There were a lot of members present, Mr. W. Morton in the chair. Mr. G. Hunt was re-elected president, and there was no change in the other officers. The club is in a flourishing state and have a good balance in hand.

FROM YORK AND DISTRICT.

The unsettled, changeable weather has rendered the conditions of angling most uncertain. The streams were running down to a nice level and losing their discoloration after the floods, when early this week heavy rains again marred the prospects. One result of the overflowing of the rivers has been the destruction of a large number of fish, which, along with rabbits which were washed out of their warrens, have been found stranded on the land after the waters had receded. There has been pike and roach fishing in the neighbourhood of York, many pike being caught in the Foss, where they had gone to shed their spawn among the weedy growths in the river. In taking leave of grayling, attention is turned to trout, which are plentiful and in excellent condition in the Wharfe, Yore, Swale, Nidd, Rye, and Derwent. No harm to this fish is anticipated from the late frost, whilst the mild weather has been in their favour. By the end of February or the beginning of March the prospects, which are very hopeful, ought to brighten. The fish must be well supplied with food after the late floods.

"THERE IS NOTHING NEW UNDER THE SUN" is a saying credited to a variety of illustrious authors, from the time of Solomon to the present day. It is a fact that many inventions looked upon as modern are of ancient origin. The telephone, which recently caused such a furor of excitement, was in ancient days a means by which the high priests worked upon the credulity of their disciples. The Pyramids of Egypt and other wonders prove that this generation has a great deal to learn. Holloway's Pills and Ointment, however, were not anticipated by our forefathers, and to-day they stand alone as the best cure the world possesses for all the ills that humanity is heir to.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

FISHING ON THE TORRIDGE.

SIR,—In reply to your correspondent, he will have no difficulty in getting trout fishing free. If he has not already secured his apartments, he will find some very comfortable ones if he writes to Sergeant Thomas Grylls, Sheepwash, Highampton, R.S.O., North Devon. He has about eight miles of fishing rights. This place is not far from Shebbear. The best flies would be the Coch-y-bondhu, Blue Upright, Blue Dun, March Brown, and February Red. I do not think waders are necessary. With regard to Padstow as a sea fishing station, it is very good provided the weather is right; but it is very exposed if there is any wind. The nearest salmon fishing would be in the Camel—about ten or twelve miles.—Yours, &c.,

WILLIAM HEARDER (B.S.A.S.).

195, Union-street, Plymouth.

A NOTE FROM DARWIN.

SIR,—With respect to the transportation of both fish and plants, Mr. Darwin says: "On the same continent fresh-water fish often range widely, and as if capriciously, for in two adjoining river systems some of the species may be the same, and some wholly different. It is probable that they are occasionally transported by what may be called accidental means. Thus fishes still alive are not very rarely dropped at distant points by whirlwinds; and it is known that the ova retain their vitality for a considerable time after their removal from the water." I wonder how long. "Their dispersal may, however, be mainly attributed to changes in the level of the land within the recent period, causing rivers to flow into each other. Instances also could be given of this having occurred during floods, without any change of level." I have caught odd chub and flounders in old ponds quite a mile away from a river, and in no way connected with it. Floods, of course. He continues: "The wide difference of the fish on the opposite sides of most mountain ranges which are continuous, and which consequently must, from an early period, have completely prevented the inoculation of the river systems on the two sides, leads to the same conclusion. Some fresh-water fish belong to very ancient forms, and in such cases there will have been ample time for great geographical changes, and consequently time and means for such migration. Moreover, Dr. Günther has recently been led by several considerations to infer that with fishes the same forms have a long endurance. Salt-water fish can with care be slowly accustomed to live in fresh water" (both the sea lamprey and the flounder seem to like it), "and, according to Valenciennes, there is hardly a single group of which all the members are confined to fresh water, so that a marine species belonging to a fresh-water group might travel far along the shores of the sea, and could, it is probable, become adapted without much difficulty to the fresh waters of a distant land."

FRESH-WATER SHELLS.—"When ducks suddenly emerge from a pond covered with duck-weed—I have twice seen these little plants adhering to their backs, and it has happened to me, in removing a little duck weed from one aquarium to another, that I have unintentionally stocked the one with fresh-water shells from the other. He says: "These molluscs when just hatched will survive from twelve to twenty hours in damp air, and in this length of time a duck or heron might fly at least six or seven hundred miles, and they adhere so firmly they cannot be easily shaken off."

PLANTS.—"In February I took three tablespoonfuls of mud from three different points beneath water, on the edge of a little pond. This mud when dried weighed only 6½oz. I kept it covered up in my study for six months, pulling up and counting each plant as it grew. The plants were of many kinds, and were altogether 537 in number, and yet the viscid mud was all contained in a breakfast cup! Considering these facts, I think it would be an inexplicable circumstance if water birds did not transport the seeds of fresh-water plants to unstocked ponds and streams situated at very distant points. Audubon states that he found the seeds of the great southern water lily, probably *Nelumbium luteum*, in a heron's stomach. Now, this bird must often have flown with its stomach thus well stocked to distant ponds, and then, getting a hearty meal of fish, analogy makes me believe that it would have rejected the seeds in a pellet in a fit state for germination."

Thus are fish, shells, and plants distributed.—I am, &c., E. W. E.

SEA PATERNOSTER BOOMS.

SIR,—The identity of Mr. Payton with "Sarcelle," of the *Field*, was not known to me, and I hasten to assure him that such of my remarks as would have been peculiarly offensive if knowingly addressed to him were not so addressed, but aimed merely at an abstraction.

In my former letter I showed the weak points (only too familiar to sea anglers) which must prove fatal to the continued use of the right-angle boom. Mr. Payton, in reply, appeals to his experience, and baldly reasserts the efficiency of the French boom. It is possible that I may be whipping the air, and that this boom may possess some occult property capable neither of expression in words, nor of delineation; but, as figured and described, it stands out a rigid boom, eminent among the bad ones, worse than worthless, inasmuch (you will observe I give a reason) as it interposes an obstacle in the form of a metal right angle between the fish and their efforts to assist the angler to hook them.

Mr. Ruekin somewhere has a dig at people who "have so long been in the habit of using pretty words without troubling themselves to understand them, that they now revolt from the effort, as if it were an impiety." What do Mr. Payton and Mr. Aflalo wish us to understand by "effective" and "extremely efficient"? Is a boom to be hastily dubbed "effective" and "extremely efficient" because a fish contrives to commit suicide on the tackle of which it forms a part? When I call a boom effective, I speak of one that will adequately sustain its part in the capture of sizeable fish as hard and fast as they can be hauled, without bending, breaking, embarrassing the fish, entangling the gear, or in any way conducing to profanity; and to say that in these circumstances a boom is effective, or extremely efficient, when it hends at every haul and must be rebent, is simply an abuse of words.

Mr. Aflalo has my sympathy. I seldom read the *Fishing Gazette* correspondence myself without wanting to take a pen and put all and sundry to rights; but I have learnt, with Falstaff, that "the better part of valour is discretion," and I know that.

"Those who in quarrels interpose
Must often wipe a bloody nose."

Well, in thirteen lines of queer English, Mr. Aflalo contrives to state that—(a) the French boom is extremely efficient; (b) it has stood the test of time; and (c) he is an angler of experience. If (a) and (b) are true, is it not singular that Mr. Aflalo should have hugged this knowledge to himself for years, and is only drawn out of his shell now to confirm the belated announcement of its excellence by Mr. Payton? As to his experience—pre-mising that my remark is abstract and not personal—I should like to say that observation convinces me that many people are so innately obstinate and impervious to fresh ideas that their opportunities for gaining experience serve only to confirm them in their original prejudices and misconceptions. When, therefore, Mr. Aflalo appeals in general terms to his experience, I am dumb; but when he appeals to it specifically in support of a rigid right-angle boom as "extremely efficient," then he tenders me ample evidence that the value of his vaunted experience on that one particular point does not amount to a "ha'p'orth."—Yours, &c., JOHN KIRBY.

ALLCOCK'S PATENT RUST-PROOF WIRE.

DEAR SIR.—Having noticed various letters in the Press recently on the subject of plaited wire lines, we have made some tests of it in comparison with our patent rust-proof wire, and we find our wire so much superior in strength, size, pliability, and colour that we have taken the liberty of enclosing you a sample.

Our attention was drawn to plaited wire for making tackle some years ago, and our experiments proved that in plaiting an unyielding material like wire the crossing of the strands in plaiting was an element of weakness, and as soon as a longitudinal strain came on the line there was a tendency to cut where every strand crossed, which made the line much weaker than a twisted one of equal thickness. Also, fineness being a great advantage, more strands can be put in a twisted line of a given thickness than in a plaited line, as a twist will of course lie much closer than a plait, and it therefore enables us to get the desired strength with little more than half the thickness necessary in a plaited line.

In three sizes of plaited line before us the breaking strain is given as 22lb., 24lb., and 28lb., but in our twisted patent line the same sizes, carefully gauged, showed a breaking strain of 38lb., 50lb., and 60lb. respectively.

Then our twisted wire is naturally more pliable than plaited, and though the rust-proofing process slightly lessens this, it is at any rate as pliable as the plaited wire, with the advantage of being a neutral colour, so that in strength, pliability, colour, and thickness it must be considered much superior.

As to the question of the advantage of using entire lines of wire we do not wish to enter, but a few yards of wire used as a trace, with hack line of flax or silk, make an admirable line for either fresh or salt water fishing.—Yours truly, S. ALLCOCK AND CO.

[Messrs. Allcock's samples seem to us to be excellent, and, for instance, far and away better than gimp for pike tackles.—ED.]

THE "BREAKING" OF THE SHROPSHIRE MERES.

SIR,—Could you or any of your readers give a satisfactory explanation of what is known as the "breaking" of the Shropshire meres? There seems to be little known about it locally.—Yours truly, E. W. B.

[We have not fished Ellesmere, but we believe that the expression "breaking of the mere" refers to the same thing as is known as the "working" of a pond; that is, the appearance in all parts of the water of a very fine vegetable growth, which spreads so as to occupy almost all the water from the bottom to the top. We have seen this epidemic growth of all colours, from light green to dark brown. In the cold months it dies off, and reappears with the hot weather. We had a notice of it in the *Fishing Gazette* not long ago, taken from an American paper.—ED.]

FLAT FISH.

DEAR SIR,—I read "Smear Dab's" letter in your issue of Jan. 28 with much interest, the postscript especially. I was not aware until then that the taking of uneizeable sea fish had ever been prohibited by Act of Parliament. On referring the matter to a legal friend and good sea angler, Mr. George Read Clarke, he writes me: "Almost all the 1st George's Acts are repealed: Act 1, George I. c. 18, relating to fish, is repealed by 31 & 32 Vic. c. 45, s. 71." The repeal of such an eminently useful Act is, I venture to think, a great pity, and the sooner that or a similar Act is placed upon the statute book the better

for all concerned, as it would greatly strengthen the hands of those who are doing their best to fight what is, after all, the fishermen's battle. While I have my pen in hand I should like to make some remarks on flat fish and their capricious habits, which I hope may be of use to your many readers who fish at Southend. In the first place, they seem to be gifted with the power of forecasting the weather in an extraordinary degree, and when bad weather is coming they bury themselves, or "sand" as the fishermen here call it. Consequently to fish for them on a falling barometer is almost useless, and for that reason I always send the latest barometer readings in my report. After bad weather, the fish, especially dabs, are covered with mud and sand, a clear proof that they have "sanded" to avoid the storm. Their caprices with regard to feeding are past finding out. I can only say what I have said a dozen times before, that the best method is to open the first few fish caught, ascertain on what they are feeding, and act accordingly.

Many people have the idea that the sooner flat fish are cooked after being caught the better; this is not the case, however. To get flat fish in perfection they should be cleaned as soon as convenient, washed in salt and water, and hung out of doors to get "wind dried." They are then firm, and not pappy like a freshly caught fish. Treated in this way a dab is about as good a fish as swims the seas, and will make even that most tasty morsel, a fried sole, look to his laurels.—Yours faithfully, CHARLES HUSSEY (B.S.A.S.).

TROUT FISHING WANTED.

DEAR SIR,—In reply to "Trout" and "Salmo Salar," who ask for information as to trout fishing at Easter, I would recommend them to put themselves in communication with Mr. W. Mackenzie-Ross, of 6, Little Bruton-street, London, W., whose fifty years' experience as angler and gillie on most of the Border and Scotch rivers and lakes, and many of the Welsh and English rivers, enable him to impart really reliable information. He charges a small fee for consultation or letters—some 2s. 6d. and postage—but the knowledge imparted is well worth the money.—Yours truly, L. M. MEREDITH.

P.S.—The old gentleman mapped out an angling tour for myself and husband last year, which, though a bad season, proved very successful.

WIRE WINCH LINES FOR SEA FISHING.

DEAR SIR,—I am in receipt of the two samples of "Hercules" wire mentioned in your footnote to "Viator's" letter last week, for which lines many thanks. They are, of course, not to be compared to the braided phosphor-bronze lines. "Viator's" letter is indeed a confession.

1. That he has not used wire winch lines with the proper apparatus for bottom fishing with the rod in the sea.

2. That the wire used was unsuitable.

3. That, as we thought, he had not troubled to use the sixteen strand plaited wire before condemning it.

I am pleased, however, to note that he has obtained samples, and is "trying them as reel and hand-lines very soon." When he gets the proper reel, pulley top, butt roller, and methods, he will no doubt find the value of wire for bottom fishing with the rod. This is the subject first started by Mr. Parker before the B.S.A.S., and in the *Fishing Gazette*, and discussed by Mr. Mignot and others who know.—Yours truly, CHARLES S. PATTERSON.

BRITISH SEA ANGLERS' SOCIETY.

MR. ELDRED ON FISH HOOKS.

DEAR SIR,—I notice that in the report of my lecture before the B.S.A.S. on Feb. 1 the name of Messrs. Bartleet and Sons, Redditch, is by accident omitted from the list of gentlemen who so kindly lent me specimens of hooks, &c., to illustrate my paper.

Will you permit me, through your columns, to acknowledge my indebtedness to them in this respect.—Yours faithfully, F. E. ELDRED.

GRAYLING EAT TROUT EGGS.

DEAR SIR,—As I look upon the grayling "as a thing of beauty," and, I trust, "a joy for ever," I am very jealous of having a word said against him.

That I have had some experience with his cultivation in waters other than rivers will be seen in a series of articles I wrote for the *Fishing Gazette* in 1892.

Before I go on to give fresh testimony in his favour, let me first give Mr. Miller credit for all good intentions, but at the same time it is well to remember what happened to the dog with a bad name. The river on which I reside is the Blythe, in Staffordshire, a tributary of the classic Dove, and to my certain knowledge, conviction, and belief for the last forty-five years the balance has been most evenly sustained between *S. fario* and *S. thymallus*, and I question if either would do better, if as well, were they separated. Granted Mr. Miller and mine Editor, grayling certainly prey to some extent upon trout ova, so do eels and others, even the miller's thumb when they can get it, but precisely the same thing takes place by these on the grayling redds in April. It is always dangerous to interfere with Nature's laws, for it is patent to every observer that the same thing happens throughout the whole chain of Creation, or things would soon come to a crisis. One thing I quite admit, i.e., that it is in no way desirable that trout should be unduly displaced by any fish that swims, and it is quite possible that a certain displacement may take place more upon some rivers than others—for instance, those traversing long reaches of level land, fed largely through porous strata, and lacking a number of tributary rills or feeders from the hills. In these cases trout must of necessity spawn upon the gravel beds of the river itself,

consequently the ova falls an easy prey to *Thymallus* and others, who have an undoubted knack of ploughing into the gravel to obtain it. In the rivers I have named these things are very different. We have numbers of these small feeders, and the trout, like the lordly *Salmo*, will never spawn at home if he can get away to do it; who shall reason with nature here? In the hatterfield there is not more heroism—more dangers to be met. I have frequently seen in the smallest of ditches (provided they are perpetual and have gravel), half a mile from the river, some half a dozen pairs of trout ploughing away. Be it said the ova is quite out of the way of *Thymallus* here, and the fry will remain in these places until about July or August, when they are pretty active; they then pass down, and largely join company with the schools of minnows upon the shallowest scours of the river out of harm's way. These beautiful little scavengers, in their raids upon the animalculæ, seem to teach them the early lessons of industry and self-preservation. In taking minnows for bait from these places, I have frequently found one in ten trout fry of the spring hatch. Whoever disbelieves in mixed fisheries and fish preying upon fish let me ask him why it so happens that in the mountain streams of Wales nothing but fingerling trout are found? Is it that the fish are all trout, the streams all breeding ground, and the enemy not present in force? With all good wishes, after long silence.—As ever, F. S. P.

ANGLERS' ASSOCIATION RE-STOCKING FUND.

DEAR SIR,—Since last report I beg to acknowledge receipt of £2 12s. 6d. from the Bostonian Angling Society.—Yours truly, ALEX. WRIGHT (Hon. Treas.).

FLAT FISH AND WIRE LINES.

DEAR SIR,—Many thanks for finding space in last week's *Fishing Gazette* to allow sister "Smear Dab" to ventilate our grievances. It is quite true what she said as to the size we should attain before coming to see you. We have had terrible trouble of late in our nurseries by the loss of so many of our infants going aloft, and other wise. The clouds above us—yes, we have clouds as well as you—but our clouds tumble, roll over and over, howling and hissing, and making terrific noises, which make us keep to the ground floor, covered up in our sand blankets many families together. But there seems almost as much trouble in your much clearer atmosphere in providing the means for taking us and our dear children aloft by our would-be captors, and their various coloured wire lines that glint, sparkle, and shine as they come down, derr, down. Well, as you know perfectly well, we have capita sight, and, always looking upwards, our hearing is equally good. Consequently, whilst taking shelter under the bow of a fishing boat, we heard the following read from your own paper, the *Fishing Gazette* to this effect. Your correspondent, A. W. Parker should say that hair and silk lines are not much heavier than "sea water," while phosphor-bronze are about eight and a half times heavier, and sink readily, and the surface of the tide offers very little friction, and makes sea fishing more comfortable (poor dabs). Another correspondent, C. S. Patterson, goes as far as the Mediterranean and the Canaries to verify the wire lines are used, to support his views in favour of wire lines. Then came another correspondent, A. Mignot with the braided wire line that makes fishing a "real pleasure" (poor dear dabe), there being no weight, do not hold water, going straight down and up, giving direct pull (oh, dear sister), only you must have a large wheel on the top, and counter sunk wheels along the rod. Then another correspondent, "Viator," says wire line certainly hold less tide than any other, but good strong and fine hemp lines have too many advantages to be displaced by a material which has so many disadvantages. Good hemp is suitable for all sea fishing, and much river fishing, too. Then came another and last correspondent's remarks, this time by that old and respected firm, Messrs. Hearder and Son, who state that a flax line properly made is undoubtedly the very best for sea fishing. Then there was a burst of applause, "so say all of us," which resounded down to our very ground floor, and must have been heard on the Leigh shore. It was then agreed that nothing can possibly supersede good hemp line dressed or otherwise, for experienced fishermen. Let the "sea anglers" (landmen) use their own fancies, their quips and cranks, their wheels and wire lines; the merely fish for pleasure, at least some of them. Experience is a good tutor when fishing is pursued for living. But why do they fish for dabs at Southend they want to get good-sized, well-fed members of the family? Surely there is room enough between Dove and Start Point, where the ground floor is all a heantiff sand, and if you want good flavoured dabs such is the ground to get them from. Dabs taken from muddy sandy bottoms, such as Southend, partake of a muddy flavour, although the very mixture of mud and sand makes the best nursery for all kinds of fish, from the halibut down to us poor dabs. Such is Southend. The fry are there in myriads, among which there are some fair-sized fish; but they have not yet been to sea and lost their muddy flavour. Southend is not feeding ground; it is purely and simply a nursery for the very young, who feed upon the substances brought down with the mud and deposited upon the sand. Then we catch them; they make good food in time? Why complain at their being taken? You use the means for doing. If you do not want them use larger hooks at larger baits, query then the results. There is not the slightest need for a "Mundella" Act nor anything the kind, not even for nets. We hear that information is already being collected on this subject at Southend. May much joy go with them we say, and do not forget several of *Asp's* fables.—Yours truly, SMEAR DAB.

Several letters unavoidably held over.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces. Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to B. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London. Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

THE GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
" Six Months ditto	5s. 4d.
" Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	£7 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0

SATURDAY, FEBRUARY 18TH, 1899.

THE RAINBOW TROUT.*

I SUPPOSE there is no doubt that the introduction into Britain of *S. fontinalis*, the speckled brook trout of New England, resulted in general disappointment.

Judging of this fish from the very high place it held in America, high hopes were entertained of its future in British waters, but it must be confessed that they were not realised. However highly *fontinalis* was esteemed in America, it is certain that when introduced into Europe, it fell far short of the expectations of its friends.

Then the rainbow trout came to England. The *fontinalis* had a fair trial and proved a failure. The failure of the *fontinalis* has without a doubt prejudiced the minds of people against the rainbows, and it is possible that on that account the rainbows have not yet had a fair trial. However that may be, it is certain that the rainbow trout has been made the object of attack and severe criticism in various English publications, and has been considered as an unsuitable fish for British

waters. On the other hand, the rainbow has also found many friends in England, who claim that it is a highly desirable fish for that or any other country.

This controversy, which I am happy to say has not been characterised, so far as I have followed it, by any asperity of feeling or speech, has brought out a very sensible and well prepared book by C. S. Patterson and Charles Walker, entitled "The Rainbow Trout." This book, although it takes sides with the rainbow, is not by any means an extravagant eulogy of the fish. It appears to contain a fair and not exaggerated statement of the good qualities of the rainbow trout, while the specific object of the book is to show why it has not succeeded in Britain, and at the same time to propose conditions under which its introduction can be made successful. Although the book is obviously a defence of the rainbow trout, there is underlying it all the evidence of a sincere desire to bring out the facts of the case, and to give the rainbow a fair trial without advancing any unreasonable claims for it, or asking for the fish anything more than it deserves.

It seems to me that the writers have fairly accomplished their object. Of the four conclusions in regard to the rainbow trout, which the authors of the book have arrived at, and which are stated on page 22, the first three are certainly correct and well-founded, viz.: (1) that the rainbows prefer (comparatively) deep and not too swiftly running water, and are not averse to (comparative) warmth; (2) that they will grow quickly and (3) that they are less cannibalistic than the American *Fontinalis*.

The fourth conclusion, that the rainbows will show little or no tendency to go to the sea, I am not so sure about. It may be correct, but I think that at present the verdict must be "not proven." Is there any trout that will not go to the sea when it has a good opportunity? It is true that the McCloud river rainbows do not go to the sea from their native stream; but, on the other hand, the two hundred miles and more of warm water between them and the ocean is doubtless a sufficient reason for their not going.

The position taken by this book that the rainbows have not succeeded in Britain because they have not been placed in proper waters, and that they would have succeeded if they had been placed in proper waters, seems to be a very sensible one, and one that time will doubtless prove to be sound. The conclusions which the writers state on page 37 are also undoubtedly sound and correct. They seem to hit the case so exactly that I will quote them *verbatim*. They are:

"1. The rainbow will always fail if put in cold waters, escaping from them if possible, but if not, gradually dying off.

"2. The rainbow does well in all warm waters, especially where the temperature is subject to little change.

"3. It lives and breeds freely where neither *fontinalis* nor *fario* will thrive."

If these points are carefully kept in mind in the future introduction of rainbow trout into England, I think that future results will be much more favourable than those of the past, and that it is quite probable that *Irideus* will become a favourite fish in England wherever it finds a congenial environment. Too much stress cannot be laid, in my opinion, on the first of these statements, viz., "that the rainbow will always fail if put in cold waters, escaping from them if possible, but if not, gradually dying off." Here lies, I believe, the main secret of the whole matter. In many years' experience with these fish, I have never known a mature rainbow to live in ice water. Ice water is something that they know nothing about. The McCloud river proper, where the var. *Shasta* is native, is formed all at once by one vast spring that issues from the side of Mt. Shasta, a mountain over 14,000ft. in height. The stream never freezes. In the coldest winter that I have known there the temperature of the water never fell below 38° Fahr. No native McCloud river trout (*S. irideus Shasta*) ever felt the sensation of being in ice water. It is, therefore, a very fair conclusion to arrive at, that they are not adapted to extremely cold water, and will avoid it when they can.

I cannot leave this subject without saying a word of my own for this beautiful fish, on the banks of whose native stream, the McCloud river

of California, I have passed, off and on, nearly a quarter of a century of my life. I shall never forget the animation which pervaded our little community, the gathering of rods, the preparing of lines, the selection of flies, during the last days which preceded the opening of the trout season.

And on the opening day itself, the pride and enthusiasm and the happy faces of the fishermen as they came in at night, one after another, displaying their strings of beautiful golden rainbows. It was a sight that cannot be recalled without keen interest and pleasure, and a strong yearning for the beautiful river where it occurred.

As the season advanced, fishermen of both sexes and all ages came from all directions to fish for rainbows in the McCloud, and it became the custom of nearly the whole of our little settlement, men, women, and children, at the end of the hot summer days, to go out with rod and line in quest of these beautiful fish. The passion for fishing seemed to seize the whole community at these times, and it was a very pretty picture that they made, as the sun was going down below the hills, these anglers, men here, ladies there, and little boys and girls not far off, all dotting the river banks up and down as far as one could see.

And the sport was good. The fish were so abundant that almost all efforts were well rewarded, both in the number and size of the captures, the largest fish usually weighing between 4lb. and 5lb., while the smallest hardly ever weighed much less than 1lb.

This having been my pleasant experience with Rainbow trout, I cannot help wishing that every trout stream in Britain could be like the beautiful McCloud, if it were possible, in the quantity and size of its Rainbows. This, of course, is such a wish as only visits us in dreams, but to come down to plain, practical reality, it seems to me that if the Rainbow trout could be introduced into suitable British waters, where it will supplant only coarser and less valuable fish, it would be a consummation much to be desired.

I am not disposed to exaggerate the good qualities of the Rainbow. As a table fish, he does not approach the Atlantic salmon (*Salmo salar*), and he is in this respect far behind the eastern brook trout (*S. fontinalis*). Neither does he, in my opinion, merit the distinction given him by Mr. Noel (p. 30), of being the gamest fish we have, that is, if he means the gamest fish in the United States, but take him for all in all, the Rainbow trout is a beautiful, and when full grown, a magnificent fish, game enough to satisfy any reasonable angler, and when prime, a delicious fish for the table.

Before closing, I may perhaps be pardoned for alluding to some trivial errors in this valuable little book, which I have no doubt the authors themselves will be glad to have noticed, especially as they do not in the least affect the correctness of the reasoning, or of the conclusions of the book, both of which are very sound.

On page 25, I am quoted as saying that the temperature of the water at Baird varies "from 28° F. in December, &c." This, of course, is seen at once to be a misprint, as liquid water at 28° F. is an impossibility.

On page 27, we read that "in 1881, the whole of the hatcheries" (on the McCloud) "were destroyed by a very violent winter flood." It is true that the winter flood was violent enough,—it might even be called terrible,—for this mountain stream, formidable even at low water, rose 26ft. and swept large buildings before it like empty egg shells; but the flood destroyed the salmon breeding station only. The trout breeding station, four miles farther up the river, was not seriously injured, and successive shipments of Rainbow trout eggs were made from there to the eastern states every year from 1880 to 1887.

On page 31 it is stated that "Michigan has a much milder winter climate than any other eastern state." I doubt if facts will bear out this statement. It is true that Michigan is surrounded on three sides by water, but the winter climate in parts of Michigan is very severe, much colder than many eastern states. Michigan has certainly not a "warm, equable" climate, as would be inferred from remarks on page 32. Indeed, the climate is quite the reverse.

Allow me to mention that it seems to me that the book we are discussing, in speaking of waters that are suited to rainbow trout, does not give

* THE RAINBOW TROUT. By C. E. Walker and C. S. Patterson. London: Lawrence and Bullen, Ltd.

quite sufficient weight to the temperature of the water, as compared with the temperature of the air. I am, of course, stating a self-evident proposition when I say that if the water is warm enough for the fish, it is no matter what the temperature of the air is.

I thoroughly agree with the writers of the book, that rainbow trout will neither thrive nor stay in streams that freeze over in the winter. They are, comparatively speaking, a warm water fish. In their native habitat they do not know what ice water is, and I am satisfied that freezing water is very distasteful to them—to say the least; but at the same time they would live in a great spring stream like the McCloud in California, or the Caledonia in New York, even in a climate where the air temperature gets quite low, because in spring-fed streams like these they could find in almost every temperate latitude water not excessively cold. Something like this may account for the success of the rainbows in Michigan, though I have not facts at present to bear out the suggestion. Here let me add that it is a common error to suppose that the carmine band is constant on the rainbow trout. It is not so by any means. At times young fish, and even older fish, females especially, will not show it at all, or if it appears at all, it is hardly perceptible. In the McCloud river it is brightest and most marked in the males, and especially at the spawning season. But it is no proof that a fish is not a genuine rainbow because the red stripe is not perceptible.

I may mention here that it seems to be pretty generally conceded now in America that the ancestor of the rainbow and steelheads is one and the same fish, those of its progeny that habitually

British waters and may become a much esteemed and welcome guest. LIVINGSTON STONE.

[We feel sure that this is a most interesting and valuable contribution and well worthy the most careful consideration by all concerned in any way with the rainbow trout. We asked Mr. Livingston

Several different views were expressed upon the subject, and since that time I have taken occasion to measure falls in several rivers where salmon were leaping, for the purpose of determining how far a salmon can leap. The question allows of some elaboration, and several important factors must be taken into consideration. First, the character of the "take-off," or, in other words, the water from which the salmon starts below the falls. If he can start from a quiet, deep pool or eddy just below the falls, he can make a much higher leap than if he must start from broken water or shallow water. In some rivers salmon are much longer and slenderer than in others, and the slender salmon make much higher leaps than the more robust ones. A fresh run salmon may be so fat that he is clumsy, and not able to do his best at leaping, but after three or four weeks spent in the river, he may perform some remarkable acrobatic feats. In the Washcootai River I have seen salmon thrown back time and again from a leap of about 6ft., and do not remember ever having seen a salmon make more than an 8ft. leap in that river. On the Olomana River I have seen salmon thrown back repeatedly from a leap of 10ft., but having been foiled several times in succession, these fish jumped approximately 14ft. on two occasions, and 16ft. in one instance, while I was watching them. On the Kegashka River I have seen salmon leap about 12ft., but in this river the leaping place was not where I could measure the height of the chosen spot. On the Coal River, in Newfoundland, salmon seem to have difficulty in clearing 8ft. of fall, and this is due probably to the character of the rocks beneath the fall, but as the water from which they leaped was white water, I could not see the character of

went to the ocean becoming steelheads, and those that remained habitually in fresh water becoming rainbows.

The little slips above mentioned are, however, hardly worth mentioning, and they certainly do not affect the soundness of the conclusions of the book, which are well reasoned out, and, in my opinion, incontrovertible.

I agree cordially with the position taken in regard to the rainbow trout, by the distinguished editor of the *Fishing Gazette*, that great caution should be exercised in introducing rainbow trout into British waters, not, if I understand his position correctly, because the presence of the fish will be an injury, but because if planted promiscuously, without regard to suitable conditions, the result will be disappointment and useless expense. I agree entirely with this position of Mr. Marston. Indeed, no one has had more reason than myself for acknowledging the futility and folly of placing new varieties of fishes in waters that are not congenial to them, but if in the future introduction of rainbow trout into Britain, the warnings of this little book are heeded, and the trout are placed in such waters as the book recommends, and under the safe guards which it provides, I think the rainbow trout of California may yet be successfully established in

Stone to review Messrs. Walker and Patterson's work, because we doubt if anyone living has more experience of the fish than he has. He is the U. S. Deputy Fish Commissioner and was in charge of the government salmon boundary station on the Pacific Coast, he was formerly secretary of the American Fish Culturist's Association, and he is the author of "Domesticated Trout, How to Breed and Grow Them," which has long been a standard text book among pisciculturists. Mr. Stone has stated our position exactly, except that we also think it a mistake to introduce rainbows into any of our rivers, in which our native *S. fario* does well. If the rainbow will do well in waters which are not suitable for our native trout, then by all means let them be introduced.—Ed.]

THE SALMON'S LEAP.

A FEW years ago, in a fishermen's nook in London, we were discussing the height to which a salmon could leap, and an Englishman stated that he had known salmon to make a clean leap of 20ft. perpendicularly. This was questioned by a Scotchman present, who said that he had been on many a salmon river, and had never yet seen the salmon that could clear 10ft. perpendicularly.

the "take off." On the north branch of the Humber River salmon were leaping very much higher with ease over falls similar in character to those of the Coal River.

The highest leaping that I have ever seen was on the first falls of the White Bear River in Labrador. The salmon in this river are not large, and the adult fish weigh quite uniformly from 8lb. to 10lb.; but they are very slender, and have tremendously broad tails. A photograph of one of those salmon of 10lb. weight placed by the side of a sea trout of 4½lb. weight shows the breadth of tail and the more graceful outlines of the salmon of this river. I measured the height to which the salmon were leaping, approximately, by standing over the falls and letting my line run from the top of the falls into the pool below, and this line was marked with knots 3ft. apart, so that while the distances were not measured accurately, I was able to determine that most of the salmon leaping the falls at this point were making a leap of about 12ft. Salmon would occasionally leap far past this chosen spot into another chosen spot, which was approximately 18ft. from the pool below.

I photographed salmon in the air, making these two leaps, and all but two that are shown in the photographs were making the 12ft. leap. One that made the 18ft. leap is the salmon which

hows largest in the photograph, as he passed in his flight very close to the projecting rock upon which I sat. The other one making the 18ft. leap is the one with the tail curved downward, and looking rather indistinct in the photograph. I believe that the salmon use the tail for propulsion while in the air, as most of them continue while in air the movements which they make in traveling through the water. When they are near the end of the flight the pectoral fins are spread, the tail becomes rigidly fixed and the salmon sails into the spot that he has selected for an alighting place. The photographs brought out this point.

Reducing the question to one of mechanics, we may estimate that a salmon of 10lb. weight leaping from a still pool requires an initial velocity at the moment of leaving the water of eighteen miles an hour, in order to have momentum sufficient to carry him 12ft. perpendicularly. A velocity of twenty-three miles an hour is required or carrying this same fish 18ft. perpendicularly. —ROBERT T. MORRIS, in *Forest and Stream*.

THE STONE FLY AND ITS LARVA.

ALTHOUGH during the past twenty years I have occasionally published descriptions of the Stone Fly and its artificial dressings, some

identical with the insect so called by Pictet and Curtis—and is probably the species most generally known to anglers as the Stone Fly, since angling writers generally refer to the male fly being much smaller than the female.

I have copied Pictet's illustrations of his *Perla bipunctata* and *Perla cephalotes*, drawn from the natural insects natural size. It will be seen that the former is a larger fly both in the male and female, and whereas in both species the male is smaller than the female, in *P. cephalotes* he is much smaller.

Pictet points out that the general resemblance of some of the Phryganidæ (sedges) to the Perlidæ (Stone Flies) has given rise to the erroneous idea that the Stone Fly lives in a case like the sedge, which it never does or can do, in fact, if it were enclosed in a case from head to tail like the sedge larvæ it would be unable to move about, as the case would imprison the legs. In the larva, or grub, of the true caddis flies the feet are placed close up near the head, and can easily be protruded when the insects wants to crawl about.

Pictet says that the larvæ of the Stone Flies are found principally in the roughest parts of swift streams. Usually the young larva emerges from the egg (deposited in the water some time before by the perfect insect) in the summer or autumn. These larvæ grow to about middle size

often the prey of insects stronger than themselves.

The nymph of the Stone Fly only differs from the larva in having the rudiments of wings (i.e., as the larva grows the rudiments of wings appear on it).

The larvæ of the Stone Flies crawl about among the stones and rocks which form the bed of the river, the larger species preferring the most rapid parts of the stream, those parts where the stream is gentle and the surface smooth being rarely inhabited by these insects. They swim but little, although the long hairs with which the feet of some species are provided would appear to furnish a powerful swimming organ. It is generally only when frightened that one sees them quit the ground and allow themselves to be carried down by the current to a new hiding place; in this case they guide themselves as much with the feet as with the abdomen. As a rule the larvæ live under the stones, selecting places where the rough surfaces of stones and rocks approach each other, and thus afford a secure retreat. Their steel-like hooks or claws enable them to cling firmly to smooth surfaces and under horizontal planes (like flies to a ceiling).

When the time arrives for the last change the nymph leaves the water and seeks a suitable place in which to undergo it, selecting sometimes a

recent correspondence on the subject shows that there is a good deal of uncertainty about the identity of the insect in question. It also shows that one ought not to trust to memory, for, in answering one correspondent, I said that the Stone Fly in the larva or grub stage of its existence lives in a case or caddis, which was, of course, a mistake, and one I ought not to have made, having often studied Pictet's superb work, and more recently Mr. Frederic M. Halford's invaluable "Dry Fly Entomology."

The following notes and accompanying illustrations are from Pictet's "Famille des Perlides":

Pictet points out that the term *bicaudata* is applied by different naturalists to different species of the Stone Flies. Ronalds calls the fly he refers to *Perla bicaudata*; Mr. Malloch, of Perth, writing in the *Fishing Gazette* the other day, refers to *Perla bipunctata*; Mr. Halford gives as the Stone Fly *Perla cephalotes*, which is

at the beginning of the winter. It is probable they keep as much as possible at the bottom of the deep water in the winter, as the temperature is more even there; in fact, in cold weather it is very difficult to find them at all, and you do not find them near the banks. In the spring they approach the sides and grow more rapidly, and then change to the fly stage of their existence, some with the first fine days, others later in the year.

Stone Flies are found chiefly in swift streams, especially in the streamy parts where broken by rocks, &c.

The larvæ of the different species of this family are all exclusively carnivorous, feeding on small aquatic insects, chiefly on the larvæ of the Ephemeridæ* (duns), and in revenge they are

* This fact should be remembered when it is a question of introducing Stone Flies into waters not producing them.—R. B. M.

large stone, or a wall, or the trunk of a tree or stem of a plant. They only wait until they have found a suitable place, which sometimes takes them some yards from the banks of their native river. It is necessary for them to be able to place themselves on a rather rough surface so as to get a firm hold with their claws during the changing of the skin. When they are sufficiently firmly fixed they await during some moments an event, analogous to that which takes place with many other insects, which will free them from their outer skin. This is the formation of a bed or layer of air between the old and the new skin. The action of heat and dryness appears to influence the development of this layer of air, the principal cause of which is not well known, but the effects of which are easy to appreciate. This air gradually distends the outer skin until it is entirely detached from the inner; increasing in volume it makes a sort of inflation, which, in conjunction with the movements of the insect, ends

in a longitudinal splitting of the skin of the thorax, out of which comes first the body of the insect, then the rings of the thorax, then the head and antennæ, then the wings unfold. Then the insect withdraws the feet from their sheaths, which are held in place by the hooks, takes a fresh hold with these organs, and is thus enabled to pull out of the old case its abdomen and silk tails (whisks, as the fly makers call them). The old skin or larva coat remains adhering to the place selected by the insect for changing it. On examining it closely, the whole external organs of the insect are seen to be represented, because all, even to the corner of the eye, have left their skin there, some entire organs have been left behind, such as the respiratory tufts (*houppes respiratoires*), and in some kinds the whisks. Traces of internal organs are also found.

At the moment of emerging from the nymph skin, the Perlidæ have not their full strength or characteristic colouring; they are rather softer and clearer than they will presently become, a circumstance to be borne in mind in distinguishing species. In any case, after a few hours, or it may be after a few minutes even, the integuments become firm enough under the action of the air to enable the insect to fly.

The flight is heavy, horizontal, and straight; the flies have difficulty in rising, and can only do so at a very slight incline. The least blow stops them, and they fall readily if touched, the larger species appearing to be in this respect even less agile than the smaller ones.

The Stone Flies live usually on the banks of their native streams, and rarely wander far away; they are found on stones, walls, and bushes, some species having different habits in this respect. None of our European species take any nourishment; the rudimentary character of the mouth organs account for this. Thus, the Stone Fly lives but a few days, and, like so many other insects, appears to arrive at the perfect state solely to give birth to a new generation.

The males and females couple soon after changing their nymph skins; but not in the air, the male being minus the caudal forceps which permit the May Flies, Duns, &c., to hold the female in the air.

The eggs are in loose packets and easily separated, not being surrounded by any viscous matter. Pictet was not able to observe how the females deposit their eggs, but thought that they simply let them drop into the water as they fly over it. He had never seen them enter the water, as some of the Phryganidæ do, in order to deposit their eggs beneath stones under the water.*

This interesting description of the life history of the Stone Fly is general of the species, and, as Pictet points out, may vary a little in some particulars in some branches of the family, but as his work extends to over 400 pages I cannot follow him more closely in this place, except to note with regard to the illustrations that:

1. *Perla bipunctata* is, according to Pictet, the largest of the European Stone Flies, and the two sexes presenting less difference in size than is the case with many others. It is found over a great part of Europe, including, according to Newman, England.

2. *Perla cephalotes*.—This species of Stone Fly is remarkable for the great disproportion between the size of the male and female—the male, as already noted, being so much smaller. The wings of the male fly are quite rudimentary, not fit for flying, and not longer than the abdomen when alive; in dead specimens when the body is dry it shrinks so as to appear much shorter than the wings, the latter are brown, rounded, with strong markings. Another handsome species of Stone Fly figured and described by Pictet is *Perla marginata*, also found in this country, the female closely resembles *P. cephalotes* in figure and colour, but there can be no mistaking the males, as *Perla marginata* has long wings.

At the suggestion of Mr. Ohlson, of the Fly Fishers' Club, I am sending out some special bottles for collecting water flies and larvæ, and I shall be glad to have the names and addresses of any anglers who will undertake to collect specimens; instructions as to description, &c., will be

* I have often noticed when turning over stones in the middle of a trout stream many larvæ adhering in a row side by side, like sacks of flour in a mill.—R. B. M.

sent. I shall be glad to have Stone Fly larvæ now and some flies when they hatch out.

With the trout eggs I found in the stomachs of the grayling sent to me by Mr. J. E. Miller, from the Yore, the last week in January last, there were also larvæ of Stone Flies.

R. B. MARSTON.

"FIRST BLOOD."

THE Dee was all out of it on the opening day. So was the Don, the Deveron, the Spey, and the Ness, and the other eighty and one Scotch salmon streams which opened on that auspicious day. The fresh, which set in the previous Thursday, continued throughout Friday, and was even augmented by local rains, and, the hopes of a frost overnight not being realised, there was nothing for it but to face the music to a flooded river in making our first essay of the season.

The prospects were not of the brightest, but it was the opening day, when enthusiasm runs high. Much is overlooked on such occasions, and hope, borne on the wings of pent-up desire, is strong, dulling the worst fears and giving a rosy hue to the faintest chance of any favouring condition, especially on the opening day.

The wish was father to the thought that matters might not be so bad after all, and although there were grave shakings of the head with the older anglers, and the emphatic "no use" from those who had been at the river on Friday afternoon, Saturday morning saw us tearing along to the station in order to catch an early train for one of the mid-reaches of the Dee, a whole mile of water being placed at our disposal for the opening week by a friend who did not intend coming down just yet. He generally lets the first week or so of the season slip by, especially on an opening like the present, when the weather and water conditions have been somewhat mixed, and when no one can tell for two days on end how things are to turn out.

On a whole mile of water there are always some bits here and there where a fish may lurk when the pools are unrecognisable, and consequently unfishable, and to these likely places we determined to devote our attentions. It was on such that our hopes depended, and, recalling how often this backwater here, and that slack bits of stream there, this bend here and that turn there, had served us on many a former day when flooded out of the regular pools, it was wonderful what a cheery state of mind we found ourselves drifting into as we sped along over the eighteen miles of lower Deeside scenery, bearing but few traces of the adamant hand, which held it so fast in its iron frosty grip but a few days since.

For an opening day the weather was on the whole delightful. The mists which hung over the river in the early hours were dispelled as the morning advanced, and the early spring sun came out bright and strong till well on in the day, when clouds again began to gather and a slight rain fell at intervals till night closed in. After the rigours of the past few weeks, the genial spring day was most acceptable; and on this point at least the opening day was voted a decided success. If the river was not all that could be desired, the weather was no drawback, and the patch of blue sky so much built on by old hands was all there, with a few yards to spare.

The road from the station landed us at the centre of the water, and true to old traditions the gaff was thrown heavenwards to decide whether we should commence where we were, or proceed to the head of the water. The first throw was not very decided, as it fell with the clip pointing across the stream, and, accordingly, a second shy had to be made. There was no dubiety about the second throw. The die was cast for the head of the water, and to the head of the water we went. Probably the twist given to the handle of the gaff had something to do with the outcome of the auspice; but, at all events, it was quite to our liking, and what we would have chosen without the tomfoolery of calling in the services of the gaff, had it not been to humour old Donald, who would have been hurt had we not commenced the season's operations with the customary *éclat*. A brand new Gordon—the king of Dee flies—was put up to take the "cream of the water," as Donald put it; and "tight lines" being duly honoured by the same worthy, with many other

benedictions on the coming season, and with best wishes for a good day. Although this was said in a somewhat suspicious and doubtful tone of voice, and not after Donald's usual sanguine manner, the day's work commenced in earnest.

The river, if big, was not dirty, and there was no call for heavy casting. Wading, of course, was out of the question; but I have ever found stocking waders very serviceable, although probably they might have also been dispensed with, only that one can follow a fish with more comfort, and, at times, cover a flat or backwater "lie" with greater facility a yard or two into the stream than from 2ft. or 3ft. of a bank above it. It may be pure fancy on my part, but I feel more "at home" when casting, say, knee deep in the river than from a bank above. Of course it all depends on the surroundings of the pool and the nature of the margin of the river; but I confess to a predilection for getting into the water whenever and wherever I can. It is quite the opposite with a great many anglers I have met with, and they are often disappointed with fisheries they have taken when they find out, on arrival, that wading, and especially deep wading, is absolutely necessary before getting over their fish properly in a normal sized water. They prefer what are termed ladies' reaches, and soon get disgusted when a bit of hard wading has to be encountered to secure a fish. The nature of the fishery in this respect should be fully inquired into by those who are timorous of wading or who are not fully and freely at home when off the bank. Last year a gentleman took a section of the Dee for the spring months on the full assurance that there would be little or no wading required if the river kept up. After the first week the river fell away to dead summer level, and wading became an absolute necessity. It continued so during the second week, and the gentleman left in disgust. As there was no immediate prospect of a rise in the water, he wrote asking the proprietor to take the water off his hands and send him anything he liked in return. The rental was £150 for the season, and although only two weeks of it had gone, all he got in return was a cheque for £5. This same reach was worth twice as much in a small water to one who could wade, as in a big one to anyone fishing off the bank. Yet it was truthfully enough described as a bank water if the river kept up. But this by the way.

Knee deep I was covering a tempting little hole close by the side with a white-winged Akroyd, which I had changed for the Gordon, when the rug came, followed by the swish of a tail, which at once proclaimed the nature of the quarry.

"He's a kelt, Donald," I yelled to the old fellow, as he came tearing along the bank on seeing me engaged, so that he might take it easy.

"Don't be too sure of that, sir," came from the sanguine Donald. But I was not mistaken. Down the water it went, and I put on as much strain as I could to prevent it getting out into the swollen current, else there was no saying how far it might compel me to follow, or when the compact might cease. I succeeded in keeping it well in hand, and calling to mind an experience of some five years ago on the opening day, when the precious part of a whole forenoon was devoted to indulging the humours of big kelt over some three miles of the Commonty and Blackhall Castle waters, I at length got quite savage with this one, and, *volens volens*, soon had him within reach of Donald's gaff. It is not my practice to gaff a kelt, but here I had no option. There was no shallow to run it into, and landing nets are not yet made compulsory on the Dee during the opening months. But this is a mistake, and profiting by this legal loophole, that fish was gaffed, and so god rid of within twenty minutes of having been struck. Another run with a second kelt followed, a small affair this time, and got over in half the time.

Donald and I then had lunch, and as it was beginning to cloud up a bit and a slight drizzle to fall, skimmed over the lower part of the water till the "Lang Haugh" was reached, a favourite "lie" in a spate, and only fishable in a big water. At any other time it makes a wading ground to get at the pool proper farther out. As the Akroyd seemed to bring only "kelt sport," Donald tied up a Yellow Gaudie I got sent me the other day from old Blacklaws, who, although

ough the four score years and ten, can tie and cast a fly with many of his juniors. The Yellow Gaudie did it. At the third cast I was into a fine fish—small, but game. Away it went like a flash up the water. It was an anxious moment or so before I got it checked. But back it came with the current at the bend of the river, and for fully five minutes I held him in the teeth of it. Then it showed beautifully on its side, and then a sort of helplessly floated right round to Donald's feet; "7½lb., sir," said Donald from the bank a minute or two later, and we drank to the "first blood" of the season. G. M.

GROUND-BAITING, OVER-BAITING, ETC.

IN most open waters near London, during the first four or five months of the coarse fishing season, a great number of anglers cast in far too much ground-bait, and the fish get over-fed. Consequently, indifferent sport is the result. Take the Thames for instance, how frequently one hears of a swim having been baited with 1000 worms. No doubt judicious baiting is necessary to ensure success, but time should be given between the baiting and commencing, say at least forty-eight hours. Now, many anglers ignore this, and in a river like the Thames, at least during the summer months, the immense traffic naturally renders the fish shy, especially in the daytime; the result is they only begin to feed late of an evening and during the night. I have frequently proved this fact by opening one or two of the fish taken at day-break, when I have found them full of ground-bait—bread and bran, or worms, as the case may be. I advise anglers to open several of the fish first caught, one can then tell on what bait they are feeding. On one occasion, on opening a chub I found it full of cheese paste; on another, I opened several roach and found them literally gorged with bread and bran; needless to say, I knew at once what bait to use, and was thus successful. An old friend, a well-known chub and barbel fisherman, made a point of baiting one or more swims on a Thursday, ready for Saturday and Sunday; he was the most successful angler in our club, and this was no doubt due to his foresight. On the day he fished he used very little ground-bait. I mention this because one frequently sees anglers with large bags of ground-bait, which they continually cast into their swims; no wonder they catch so few fish. In fact, this was a common practice on the river Lea for many years past; but now most of the best roach anglers only make up the top of a half-quarten loaf, mixed with plenty of bran. A piece about the size of a Norfolk dumpling I find quite enough for a long day's fishing. Never cross bait your swim, if you intend using worms for a hook-bait, throw in a few cut up worms; if paste, throw in a few pieces about the size of a pea, don't over do it.

An instance of over-baiting, or, rather, injudicious baiting, occurred on the river Arun, in a swim I had been fishing near Bury, and doing well at. A friend, who was staying down for his holiday, procured a sack of grains, and mixed them with bullock's blood, casting the whole mess into the swim on the ebb tide, with the result that few fish were taken in the swim for some weeks, for the Arun being a strong tidal river, and the grains light, on the run up of the tide they were shifted further up the river, the fish, no doubt, going with them. On the following Sunday a great competition was held, and, strange to say, one of the first prizes was taken by an angler who fished about ten yards above where my friend had put in the grains. It taught my friend that the sort of baiting good for quiet rivers like the Medway and Onse was quite out of place at Amberley. Most of the anglers on the Arun squeeze a stiff piece of ground-bait round their bullets. This is a good plan, as it ensures the ground-bait remaining for a time close to the baited hook, and better than casting it into the swim.

I shall always remember my first visit to Richmond-on-Thames. I was a lad at the time, and was advised to take plenty of carrion gentles. So procuring six quarts at Messrs. Carter's shop, who kindly put them in a canvas bag, and tied the bag up with string, which we put on the rack. The train was just on the point of starting when in rushed an elderly lady. There was no smoking compartments in those days, but that did not

matter, as she did not object to a cigar, and asked us to allow her to sit with her back to the engine, to which we at once agreed, and so changed places, forgetting all about our traps. For some few miles all went well, when, all at once, we were startled by a scream. Now all anglers know how gentles find their way through the very smallest aperture, and it was certainly a mistake to expect them to remain quiet for long in a bag only tied up with string. The lady sat quietly reading, and no one noticed the gentles dropping out of the bag into her lap; fancy her horror when she noticed she was nursing twenty or thirty of these creatures. You can easily imagine our disgust, for the bottom of the carriage was covered with them. The old lady took her departure at the next station, leaving I and my friend busy scooping them up, and, in spite of all that escaped, we had more than enough for a week's fishing, let alone a single day.

I have often been asked how I make up ground-bait. This greatly depends upon the rivers I am going to fish; for rivers like some parts of the Ouse, Medway or Lea, with but little stream, your bait may be made much lighter, not nearly as stiff as for a strong running stream such as the Arun, or, in fact, many parts of the Thames, where they add more bran and less pollard, or allow the bread to soak longer, but beware of making it too soft, this is a great fault with beginners. I advise them only to make enough to last for a few hours, then make up some fresh, it is a great mistake to use stale bait of any kind. When white paste fishing, a good dodge is to slightly damp your paste, then dip it into a bag of dry bran, the particles of loose bran flake off, and floating away help to attract the fish.

There are so many little dodges known to our best anglers, that of late years roaching has become quite an art, but to enumerate all would make this article far too long. In these days roach are not so easily caught as in Walton's time. So I advise novices to try and have a day or two with an up-to-date roacher in order to become as celebrated some day as J. Osborn, Woodward, and many other well-known roach fishermen. On the Thames many anglers use soft clay, dug out from the bank, and mix it with soaked bread (crust and crumb) and plenty of bran. Thames professional anglers use the crust in the shape of a cube, this being a favourite bait on this river, but I seldom found it of much use on the Lea and certain other rivers. In making up ground-bait most Lea men never use crust.

Foul baiting.—In my long experience as an angler I have seen many instances of swims being spoilt. On one occasion, being a subscriber at Benningfield's water on the Lea, a swim where I had been very successful was for a time spoilt; in fact, made unfishable, hair line after hair line being broken, so the swim for a time was discarded. At last, while ledgering for chub, my gut triangle hook became fixed, but a steady pull at last released a five-barred gate, which, floating to the surface, I quickly removed out of the water sufficiently far to prevent its being pushed in again.

I think it was in the sixties that two well-known roach anglers, hailing from the east end of London, agreed to fish a match for a small prize or purse, two swims being selected; but, No. 2 swim being known to be better than No. 1, it was agreed the men should change swims every hour. It was decided to fish from 10 a.m. till 7 p.m. The angler I shall call Fred, having won the toss, elected to start at the best swim, so as to have the last hour at it. This was clearly a great advantage to him, as he would fish the best place five hours to his opponent's four, yet Joe won the match. Before leaving No. 2 swim Joe cast into the swim all his remaining bait. Fred up to this time having a few fish more than Joe, and the best swim for the last hour, it was almost any odds on him. Strange to say, No. 2 swim only yielded one more fish. How was this to be accounted for? Some of Fred's friends wanted to make out he did not try, but some time afterwards it transpired Joe had mixed salt with the last lot of bait he threw in, and completely spoiled the best swim. RED EYE.

GRANT'S CHERRY WHISKY.—This attractive "pick-me-up" is a pleasant combination of Kent Cherry Juice and very soft old Scotch Whisky. This and Grant's Morella Cherry Brandy are sold by Wine Merchants.

MRS. DABWATTLE GOES A-FISHING.

"JOSIAH," said Mrs. Dabwattle sweetly, "I am coming fishing with you to-morrow."

Mr. Dabwattle gasped. Not an ordinary common "I-wanted-that-badly" sort of a gasp, but one of sheer paralysed astonishment, opening his mouth so widely in the operation that his cigar dropped out on to his leg, where it started a small fire on its own account that speedily began to recall him to the painful realities of this world.

The cure was completed by his hurriedly seizing the wandering Havanah, and putting it back in his mouth, lighted end first.

Then weird and wondrous words floated around, until his ingenuity being exhausted, and his brain cortex fit to burst, the appalling sense of Mrs. Dabwattle's words broke upon him in all its terror.

"Ann Jane," said Mr. Dabwattle solemnly, "you must be dotty. Have you any idea of fishing? Can you cast a line? Can you play a trout? Can you scramble over rocks and through bushes with your size? It's monstrous, and not to be thought of for a moment. Bosh, Mrs. Dabwattle, bosh!" and then Mr. Dabwattle indulged in a hideous chuckle of his own invention, a chuckle that he kept for special and urgent occasions like the present, a chuckle that conveyed untold scorn and other maddening things; and which applied at the right moment—that is to say as he left the house, thus avoiding any reply—always infuriated Mrs. Dabwattle, and put her into a temper that took hours of violent sweeping, dusting, and upside-downing the house to calm.

On this occasion, however, it was too late at night for Mr. Dabwattle to escape, and he experienced the full fury of the storm, getting well bullied in consequence, and being obliged, after much resistance, to at last agree to his wife's proposal.

Mr. Dabwattle got down first next morning, and presently Mrs. Dabwattle's fairy step was heard on the stairs. Mr. Dabwattle went towards the room door to welcome her, but recoiled with a yell, and got round to the other side of the table, and stuck there, with one hand planted in the marmalade dish, and his eyes starting out of his head, as Mrs. Dabwattle sailed smiling into the room, arrayed in a bright green pair of bicycle what-you-call-ems, with a jacket to match.

Her legs were clothed in red check stockings of Mr. Dabwattle's, from which she had cut the feet, replacing them with black silk ones, cut from a pair of her own.

On these black extremities she sported a pair of old dancing shoes, because, as she afterwards explained, "She wasn't going to spoil a good pair of boots getting them soaked and cut about."

Above her Alpine hat waved a feather of fear-some shape and hue.

When Mr. Dabwattle perceived that it was of a truth his Ann Jane, and not a tax collector in disguise, he came from behind the table sucking the marmalade off his fingers, and trying to find words suitable to his state of mind. But before he had got even one finger clean, Mrs. Dabwattle opened the ball.

"Ha, ha, Mr. Dabwattle," she cried exultingly. "You little thought last night that I had anticipated your foolish objections about petticoats being in the way fishing, and that I had provided these er—trouserettes especially, so that you need not have that excuse, anyhow. I see you are surprised, my dear, but I hope you are satisfied."

"But the colour, Mrs. Dabwattle," faltered Josiah, paralysed by this sudden attack; "such a colour; and then that feather, oh, oh."

"There," cried Mrs. Dabwattle, "isn't that like a man? Nothing one can do is right. Didn't you tell me the day you came back without any fish, with a lot of green paint on your coat, that you had put it there on purpose to make you less conspicuous against the bushes? Although I noticed that they had re-painted the door of the Green Dragon that day the same colour. Isn't your line green, don't you call your wretched rod 'greenheart,' isn't even your beastly little fishing paper you devour so, green? And now you find fault with my trouserettes because I try to please you; and, as to my feather, one can't go out a guy even fishing, and feathers are worn big now; and I chose this because it's the tail of a lyre bird, and, the shopman said, suited to a fisherman—though why he grinned I don't know—and, and,

boo-hoo hoo," and Mrs. Dabwattle flung herself down in a yellow armchair, and sobbed loudly, producing a combination of sound and colour that quite overcame Mr. Dabwattle—who was biliously inclined—and caused him to hasten to pour oil on the troubled waters, and allay the storm.

Mr. Dabwattle, with these green garments ever in his eye, displayed a sudden solicitude for Mrs. Dabwattle's health that was quite enchanting, and instead of their walking through the town, insisted on hiring a little donkey-cart for the day in which to reach the river. Mrs. Dabwattle assenting, they soon got things arranged, and set forth in their chariot eager for the fray.

They had barely started, however, before Mr. Dabwattle remembered that he had left his knife in his room.

"You stay in the cart, Josiah," said Mrs. Dabwattle. "I'm not going to be left alone here with this beast, and we can't turn him round under half an hour. I'll go back," and she clambered out, and was back again almost before Mr. Dabwattle had time to replace the whisky-flask in the basket, after indulging in a surreptitious gulp. "Fancy forgetting your knife, Josiah," said Mrs. Dabwattle severely. You should always go through what you want to take first, like me. Now, I have put in the food and the flask—by the way, that flask must leak, I smell it strongly; a change of shoes and stockings—which you can manage in your pocket, Josiah, when we leave the cart. Then my cloak and umbrella—you'll have to carry these, my dear—and, let's see, yes, of course, some needlework and a book, in case I get tired of fishing. Those won't hurt in your basket, Josiah. There, you see, Mr. Dabwattle, nothing forgotten, everything needful for use and enjoyment."

"Why didn't you bring a table and chair as well, my dear," snarled Mr. Dabwattle. "I could have easily carried them on my head. Let me see, oh yes, and the bath tub, I could easily have slung that round my neck—everything for enjoyment, indeed," and Mr. Dabwattle groaned aloud and gave the moke "what for."

When at last they reached the river Mr. Dabwattle's temper was not improved, for Mrs. Dabwattle had, without warning, caught the donkey a crack over the back with one of the rods, which crack falling on the harness and not the animal had considerably damaged the spare top and bent the rings.

It was with a face full of gloom, therefore, that Mr. Dabwattle began putting the rods together, nor was it soothing when Mrs. Dabwattle suddenly sprang at his best winch, and began turning it round as hard as ever she could, exclaiming in childish tones, "Oh, Josiah, what a delightful little wheel thing. What can it be for, I wonder. Oh, I could turn it round all day, it's too lovely for words."

"Don't be a fool, Ann Jane," snorted Mr. Dabwattle. "Give it to me, can't you see that it's the line? Now, you just watch me. I place it here so, fix it like this, run the line through the rings, fix on this long piece of gut, then this fly like this, take the rod in your right hand, your landing net in your left, and there you are ready for your first lesson. See?"

Mrs. Dabwattle looked doubtful. "But where do you put the worms, Josiah?" she asked, "Won't they creep through the holes in the net?"

"Great Scot, Ann Jane Dabwattle," roared Mr. Dabwattle, "worms, worms; you ain't going to fish with worms; and if you were, d'ye think you bait the net with 'em for the fish to come and fetch away? Flies, woman; we fish with flies. This is the fly, this thing here; that's what the fish take in their little mouths, and then they pull, pull, pull; and he seized the fly and tried to shake it under Mrs. Dabwattle's nose. But Mrs. Dabwattle, in great alarm, jumped back, as was to be expected, at such a demonstration, and, as she had the rod in her hand, succeeded in jabbing the fly into Mr. Dabwattle's finger, making him jump and whirl like a Dervish, and yell like a man possessed, all of which only made her pull the harder, under the impression that he was showing her how a trout behaved when hooked. However, she soon discovered her error, and in a blue, not to say lurid atmosphere, the hook was extracted, the finger bound up, and after much delay, she received her first lesson in fly fishing.

Here my pen refuses to write. Suffice it to say,

that after much exertion and many accidents with the fly of a painful nature, she mastered the art of getting about 6yds. of line on to the water, in a good solid lump, with the fly in the middle.

Then Mr. Dabwattle gave the final directions. "Go up to that bridge, Ann Jane," he said, pointing out a bridge some way up the river, "and when you get there begin fishing, as I have taught you, only past the bridge, mind. This water here is useless, and I'll just skim over it and catch you up."

Here I must candidly acknowledge that Mr. Dabwattle knew of a whopping trout just above him, and meant to insure his Ann Jane being well out of the way in case he rose him.

"And," continued Mr. Dabwattle, "if by any freak of nature you should hook a fish, remember what I have told you; be very careful, and wind him in slowly as you get the chance."

"I see," said Mrs. Dabwattle, as she turned towards the bridge; "but surely, Josiah, it will have to be a very thin fish for me to wind in through all these rings."

Mr. Dabwattle set to work, but, alas! for the best laid plans. He had hardly made half a dozen casts before he was stuck in a lusty trout, his own particular whopper. All his ill-humour vanished. Even Ann Jane and her green trousers were forgotten. With a nice clear river and plenty of room all seemed *couleur de rose* in a moment. Away went the fish; screech went the reel; and at the strange noise Mrs. Dabwattle, who had not got far as yet, turned, beheld the bending rod, and ran back eager and breathless.

"Don't come close, get out of the way," roared Mr. Dabwattle, as his Ann Jane cavorted round and about. "Good heavens, woman, what are you about? Leave it alone, don't touch it. Oh, ah! you, you," and Mr. Dabwattle's voice, that had risen to a scream, sunk to a moan of despair as Mrs. Dabwattle, overcome with excitement and the sight of the slender bending rod, made a wild spring at the line, and exclaiming, "Oh, I must help, Josiah," seized it with both hands and tugged!

Once more my pen strikes work. Even that old trout, used as he was to fishermen, felt sad as he sailed away to his holt under the bushes, where he reflected on the limited language of trout as compared to that of man.

When Mr. Dabwattle eventually reached the bridge, after having flogged the rest of the water in a heartless and broken-spirited manner, he spied the cause of his discomfort, bending down on the bank a little beyond, busily engaged in rooting up the earth with something that gleamed white in her hand.

"What on earth are you doing now, madam?" he shouted. "Root grubbing isn't what I brought you out for—that's not fishing."

"No; but it means fishing, my good friend," shouted back at him his bright green spouse. "I've had enough of your stupid fly fishing, and caught nothing but myself; and now I'm getting a worm, and I'm going to fish properly, and you just run down here and put it on the hook for me."

"With my knife, too," yelled Mr. Dabwattle, and he dashed off the bridge with murder in his eye.

But his Ann Jane met his furious onslaught with that calmness born of innocence that disarms the strongest foe. "Don't be alarmed, my dear," she exclaimed, "I am not using your precious knife. I could not find it when I went back, but I brought your razor instead!! It's ever so much stronger, and I shan't break the blade."

"Ann Jane Dabwattle," said Mr. Dabwattle, sadly and slowly, "if any man had told me that he knew a woman, a real live woman, that went digging worms with her husband's best and only razor, I should have told him to run away and write fishing stories; but after this—oh, Ann Jane, Ann Jane—come home, Ann Jane, come right away home," and Mr. Dabwattle led his wife home, where she has since stayed. OYSTER.

BRITISH SEA ANGLERS' SOCIETY.—The annual general meeting of the members of the society will be held at the Cannon Street Hotel on Wednesday, Feb. 22, at 7.30 p.m., for the purpose of receiving the report of the committee and the audited accounts for the year ending Dec. 31, 1898, and for the election of officers for the ensuing year.

THE 1898-9 GUT CROP.

In reporting upon the gut crop of 1898-9, I have to announce an increased production of about 30 per cent., the major portion of which is confined to Refina or fine gut. For the first time since the exhibition year of 1883, the shorter common gut ("Corta") is a largely diminished quantity. In consequence of the Spanish-American War, the exchange value of gold so appreciated, that the price of gut has been materially cheapened, in some instances to the extent of nearly 30 per cent. The quality this season is fully up to the average, and intending purchasers will have little reason to complain. The heaviest salmon gut is scarce, and of course correspondingly expensive, the supply (as is frequently the case) not equalling the demand.

R. RAMSBOTTOM.

81, Market-street, Manchester.

STRAY CASTS.

SALMON problems, like the poor, we have always with us, and both topics have, I fear it must be confessed, been sufficiently fertile in words without knowledge, and speculation without sanity. There is no remedy for this, and perhaps it is as well as it is; but then let us be careful what we accept, for only by severe examination of theories and suggestions can we hope to secure some of the gold of fact, and reject the dross of fallacy and falsehood. At least, let us do it in the salmon and angling world, as for the politico-economic world it is simply past praying for, so we shall leave it at that.

A correct theory I do not hold to be necessarily true. But it must explain the phenomena. A spirit rapper may be a juggler or a miracle worker. Either explanation is sufficient to explain the phenomena, and, therefore, is enough for me. The philosophy of Ptolemy was objectively false, but as it explained everything, and could not possibly mislead any human being to his disadvantage or otherwise, it was good enough for Bacon. But he shrewdly remarked that the new Copernican system, although objectively false (!) could never be proved incorrect, for it also explained the phenomena. But when a man tells me that salmon will come up the Thames, when that river is as pure as the Test for instance, I demur. There may be other deterring influences at work besides the mere filth of the river, and there may be filth, Thames filth for instance, which does not really deter. The Liffey is the filthiest river in Europe, the Clyde scarcely excepted, and yet salmon ascend it, whereas some perfectly pure streams are never entered by these mysteriously capricious fish. A Glasgow paper has been telling its readers lately how salmon come some way up the Clyde even now, turning off at the Leven, and ascending by it to Loch Lomond; and presently, when Glasgow's model corporation has quite done with the river, they will come up to the Broomielaw and on to the upper waters in Clydesdale itself. This is good news, but I suspect that paper is singing the London song. And talking about the Leven, is it not about time *S. salar* began to take a peep in at the Stour or Medway, or some of the Essex rivers? But perhaps they are not clean enough.

They kill heavy springers in Ness and Thurso waters in early February and onward, and I am told there are really "winter fish yet travelling to the spawning grounds, which, of course, is the ultimate aim of all migrating fish." Well, this is good news. Will someone tell me whether these big fish are full of spawn as befits creatures hurrying to the redds—and very late, too, at that? If not, why darken counsel in this way? I hate to be hypercritical; but still, I hope there is no harm in saying, just by the way, that we seem to have no winter fish (salmon). I make it out in this way. The latest run of fish which the angler comes in contact with, even in the late November days, are always known—and rightly so, of course, as winter does not begin, if it comes to that, till late December—as harvest or autumn fish. And then, no matter how early the season opens, the angler—and everyone else, for that matter—calls the fish he killed spring fish, so that winter is virtually ignored. Perhaps autumn fish become "winter fish," but I hope not. Such nomenclature would

be most undesirable and confusing. But to return. What I really admire in the above quotation is "of course!" If there is a touch of the sarcastic in it I make my apologetic bow, but I really think we have here a most highly controverted point dealt with after the delightful manner of the most obvious truism. As I am writing these simple lines, towards the close of January, there are thousands of salmon pouring in from the ocean, and ascending certain favoured rivers of these islands, but surely not one of them will spawn, or is physically capable of spawning, until at least next November or thereabouts at the earliest. Why, then, speak of them as "winter fish travelling to the spawning grounds?" Their ultimate aim (next November or December) may be spawning, but what we want to get at is their immediate aim. My own impression is that their visit is of a ceremonial kind. They come with congratulations and good wishes in their mouths, just as our own women folk do when a certain interesting domestic event has recently occurred, and the mother in question is strong enough to be called upon. Or they may come up to laugh at the weary and worn breeders, forgetting that it will be their own turn next. I offer these explanations with reserve, and am quite prepared to qualify or even withdraw them on fuller information than I possess forthcoming. But anyway, they are an explanation, if only a laughable one; but to say the springer is coming up to spawn is no explanation at all, but worse. Nor is this all. The lighter weights (fish of from 7lb. or 8lb. to 10lb or 12lb.) it appears are "the true spring beauties," and not those heavy fish of Tay or Thurso. Agreed; but are these on spawning bent also, and, if not, what are they up to? Some years ago I read some remarks addressed to the tyro by an old and experienced salmon angler, Major Traherne I think it was, and among other things the pupil was told to try carefully "the eddies and tail of eddies at back of boulders" as a likely spot for a fish, as to such spots *food was swept by the current*. The italics of course are mine. Now any one who chanced to overhear the language used on that occasion, or took a glance at the wild war dance I executed over the mangled remains of that book as I kicked it about the room, would possibly be inclined to think I took things too seriously. And if I had been overheard, as I might have been the very previous day, giving exactly similar advice, barring the italics, to an inquirer, going on a strange river myself I might also be thought inconsistent. And yet it was quite otherwise. Undoubtedly, when you have not a local man to guide you, look carefully to boulders and their eddies. It is probably the best policy. But how dare any man say the presence of salmon in such places, or their taking humour is a matter of food or feeding! How does he know? He never saw a salmon feeding there, or anywhere else for that matter, and all this assumption of groundless and haphazard conjecture, as tried and accepted matter of fact, and lending it currency as such, I simply regard as treason to our craft and its mysteries. I love a man that can honestly and fearlessly say: "I don't know." As for saying the matter is but a trifle, I simply deny it. Nothing, however remotely connected with fishing is a trifle; and the cultivation of a credulous, unenquiring mental attitude is no trifle either. It is tampering with the vital springs.

Next, and lastly, a word on early and late springers, or rather on early and late spring rivers. I read this is a matter of temperature, and of course it may be, but let us see how it works out. "Where the waters are warmed in a long, shallow basin there is an earlier run of salmon than where the stream runs deep and sluggish over a cold bottom, even though their sources may all spring from the same mountain range." Of course, "spring" here really means winter, as the fish movements referred to are all pretty well over by the close of March, when winter ends; but it is enough for our purpose to remark that we are here speaking of cold weather, and not hot. Now, I always was of opinion, and am even so still if it comes to that, that in cold weather the water "in the long, shallow basin (query, bed)" was the colder, while that in "deep and sluggish streams" was the warmer. And the converse would be true, of course, of summer. For as

water is the most difficult substance in nature to make either hot or cold, and is also a very bad conductor in thermal matters, it defies the cold of winter to reach its greater depths, though, in its shallower parts, it may certainly at the close of a very cold spell be chilled through and through, even to freezing. And at such times fish retire to the depths for warmth. In like manner, it baffles the summer heat. The shallow margin, no doubt, will in late August be warm, very warm, but a touch of winter will be found lingering in the depths still. In fact, the sensible effect of heat or cold on water is in inverse ratio to its depth; so that the shallow water is now (in winter-spring) coldest, and the deep warmest; and no deep stream ever has "a cold bottom" in these islands either in winter or summer. Nor exactly a warm one either. The temperature of the deep changes little, and how much have the destinies of humanity depended on this small fact! How much does western Europe owe to the warm western winds from the winter Atlantic, and to the cool ones from its summer surface? But this is not fishing. MONA.

PISCATORIAL SOCIETY.

THERE was a large assembly of members and friends of this society on Monday evening at the Holborn Restaurant, to hear Mr. Horace H. Brown read his paper on "The Birds of the Kennet Valley," which had been looked forward to with unusual interest. Mr. Robt. C. Blundell presided. Mr. Horace Brown, after referring to the immensity of the study of natural history in any branch, mentioned that the species of birds to be found in the British Isles numbered 376, viz., 128 residents, fifty-two summer visitors, thirty-one winter visitors, and 165 occasional visitors. In the happiest possible manner he likened the members of the Piscatorial Society to these various classes of birds. First, the residents (the regular members), the happy souls who were ever with them ready to take the rough and the smooth as they came, and whose study it was, whilst learning the theory of how to take fish, to put in practice the art of how to make friends. Then they had the summer visitors, who turned up when the fat of the piscatorial land was served to them in the shape of Grey Drakes and Spent Gnats, having previously, perhaps, if very energetic, tried their luck with the Grannom. With the last of the May Fly they vanished. Verily they had their reward! Then there were the winter visitors, who showed up at the festive board when banquets were held or who came to "smokers." These, under the inspiring influence of the flowing bowl and genial society, talked fish, and there finished. Then came that remarkable collection classed as occasional visitors. They even sometimes built with them, and each year laid two guinea gold-coloured eggs, which were carefully collected by the hon. secretary and treasurer. They had been known, too, to lay three, and then to wish they hadn't. (Loud laughter.) He (the speaker) wished them good luck, and, as far as eggs went, "power to add to their number." Their treasurer had charge of a fine collection of these golden eggs, numbering over 200. They had been handed down to him carefully packed away and labelled "please don't touch." He might remark, likewise, on that curious migration northward that took place amongst certain knowing "old birds" in the autumn—birds who sometimes showed no piscatorial desire whatever until the period of migration to Scotland set in, but who, noting energy in their younger brethren, gave vent to their plaintive little cry of "pyffling, pyffling," repeated with monotonous frequency. (Laughter.) Much of their zeal was due to the extraordinary moulting which took place at this season of the year, when the semi-official broadcloth was thrown off and replaced by plaids and tartans, whilst the lower extremities were more or less exposed to the admiring gaze of the hen birds, who were supposed to aid in the adornment of the male, especially the lucky birds who had well feathered their nests. Harking back to that real quarry of the evening—the feathered friends of the Kennet valley—Mr. Brown said that in Berks, Wilts, and Oxon something like 245 had been credited. Suppose the members were at the Swan at Newbury, and that breakfast was arranged for 8 a.m. (a pure supposition, by the way), and that they had plenty of time for their ablutions. If they loved birds, they would, by drawing up the blind and opening the window, have a day's work before them without moving. He had seen the kingfisher dive from the old apple tree in the garden, and noticed that black rascal, the lesser grebe, which was so devilishly cute. He, too, from the same lattice, had watched the heron, and a cloud of golden plover captivated him by their graceful evolutions for so long a time that "Brown, breakfast," was shouted. Then he knew it must be nine o'clock. (More laughter.) On one occasion, indeed, he had counted forty-two different kinds of birds in the district. The summer migrants swarmed by the Lambourn. They might hear the marked call of the chiff chaff, the first to chirrup forth tidings of spring. This was followed by the black cap, the willow warbler, the wood warbler, the reed, sedge, and garden warbler, the polly whitethroats (those charming little friends of our boyhood), and the grasshopper warbler. They found the tits at all seasons of the year. The beautiful nuthatch might always be heard, though seldom seen. The cries of nocturnal birds, specially the nightingale, too, he had often listened to when standing on the little bridge by moonlight. They might also hear the

song of the reed warbler, also called the night warbler or reed wren. Thanks to a hint given him by their chairman, Mr. R. C. Blundell, when down at Newbury once, he (the speaker) had heard these reed warblers hold forth on one memorable evening—a great treat. Referring to larger birds, Mr. Brown said that the golden eagle was killed at Hungerford in 1840, and the giant bustard was plentiful fifty years ago on Lambourn downs. He had dropped upon a specimen of a very scarce bird at Hungerford, which one of the commoners had killed, viz., the purple gallinule, a bird so rare that although it was included in "British Birds," by Lord Lilford, it was on the strength of one specimen only, which was obtained near Wellingborough in 1890. On another occasion, Mr. H. Harden had picked up and had drawn his attention to a spotted crane—a rare find. The marsh through which the society's moor stream ran was "bird haunted." They could not walk along its banks without hearing the "scape, scape," of the full snipe, and its "drumming" or bleating as it circled in the air—a habit followed by its cousin, the little Jack snipe, but not by the great or solitary snipe. They could not look down stream from Ham Bridge without spotting the everlasting dabchicks, moorhens, and coots, and in the summer the graceful wagtails. Going towards Thatcham by the Kennet and Avon Canal, they might see a few of the commoner sorts of hawks. The Kennet valley could boast of being the home of the common buzzard, which not many years ago was plentiful in the immediate neighbourhood of Hungerford. After giving an interesting list of terms used in speaking of flocks or companies of birds, the speaker said that in the matter of luck the birds might be reckoned as full of portent. The magpie, crow, and raven were all, under certain circumstances, desperately unlucky. They should be careful, too, not to hear the first cackoo of the season before breakfast or see the first wheatear sitting on a stone. The terrors of bad luck were ever held before evil-doers who would rob certain birds of their eggs. What for the good luck? What omen would they seek from the sight of their feathered friends of the Kennet valley? To his mind it was a slice of good luck to have them to look at, to hear them, and to talk about them. Each one of them, residents or migrants, was so full of interest that to be without them would be to rob the surroundings of their piscatorial pursuits of half the pleasure and half the profit. He might add with Ralph Waldo Emerson—

"Hast thou named all these birds without a gun,
Then be my friend and teach me to be thine."

A hearty vote of thanks was unanimously accorded to Mr. Horace Brown for the amusing and admirable reading he had given the members.

A very kind offer of 600 coarse fish, consisting of roach, dace, and chub, was received from Mr. Willie Gilby, J.P., through Mr. Hine Haycock, and an expression of thanks was passed for the most acceptable gift. The fish in question will in due time be placed in the new water at Uxbridge. May I again remind members of the smoking concert on Monday next? Mr. Robt. C. Blundell has secured some excellent artists for the occasion, and a capital programme will be presented. M. G. E. DE C.

FISHING RIGHTS IN THE TRENT.

AT Bingham Petty Sessions last week, three labourers, named respectively, Chapman, Holmes and Fewkes, were prosecuted by the Board of Conservators of the Trent Fishery for illegal fishing in a stretch of the river leased to the Wellington Angling Society. The two latter pleaded guilty, but Chapman decided to fight the case on the ground that he had proper permission to fish in the river. It was proved that they were using a net 25yds. in length, 8ft. deep, 3in. from knot to knot, and 1½in. diagonal. Mr. Gaskell, the president of the Wellington Angling Society, stated in his evidence that the net used by defendants was capable of taking all the small fry, and could sweep everything out of the Trent. The defendant Chapman went into the witness box and produced written permission from several persons; but Mr. Eddowes, the solicitor for the conservators, got from him the admission that he had obtained these permits since the commission of the offence with which he was charged. Although Mr. Eddowes pointed out that the offence was a most serious one, and pressed for the imposition of the full penalty of £5, the magistrates, after consultation in private, fined each defendant forty shillings and costs, and ordered the net to be confiscated.

YORKSHIRE FISHERY BOARD.

THE annual general meeting of this board of conservators, appointed under the provisions of the Salmon and Fresh-water Fisheries Acts of 1861 to 1896, was held at the Royal Station Hotel, York, on Feb. 9. The secretary submitted the annual report and balance-sheet, which showed that the receipts for sale of salmon net licences were: £35 for sea licences, and £23 for river licences, a total of £58. The take of salmon in the sea had been about the average of recent years, but the river fishing had again been a lamentable failure, owing to the diminished flow of water during an exceptionally dry fishing season. One salmon rod licence only was issued, no salmon being caught with rod in 1898. From the water bailiff's report it was impossible for fish to live in the Ouse during the greater part of the fishing season, and it was patent that no improvement could be expected in the fishing industry in the river so long as the summers continued so dry as they had been during the last few years. He was pleased to state that the pollution of the river Aire had much decreased. It was also gratifying to be able to report a very large increase in the sale of licences, notwithstanding that the season had been an indifferent one for sport. The large number of 10,564

trout rod licences were issued during the year, being an increase over the previous year of 1061. Mr. A. R. Empson, one of the conservators, was good enough to attend the hearing at Westminster for the purpose of giving evidence in connection with the proposed abstraction of waters within the watershed of the district, and it was thought that his opposition to that course, so far as it went, had not been without some beneficial results, though the right to inspect gauges was not given to the county authorities opposing the Bills as was hoped would have been the case. Clauses, however, dealing with the question of compensation water and the maintaining of proper gauges were inserted in the Bills, and it was believed that the opposition of the several authorities had resulted in the maximum of benefit possible at the present time. Notwithstanding the expenses relating to the fish pass repairs, and the sum of £52 10s. which it cost the board in reference to the Corporation Water Bills, there was a substantial reduction in the debt owing to the bank, the amount having been reduced from £323 6s. 8d. to £268 19s. 3d. There had been forty-six convictions under the Fishery Acts during the year, nine of which related to the sale of unclean salmon or the use or sale of salmon roe. The report was adopted. A vote of thanks to Mr. A. R. Empson for his services in attending the hearings at Westminster was heartily carried. The secretary stated that applications had been received for yearling trout from the Richmond Angling Association, Knaresborough Joint Anglers, Burneston Angling Club, Harrogate Angling Association, York and District Amalgamation, Hearts of Oak Angling Society (Great Driffield), Hull Angling Preservation Society (river Don), Kirbymoorside Angling Club, Thirsk Angling Club, Ripon Angling Club, and Lansthrodale Angling Club (Wharfe). In answer to questions, the secretary stated that the aggregate cost of providing the trout for distribution was £55.

BATH ANGLERS' DINNER.

A GOOD muster attended the third annual dinner of the Bath Anglers' Association on the 9th inst., at Fort's Restaurant, Milsom-street. Several letters of apology and regret for non-attendance were received from the president and others. The spacious dining hall was furnished with a stack of glass cases, in which were set some excellent casts of fresh-water fish. The tables were elegantly laid out, and at intervals large vases of gold and other species of fish were placed. A further embellishment was the tasteful distribution of beautiful flowering orchids, grown by Mr. F. C. Fortt. As regards the repast, it was all that could be desired. Mr. T. Tempest presided over the company, being supported by Messrs. Foster Smith, P. Learoyd, F. C. Fortt, L. G. Clough, H. Lansdown, R. Kendall, J. Berryman, W. Monk, F. Moody, R. Curtis, A. J. Tanner, W. Edwards, and S. Wilkinson. The loyal toast having been duly honoured, the "Bath Anglers' Anthem" was sung. The "Bath Anglers' Association" was submitted by Mr. Harold Lansdown, who, in the course of a brief speech, remarked that angling was a sport which tended to a lot of good fellowship. (Applause.) Responding, Mr. Fortt considered that angling associations were good things in their way. They tended to good fellowship and mutual improvement. He thought the club had made great strides during the three years it had been in existence, and the three dinners they had held had been very creditable affairs. Mr. Fortt next proposed the toast of the "Chairman," observing that were it not for such gentlemen as Mr. Tempest he did not know where their dinners and such like functions would be. Mr. Tempest was a good sportsman, and was always ready to help any association formed for the purpose of sport. Acknowledging the compliment, the chairman expressed his satisfaction at the evening spent, and said he hoped to be present at the Anglers' next annual dinner. Amongst those who contributed to the harmony were: The Cecilians (the Singers Messrs. Monk, Edwards, Hopper, and Kerr), a quartet; Mr. Reginald Curtis, in a highly dramatic impersonation of "Bob Brierly, the Ticket-of-Leave Man"; Mr. Bertram Fortt and Mr. T. Clack rendered comic songs; and others contributed to the musical programme (Messrs. F. J. Moody, Percy Fry, W. Edwards, H. Glisson, Bryce, &c.). A very enjoyable evening was spent.

HARROGATE ANGLING CLUB.

THIS association has accomplished some excellent work until now, and perhaps possesses the best varied fishing ground in Yorkshire. The club has annually re-stocked its waters with yearling trout and ova, and have introduced the rainbow trout. A water bailiff is kept on the fishing grounds. Prosecutions have been undertaken, and the club's hatchery (presented by the president, Mr. Ibbetson, of Leeds) is in full working order. The club possesses the fishing rights of the river Nidd, from North Ribston to below Cattle, a distance of about ten miles, containing trout, grayling, pike, and coarse fishing generally. The club have a number of members in Harrogate and Leeds, as well as in other West Riding towns, and the fishing grounds can be easily reached via Harrogate, Knaresborough, or Wetherby; whilst the water bailiff (Dowling) can be communicated with at Ribston, Wetherby. The association have also the fishing rights of the lower Crimble, from its confluence with the river Nidd to Spofforth, and the upper Crimble, from Pannal to its source at Crimble Head, about twenty miles of capital trout fishing. At the annual meeting of the club the total receipts were nearly £80, with further subscriptions still owing, and the whole of this sum will be spent in re-stocking and preserving. A thousand yearling trout of large size were added to the waters at Ribston last spring, and a large quantity of rainbow trout ova were successfully

hatched out and transferred to suitable runners under the protection of the water bailiff. The Crimble and Oak Beck streams have from time to time received consignments of fish, and the members of the club continue to have excellent sport, as far as thirty and forty brace of fish being taken by one angler in one day. The Yorkshire Fishery Board have granted the association 500 yearling trout for the present season, whilst a large number of ova is to be purchased and hatched, no spawn being taken from any of the streams. The Mayor of Harrogate (Dr. Solly) is a member of the association, whilst the president is Mr. Ibbetson, of Leeds, who has kindly presented the club with a fish hatchery. The committee have decided to admit a few more members at the present subscription of £1 1s. per year, before imposing an entrance fee, and anglers who are thinking of visiting Harrogate during the coming summer, or those on the look out for excellent fishing all the year round, should communicate without delay with the hon. secretary of the association, Mr. R. Fortune, Strawberry Dale-road, Harrogate.

G. MORELL.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

Add	30 min. for Chelsea.	Add	55 min. for Kew.
40 "	" Putney.	75 "	" Richmond.
45 "	" Hammersmith.	80 "	" Twickenham.
60 "	" Barnes.	85 "	" Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Feb. 18	7.15	7.43
Sunday, " 19	8.17	8.56
Monday, " 20	9.42	10.30
Tuesday, " 21	11.14	11.51
Wednesday, " 22	—	0.25
Thursday, " 23	0.53	1.13
Friday, " 24	1.33	1.52

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, Feb. 18	7.55	8.23
Sunday, " 19	8.57	9.36
Monday, " 20	10.22	11.10

These times show high water at Houghton Bridge, Amberley Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—The old era in the work of Thames preservation is past and gone, and what was to be done in the fifties and sixties is very different to what it is at the present time, which may fairly be designated as another epoch. The old evils of poaching, snatching of fish, taking unsizable fish, laying night lines, trailing, and other evils are done away with, and the work is of a more straightforward character, but the same energy is still needed, especially under the head of watchfulness; and the netting of lakes and reservoirs, practically inaugurated during the presidency of the late Mr. Thomas Spreckley, will be always required for re-stocking purposes and preventing the depletion of fish, unless the new scheme of Mr. E. B. Shrubsole, which has been taken up by the Thames Re-stocking Association, is found adequate by the introduction of fish hatcheries, and the raising and rearing of the natural fish, if the river has become sufficiently developed, is found sufficient for maintaining a good head of fish in the river. I have never advanced any opinion on this new proposition, because my great fear is there will not be found enough of pecuniary support to carry it fairly out. We all know how difficult it is to get funds to carry on the ordinary work of river preservation, and how costly it was when those pioneers of fish culture, the late Messrs. Frank Buckland and Stephen Ponder, introduced it to the Thames, in respect to trout and grayling, then the T.A.P.S. had to relinquish their connection with it on a monetary consideration, even when there were so many ready to give their support. The late Mr. W. H. Whitbread, one of the founders of the society, in addition to his annual subscription of five guineas, supplemented it with an additional donation of ten guineas for the work of fish culture. The scheme is one of so expensive a character, my only fear is if it fails it will be for want of the necessary support, and I should be sorry to throw cold water on the movement, for anything that is done to benefit the river I have been so long connected with will have my best wishes, as I still love the grand old Thames and the old society which watches and preserves it for the benefit of all classes of anglers.—B.

—(Hampton Court).—William Milbourne, writing on Tuesday, says: "There has not been any fishing done this week, as the water is now higher than we have had it for the last three years, and is running over the banks, flowing over the meadows, and still rising fast. I am afraid we shall not do any more fishing for some time. It looks like a very high flood."—B.

—(Henley).—Feb. 15.—The river, which has been in flood for the last week, is once more within bounds. Henley Reach can be fished from the bank, the water is falling down, and a very strong stream running. If the rain would only keep off it should be in good condition by the week-end, but we get a little every day. At the time of writing it is coming down fast, which will no doubt

delay it clearing. Several aak up to 4lb. have been taken to-day and some roach. I have just seen a bag of the last named fish weighing 13lb., taken ledgering with lob worms.—STANLEY MEAD.

—(Kingston).—Mr. Gunston, fishing on Tuesday with John Johnson, creeled sixty-four bream, the largest 3½lb., but only a few retained; and Johnson during the week has taken thirty-four more bream and nine dozen of roach. Only a few bank anglers have been out, and taken a small quantity of roach.—B.

—(Sunbury).—There are no reports from this district, and the same may be said of the portions higher up, so that the angling news generally is very limited.—B.

—(Teddington).—W. McBride writes: "The water is in a terrible state, and has risen six inches to-night (Tuesday). If the rain keeps on, I am afraid we shall have a big flood. I went out with a customer on 12th inst., who caught eight brace of perch, one jack, and fourteen gudgeon. In a small eddy to-day (Tuesday) I got seventeen dace, one perch, and one eel where the previous take was made. I am sorry to say the water is too high to lay our pots for lampers. Mr. Sinnibaldi, jun., caught a fine pike last week in the ballast hole pond just above the railway station. It weighed 24lb." I remember when we netted the lake at Osterley Park some years ago we got a pike of about 14lb., which was afterwards taken to this piece of water, and this may probably be the same fish. There is another report to hand from Douglas accounting for a jack of 4lb. being creeled by Mr. Sinnibaldi from the steps of the Anglers' Hotel, and the date of its capture was Friday last.—B.

—(Twickenham).—The river has not of late years been of the same description as I found it on Tuesday last. I had a good chat with Mr. Ogden Smith as to its consequences in connection with the fish. He replied, "It is of serious mischief to the small fry, as I have seen them left in the meadows on the grass, in large quantities, to perish." The anglers who fish in punts have not been able to get out, and what fishing has been done is entirely with the bank fishers in the back eddies. Mr. Ogden Smith told me of one take he had seen on Monday, from the rod of Mr. Simmonds, consisting of five and a half dozen good sized roach and dace; and one on the Friday previous from another bank angler, who had a good show of very fine roach and dace. There is a little irritation amongst the anglers as to the trout which have been taken in the nets lower down, as to their always being taken to Kingston, as they consider it is only fair to them to have them placed in the river at Twickenham or Teddington. It has, however, always been the practice to turn them in again above the lock, and whatever objection there may be it does not belong to any recent movement in that direction, but of a custom which has prevailed ever since the foundation of the T.A.P.S., together with the present reward, and can be dated to the founders of that noble institution.—B.

—(Windsor).—The river is still very high, but is now running off, and should the rain keep off for a few days anglers should be able to obtain good sport in about a week. Jack and chub should account for heavy creels to those anglers who watch the water carefully and avail themselves of the first opportunity of wetting their lines again as soon as the water clears. I hope, with other members of the Windsor and Eton Preservation Society, to don my waders immediately Father Thames confines himself to bounds again, to net the ditches and ponds, where I have no doubt we shall find and return to the river large numbers of fish that would no doubt come to us untimely end if it were not for the good work carried on by such associations.—CECIL HOWLETT.

Blackwater (Maldon, Essex).—The waters in connection with the Langford Fishery have been rather too much coloured during the past week, but now prospects for successful angling seem much better. Messrs. Turner and George, fishing the backwater on the 9th and 10th inst., secured over 20lb. of roach; and other anglers secured a few roach. Mr. Ben Lees was the most successful on the 11th, with roach and bream. The time of high water on the 19th will be at 6.56 a.m. Day tickets for fishing the Langford waters may be had at 1s. from the above clubhouse. As the time is now drawing near for renewing the lease of Langford waters, I shall be pleased to bear from the late subscribers if they will again subscribe to the Langford Fishery during the next season.—F. KEEN, 26, Spital-road, Maldon.

Bottisham Locks (Waterbeach).—After wind and rain fish all disturbed just now. Time of writing we are having fair sport. No end of pike up to 4lb. each. Roach slow; dace have spawned; river clean; bank fishing also.—J. O. GEORGE.

Dart (Totnes and District).—Reports from the moorland waters show that the spawning season has been a good one, and there is every hope that with the new fish passes at Totnes and Buckfast Weirs the ensuing season will be successful.—DEVONIAN.

Devonshire streams.—All the streams have been running in heavy flood for a week or two, and there are no signs of any improvement at present. It is announced that the Meavy and Plym are well stocked with fish. The Tavy, Walkham, and Plym Fishery Board report a balance in hand of £35, although the past season was the worst experienced since the formation of the association; owing to the low state of the water, salmon and peal did not return to the rivers in anything like numbers until August, whilst trout were out of condition much later than usual. The Tavy and Meavy, however, yielded some fine trout, one basket of forty including a 2½ pounder. Baskets of from three to five dozen were made on the Plym.—DEVONIAN.

Exe and Canal (Exeter).—This has been another monotonous week of rain and wind, relieved on one day only by a tropical thunderstorm. Fishermen are quite boycotted, as one flood is barely off ere another is making.

It has been, with out exception, the most sickening season within my recollection.—RED PALMER.

Fen District (South Lincs. and Cambs.).—The heavy rains are really now disastrous to the interests of the anglers. Most of the rivers and leading drains are bank full, and running over in some places, to the dismay of all concerned. Only the little drains are now worth a visit, and those only are yielding roach. Weather, however, is promising if only the floods would but run down.—LIMPET.

Idle District (North Notts.).—Thousands of acres of land have been submerged in the valley of the Trent between Newark and Gainsborough. Floods are also reported on the lands above Gooles, and many districts where fishermen do congregate—in this district even—under water, or were so early this week. About the only item recorded last week were a few roach takes from the Stockwith Canal.—L.

Lea.—The river has been in full flood, but on Wednesday was fining down. It should be in order by Saturday if no further heavy rains intervene. Many anglers have been out, but few have met with sport. The water above the lock at St. Margaret's early in the week attracted a good many rods, and some nice jack and perch were secured. One angler (Mr. Friedlander) took a brace of the former, 8½lb. and 4lb. 3oz. At St. Margaret's on Monday a few nice roach were landed. Mr. Isaacs captured four scaling 6lb., best 1lb. 9oz.; and Mr. Wood a similar number going 3lb. 10½oz. I hear that at Waltham Mr. W. Springham, last Saturday, took twenty-five roach weighing 11lb.—a nice basket. In this district pike up to 7lb. and some pound perch have also been taken. Mr. W. Perry, writing from the King's Arms Fishery, Waltham, kindly forwards me this information: The Stort has overflowed in most districts, and frightful weather has prevailed for angling. There has been no sport, but roach, conditions favouring, should be had this week-end.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these streams are now high, and out over the fields in some places. The heavy rain of last week caused both streams to rise higher than they have been for years, and for miles along the banks the land was under water. There has been no angling, and it will be some weeks before the river gets into order again, and then the fish will not have recovered the floods, and trout fishing will be slow for a time after March 2.—GWYNNE.

Lugg, Arrow, and Winsley (Kingsland).—Gales with driving heavy storms of rain, &c., have prevailed for a week past, varied at intervals with every kind of weather known to us Britishers, including thunder and lightning; the effect has been to bring another big flood, as high or nearly so as that of Jan. 23. The waters are subsiding to-day (Wednesday), but are still overflowing the banks, and a vast quantity of land is yet submerged. This afternoon rain has again set in, and the outlook is ominous. It is a question if the rivers will be low enough to commence trout fishing when the season opens (March 2).—R. T. WILLIAMS.

Nene (Peterborough).—Depressing circumstances are still in the ascendant, and my prognostication of last week has been fully verified, as the water in the river has risen fully another foot, bringing it up to about 13ft. on the water gauge at the bridge. As a consequence the adjacent lands are now flooded, with no immediate prospects of improvement. Albeit a great quantity of roach have been caught, some taking 2st. or 3st. weight during one day's fishing. Notwithstanding the controversy over the Eroder dredger that the Wisbech Town Council had decided to purchase for river purposes, after a prolonged discussion of the matter on Friday last the minute on the subject stands confirmed, and as soon as the plans and specifications are prepared the dredger will be ordered, at a cost not exceeding £1800.—E. A. S.

Otter (Buddleigh Salterton).—For the last week rain and gales have visited us, and fly fishing has consequently been an impossibility. The river is now (Feb. 15) in flood. The usual netting has been going on, but with very little success. This is not altogether such a reason for congratulation as at first might appear. It looks as though the supply of white or sea trout, which presumably come up from the sea near the mouth of the river, was being exhausted by the annual and indiscriminate drains upon it.—HERON.

Ouse (Holywell Ferry).—Had a rise in the water here all last week that quite upset all fishing, but it has now (Wednesday) subsided, and is not at all a bad colour; but by Saturday it will, no doubt, be in first-class condition again, and the large specimens which have eluded capture up to now will have to look to themselves as the end of the season approaches.—A. SCARD.

Ouse (Paxton).—We have had two weeks of flood, but they have drawn off the water well, and it has fined down to a perfect state for fishing. The jack are feeding well. A person was fishing last Tuesday for roach with worms, and a jack of 4lb. took the bait, and, after a good fight, was landed. Now is the time for good sport with the jack, for they are hungry, and in numbers in little room.—W. DUCKER.

Plymouth.—All the rivers are in high flood, and plenty of water everywhere; all the lower levels are flooded throughout our district. There will be no dearth of water certainly for the first part of the season, and everything bids fair for a good one. We shall only now be able to issue tickets and licences for the Dart district and the Tavy and Plym, besides the Cornish rivers, as the Avon and Erme district has been monopolised by a quiet family party. These latter rivers are being poached to a fearful extent, and I am surprised.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—All these rivers are now again flooded, and the weather continues very wet and stormy, so that angling is well nigh impossible, excepting pike trolling and fishing

with worms and other ground bait. The salmon are now afforded a grand opportunity to reach the upper waters, and if there proves to be a scarcity of them this season it will be useless to expect to find salmon in future in this neighbourhood.—VYRNWY.

Stour (Bures, Suffolk).—The weather and water during the past week has been against successful angling of any kind, and though a few decent roach of 1lb. each and upwards have been taken, large takes have been out of the question. Since the 12th the wind has moderated considerably, and the water is now in splendid condition. Mr. H. Steed, on the 13th, had four pike in an afternoon's angling, largest 5lb.; and a London angler, on the 15th, some roach, largest 1lb. 4oz. Some good bags of roach should now be made with either gentles or paste.—W. T. BAINBRIDGE.

Sussex Rivers and Chichester Canal.—The heavy gales of the past week, combined with high tides, have played havoc on the coast, and filled rivers to overflowing. Some thousands of acres are under water from the rising of the Arun, and, in fact, the Ouse. Cuckmere and Adur are all filled to overflowing, and running rapidly. The hope of angling is at present remote, as the weather is far from settled. The Canal at Chichester has not suffered, as the water is let off at the locks to keep it from overflowing. Several anglers have been down when weather permitted, and pike up to 4½lb. have been taken. One of 4½lb. was taken in the reach from Birdham Bridge to the lock, by spinning, when at times the spoon was blown out of the water. There are a few big pike below Donnington, but they are proof against all lures.—GEORGE F. SALTER.

Taw (North Devon).—The rivers are very full of water, rather too full for any fishing. The small brooks, although in good condition as regards colour, are over their banks. I have heard of a few worm fishermen, but the catches are small. I have been informed a new Act of Parliament, since 1875, is in existence, that no trout can be taken before a certain time. Not having seen any, can you inform me of it?—RUSTY GAME.

Temé (Ludlow).—The Temé in this district is still running out of order for angling, being high and muddy. The rain of last week caused it to rise, but it had gone down a little on Saturday; but rain, thunder and lightning, and a gale sprung up on Monday, and the river commenced to rise again, and there will be another flood, and angling will be impossible, and as things are at present there will be little, if any, fishing done before trout come in season on March 2, when it will be doubtful as to good sport. The late floods have stirred the fish up, and the heavy water has not been good for them to be in good condition, and anglers will have to wait for a time before good conditioned fish will be landed. The Ony, Corve, Clun, and Ledwyche are all running high and muddy, and will be on the rise. They are quite out of fishing order, and nothing will be done in them until the weather takes up.—S. LUDLOW.

Temé (Tenbury).—The Temé in this part is now running high and muddy, and quite out of order for angling. Seldom if ever has such weather been had as we have had lately. Snow, rain, thunder and lightning, and a gale all following one another, and it has made the river quite out of condition for any sort of fishing, and there is no prospect at present of any change, and there will be nothing done until trout come in, when sport will be slow for a time.—WORCESTER.

Usk (Abergavenny).—Trout fishing commenced here, Thursday, the 15th. The river has been in flood for the last four to six weeks. The water rose on two occasions higher than the flood of 1894; the flood level mark being out of sight.—ERNE DELAFIELD.

Witham, &c. (Mid-Lincolnshire).—Angling is all but at a stand still in this district. Floods are having disastrous effects. Some of the drains have overflowed their banks, and in some places low lying lands have been submerged. The other day a strange scene was noticed; when the waters fell hundreds of fish, chiefly roach, failed to get back with the returning water; they had gone on to the meadows to feed on the grass and were left high and dry to perish. The chief mortality from this course was at Timberland Fen, which joins the river at Kirkstead. There has been a little sport on the Sincil Dyke and the Stanch at Bardney. From the latter an eel was taken the other day of 4½lb.—LUCI.

Yorkshire Rivers.—THE YORE, SWALE, NIDD, WHARFE, OUSE, &c.—We have had some remarkable weather since my last week's notes, and the hot wave has been followed by a lot of wind and wet. Although the floods have not been sufficiently high to overflow the banks of any of our rivers, they have been high enough to prevent angling, except for roach, &c., in the back-waters. Frequent rains have, however, kept most anglers at home, but the weather moderated on Tuesday, and to-day it is brilliantly fine, and as the aneroid has a steady upward tendency, prospects for sport are improving. The thrush, blackbird, and lark have been in full song for a week now, and the snowdrops are getting plentiful in the woods contiguous to the riversides, reminding us that the season for grayling fishing will soon be over, and that our attention will soon have to be turned to that of the trout. The Spanish Needle, small Olive Bloat, Little Brown, Red Cock, Blue Midge, and Alder Flies have been observed on the water during the bright sunshine of the last day or two, and as the water clears the grayling will rise to them. I was very pleased, indeed, to notice in the report of the last meeting of the Yorkshire Fishery Board that Col. J. W. Lodge, the popular member, who practically represents the upper reaches of the Yore, had raised his voice on behalf of what is known as "the coarse fish anglers," and had protested against the anomaly of their being obliged to pay a licence to catch trout, when the miles of water which they fish does not contain a single specimen, or, at the most, very few trout. His arguments, I observe, were

met by the secretary that the fishery board are trying to introduce trout into those streams, so that in due course of time the bottom fisherman, who never goes out with the intention of getting a trout, like the boys who have to pay their shillings for gudgeon fishing, may be able at some future time to get some return for the money they contribute for the preservation of *S. salar* and *S. fario*. But I doubt the policy of putting trout into waters where there are pike, chub, perch, &c.; besides, the bottom fisherman does not want trout. He is never so happy as when he gets into a swim full of good roach, bream, &c. But the board say the law will not allow them to spend money in coarse fish. Last year no fewer than 10,564 trout rod licences were issued, an increase of 1061 over the issue of 1887. On the other hand, only one salmon rod licence was issued; no fish fell to that rod, and the total income for salmon (sea and river) licences was but £58, against the £528 4s. contributed by the trout rod licentiates. And I notice with pleasure that the board have granted 500 yearling brown trout each to the Richmond Angling Association, Knaresborough Joint Anglers, Burniston Angling Club, Harrogate Angling Association, York and District Amalgamation of Anglers, Hearts of Oak Angling Society (Great Driffield), Hull Angling Preservation Society, River Dove (Kirkbymorside) Angling Club, Thirsk Angling Club, Ripon Angling (River Yore), and Langstrothdale (Wharfe). I also hear the Hawes and High Abbotside and the Askrigg Angling Associations on the Yore are to be included in this list. I have little to report in the way of angling. I tried a couple of hours roach fishing in the Yore below Middleham this afternoon, and found the fish well on the feed, and to take the little red worm very freely; I got about a score nice fish. Several other anglers have made similar catches lower down the river, but I have not heard of any grayling fishing. All our rivers have, of course, been out of condition for pike fishing, but that description of angling has been good in ponds and canals; and at Pocklington, Messrs. Jenkinson and Pope caught six, but only small fish, the largest weighing 7½lb. Only moderate returns from the Wharfe are to hand. On Saturday a Leeds angler caught half a dozen grayling, and on Monday Mr. Pickergill had a grand dish of twelve good fish.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAM.—Weather delightfully fine, and all our rivers are getting into good trim for all-round fishing. A few flies are on, chiefly the little brown. Prospects for next week are good, particularly for roach and pike fishing.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Deveron (Banffshire).—The angling season on the river Deveron opened on Saturday last, but, unfortunately, the river was in too high flood, owing to the melting of snow on the hills, which greatly discoloured the water. The tidal water at the entrance has also been exceedingly high since Sunday, the water almost covering the right bank of the river up to the Bridge of Banff. On the coast it is many years since the stream was so full. The wind, however, was light from a south-westerly direction, which kept the sea from rising. Owing to the state of the water nothing has been done by anglers, but when the stream settles down to its normal condition good sport is expected. The net fishermen were early at work on Saturday morning, and although the river was high they continued plying the nets until dusk, with the result that they only captured three trout. Last year, the first year after the dyke was removed, sixty fish were landed on the opening day. During the nineteen years that the present lessee has had the fishings the average for the opening days was 186 salmon. On the opening day in 1896 there were killed in the river by the net fishermen no fewer than 695 fish. The failure of the fishing on the opening day this year is attributed principally to the removal of the cruive dyke. Up to Wednesday there was little appearance of an improvement in the fishing, only seven fish from both river and sea having been got. They averaged 8lb., and were consigned to the London market.—H. W.

Loch Ness (Foyers Hotel), N.B.—The opening of salmon fishing on Loch Ness on Feb. 11 resulted in very poor sport, only one salmon being killed, by Mr. R. Thom, Annan—a beautiful fish, weighing 22½lb. The loch was very calm, and weather conditions altogether unfavourable for good sport.—S. TILSTON.

Loch Tay (Kenmore, Perthshire, N.B.).—On the 4th Mr. Harry Tangye killed salmon, 19lb. 6th, Mr. A. E. Holder, of Remoney, killed one, 14½lb. 7th, Mr. T. A. Holder, of Remoney, one, 18lb. 8th, Mr. A. E. Holder, of Remoney, one, 16lb.; Mr. Harry Tangye, one, 21lb. 14th, on the reserved water, Macdiarmid, the keeper, one, 18lb. Loch in good ply.—W. KNIGHT.

Loch Tay (Killin, N.B.).—Feb. 9, on the Reserve water, Surgeon Fraser had a salmon of 15lb. Feb. 11, on Hotel water, Mr. Menzies had one of 21lb. Feb. 14, Mr. A. Smith, of Glasgow, one of 19lb.—MAISEY.

North-East of Scotland.—The spring salmon angling season, which opened on the Dee and bulk of Scotch waters on Saturday, promises to be one of the best enjoyed for some years past. True the angler was all out of it on account of the spate which prevailed on the opening day, but the fact that fresh fish were got all the way up from Durris—sixteen miles from the sea—right on to the royal waters at Balmoral—over some sixty miles of water—speaks volumes for the future prospects of the spring angler. With anything like average weather conditions sport will be simply grand. On the Balmoral waters, on Saturday, Donald Stewart creeled a beauty of 17lb., which was dispatched to Her Majesty at Osborne. On the Birkhall waters, kelt sport was all that was got. On the Invercauld Ballater water Mr. J. B. Millar and Mr. Aton had four nice fish on the opening day scaling

from 6lb. to 16lb.; while Mr. Lynningham had one of 17lb., and Mr. Granville one of 14lb., on the Cambus O'May water. The Monaltrie, Mortloch, and Morven reaches were not fished. Col. Eddis had two, of 15lb. and 10lb., on the south side of Cambus O'May water on Saturday. On the Glentana waters, on the opening day, Mr. Brickman landed two, of 6lb. and 16lb.; and Mr. Merry the top weight for the day—a beauty of 25lb. On Monday, Mr. Merry creeled two, of 6lb. and 12lb. On the Aboyne waters, Mr. Crawshaw was the only lucky angler, creeling a nice little fish of 7lb. On Monday, however, Mr. Kemp had one of 22lb. and two of 6lb. each, while Mr. Hepburn had one, 6lb., and Mr. Borthwick one of 10lb. On the Kincardine O'Neil waters, fresh fish are said to be quite plentiful, and prospects of the brightest. Sir John Gladstone had two on the Comonty, of 8lb. apiece. Mr. Drummond opened the season with one of 9lb., and on Monday had three to his own rod, of 6lb., 9lb., and 10lb. Col. Chas. Hay landed a fine fish of 20lb. on Saturday on the Dees water, and two on Monday, of 13lb. and 14lb. On Kincardine Lodge water, on Monday, Mr. Deverell creeled two, of 7lb. and 8lb.; and Nicoll, fishing for Lord Garrioch, on Borrowstone, had one of 7lb. on Saturday, and another of 7½lb. on Monday. On the same reach, Mr. Wm. Blacklaw, sen., commenced his sixty-fourth season on the Dee by landing a beauty of 7½lb. Dunn, on Carlogie, had one of 6lb. General Hills, on Inverly, had three, 8lb., on Saturday; whilst Capt. Mitchell's party had five on the Blackhall water, and Mr. G. Mekin, Durris, one of 9lb. The weather has been snapper, water falling, and sport rife. On Aboyne, on Tuesday, Mr. Kemp had one of 16lb.; Mr. Borwick, one 10lb.; Coutts and Gregson, three, of 8lb., 7lb., 6lb. On the Blackhall Castle water, on Monday, the Hon. A. Orde-Powlette creeled two, of 6½lb. and 9lb.; Mr. Mowbrey Farquhar, two, of 7lb. and 8lb.; and Capt. Mitchell, one of 8lb. A good supply of salmon was in the Aberdeen market on Wednesday morning, and prices ran from 2s. 4d. to 2s. 5d. per lb., a small supply of trout sold at 1s. 3½d. per lb. All over the prospects are much brighter than the most sanguine dared to anticipate before the season opened both for the angler and netter.—G. M.

South of Scotland.—Heavy rains have fallen over the south of Scotland since last week's notes, and the rivers have been running bank full in red floods almost daily. Next week-end the Border rivers open their waters for the angling season, and at present the prospects are anything but bright for the spring salmon fishing. It is feared that the repeated floods will have done much damage to various fishings in this part of the country. There is a little salmon disease in some of the waters, but the Annan is comparatively free of the scourge so far. The salmon netting on the English side of the Solway opened for the season on Friday of last week, but owing chiefly to the stormy weather prevailing none of the drift net boats licensed by the Eden Conservancy Board have been down the Firth. Probably a commencement will not be made by the fishermen until the Scotch side of the channel opens as well. The weather is very unsettled at present.—HEATHERBELL.

Spey.—The net and rod and line salmon fishing opened on Saturday on the Spey and sea coast district of the river. On the previous day there was a thaw in the upper reaches of the Spey and Spey basin, causing the river to rise in volume 3ft. or 4ft. above its normal size, thus making the water all but impossible for rod fishing on Saturday, more especially in the reaches near the sea, where the river breaks into numerous streams. All the netting crews were on duty from Orton downwards, and succeeded under difficulties in obtaining highly successful results. This gives promise of remunerative catches when the water falls to a normal height. Nearer the sea it was impossible to get the nets worked at all satisfactorily. The few anglers who tried their luck all returned blank. Owing to the heavy ground swell running for several days the sea nets could not be properly got to work, and not over half a dozen fish were caught. In the vicinity of Rothes the fishing opened under most unfavourable circumstances, owing to the high state of the river. Between the Delfr Bridge and Craigellachie only one well-known pool—the Boat Pool, on the Arndilly water—could be fished. Shlach, head keeper, got there one beauty of 14lb. and five kelts. Two rods fished the water leased by Major Grant, of Glengrant, without success. At Aberlour conditions were precisely similar—fine, spring-like weather, but far too great a flow of water. Numerous anglers were out, but no results in clean fish were secured. It is, however, believed that a fair stock must be forward by this time. On the Wester Elchies water, Mr. Duncan, fisherman, had one salmon of 24lb. The salmon spawning season, now practically over, has been considerably behind the heavy spawning returns of the two or three immediate preceding seasons. Ever since the close of the season in October last, the river Spey has been abnormally high in volume, and this fact has given ascending salmon favourable opportunity of getting up the river. Good hopes for a successful season can certainly be predicted, but for further assurance time and a trial will tell. In a gigantic river like the Spey fish cannot be seen in the pools from the banks; consequently, until fishing operations are commenced, the quantity of fish in the river cannot be ascertained. The leases of angling for the season in this district are: Mr. Hankey, Knockando water; Col. Smith, Legan water; Mr. Grant, of Wester Elchies, Carron water; Dr. Cowie, Mr. Cumming, and Mr. Hankey, Wester Elchies water; Mr. Graves, Aberlour water; Mr. Dethbridge, Easter Elchies water; and Capt. Spicer, Arndilly water.—J. M.

Tay.—The river is now coming into better ply, but of late it has hardly been fishable owing to the continued flooding. On Friday, Mr. R. Thomson, from Fisher's Hotel, Pitlochry, killed two nice fish, 19lb. and 13lb. On

the same stretch, on Saturday, Mr. R. H. Mackworth Prade killed one of 22lb. On Mr. Leaf's lower Delvine water, on Tuesday, the boatman had a fish of 16lb.; and on the upper water, on Wednesday, they killed another of 17lb. On the Logierait water, Mr. R. Butter, Perth, killed a 14lb. fish. On the Benchill water yesterday, Mr. Pople killed two fish, weight not ascertained.—P. D. MALLOCH.

Tweed, Teviot, and other Border Rivers.—Since my last notes the main rivers—Tweed and Teviot—have been running in good bait fishing order, having subsided very much since the last heavy floods. The Tweedometer to-day (Wednesday), however, still shows a height of 2½ft. above the normal level, but as the weather is now fine and genial, with a slight frost, the streams will very soon be down to salmon angling proportions. On one or two of the shallower casts to-day some of the more enthusiastic anglers were out trying their luck, but their efforts were fruitless, no kills being recorded. It is stated, however, that there are a good head of fish up the river, and once they get settled down in the various fastnesses it is hoped that proprietors and lessees will have a fair good spring season. Trout fishers, however, have been in their glory during the past week, and many heavy baskets of trout have been got, but the fish are still scarcely worth taking, not being in anything like eatable condition, being soft, flabby, and lanky. Give them another month, and then fish will be fit for the table, and delicious for breakfast. The net salmon fishing opened yesterday, but as yet no news has come to hand regarding the success of the opening of the season. Of those who have had best baskets of trout in Tweed and Teviot lately are the following: Mr. Richard Newton (Tweed), 15lb. (Teviot), 12lb.; Mr. J. Hogg, 12lb., 8lb., 6½lb., all in Tweed; Mr. J. Cook, 14lb., 11lb., and 8lb.; Mr. Jas. Mahon, 6lb., 8lb., and 4½lb.; Mr. J. Robertson, 8lb., 14lb., 6lb., and 9lb.; Mr. James Percy, 8lb., 10lb., and 6lb. The English markets being now open for the sale of fresh-water trout, all these takes have been sent south by the fishmongers here who bought them, as they knew they could not dispose of them here. Several of the pike fishers have been out again, but no takes as yet have been recorded. The annual general meeting of the Kelso Angling Association was held last night in the club-room, White Swan, when the genial vice-president was in the chair, and the attendance was good. Minutes of last general meeting and accounts were approved of, and the statements showed the society to be in a most flourishing condition. The office bearers were elected as follows: Patron, His Grace the Duke of Roxburgh; presidents, Sir R. W. Griffith, Bart., Sir G. B. Douglas, Bart., C. B. Balfour, Esq., of Newton-Don, and Major Scott Kerr of Sunlaws. The other officials, who do the working part of the business of the association, were re-elected *en bloc*, with Mr. R. J. Mills as secretary and treasurer, and Mr. John Smith (chairman of committee). It was agreed that the society be affiliated to the Scottish Trout Anglers' Association. A very pretty specimen of the perch, weighing 2lb. 4oz., in glass case, was presented to the society by Mr. R. Ormiston, Hay Bank House, Kelso. The fish was caught in the Tweed, at Sprouton, and set up by Mr. Jas. Chisholm, taxidermist, Kelso. Mr. A. Steel then intimated that he would give a silver medal as first prize in a pike competition amongst the members, and various other members offered money prizes besides. It was then resolved that the committee make arrangements for a picnic party of the members to go to the Howietoun breeding ponds during the month of July, and a good many members at once put down their names as participants in the event.—MAXWHEEL.

IRISH REPORTS.

Ballynahinch Fishery.—The season opened on the above on the 1st inst., but no one has tried it as yet. We have had very large spring tides, also good water, but the weather was very unfavourable. I may add that we had a splendid spawning season, and both sea trout and salmon were more numerous than for the last two years.—WALTER BLACKADDER.

Bannon River (co. Cork).—Salmon and trout fishing opens to-day (Wednesday). Numerous anglers are out, but as yet no reports have come in.—W. HAYNES AND SON.

Blackwater (co. Cork).—River quite unfishable for past week, owing to the extraordinary wet weather. It will take some days to get into fishing order. The weather, as we write, has settled; a sharp frost set in.—W. HAYNES AND SON.

Cork Rivers.—Sport has been very backward on the majority of the Cork rivers open for angling, while on some nothing at all has been done. The weather, however, has been greatly against angling, and the waters high and foul. Spring salmon are supposed to have come up in big numbers on all the larger rivers during the recent long-continued floods, and the records of sport should show great improvement next week, especially as the weather is all that could be desired.—T. J. D.

Corrib (Galway).—The weather continues unfavourable, and the river is not in the best order yet after the floods and gales of last week. Up to time of writing, spring fish have not been seen in any numbers. We are pleased to note that the appeal against the bye-law recently made prohibiting cross-lining on Lough Corrib was unsuccessful before the Judicial Committee of the Privy Council at Dublin Castle a few days ago. Forty-two cross-liners appealed against the bye-law, but it was unanimously rejected.—J. A. B.

County Antrim Rivers.—Since the season opened the weather has been very unsettled, with bitter frosts at nights. Consequently little has yet been done on the Bush, Margy, and the Glens of Antrim rivers. Capt. Williams, Dorsetshire Regiment, has killed several salmon at Ballycastle. The Maine opens on March 1. One of its

tributaries, the Glenwherry, formerly preserved by the Belfast Angling Association, holds a good head of trout, I hear. The Six Mile water and the Bann open on March 1. To-day (Wednesday) the weather has taken a decided turn for the better. The Bush has been completely cured of salmon disease, which formerly did great damage.—J. A. B.

Killarney Lakes.—Practically nothing was done on the Killarney Lakes last week, owing to the very wild and wet weather which prevailed. The waters, too, were very high; too high to afford any fair chances of sport, even if the weather conditions were favourable. At time of writing, however, the weather has improved.—T. J. D.

Lee (co. Cork).—Since last report the river has been almost unfishable owing to the continued heavy rains. Very few anglers have ventured out. On Lee Mount fishery, Mr. W. T. Crawshaw, one, 8lb.; on Fargus, Capt. Douglas Pennant, 60th Rifles, one, 10lb.; on Farran, Mr. Maurice Lyons, one, 10lb., and F. Dale, one, 12lb.; at Inniscarra, Sergt. Grey, R.I. Constabulary, one, 12lb. As we write the weather seems to have settled, and good sport may be expected during the coming week.—W. HAYNES AND SON.

Liffey.—Since the season opened on this well-known river—the lower portions of which is euphoniously known as the “Stench pool of Dublin”—Major Claude Cane has killed several spring salmon up to 18lb. on his preserves. Salmon are increasing in the Liffey, and with less pollution about Dublin this increase would be still more marked. On the other waters in the vicinity of the metropolis, little has yet been done by trout fishers.—J. B.

Lough Curran (Waterville, co. Kerry).—The weather has been very wild and wet since last report. Only one salmon (9½lb.) has been taken by Mr. Chamney. The two salmon reported last week as being got by Mr. Smith should be credited to Mr. Chamney. On many days fishing was very difficult, and on a couple of days was quite impracticable.—T. J. D.

Lough Neagh.—Since the season opened on Lough Neagh on the 1st inst. the pike fishing has been very poor, and it is plainly evident that the fish are not there, the takes being small and the fish themselves of an indifferent size. The demand from Billingsgate, Manchester, Glasgow, and other cross-channel markets is good, and prices pretty good. We regret to learn that wholesale poaching of spent salmon and trout continues, although the railway stations around the lough are being carefully watched by the Royal Irish Constabulary and the bailiffs. Some seizures have been made. Angling opens on the Blackwater, Ballinderry, Moyold, Maine, Bann, &c., on the 1st prox.—J. A. B.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River in high flood for the past week. No rods on the water. Weather very unsettled. A number of fine springers have been got at the salmon weirs. Fine weather is all that is required for good sport. Trout anglers on the Bunree river are getting from eight to twenty trout daily.—PAT HEARNES.

Slaney.—The season opens on this river the 26th inst. Just now the river is high in flood, so that all the spent fish will have gone seawards. As yet spring fish are not showing up.—J. A. B.

Tyrone Rivers.—None of the Tyrone rivers are yet open, as they are all late streams. On the 1st prox. the Ballinderry, Blackwater, and its tributaries, Torrent, Fury, and Ballygawley, open for trout fishing. The well-known Mourne will not open till April 1. The Omagh Angling Club is moving to have the season extended on this fine salmon river. Between the lateness of opening and the earliness of closing (Oct. 10) and the annual flax water plague, the salmon angling season is generally about five weeks in duration, whilst trout fishing is over in June.—J. A. B.

SEA FISHING.

Deal (The Pier).—Scarcely anyone has wetted a line from the pier during the past week, the weather having been very stormy and unsettled and the water very thick and discoloured. Several members of the British Sea Anglers' Society paid a flying visit on Feb. 12, but none of them experienced any sport. A strong south-west gale blew for the greater part of the day on Monday, and the pier was without a patron. Mr. Cooper took a small codling on Tuesday—the only return for three hours' patient fishing. Two or three smallouting and one codling constituted the catch of five rods to-day (Wednesday).—J. RICHARDSON (B.S.A.S.).

Deal.—The storms and gales that have been blowing quite put a stop to angling. However, on Saturday a few anglers put in an appearance for Sunday fishing if possible, and Mr. G. R. Clarke, out from two to four in the afternoon, landed three codling, largest 3½lb. Messrs. Perks, Andrew, and Royle put out about 7.30 a.m., and landed twenty-two codling (some fine ones amongst them), two whiting, and one pout. To-day (Wednesday) quite a summer day, and water very thick, and a few local fishermen fished off the butts. One man landed twenty-five codling, some very nice ones amongst them, and the others did not score so high. If the weather keeps moderate, in all possibility there will be some sport again amongst this kind of fish.—EDWARD HANGER (Agent B.S.A.S.).

Plymouth.—Gales and plenty of wind has been the order of things during the last week, not only blowing sails out of our small fishing boats, but funnels out of iron-clads. Very little fishing has been done, especially from the rocks and piers. A friend of mine was out last week trying for some pollack, but he had better sport shooting cormorants, as he managed to bag three in the afternoon. Sea birds of all kinds are plentiful just now, and the collector will meet with many varieties if he takes a walk along the breakwater, which is nearly a mile in length.—WILLIAM HEARER (B.S.A.S.).

Southend and Leigh.—Feb. 15. This neighbourhood has not been exempt from the rough weather which has prevailed all round the coast, and although there have been one or two fair days, there has practically been no fishing. On Saturday, Sunday, and Monday the gale blew with hurricane force, accompanied by furious rain squalls. On Sunday the schooner *Willow* foundered on the Black Tail Sand. Captain Wyatt and the crew took to the boat, and after a terrible voyage in a barracane of wind, managed to make the Mouse Lightship, whence they were most pluckily rescued by the Southend lifeboat. The most dismal accounts reach me from professional fishermen of bad catches and rough weather. The barometer at present appears to be rising, probably on account of an approaching change of wind to E. or N.E. If this change comes it will most likely be accompanied by frost and snow. Anyway, things are too unsettled to forecast with any likelihood of success the weather for this week-end. The gale has been blowing "on and off," principally "on," for five weeks, so that a change of some sort in the near future may be looked for. Under the circumstances I cannot recommend fishing here this week. Barometer, 29.69 in rising; wind, S., light; sea moderate; weather clear.—CHARLES HUSSEY (B.S.A.S.).

The following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, Feb. 24. Neap tides. Lowest on Monday.

NORTH WOLVERHAMPTON WORKING MEN'S CLUB.

On Feb. 13 a very successful supper and concert was held at North-road by the members of the fishing club, the occasion being a presentation to their worthy secretary, Mr. Stables, Mr. Cook, of the Wolverhampton and District Angling Association, presided, and Mr. J. J. Salt officiated as vice-chairman. The usual loyal toasts were proposed and responded to. Amongst those who contributed to the evening's amusement were: Messrs. J. Goddard, J. Mason, J. Hill, H. Jones, W. Nott, J. Holding, T. Smith, &c. The vocalists were all in capital voice, and Mr. J. Goddard accompanied with his well-known taste and ability. During the interval the chairman, on behalf of the members of the fishing club, presented the secretary, Mr. J. Stables, with a splendid fishing rod, suitably engraved, as a token of esteem in which he is held by his fellow members, and in slight recognition of his valuable assistance and untiring energy in promoting the interests of the club. Mr. Stables acknowledged the gift, and said it always had been a pleasure to him to do the work in connection with the fishing club, and he would always, to the best of his ability, endeavour to carry the work to a successful issue in the future.

STOP PRESS. WEATHER REPORT.

BY TELEGRAPH.—FRIDAY, FEB. 17, 11.15 A.M.

DEAL.—S.E.; smooth.

DOVER.—S.; smooth.

RAMSGATE.—S.E.; smooth.

MARGATE.—S.; smooth.

HASTINGS.—N.; smooth.

SOUTHEND AND LEIGH.—Telegram.—Since sending my report a marked improvement has taken place in the weather, and fishing prospects for the week end are consequently much better. As I expected, the wind has veered to an easterly quarter. If no considerable fall of the barometer takes place in the meantime, sport should be obtainable on Feb. 19.—C. H. HUSSEY.

Angling Fixtures.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address *Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London,* marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly delegate meeting will take place on Monday evening next, Feb. 20, at 8.30.—R. GHURNEY.

Anglers' Benevolent Society.—The next committee meeting will take place on Friday evening, Feb. 24, at 8.30. At the last meeting £18 were granted for three applications. In last week's issue I omitted to state the amount from the Islington Brothers' donation box, £1 12s. 6d. I hope secretaries of societies who had concert tickets for the Holborn Town Hall will send on remittance and unsold tickets, as I wish to bring it to a close.—R. GHURNEY.

Anglers' Association (N. AND N.E. SUBURBAN DISTRICT) Visiting List.—My next visit will take place at the Enterprise A.S., City Arms, High Cross Road, Tottenham, on March 1.—T. R. C. LA MOND.

Anglers' Benevolent Society.—ANGLING COMPETITION.—The annual dinner of the committee of the recent A.B. Windsor competition was celebrated at the Queen's Arms, 1A, Chapel-street, Edgware-road, on Feb. 9. Harmony followed. Messrs. Steptoe, Delroy, Brock, Garney, Grossmith, &c., contributed. A telegram was received by Ben from "Dragnet," apologising for not attending, but wished us all the good luck, and we were to enjoy ourselves, which you may guess we did. The chairman spoke of the late A.B. competition, and also the treasurer. Ben Abrahams replied, and stated that there was £23 16s. to hand over to the A.B.S. on Feb. 24. Everyone was cordially thanked, also the Press, committeemen, and officers.—BEN ABRAHAMS.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On Feb. 12 several of our members were out despite the weather. Some nice fish were taken. Mr. Jagot, sen., lapsed roach prize with good fish. The following weighed-in for yearlies: Messrs. C. Osborne, roach and perch (good); Jagot, sen., perch; Thompson, four bream; Mr. Skilleter showed a large eel, 2½lb.; Mr. C. J. King, roach, bream, and very large perch. Mr. Pearce, a nominated member, had some nice roach from Homerton Bridge, Lea. On Wednesday, the 15th, our quarterly meeting was well attended. Mr. C. J. King was elected to take the position of secretary in place of Mr. Haynes, of the Good Intent, who has been *pro tem.* for the past three years. Mr. Coventry gives

10s. for the gross weight of all fish taken from his ground on Feb. 19; Mr. Jagot, sen., gives a prize for largest roach; and Mr. Carey, one for the largest perch. Also lapsed prize outing for dace; all fish to be shown at Mr. Coventry's.—C. J. KING.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—Messrs. H. Brassington had roach; Pronter, barbel; and Ben a 4lb. 4oz. jack, on the 12th. H. Brassington reports a take of roach from Staines on the 15th, largest fish 14oz. The committee of the above decided that all members who were written to will have one week's grace, and I hope the same will show up on 22nd and oblige. I beg to remind E. Jackson and G. Blades that Monday next is A.A. delegate meeting. Please attend and take the report. Several of the above were at Queen's A.S. return visit on Thursday last.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portsmouth Place, Lincoln's Inn Fields.—On Feb. 12 Messrs. Drew, Butlin, Montgomery, and Black weighed-in roach and dace. On Feb. 26 the third quarterly outing for four prizes will be to Windsor. All to go down on the morning of the match, and to meet at the Waterman's Arms to fix the boundary.—J. CHAMBERS.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—The following members had shows of fish on Feb. 12: Brealsforth, jack and roach; Hulme, roach; Millen, roach; Moore, roach. On Feb. 15 Mr. Drockes was elected a working member. Mr. Brealsforth being in the chair for the evening, some very edifying and interesting remarks were made by the same. Will members please note that in consequence of the floods the outing for Feb. 19 is altered from Shiplake, and will take place at Boxmoor; all members first train?—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—On Feb. 12 our members competed at Datchet, but owing to the flooded state of the river only two weighed-in, Mr. H. Hamilton being first, and Mr. C. Cannar second, leaving two prizes open. A special meeting of the society will be held next Wednesday, Feb. 22, to consider annual dinner, &c., when I hope to see a good muster.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—On Feb. 12 Messrs. W. Thomas and H. V. Wilson were the winners of the lapsed prizes. Also weighed-in: G. S. Ireland, roach; C. Phillips, bream and roach. Mr. Addison exhibited his prize won in the Anglers' Benevolent Windsor Competition, viz., a pair of Anglers' Benefit boots, presented by Mr. W. Liggins, of Coventry. A special meeting is fixed for Tuesday next, Feb. 21, to arrange last outing and other important business. Will all members please attend?—A. JENKINS.

Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Since last report we fished our match at Feltham, but owing to the state of the water only one prize was taken by Mr. C. Harris, who also weighed-in perch on the 12th. We have made another new member, Mr. W. Withers. We fish a consolation match on Feb. 26 for members not having won a prize during season.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—The members of the above fished a competition for their February series of prizes on the 12th. Only one member succeeded in getting above the stipulated ½lb., Mr. W. Taylor. On the 15th Mr. J. Martin weighed-in 12½lb. of roach.—ALF. CONN.

Blackfriars Angling Society, Imperial Hotel, Southwark-street, S.E.—Several members weighed-in on the 12th—Mr. J. Foster, roach and perch (largest roach, 1lb. 4oz.); Mr. J. Wheelhouse, roach (largest, 1lb. 15oz.); Mr. Merrygold, barbel; Mr. Kobelt, roach and dace. There are three prizes to fish for at Datchet on Feb. 19.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—The quarterly peg-down match took place on Feb. 12 at Ware, the result of which was as follows: Mr. H. Davis, first; Mr. C. Davis, second; Mr. F. S. Pavett, third; all with roach. On Feb. 15 Mr. W. Taylor was elected an honorary member.—T. PATERNOSTER.

Bomere Angling Society, The Britannia, Clarendon-road, Notting Hill, W.—On Feb. 14 members showed up in great force at our new clubhouse. Owing to the amount of business to be got through it was 11.45 before we finished. I beg to thank all members that attended on this opening night. It was arranged to hold a grand smoking concert on March 7 on behalf of the A.B.S., it being greatly needed. There will be plenty of talent, and every member and friend of the club will thoroughly enjoy themselves. We hope to have a large attendance. Members are requested to attend early next Tuesday evening, as we want to be well represented at the Elgin concert on that night on behalf of the A.B.S.—H. DAGWORTHY.

Brompton Angling Society, D'Oyley Arms, Marlborough-road, S.W.—Our fourth special outing will be to Pangbourne, on the 26th inst.; usual conditions; all to travel down by first or subsequent trains, and return by 8.52 p.m. from Pangbourne. Hope everyone who can will make a point of attending. Wednesday, March 8, has been fixed for the supper given by Mr. Cowper to winners in last match. Losers and others at same nominal charge as before. Concert to follow.—W. H. B.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—On Feb. 12 Mr. H. Boden had 9lb. of roach, caught from our water at Bures, largest 1lb. 2oz. On Feb. 19 we have an outing on the east coast.—HY. TAME.

Cambridge Friendly Angling Society, Fountains Abbey, Praed-street, W.—Three prizes only taken at the

outing on Feb. 5, by the following: T. Welham, E. Welham, and H. Scutt. The remaining prizes will be fished for under the same conditions.—W. SUTTON.

Cambridge Heath Brothers' Angling Society. The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On Feb. 12, five of the consolation prizes were won as follows: Messrs. Earp, first; Dawson, second; Millward, third; Turton, fourth; Adams, fifth. Also weighed-in: Messrs. W. Elsworth, sen., jack; J. French, jack, perch, and roach; R. Nursery, roach; R. Hubbard, roach; J. Baines, roach. Remaining consolation prizes to be fished for, any open water, Feb. 19; start on the morning. On Feb. 20, we hold a Bohemian concert on behalf of the A.B.S., when all anglers, wives, sweethearts, and friends are cordially invited.—P. E. LOFT.

Camden Angling Society. The Locomotive, James-street, High-street, Camden Town, N.W.—We have an outing to Broxhorne on Feb. 19. Club rules; no live bait to be used; all to start on the morning.—E. BOXALL.

Canning Town Angling Society. Marquis of Salisbury, Hermit-road, E.—Several of our members were out on Feb. 12. Mr. G. Lewis had a nice show of dace. Our next outing will take place at Hatfield Peverel on Feb. 26, when we fish for the annual rabbit prizes, given by Host Clayden, at the Sportsman's Arms.

Central Angling Association (Liverpool). Original Prince of Wales Hotel, 13B, Moss-street.—On Feb. 9 four new members were elected, and several more are promised for Feb. 16. Forty-two members are now on the books. A gold centre silver medal is offered for the heaviest roach caught during the season from the Leeds and Liverpool Canal. The association's waters are at Hooton and Willaston, and contain a fine lot of tench, perch, roach, &c. A competition for trout has been opened, and prizes presented by Messrs. Bratt, Layfield, Meighen, and Fergusson.—GEORGE W. HANN.

Clapham Junction Angling Society. The Clarence, Winstanley-road, Clapham Junction, S.W.—Our next day's outing will take place on Feb. 26, at Windsor. On Feb. 12 Mr. A. Bowater saved this society from having a blank. A committee meeting will take place on Wednesday, Feb. 22, when important business will be brought forward at 8.30.—G. T. JAMESON.

Clapham Strollers' Angling Society. Alexandra Hotel, Clapham Common, S.W.—On Feb. 19 we fish a match at Walton for lapsed prizes; all fish to weigh. Mr. Monks weighed-in barbel on Feb. 12.—T. PASMORE.

Clissold Angling Society. The Cricketers, North-wold-road, Stoke Newington, N.—On the 12th several were out, but only the following weighed-in: Messrs. Osment, Hunt, Cobbold. Members are requested to attend on Tuesday next.—S. FAULKNER.

Collingwood Angling Society. The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—The following have weighed-in: Mr. Boyd, six bream, largest 2lb.; Mr. Jarrett, bream; Mr. Ball, bream and roach; Mr. Stafford, perch; all from the Thames.—W. H. STAFFORD.

Convivial Angling Society. City of London, Sidney-street, City-road.—On Feb. 12 several members were out, but owing to the flooded state of the waters we had a blank. On Feb. 19 we have an outing to Rye House for five prizes. Members can get out at Rye House or St. Margaret's, two rods and live bait allowed.—PHIL.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On Feb. 12 Messrs. Massey and Cutbush had good bags of roach, dace, and perch.—W. MASSEY.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—On the 12th we fished at Bourne End for three prizes, with the following results: Messrs. C. Walter, first; G. Norris, second. The eligible members fish for the remaining prizes according to rule. Messrs. H. Haines had 12lb. 7oz. of roach; and W. Long, 3lb. 12oz. of roach from other waters. C. Walter was re-elected check secretary for this quarter.—G. H. FRANKLIN.

Dalston Angling Society. Brownlow Arms, Brownlow-street, Dalston.—On Feb. 12, in spite of the rough weather, several of the members were out, but the only gentleman who weighed-in was Mr. T. Swain, who had some very nice roach. Members are requested to attend on Tuesday next to arrange for another outing.—S. MALBY.

Drayton Park Piscatorials. Stanley Arms, Landseer-road, Holloway-road, N.—On Feb. 19 general outing. Owing to condition of rivers members may go where they choose.—GREG.

Eagle Angling Society. Red Lion, Tottenham.—During the last week several of our members have been out with very fair success. Mr. T. Collier weighed-in a jack, 7½lb. On the 15th inst. Mr. A. Sheppard had a jack, 6lb. 1oz.; Mr. T. F. Barlow, 10lb. roach and dace; Mr. W. Denton, 6lb. roach and dace; Mr. F. Reed, jack.—W. S. PRICE.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—Our outing for the silver challenge cup was not a great success. Owing to the condition of the water and the heavy wind fishing was rendered very difficult, and the takes ruled small. Mr. Mathews was the lucky winner, and holds the cup for a year, also receiving an added prize. We have arranged another outing for

three good prizes on Feb. 26. Full particulars will be arranged next Tuesday.—A. T.

Elgin Angling Society. Blenheim Arms, Blenheim-crescent, Notting Hill, W.—There is not much to report this week. Some of our members were out on Feb. 12, and had a few fish. I should like to remind secretaries of our concert next Tuesday, Feb. 21. Any club that has not received a notice will please accept this as an invitation.—G. KING.

Enterprise Angling Society. City Arms, High Cross-road, Tottenham.—On Feb. 15 the following weighed-in: Messrs. Crump, roach and dace, 5lb. 9oz.; Wells, dace, 1lb. Phaeasey and Horne also weighed-in. On March 1 we hold our return visit in aid of the Anglers' Benevolent Society, when we hope all anglers and friends will rally round.—W. LEFEVRE.

Forest Gate Piscatorials. Forest Gate Hotel, Godwin-road, Forest Gate.—Only a few members were out on the 12th inst. Mr. Durell, roach; Mr. H. Creeke, 8lb. roach, being the only two who had fish.—H. C.

Forest Piscatorial Society. Rose and Crown, Hoe-street, Walthamstow.—On Feb. 12 Messrs. W. Davies and H. Tisley were the only members who weighed-in, each with roach.—H. TISLEY.

Golden Barbel Angling Society. Sir Isaac Newton, Union-street, W.—On the 12th inst. Messrs. Ellins and James were the only members who weighed-in. On the 14th inst. the outing took place, and resulted as follows: Mr. King, first with 16lb. 15½oz. jack and roach; Mr. Ellins, second, roach, perch, and dace; Mr. Mitchell, third, roach.—J. E. LAWFORD.

Good Intent Angling Society. The Crown, Church-street, Shoreditch.—Mr. Thompson was the only one that brought in fish on the 12th. Our annual supper took place on the 14th inst., and was a great success. Our caterer, Mr. Mignot (of Hackney), supplied us with a capital supper, and I can highly recommend him to any club that may want a supper provided. After the supper the usual toasts were soon got through. Mr. W. H. Beckett made a capital speech, in which he spoke of the good work the Anglers' Association was doing. The chairman's (Mr. J. Williams) and vice-chairman's (Mr. G. Hunt) healths were drunk with musical honours; also our esteemed host and family, Mr. F. W. Arnould. They all ably responded. The chairman then became very busy booking prizes for finish of the season, thirteen in all. Harmony then commenced with some excellent talent provided by Mr. G. Hunt and Mr. G. Huggett, which was kept up till 2.30. I may say it was one of the most pleasant evenings we have spent during our twenty-seven years of existence.—R. MURPHY.

Harcourt Angling Society. Harcourt Arms, Harcourt-street, Marylebone.—We fished our match at Shiplake, but owing to the water being so plentiful only one prize was taken, leaving seven prizes to be taken at Shiplake on Feb. 19.—A. E. PAYNE.

Hearts of Oak Angling Society. Ye Olde Crown, Brick-lane, Bethnal Green, E.—Mr. Jeffries and Mr. C. Smith had a show of roach at our outing on Feb. 12. Only one prize was taken, by Mr. H. Bagshaw. On Feb. 19 members to go where they like for remaining prizes. All members to sign on Saturday evening at six o'clock, or after.—C. SMITH.

Holloway Angling Society. Holloway Station Hotel, 295, Holloway-road, N.—At our usual weekly meeting on Wednesday several good fish were reported, notably those of Mr. Hawes, who had taken several good pike from the Loddon on the preceding week. Amongst his take was a fine fish going 13lb. This is the best fish from the district during the season. Our final outing has been arranged for March 5, when a good muster is expected. Our quarterly supper on Feb. 8 was a great success.—A. CLAYTON.

Hoxton Brothers' Angling Society. Spread Eagle, Kingsland-road, Shoreditch.—On Feb. 12 Messrs. F. Newton had roach; J. Wiltshire, ditto; H. Bailey, jack; G. Nicholls, dace; and T. McGrath, ditto. Our smoking concert in aid of the A.B.S. on Tuesday, Feb. 14, proved a great success. Although our large room has been recently enlarged, it was crowded to excess. We had some excellent talent, which reigned supreme throughout the evening; Mr. H. H. Heap, R.A.M., presided at the piano. Our president, Mr. G. H. Wood occupied the chair, faced by Mr. G. H. Shepherd (Host, Bermondsey Brothers) in the vice. During an interval the chairman stated he had gathered donations for the A.B.S. as follows: J. Abrahams, 10s. 6d.; J. Bartlett (Host, Spread Eagle), 10s. 6d.; A. Abrahams, 10s. 6d.; T. Dickson, 2s. 6d.; Josh Cosnett, 10s. 6d.; G. Leeder, 10s. 6d.; together with a donation of £1 1s. from himself made £3 16s., and the amount collected in the box was £3 4s., therefore made a grand total of £7. The next concert will be a Bohemian, Mr. G. H. Shepherd in the chair, faced by G. Armstrong.—JOHNNY.

Islington Brothers' Angling Society. Myddleton Arms, Canonbury-road.—Our match at Cookham on Feb. 12 was a success, all prizes taken as follows: Messrs. Boys, 1st, 2lb. 2oz. roach and dace; Wilkes, 2nd, 1lb. 11½oz. roach and dace; J. H. Herbert, 3rd, 1lb. 5½oz. roach and dace; G. Holder, 4th, 1lb. 4½oz. roach; Croker, 5th, 1lb. 2½oz. roach; Heckford, 6th, 1lb. 3oz. roach and dace; Howard, 7th, 1lb. 4oz. roach and dace. We met on Tuesday last, when the minutes of the previous meeting were read and confirmed. E. Challis in the chair.—J. H. HERBERT.

Jolly Butchers' Angling Society. George the Fourth, Walnut Tree-walk, Lambeth, S.E.—Our supper, "Jolly Butchers" versus "Wellington A.S.," takes place at the above address on Wednesday, Feb. 22; supper to be on the table at eight o'clock sharp; all members are requested to appear as early as possible to arrange for concert, which is to follow later.—S. EDWARDS.

Jubilee Angling Society. Prince Arthur, Golborne-road, North Kensington.—Since my last report we have had three shows of fish weighed-in: Mr. Gilder, roach and perch from the Thames; Mr. Moody, two shows of jack from the Welsh Harp. I hope to see a good attendance next meeting night.—G. BENCE.

Limehouse Piscatorial Society. Silver-street, Burdett-road, Limehouse.—This society (recently formed) has been enrolled with the Anglers' Association. Our entrance fee is 10s. 6d., and subscription 15s. per annum. Our standard of fish is same as the Thames, with the exception of roach, which must measure 8in. Any further information with respect to this club may be obtained from the private address of the secretary, 12, Streetfield-street, Limehouse, or at the clubhouse.—R. J. WELLS.

Lincoln Angling Society. Metropolitan, Winchester-street, Pentonville, N.—On Feb. 12 the following showed some nice fish: Mr. Johnson, 7lb. 5½oz. of roach; Mr. Thompson, rudd; Mr. Briggs, perch; Mr. Holmes, roach; Messrs. Utton and Manly, roach. I hope to see a good muster on Wednesday next, being quarterly night. Time of train for outing will be arranged on this night.—W. WATLING.

Liverpool East End Angling Association. Court House Hotel, Commutation Row.—The weekly meeting of the above-named association was well attended, there being representatives from the various societies affiliated to the Liverpool centre of the Provincial Angling Association to hear the report of the committee meeting of the P.A.A., held at Bristol on Feb. 4, at which the Liverpool delegate was present. Many interesting items were mentioned in the report, which went to show the great amount of energy exercised by the P.A.A. to further the ends of the centre. Another item was brought to the members' notice, and was a splendid gift of close on one million live fish for stocking the waters rented by the Association. Fish carriers having been sent to convey the fish to Bromboro, and in all probability they will arrive on Saturday afternoon. The donor has the best thanks of the members tendered to him. A good basket of dace, grayling, and chub, weighing 10lb., was shown at the clubhouse on Monday. Mr. J. Parks and Mr. J. A. Porter were the captors. The Leeds and Liverpool Canal has fished well during the past week, a few very nice takes of roach and gudgeon being had. The Bootle branch of this association is progressing very favourably. A net has been presented by Mr. W. Jones, the chairman, for the taking of live bait, another gentleman having also given a tank for the purpose of keeping them in. A vote of thanks was tendered to the donors.—JAMES REYNOLDS.

North-East Brothers' Angling Society. Star and Garter, Green-street.—On Feb. 19 we have a boundary match to Broxhorne, from Fish and Eels look to Ratty's weir. Show fish at Fish and Eels at time decided on morning. Train 9.10 a.m. Bethnal Green. I hope to see all members present at smoking concert on Monday, Feb. 20, at the Cambridge Heath Brothers A.S.—A. LEWIS.

North London Angling Society. Tap House, Holloway-road.—On Feb. 12, Messrs. Black and Pink weighed in roach, and Christmas dace from the Lea. On the 19th the prizes left over from Ware will be fished for at Roydon. All to go by the 8.8 a.m. from Hackney Downs. Later arrivals to report themselves on the bank.—H. STRETCH.

Original Alexandra Angling Society. The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Feb. 12 Messrs. W. Madget weighed-in one jack, 7lb. 5oz.; S. Orrow, 5lb. 6½oz. roach; R. Brockett, jack, 3lb. 1½oz.; S. Dulieu, 1lb. 14oz. jack; A. Birch, 1lb. 6oz. roach. Our second Bohemian concert in aid of the A.B.S. fund will take place at the above on Tuesday, Feb. 28, to which ladies are cordially invited. Pianist, Mr. Dan Green.—E. BROCKETT.

Original Clerkenwell Piscatorial Society. Sutton Arms, Great Sutton-street, Goswell-road.—On the 14th we had a nice show of fish: Mr. Davison, jack; Mr. Webster, jack; Mr. Hunt, jack and perch; Mr. Beckett, roach; Mr. Abbott, roach (largest 1lb. 3½z.); and Mr. Woods also showed roach and perch. Our next outing will take place at Hampton on March 5; all members to go by first train on the morning. Our visit on the 6th was on the Central visiting list, and not on No. 2 Anglers as stated, a slight error being made.—A. HILL.

Park Angling Society. Park Hotel, Park-lane, Tottenham.—Our smoking concert, which took place on the 11th, in aid of the A.B.S. was a success. The chair was taken by Mr. A. Hubbard, supported by Mr. C. Coldwell; pianist, Mr. B. Rowe. The following gentlemen rendered some excellent harmony during the evening: Messrs. Hubbard, Coldwell, Sparrow, Timms, Ranson, Allen, G. Fox, Churchley, Fox, Hollington, E. Carter, Curtis, and several others. Several members were out on the 12th—Messrs. Thompson, Reitz, Skeggs, Tracy, Hopton, Carter, Coldwell. Sport being bad, very few fish were weighed-in.—W. S.

Peckham Brothers' Angling Society. Windsor Castle, Cator-street, Sumner-road, Peckham, S.E.—The return visit on the Central and S.L.U.V. list comes to the above house on Tuesday, Feb. 28, being the first visit we

TO SPORTSMEN—Burberrys, of 30, Haymarket, London, will offer (till the 28th inst.) at half price, their 1898 model and stock sporting garments, viz.: gabardine (unlined) shooting coats, 21s.; long overcoats, 21s.; long leggings, 7s. 6d.; gaiters, 6s. 3d.; golfer caps, 2s. 6d.; gabardine combination shooting coats, 26s. 2d. and 31s. 6d.; K. B. breeches, 21s.; knickerbockers, 15s.; long overcoats, 31s. 6d.; kilt coats, 21s.; Highland capes, 21s.; Burberry capes, 21s. 6d.; rain-proofed tweed shooting coats, 26s. 2d. and 31s. 6d.; Highland capes, 26s. 8d.; weatheralls, 31s. 6d. Sent on approval on receipt of cheque covering.

THE MOST IMPORTANT LESSON Esculapian tried to impress upon his pupils was that the chief trouble afflicting humanity was due to impurities of the blood. All disorders may be traced to this fact, for unless the source of life is freed from disease germs it cannot have that strength which is necessary for good health. Holloway's Pills are composed of the most precious herbs and soothing balsams which Mother Earth can offer to her children, therefore they may be relied upon to supply the nourishment that is craved by the system. It is no vain boast to say that this is the most wonderful discovery made in the annals of medical science; they will cure or relieve all diseases.

have had in our new house, and, having an excellent host, I hope to see a good muster. Our match at Pulboro' on Feb. 12, was not a success, only two weighing in, Mr. Watkins, jack; Mr. Steadman, roach.—G. ETHERINGTON.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—Wind and river being a trifle high, only two prizes were taken at Bourne End on Feb. 12, by Messrs. Austin and F. Dove. W. F. Sherlock had fish, but not up to our standard. Ben Forster, our late host, added the fourth prize, the two left, same conditions as others. We arranged for a weekly subscription of 1d. per member during the fence months to support the Rivers Re-stocking Fund.—R. C.

Prince Albert Angling Society, Prince Albert Hotel, Woodfield-road, Harrow-road, W.—Our outing at Cowley resulted in the following members taking prizes: Mr. Hardcastle, first; Mr. Baverstock, second; Messrs. Perry and Chapman tied for third prize; leaving one prize to be fished for. Total weight of fish taken did not exceed 4½oz., owing to the terribly rough day.—W. B. F.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On Feb. 12 only Messrs. W. Shepherd and J. Taylor weighed-in. Will members please attend on Tuesday next, 21st inst., to finally consider outing and transact other business of much importance? Those failing to attend can have no excuse afterwards for what has been done. Our visit on the Clerkenwell and District Visiting List takes place on Tuesday, Feb. 28.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—On Feb. 12 only the two following members returned with fish—Messrs. Bardot and Pope. Last meeting night we added Mr. Brand to our list of members. Feb. 22 is quarterly night, when I hope to see all attend and clear the books.—J. GIBBONS.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington Cross.—Two of our members weighed-in on the 12th inst., Mr. Cooper and Mr. Brown, the fish consisting of roach and perch. We held a roving match on Feb. 19. Members can go where they like for gross weight only.—H. ALLAN.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—A few of our members were out on the 12th inst., but only Mr. Campbell weighed-in roach, 1lb. 1oz. Our outing to Goring is postponed till Feb. 26. Same conditions.—W. ALDIS.

South London United Anglers' Visiting List.—The next visit on the above list will take place on Tuesday, Feb. 28, at the Peckham Brothers' A.S., Windsor Castle, Cator-street, Peckham.—ALF. PAINTER.

Stockwell Angling Society, Old Queen's Head, Stockwell.—As anticipated the outing to Datchet was very much "off." Mr. Payne having a decent take of dace on Saturday from the lower reaches encouraged some to go down on the following day, in spite of gales, floods, and blizzards. "Wally" was well amongst the gudgeon as usual. The clerk of the weather may be an important individual, but he is no angler.—THOS. LUCAS.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Our next outing is to take place on March 5, place to be named later. Mr. Stevens weighed-in one roach from Thames, 1lb. 4oz.—G. E. LOCK.

True Caledonian Angling Society, 23, Caledonian-road, N.—Mr. Miller has weighed-in, as the result of two separate days outings, thirty-five roach, weighing 41lb. 12oz., eleven going over 1½lb. each, the largest 1lb. 12½oz.—THOS. F. WARD.

Twickenham Piscatorial Society.—There was a large attendance at the weekly meeting on Tuesday evening, with Mr. Hibblethwaite in the chair. Six new members were enrolled, and the chairman's name was added to the committee, and Mr. Edwin Gunston, whose success amongst the bream at Kingston, on Tuesday, appears in another column, was elected vice-president. The collecting box of the T.A.P.S. made a successful start.—J. M. BROUGHAM.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—On Feb. 15 an open roving match was arranged for March 12, punt or bank, two rods, all fish to weigh, with option of going away on Saturday. Mr. Coombs has given a prize for gross weight. On the 22nd some very serious business will be put before the meeting, the consideration of which necessitates a full attendance. I therefore urge all members who feel interested in the club's affairs to do their best to be present.—W. H. BATCH.

Walton and Cotton Angling Association, Crown and Woolpack, 162, St. John-street-road, N.—We have had some nice fish weighed-in during the last few days, viz., jack, 8lb. 14½oz., 6lb. 14oz., 4lb. 10oz., 4lb.; roach, 1lb. 6½oz., 1lb. 2½oz., and takes of roach 10lb. 7oz., 3lb. 9oz.—M. CUDDON.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—We have arranged to have an open competition on Feb. 19 for the three lapsed prizes, and on Wednesday next there will be another open competition for three more prizes. Mr. W. Sparrow weighed-in some nice perch and bream from the Thames.—W. WRAY.

West Green Angling Society, Black Boy Hotel, West Green-road.—Mr. James Taylor ("Red Palmer") has kindly promised to read us a paper on "Rain and Rivers." Date not yet fixed, but will give full information next week. We hope members will muster strong, and shall be glad to see any visitors from other clubs.—A. G. H.

West Ham Brothers Angling Society, Coach and Horses, The Grove, Stratford.—Our members were out on Feb. 12 in the match, and the following took the prizes: Messrs. Weller, sen., first; John Newton,

second; L. Hunt, third. I hope our members will not forget that it is our monthly meeting on Wednesday next, Feb. 22.—R. LOWTHER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—On Feb. 12, Mr. Beck weighed-in a jack of 11½lb., and Mr. Richardson a good show of bream and dace. A special meeting will be held on Feb. 22 to arrange match.—S. H.

Wimbledon Piscatorials, 28, Alexandra-road, Wimbledon.—Only some half dozen members turned up for the fortnightly competition on the 12th inst. The weather was something to be remembered, and but one prize was taken; Mr. H. Golding, jun., was the lucky winner with three nice bream. The next outing is fixed for the 26th inst., at Weybridge, as usual. The same prizes, trains, and conditions will obtain as heretofore.—HON. SECRETARY.

CARLISLE ANGLING ASSOCIATION.

THE forty-sixth annual report of the above society is to hand, from which the following is an extract: "They are sorry not to be in a position to report favourably on the success of its numerous members so far as salmon fishing was concerned, as 90 per cent. of our members were not successful in hooking a single fish. Undoubtedly salmon were very scarce in the autumn months. There was a very good show of such fish in the spring, but, unfortunately, members of our association are not privileged to angle in such stretches of water as are usually resorted to by these fish, their efforts being mainly confined to autumn fishing in the lower reaches. Your committee have frequently endeavoured to procure water in the upper portions of the river, but hitherto with little success. Sea trout were fairly numerous in the early part of the season. This applies more particularly to the lower reaches, although good catches were also obtained, in the 'Sheep Mount,' and the immediate vicinity of Carlisle. Grey trout were also fairly numerous in all parts of the river, and many of our members met with good sport amongst these fish. The committee are also glad to point out that the leasing of the Caldew from R. S. Ferguson, Esq., and E. Stead, Esq., resulted in a large number of tickets being taken out. The innovation of granting tickets at a small charge to juveniles has been the means of adding a large number of members to the association, most of whom, it is hoped, will in future continue their membership. The efforts of your committee to have the time of closing extended to the end of November met with no success. The amount paid to the Eden Conservancy Board this year amounted to £29, being an increase of £9 over the previous year. This arose from the fact that the actual amount received for licences by the association was £27 10s., thus leaving £110s. for the checking of tickets by their watchers. It may be noted that our members contributed no less a sum than £115 for licences to the funds of the conservancy board during the past year. The balance in favour of the association shows an increase of £24 over 1897. This improved position arises from the fact of our having been compelled, for want of funds, to give up certain stretches of water, the rentals of which amounted to £40. The committee are greatly indebted to Miles MacInnes, Esq., and Thomas Robinson, Esq., for the free use of their stretches of water, and desire to thank them very heartily for such privilege. They also wish to place on record their appreciation of the public spirit of the other proprietors who lease their fishings to the association."

INTERNATIONAL CHESS TOURNAMENT, LONDON, 1899.

DURING the past three months great progress has been made in the movement to organize an International Chess Tournament, to be held in London during the coming summer, and it is now announced that the committee have made arrangements to hold the tournament in the St. Stephen's Great Hall, adjoining the Royal Aquarium, with entrance from Prince's-street, Westminster.

Play will last six or seven weeks, commencing on May 30. Some little difficulty was anticipated in finding a suitable hall, the tournament being fixed to take place during the height of the London season, and the committee are to be congratulated on securing such a fine hall, capable of holding a very large company, and so well situated for sightseers.

A very strong committee has been formed, of which Sir George Newnes, president of the British and City of London Chess Clubs, is president, and including, among the hundred or more names, the Marquis of Ripon, Viscounts Cobham and Folkestone, the Lord Chief Justice, Lord Rayleigh, F.R.S.; a strong contingent of members of the House of Commons, including the Attorney-General, Sir Wm. Hart Dyke, and Mr. Henniker Heaton, and the presidents of all the leading chess clubs and associations throughout the kingdom.

It is proposed to hold two tournaments,—the first a Double Round Tournament limited to about sixteen players, which, it is hoped, will include all the finest players in the world, and secondly, a Single Round Tournament of twenty or more players not competing in the Double Round Tournament. The prize fund will, it is anticipated, amount to about £1500, and towards this premises have been received by the committee of about £1000. The joint hon. secretaries of the tournament are Mr. Jnnius L. Cope, hon. secretary of the British Chess Club, which is taking a leading part in the matter, and Mr. J. W. Russell, hon. secretary of the City of London Chess Club. Subscriptions to the prize fund may be sent to them at the British Chess Club, 5, Whitehall-court, S.W.

NEW PISCATORIAL PATENTS.

THE following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

1050. Reuben Heaton, Hospital-street, Birmingham. Line director for fishing rod end pulleys.
- 21,279. Trawling. Patentee, Mr. J. Cohrs, Altona-on-the-Elbe, Germany, relates to otter boards. The board consists of a box-like frame, between the top and bottom of which vertical louvre boards are fixed so as to be adjustable.
1743. Lambert William Scottford and Alexander Cruickshanks, Wray-crescent, Tooting Park, London. A double spiral spring regulating fishing winch or reel.
- 22,340. Fishing. Patentee, Mr. H. R. Mortell, Wellington-street, Gravesend, relates to trawling gear. Otter boards are replaced by short axles carrying wheels of unequal diameter, the larger one being placed inside to produce a diverging action as the net is drawn along.
2085. August S. Ludd, of Ludgate Hill, London, relates to an improved means for transporting live fish.
2193. Andrew Verd Chapin, of Queen Victoria-street, London, relates to fishing reel tension attachment.

Doftings by the Way.

MOTTO for the last week's weather, "*De gustibus non est disputandum*," which being freely, very freely, translated means, "It is little use to argue with the wind for the possession of your best 'long sleeved' hat."

ONCE more I have to refer to the books issued by the Great Eastern Railway. This time it is a most useful little waistcoat pocket book containing a list of the principal horse and cattle fairs, racing, steeplechase, and cricket fixtures, and angling information for 1899. The anonymous compiler deserves the greatest credit for the amount of information on widely varying subjects he has managed to compress into an almost microscopic space. Racing and cricket are liberally dealt with, but pages 111 to 134 contain what is to me, and, doubtless, to my readers, the most interesting part of the book, a fund of angling notes which are sure to be useful.

FENCE months, sizes of fish, angling waters, and other subjects of interest or importance to anglers are fully set forth, and not the least valuable is the list of angling resorts on the company's system. I may not have to consult the book to find when Gloucestershire will play the Australians at Bristol, when Drogheda fair is held, the Jubilee Stakes are run for, or how much it costs to send a horse from Belfast to Boulogne, all of which this little book will tell me, but I know it will be often looked at when I cannot quite make up my mind as to which part of the country I shall visit for my weekly fishing jaunt, and I know I shall not look in vain. There is a capital half tone block of the company's splendid steamer Dresden, and, of course, a list of fares to the principal stations. I cannot really speak too highly of this capital little volume, which should be in the hand, or rather the waistcoat pocket, of every sportsman.

THE labourers who were convicted at the Bingham Petty Sessions of illegally fishing in the river Trent seem to have been rather lucky. It was stated in evidence (see report in another column) that the defendants were using a net that "was capable of taking all the small fry, and could sweep everything out of the Trent," and it was proved that they were fishing illegally, so that in fining them 40s. and costs, and confiscating the net, the magistrates cannot be said to have erred on the side of severity. The maximum penalty for this objectionable offence is only £5, surely hardly enough!

SOME years ago I spent a month's holiday in Wales and Ireland. After the usual drive round the Phaynix Park and a bathe in the Liffey—and looking at Strawberry Hall when there were no strawberries to be had—I was induced to go as far as the salmon leap, but I saw no salmon leap. A certain Irish wag (all Irishmen are wags) told me at Foley's Hotel at night that he was sorry I had been disappointed, and assured me that if I would accompany him the next day he would show me a wrinkle. This consisted of a large coke fire placed just above the weir, upon which was a large frying-pan containing boiling fat. "You see," says he, "that when the salmon leap up they leap into the frying-pan; when it's done on one side we just turn them over and cook the other side. Then we place them in a box and drive home with them 'all hot.'" But I had to visit the Zoological Gardens the next day, and consequently had no hot salmon.

Scribner's Magazine for February is a specially interesting number. The letters of Robert Louis Stevenson are continued, and illustrated by some delicately beautiful drawings by Herbert Railton. "The Lepers—a tale of South Africa," is an intensely dramatic story by Wm. Cbas. Scully. Theodore Roosevelt continues his account of the "Rough Riders," and there are interesting articles on Wm. Makepeace Thackeray and other subjects, as well as some of those short stories for which Scribner's is so famous.

THE following cutting was sent from Salisbury: "A Monster Trout.—While Capt. Howell, of St. Mark's-road, was pike fishing in Mr. Gregory's river recently, a large trout took his trolling bait. It weighed 14lb. 6oz., and measured 31in. in length, 18in. girth, and 7in. depth. It was photographed by Mr. H. C. Messer, Castle-street, and is being stuffed by Mr. White, High-street. Since the beginning of last year Capt. Howell has caught upwards of 130 pike, many of which scaled 8lb. to 15lb., as well as a good many trout, grayling, and other fish."

MR. EDWIN GUNSTON (of Teddington), was out on Feb. 14 with J. Johnson, of Kingston-on-Thames, and took sixty-four good bream and eighteen roach within a very short distance of his house.

THE late Thames (Windsor) competition in aid of the A.B.S. resulted in the sum of £23 16s., which will be handed over to the executive on Feb. 24.

I AM asked to say that the dimensions of Mr. Well's pike (Allason United Brothers), was 42in. in length, 25in. in girth, and weighed 25lb.

THE monthly delegate meeting of the Anglers' Association will take place at the Foresters Hall, on Monday evening next, Feb. 20. Chair to be taken at 8.30.

ANY submarine boat (says the *Sunday Special*) must, in the nature of things, be cranky. It was found in the *Nordenfjeld*—and the same defect exists admittedly in the *Zédé*—that the movement of her crew or of things on board altered her equilibrium and was liable to depress or raise the bow dangerously out of the horizontal, and then comes the insuperable difficulty of all, that once submerged, no idea can be formed of the course of a submarine boat or her speed, the result being that she must continually come to the surface to fix her position, while nothing has yet been discovered by which the impenetrable gloom below the surface of the water can be pierced. The electric search-light, so far from enabling the crew of the *Zédé* to see anything ahead, rendered the sea, if anything, more opaque, as shoals of fish were attracted by the glare, and kept hovering round the disc. There may be a future for submarine boats, but the French in the *Gustave Zédé* have done nothing as yet to solve the problem which has not been done already, and it is quite certain that the *Magenta* would never have been torpedoed if her commander had cared to avoid being so. M. Lockroy and the French public had, however, to be impressed and pleased. It is one thing to construct a submarine boat, it is quite another thing to make her of any use, and, for the present, the *Gustave Zédé* is nothing but a dangerous toy.

MR. P. E. LOFT, of the Cambridge Heath Brothers, sends the following: "W. Bishop, of the Hoxton Brothers' Angling Society, had a curious experience when fishing in the Lea near Enfield Lock. Two anglers were fishing from the bank near him when it gave way, throwing them in the water. Bishop went to their assistance, and, by laying on his stomach, was able to grasp each of the men by the arm. However, he was unable to drag them out, and lay in this helpless position, still retaining his hold, for twenty minutes, until assistance arrived." The above took place at Coventry's water, at Sewardstone, on Feb. 12. Unfortunately both anglers, after being well looked after at Coventry's house, left without giving their names or club, and Bishop lost his hat and got his tackle damaged!

"FIRING on British trawlers" sounds ugly, and if the reports wired from Grimsby are true, the captain of the Danish gunboat implicated appears to have acted in a high-handed and unwarrantable manner. It is reported that twenty-three trawlers—fourteen from Grimsby and nine from Hull—took refuge from the weather in Fzleford Harbour, Farøe Islands. They were ordered by the captain of the Danish gunboat to follow him to Thorshavn, the capital of the group, for trial for being in the harbour "with their trawls on board." If they were simply taking refuge owing to stress of weather, and their trawls were on board, it is difficult to see how they could be contravening the regulations as to fishing within territorial waters. Two of the boats, the *Hugelia* and *Magic*, of Grimsby, approached each other to speak, when the gunboat fired on them, I am glad to hear from a later report with blank cartridge only; but the whole fleet at once hoisted British colours, and went into Thorshavn cock-a-doodle-doing defiantly with their steam sirens. All the trawlers implicated were fined. On an *ex parte* statement of this kind it is, of course, difficult to pronounce an opinion, and I give none; but while my sympathies are naturally with my fellow countrymen, I cannot forget that on more than one occasion unpleasant reports have come to hand of the behaviour of British fishermen in the far north.

THE Yachting Exhibition continues an attractive feature at the Royal Aquarium. It closes on March 2, and will be succeeded by the Fisheries Exhibition on March 8. The entertainments are going strong, and will on Monday include a double-voiced ventriloquist, a champion lady shot, and a contortionist.

"WHEN the stormy winds do blo-o-o-o!" go fishing. Never mind the colour of the water—so long as it is wet. Here is an account of Mr. Miller's two days' fishing. He belongs to the True Caledonians A.S. Thirty-five roach weighing 41lb. 12oz., eleven going over 1lb. 4oz., largest 1lb. 12oz. And they wanted getting.

CARDIFF and the Bristol Channel and the River Taff and the River Ely got so badly mixed up on Feb. 12 that it will probably take a week to sort them out.

A LARGE eel was caught in Cathedral-road, Cardiff, after the flood. The policeman who effected the arrest thinks the eel was on the way to its home in Ely.

How's this for an acknowledgment? "Dear Sir,—I am obliged by your inquiry of the 12th inst., for which I am obliged, and hope to reply thereto in the course of a post or so."

A WELL-KNOWN Teutonic orchestral player, while fulfilling an engagement in Sydney, thought he would go fishing, and, being advised to bait with prawns, had this experience: "I put me a fishing line and went to a pork-butcher and took for sixpence prawn (brawn). Zen I go fishing, and I stop zero all day, and catch nodings, and I lose all my prawn. 'Twas better I eat him mineself."

HE was a member of a London vestry, and having been brought into contact with a landed proprietor near the coast, he accepted an invitation to a day's sea fishing. Here are a few flowers culled from the description he gave of his outing. "Talk about a trip—at the ratepayers expense—for the Cemetery Committee, and dinner at the 'Hangel and Hartichoke,' it wasn't in it. I went down in a Pullman car, and had a 'rekerchy' luncheon. Then we had whiskies and soda, and 'Laryngitis' cigars, and at last I was taken out to sea in a boat that was beautifully painted, though they call it a dingy one. We caught some 'castor and pollux,' and my host caught a small Bass that must have weighed a 'tenner.' I must say I enjoyed the trip and the lunch, but the fishing was a bit too rough for me, and I was very glad when I got back on 'terra cotta.'"

OUR F. G. ALBUM OF ANGLERS.

No. 35 (New Series).

MR. W. H. CATE.

"WORTHY son of worthy sire," Mr. W. H. Cate is one of the most popular men in angling circles. As secretary of the Society of Caxtonian Anglers, as committee-man of the T.R.A., and one of the earliest members of the Kingston P.S., Mr. Cate's abilities have been of the greatest assistance to the business side of angling. A keen lover of fishing from his youth up, a taste doubtless inherited, his angling efforts have been particularly successful, as his specimen cases testify. "On one occasion," he says, "I had two pelicans on a spinning flight at once, but I didn't land them, so didn't get them stuffed!" With Mr. Sinibaldi, jun., he took on one day last year thirty bream, averaging 3lb., besides a good catch of roach. A sweet singer, a good sportsman, and a gentleman in the best sense of the term, Mr. Cate is one of those whom it is a pleasure to meet on any and every occasion.

"AND now," says W. Carter Platts in the *Yorkshire Weekly Post*, "here is our old friend, 'The Cockney,' coming along with a simple little question like this—'Is a lobster a fish?' This inquiry ought, of course, to have been addressed to the Cuckoo man on the back page; but as the answer is so apparent, I will go into the matter myself. Popularly, then, when the lobster is in the sea, he is a fish; but when he is in a salad, he is very often a headache next morning. But let us deal with the question scientifically. Firstly: The organs of inspiration in a lobster are gills; therefore, he is a fish. He has a jointed body and jointed legs; therefore, he is an insect. He blushes vividly when he gets into hot water; therefore, he is a man, and I should say a Scotchman at that when you come to think how he sticks to anything he grabs hold of, and how he grabs at everything. Thus it will be quite clear to you, 'Cockney,'

that a lobster is a human-fish-insect. But, secondly, a lobster has no vertebra; therefore he cannot be a fish. He does not breathe by air tubes; therefore he is not an insect. He only gets into hot water once in his life; therefore he is not a man. So you see, 'Cockney,' it is equally clear that the lobster is certainly not a human-fish-insect. As a matter of fact—Oh, hang it, 'Cockney,' what you want to do is to send your query to Dr. Andrew Wilson, or the photography man, or the obituary editor, and send the lobster (if it is a good one) on to me. They will tell you at once what is the nationality of a reckless reptile that takes such little care of his bones as to wear them outside, and I'll tell you what he tastes like."

THE following is taken from the *Hawke's Bay Herald*, New Zealand, of Dec. 28: "The largest fish of the season was captured yesterday by Mr. G. Culliford, who succeeded in landing a monster kingfish, measuring 49in. in length, 29in. in girth at the shoulder, and weighing 64lb." The line with which this fish was caught was made by the Manchester Cotton Twine Spinning Co., Ltd., Compstall, a firm which devotes itself wholly to the production of lines for fishing—deep sea, lake, or river.

THE Bohemian concert given by the members of the Gresham Angling Society on Tuesday evening last was one of the—if not the—best ever held under the auspices of this up-to-date body of genuine anglers. Ladies were particularly invited, and were very much in evidence. Mr. P. Morrall was an excellent accompanist, and amongst the artists were Mr., Mrs., and Miss Croger, Messrs. Reeves, Boustred, Maull, S. A. Soake, W. Syckelmoore, W. Clifford, Abbott, Pelham Wilks, F. Norman, Hatton, jun., &c. At many concerts there are artists who are particularly clever, and some mediocre, but Mr. Gray (to whom the greatest credit is due for his admirable selection) contrived to produce none but "particularly clever" and talented artists. The solo on the kitchen bellows was a "treat"—in fact, the concert was the best I have ever attended. Mr. James Tayler ("Red Palmer") was a capital chairman.

ON Friday evening next, Feb. 24, the Hastings Anglers hold a "Ladies' Night and Cigarette Concert" at the Assembly Rooms, Castle Hotel. Dr. Travers will preside, and Mr. F. S. Foster in the vice-chair. At the foot of my card of invitation are the words "Cigars and cigarettes at and after intervals." What about the pipe?

THE Piscatorial Society will have a smoking concert on Monday evening, Feb. 20, and it goes without saying that the usual treat is in store for those who are fortunate enough to be present.

ONE of the unfortunate duties which falls to me too often is to have to act as referee in angling disputes. Many anglers seem to look upon me as Solomon at five stone seven (in racing parlance). Now, of course, I greatly appreciate the compliment; but it has its inconvenient side. Here is a case in point. At a recent roaching competition the first prize was awarded to Mr. A., and was claimed by Mr. B. on the ground that his catch was the heavier by two lead pencils and a piece of coal—they had mislaid the weights, and had to use anything that came handy in their place. B. passes his protest on to me, and, to prove his case, sends me the two lead pencils and the piece of coal in question. Now, there are always two sides to everything, even a plum pudding, and the point is a knotty one; but here is my decision: I will keep the pencils for office use, burn the coal, and the match must be fished over again. Judgment accordingly, with costs (drinks round) against both sides.

THE GOLFER'S MOTHER GOOSE.

I.—The Boomerang Drive.

Little Tommie Driver is a naughty little boy, Who by his horrid slicing other players does annoy. He doesn't try to drive his ball like others, straight ahead, But loves to pull or slice it, till he fills the links with dread.

But now this naughty Tommie on his bed doth lie and whine, Because he's got a fearful ache all up and down his spine. And all because last Friday Tommie gave his ball a whack, And pulled it round so fiercely that it hit him in the back.

II.—The Little Caddie.

I had a little caddie boy who was so very small, That he was just as hard to find as though he were a ball; And once when I was playing for a lovely pewter mug, He disappeared completely as a buglet in a rug.

But when the game was over—oh, the naughty little wag!— I found him sleeping soundly in the bottom of my bag.

—Harper's Bazaar.

THE Lychnobite Angling Society's fifth annual concert, in aid of printers' charities, and for other benevolent purposes, will take place at the Champion Hotel, Aldersgate-street, on March 25. The programme promises to exceed all its predecessors, and with such names as Marie Lloyd, Vesta Victoria, Harry Anderson, Charles Osborne, and Amy Brook (R.A.M.), the concert of 1899 looks like proving a bumper. The chairman will be DRAGNET.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Cannon-street Hotel on Wednesday, Feb. 15, Dr. John Brunton in the chair. Mr. Linfoot reported fishing off Deal Pier with the wire line. Mr. G. Read Clarke gave his experience, and showed two specimens of the brittle star, which he brought up on a piece of rock when rod fishing. Mr. Handley reported that the alarm for the Southend Pier had been given by a sea angler. Mr. Hnssey spoke on the subject of the ahuse of hand-lining off Southend Pier, and urged the importance of the society aiding him to influence the local authorities. Messrs. Green, Clarke, Jacob, and the chairman also spoke in support of something being done in the matter. Mr. Tucker showed his rod with his special top (cane and whalebone built), large pulley top and roller rings, and the roller butt. The usual vote of thanks closed the meeting.

CHARLES S. PATTERSON (Hon. Sec.).

THE committee, in presenting their report for the past year, would draw attention to the change that has taken place in the *personnel* of the members, although the register of the society showed 772 members, there were 247 new members elected during the year. The promised revision of the seaside stations has been carried out, and a second edition is already being printed of the "B.S.A.S. Pocket Book," which contains lists of officers, members, stations, &c. This publication keeps members informed as to the rules and benefits of the society, and will be revised and added to from time to time, as occasion may require. The principal fixtures of the past year have been successfully carried through. The annual dinner was held at the Cannon Street Hotel, on April 27, the hon. treasurer, R. Biddulph Martin, Esq., M.P., being in the chair, and J. Wrench Trowse, Esq., the secretary of the Fishmongers' Company, in the vice-chair, and 120 members and friends were present; this was a slight falling off from the previous year, chiefly to be accounted for by the lateness of the date.

With the increased number of active members now in the society a larger attendance this year is hoped for.

The annual sea angling competition was this year again held at Deal, on Nov. 5, 6, and 7, when 155 members entered and 116 competed, a great increase in numbers over that of last year. The weekly meetings of the society, referred to in our last report as being of an experimental nature, have been continued during the past year, and have been productive of much interest to those members who have regularly attended. Your committee would urge upon all members the value which such gatherings possess as a means of gaining a thorough knowledge of sea fishing methods and neighbourhoods, and also an acquaintance with many of our most skillful anglers, whose experience has hitherto always been at the disposal of their fellow members. On certain evenings special subjects have been brought before the meeting; thus, two papers have been read, one special discussion on bottom-fishing tackle has been held, while upon three occasions formal discussions have taken place on the proposed abolition of the Buckland Museum, the destruction of immature flat fish, and trawl fishing in the Moray Frith, matters concerning the welfare of our sea fisheries. The other thirty-nine meetings have been of an informal character, at which reports have been given, by members, of sport at Blankenherghie (Belgium), Colomell (near Girvan, N.B.), Clacton-on-Sea, Deal, Dover, Dungeness, Eastbourne, Felixstowe, Great Yarmouth, Gorleston, Hastings, Harwich, Herne Bay, Isle of Man (Castletown and Port Erin), West of Ireland (Leenare and Achil Island), Leigh-on-Sea, Littlehampton Looe (Cornwall), Margate, Minehead (Somerset), Newhaven, Orkney Islands, Pakefield (Suffolk), Plymouth, Port Isaac (Cornwall), Ramsgate, Shoreham, Southwick, Southend, and Ventnor. Your committee formally beg to tender their best thanks to the agents of this society at the various stations, especially those at Deal, Leigh-on-Sea, Ramsgate, and Southwick, where most of the sea anglers seem to congregate, especially during the winter months. They further tender their best thanks to the S.E. and L.C.D. Railway Companies for the continuance of the railway concessions during the past season, and confidently hope that even greater concessions may be obtained for our members during the coming year.

Notes from the North.

MR. THEODORE BRICKMAN and Mr. A. W. Merry have again taken the Glentana water, and went up Deeside on Saturday morning, to Profit's Hotel at Dinnet.

MR. H. L. Crake has taken the private waters at Invercauld House at a rental of £400 for the spring months. It fishes best during April, and some records were made on it a few years back.

MR. FRANCIS BACON, Earlstone, Berks, has taken the Monaltrie House and water, with shootings attached, for the season. It is a good water on the north bank of the Dee, and easily fished at all times.

THE Deveron promises to afford good sport from the start this spring. Fresh fish have been seen in the mid-reaches for some weeks back. This is the result of the enlightened policy of huying up the netting rights and removing the dyke at the Reik Saw Mill, for some 200 years or so farmed by the Duke of Fife and his ancestors.

DURING the close season fish merchants have been able to supply the orders of customers with refrigerated salmon, marked in accordance with the Home Office regulations. The North of Scotland Cold Storage Company are making

arrangements for storing 2000 fish in place of 200 as formerly. We hope they may get them, and that speedily.

MR. ALEXANDER MCGREGOR leaves the Invercauld Arms, Ballater, in May, when his lease of the Ballater fishings also expires. Many anglers and others, both at home and abroad, will regret his departure, as he has, during his long lease of the hotel and fishings, made hosts of friends, and never intentionally an enemy.

THE new hotel and extensive golf course at Cruden Bay—the Brighton of the East, as it has been felicitously called—will be in full swing by April 1. There is some good sea trout fishing at times in the Cruden Burn, and, *par excellence*, tip top sea angling at any time in Cruden Bay itself.

THE third batch of salmon rivers, including the North and South Esks (Forfar), and some South of Scotland rivers, opened to the angler on Thursday last, the 16th. The late floods have been favourable to the ascent of fish, and sport should be more free on the South Esk now that the nets are bought off.

THE Ythan District Board are moving in the matter of extending the annual close time till Nov. 14. If successful in getting the consent of the Scotch Secretary of State, this regulation will equally affect the Cruden Burn and Ugie, as well as the Ythan. A fortnight's sea trout angling will thus be secured at the very best time of the year. Of course, date of opening is to be correspondingly prolonged.

THE results of the opening day on the Dee are on the whole quite satisfactory. A fish of 17lb. was got on the Balmoral waters, and duly dispatched to the Queen at Osborne. It is not often that spring fish are found so far inland on the opening day.

ON the other waters, Messrs. Miller and Ashton creeled four; Messrs. Tynningham and Granville, two; Mr. Carshaw, one; Col. Eddis, two; Mr. Brickman, two; and Mr. Merry, the top weight for the opening day, one of 25lb., on Glentana; Col. Hay had one, 20lb.; Sir John Gladstone, two; Capt. Mitchell and party, five; and old Wm. Blacklaws, who commenced his sixty-fourth season on the water, a nice little fish of 7½lb.; while Gen. Hills had three. Nothing was done on the lower reaches owing to the flooded state of the pools.

THE fly was the taking lure on the opening day, although almost every conceivable bait was more or less *en evidence*, especially the phantom and live gudgeon.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

THE majority of our Birmingham clubs are getting down to business again, and better attendances of the members are to be found all over the city. Some few of the clubs are taking time by the forelock, and are making the necessary arrangements for their summer outings and contests, which will be both large and numerous—so much so, that the Great Western and Midland Railway Companies will have to put on special Sunday trains for the members to travel by. The same old fishing grounds will be visited, and the innkeepers at Pershore, Defford, Eckington, and Bredon will again do a roaring trade. At the whole of the places mentioned the publicans are interesting themselves in getting permission for our members to go upon the land to fish the Avon, which will again be greatly patronised—so much so, that those who pretend to have the rights of fishing, and obtain benefits indirect from the anglers, should do something to help to re-stock the water to provide sport in the future. But this is a matter that they consider outside their consideration, but there will, perhaps, come a time when through depletion by over fishing they may wish that they had done something in the direction named. Some of our members have been out pike fishing, and have succeeded in making one or two good captures from their club waters, which, through the short duration of dry weather, have nearly gone down to their normal level. A member of the Midland Piscatorialists took two nice pike from the Trent at Alrewas, between Burton Bridges and the canal weir. One fish weighed 8lb. and the other 7½lb. Mr. G. Turley, jnn., of the Aston Britannia Society, caught a nice pike of 11lb. 6oz. from the Avon at Harvington, which is rented by this club. A number of small jack have been taken from the Stratford and Warwick Canals at Kingswood. A large quantity of small pike have been taken from these canals of late, the most killing lure being the spoon bait. Sport on the Severn and Avon has been very quiet, owing to the high and discoloured state of the water. Messrs. Devonport, the noted brewers of Bath-row, Birmingham, who are the owners of Earlswood reservoirs, are doing much to make their waters the best in the Midlands. They have gone in for re-stocking on a large scale; 2000 very fine perch have just been put in, and a large order has been given to the Fazeley Fisheries for a quantity of large and small roach. The fishing is let to subscribers. All particulars may be obtained of Mr. T. Coles, 70, Edgbaston-street, Birmingham. The Oldhury Angling Association held their first annual dinner on Wednesday evening last, at their clubhouse, the British Lion, Talbot-street. The members turned up in full force, and a very pleasant evening was passed. Councillor Hollyhead, the president of the society, occupied the chair,

and did his best to put the members on good terms with themselves. The annual dinner of the delegates of the Birmingham Association has been fixed for March 11th next. Arrangements have been made to hold it at the Metropole Restaurant, High-street, which is one of the finest places in the Midlands. Tickets will be sent to the clubs on Monday next. We are having shocking weather, owing to which very little angling has been done, the heavy rains and high winds having prevented our members from going out.

FROM HULL AND DISTRICT.

WE have experienced splendid mild weather in this district since the advent of the new moon, and had our local waters been in better condition no doubt our roach fishermen would have had a splendid time of it. Nevertheless, a few good fish have been taken in the top stretches of the river Hull at Wansford, Brigham, and Swing Bridge, from where roach of 1lb. 4oz., 1lb. 1½oz., and 1lb. 1½oz. have been shown; also dace from 7oz. to 8½oz. each; and below the lock, at Walton and Aike Beck-ends, and at Leven Lock a few good takes of both roach and perch have been made, but chiefly with worm. At the time of writing (Wednesday) the weather is simply lovely for the time of year, and, with the neap tides, no doubt by the end of the week the waters will have fined down again, and some good sport may reasonably be expected. A few mixed bags of roach, flounders, and eels have been made in the Wawne and Calley district with worm. The Holderness Angling Society will fish a sweepstakes on the river at Wansford on March 2; and the new society, the Trinity A.S., will open their season and fish their first match on the river, on Minto Flatts, on April 15th. At an adjourned meeting of the Hull Amalgamated Anglers' Association on Wednesday last, several applications from the affiliated societies to fish their matches on the Holderness Drains during the coming season were granted, and the bailiffs appointed for the Burstwick and Winestead Drains, at Hedon and Patrington; it was also finally arranged to pay over the proceeds of the Charity Match, amounting to £7 4s. 6d. each, to the two Hull Orphanages on Saturday (Feb. 18). The annual meeting for the distribution of prizes for specimen fish to the successful competitors of the past season, will be held at the Queen's Hotel, Charlotte-street, on Thursday evening, March 9th. The Holderness Angling Society have removed their headquarters to the King's Arms, in Witham, East Hull, where the meetings and business of the society will in future be conducted. The Derringham Angling Society held their annual dinner at the Botanic Hotel, on Spring Bank, on the 6th inst., the president, Mr. W. Wardell, occupying the chair. During the evening Mr. George B. Cheeseman was presented with the society's gold medal for the past season and many good songs and recitations were given by the members present, adding greatly to the evening's enjoyment. On Thursday evening, Feb. 9, the Alexandra Angling Association celebrated their twelfth annual *soirée* and ball at the Ripon Hall, in East Hull, where a large gathering of over 260 anglers and their friends took part in the proceedings, which were most enthusiastic throughout. The officers elected for 1899 are: President, Mr. B. Kemp; vice, Mr. J. Gooch; and hon. secretary, Mr. H. Wharam. The Trinity A.S. will hold a smoking concert at their headquarters, the Malt Shovel Hotel, on Church Side, in the Old Town, on March 4, when other club members are invited. The Izaak Walton Angling Society have arranged to open their season on April 1, at Patrington, on the Winestead Drain.

FROM THE LAKE DISTRICT.

ANOTHER suggestion has been made as to the scarcity of salmon in some of the streams of West Cumberland. Mr. J. Grice, speaking at a meeting of the local fishery board on Thursday, Dr. Braithwaite in the chair, said he had found that the rivers were very much poached near their mouths by means of draft nets, and this must have something to do with the scarcity of salmon. Mr. W. H. Watson and others agreed with the statement, and the question having arisen on the appointment of a representative to the sea fisheries committee, which body is supposed to watch and protect the coast, Mr. Grice was chosen as a delegate from the board to the committee. At the same meeting the head watcher reported that there were very few fish in the fish pond at Holmrook, but a large number of eels. This is the common experience of all interested in the culture of fish. Eels are probably more destructive to fish life in ponds than are pike in rivers and lakes, and, seeing the difficulty existing in the trapping of eels, it was a good suggestion on the part of Dr. Braithwaite that as many fish as could be secured should be transferred to the river Esk, and that the pond be allowed to lie fallow for a time. The board's finances are in a satisfactory condition, there being a balance in the hawk at the end of the year of nearly £105.

FROM LANCASHIRE.

FROM Warrington continued reports of progress are to hand. They have arranged for an annual dinner, passed a set of rules for the new federation society, and arranged for three matches. The new executive of the Isaac Walton A.S. is as follows: Chairman, Mr. W. Hoggarth; treasurer, Mr. A. J. Redman; secretary, Mr. G. F. Drinkwater; committee, Messrs. W. Shepherd, J. Jenkins, S. Hanson, E. Ridings, J. A. Cadman, and R. Wilson. The annual of the St. Helen's Anglers was a big success, and the members will long remember the happy evening they spent together at their clubhouse. The travelling or membership card of the Northern Anglers' Association, if judged by the advance proofs, is sure to give satisfaction, being, as usual, very complete. Many additional privileges are printed, and at the same time disappear a lot of useless ones under heading of first and second class, fares of no earthly use to the frugal angler of to-day. The com-

DR. NICHOLSON'S Patented Artificial Ear Drums have stood the test of 20 years, curing 1,000,000 persons, and are still acknowledged to be the only real cure for Deafness, Noises in the Head, and other Aural Troubles. Doctors say these Ear Drums have done more for humanity than any other medical invention. A Descriptive Book in any language sent free by J. H. NICHOLSON, 17, Bury-street, London, W.C.

plers are to be congratulated on the satisfactory production. The Lune Conservancy Board are doing their utmost to stop pollution of this river. It appears the estuary is badly polluted, and application to the Board of Trade for their assistance has been made. The Crompton Lodges, at Moses Gate, are yielding some good fish, and there are some fair pike in the waters. It is a trifle hard to understand why more do not pay a visit to these waters, for they are worth it—only 3d. per day. Next Monday the Levenshulme Anglers will hear Mr. Pendrigh's lecture on a "Fishing Trip to the Donegal Highlands in 1898." The Good Intent Angling Society, Collyhurst, are now up to their limit of thirty, and all enthusiasts. Within the last few days they have been visiting the Irlam and Cadishead reservoirs, and returned with some very fine roach. Next meeting night they are to have a lecture from Mr. W. Smith Nightingale on "Bottom Fishing," and the secretary has sent out an urgent whip for that occasion. The Bridgewater Canal is reported as fishing very well at Patricroft.

FROM MANCHESTER.

The travelling card of the County Palatine Angling Association is quite ready, and has been issued to the various affiliated clubs. This association practically confines itself to Manchester and district, and the card is sure to give satisfaction to the members for whose benefit it has been printed. The executive have spared no effort to make it as complete as possible, and it contains several additional privileges. We notice the system of periodical authorising is still in vogue. No doubt the executive have found it useful. The old Standard Angling Society are forging ahead; just at present they are discussing one or two things of importance, but postpone announcing the results. The Welcome Angling Society are rapidly on the increase, and a very few more will reach the limit of fifty they have in view. A most enthusiastic angler, Mr. Geo. Wyche, has lately joined this growing society. There is still one more city club just at present claiming notice, viz., the South-West Manchester. They have got into ship-shape, and are going rapidly to the front. The Moss Side Socials, at their annual dinner, had high jinks, the event being admitted as an entire success. On the 13th, in their new headquarters, they had a good muster of members and a good meeting. They have issued a new card of membership, in a neat and useful form; the membership is growing, and they intend to be heard from in the coming season. The Lancaster Angling Society at their last meeting had a muster of every member on the books—very good. They also decided to have two more centres. The first is by Mr. H. Wallwork, on "An Angling Trip to Ireland," and the capture of sea trout, 3lb. to 10lb. The second is by Mr. C. Standing, on Isaac Walton, a subject he is calculated, after careful preparation, of dealing with to the satisfaction of the members. We have had a prosecution for illegal sale of trout, in which our meat inspector has appeared. Can anything be done to induce him to prosecute for the illegal possession and sale of coarse fish in the coming close season; any amount of cases could be got.

FROM NORFOLK.

The weather has been almost too rough for pike fishing, but, in spite of it, a few splendid catches have been secured. On Monday, two gentlemen, fishing in private water near Norwich, took thirty-three fish, returning twenty-two as undersized. The eleven kept were nice fish, from 5lb. to 13lb. each. Mr. J. W. Waters, of Acle, and friend, fishing in a private broad near Acle, also had a very nice catch, their largest fish being 17lb. The wind has now moderated, and everything is in the pike fisherman's favour, the whole of the waters of the district being in capital condition.

FROM NOTTINGHAM.

Angling pursuits have again been carried on under considerable difficulties, owing to high waters running in the Trent and its tributaries, and the prevalence of boisterous winds. The river in the closing days of the past week attained a tremendous height, and at the period of writing here were fully five feet of extra water on. At Colwick, on Saturday afternoon, Mr. A. Coxon and his nephew, Mr. W. Coxon, creel-fished seventeen roach with the cockspur worm; and on Wednesday, on the same waters, Mr. J. Hynes secured a mixed bag of roach, eel, dace, and chub. Some roach were also taken at Blifton and Wilford, and in the extensive slack at Beeston Dead. There has been nothing doing at Shardlow and Weston, and scarcely a rod has been visible at either Trent Lock or Sawley. The weather had settled down on Wednesday, and indications were not wanting that the river was running in, though slowly. The netting case arrived to a successful issue by the Trent Fishery Board, at Birmingham Petty Sessions on the 9th inst., should work great good. Two of the defendants pleaded guilty, the other alleging that he had a right to net from the owners of the land. The bench convicted all three, imposing in each case a fine of 40s, with forfeiture of the net used. This was 25yds. in length, and 1ft. in depth, and was capable, as testified to by Mr. W. Jaskell, president of the Nottingham Wellington Society, who reeled the waters, of sweeping all the small fry and fish generally out of the river in the district.

FROM SHEFFIELD.

So far as Sheffielders are concerned, fishing has again been greatly interfered with by the incessant downpours of rain, and the rivers have had very little opportunity of recovering from their flooded state. Although the Trent has been running bank high, several anglers have fared very well amongst pike, but taking the season as a whole the yield has not been so good as in former years. During the past week several visitors have put in a few days at Sawley, with results of a fairly satisfactory character, whilst those rodsters who have confined their attention to

the neighbourhood of Weston and Hazleford have had very little reason to complain of the success that has crowned their efforts. To a very large extent roach fishing has of late been neglected in the Trent, but in various places heavy catches of chub have been made, the most successful baits having been pith and brains. At Dunham Bridge the principal takes have been composed of roach, whilst capital sport has been afforded at Torksey and Laneham by chub, several heavy fish having been landed. Not many bream have fallen victims to the wiles of anglers, but a spell of fine weather would work wonders in this branch of sport. The Witham during the last week or so has been in remarkably fine condition, and it seems anxious to atone for its shortcomings earlier in the season. In the Sincil Dyke roach anglers have had a very good time of it; whilst at Bardney the catches have been of uniform quality and quantity, the creels sometimes being further weighted by a few heavy eels. At places the heavy rains have caused the river Witham to overflow its banks to a considerable extent, and the result has been that large quantities of fish, principally roach, have been swept out on the bank. When the floods have drained away the fish have been left high and dry, as it were, and hundreds of dead fish have been found near Timberland, a few miles distant from Kirkstead. Very little fly fishing has been carried on in the Wye and Derwent in consequence of the heavy rains, although a few patrons of the club waters have had a little sport. On Wednesday last week a few brace of nice grayling were taken in Holmesford, in addition to several heavy roach. A fairly large amount of good sport amongst coarse fish has been obtained between Ambergate and Whatstandwell. Prospects for trout fishing on the Wye and Derwent are reported to be very promising. The complaints about netting in the Trent have been very numerous and well founded. On Thursday of last week three men were each fined £2 for netting near Dover beck-mouth, and their net forfeited.

FROM WORCESTER AND DISTRICT.

Anglers as a rule are possessed of a considerable amount of patience, and this season it has been sorely tried. Pike tackle has been rigged up and put in order, rods wrapped and varnished, and they have week after week been waiting for the water to get into condition to enable them to be used. But they will have to wait a little longer, for the rivers are still in flood, and again thousands of acres of land are under water, and this day (Wednesday) the rain is falling heavily, so that there is no immediate prospect of the water decreasing. So with the close season for coarse fish upon us, the grayling season over, the majority of club anglers will have some four months to put their tackle in order and wait for June 15. It is the general opinion that the heavy floods have been very injurious to the trout spawning operations, and anything but a good season is expected. Salmon fishing between Worcester and Tewkesbury a failure all down. In a personal conversation with several of the local netmen they tell me there has not been half a dozen fish taken by the whole of the Worcester nets since the season opened—one net has not taken a single salmon, but caught a few pike and large bream. The sixth smoking concert of the Worcester and District Angling Association was held at the Gloucester Arms Inn, Copenhagen-street (headquarters of the Good Intent Club), on Monday evening last, and, considering the inclemency of the weather, was well attended. The president of the association (Mr. L. F. Higgs) occupied the chair, supported by Mr. R. Wingfield (district secretary), Mr. Gillham, &c., the harmony of the evening being supplied by Messrs. Gough, Wingfield, Cotten, Gillham, Bowen, Allen, Hodges, Holder, Hope, and Cale, encores being frequent. Mr. Margetts efficiently presided at the pianoforte. The next smoker takes place at the Grosvenor Arms, the headquarters of the St. John's Club, on Monday, the 27th inst. The Worcester United Working Men's Club have their annual dinner on Monday next, at the Turk's Head Inn, when a large company will be present.

FROM YORK AND DISTRICT.

The week-end reports from all angling stations were to the same effect, namely, that the streams were in high flood, and successful fishing was out of the question. The frost has disappeared, and though unsettled weather has prevailed in some quarters since the 10th inst., the conditions have improved. The rivers, however, require time to run down to a normal level and assume their natural colour. Little is recorded as regards grayling, even from the Costa, a noted river for this fish, though the Wharfe and the Ure have yielded fair sport with worm and maggot. Yorkshire grayling do not spawn until April, which is a little later than the Derbyshire. Trout prospects are encouraging, the fish being both plentiful and forward. The Wharfe, the Derwent, and the Ure give the fairest prospects. Of late, on the latter river, evidence has been furnished of the rapacity of grayling in devouring trout ova, one angler having dissected several of the fish which he caught, and found their stomachs congested with trout ova and dew worms. Mr. Oxley Graham, M.A., York, an enthusiastic coarse fisherman, has written to the press to support Col. Lodge in his claim at the recent meeting of the Yorkshire Fishery Board, that something should be done for this class of anglers. He says that "a great number of trout licences are taken out by men who neither care nor wish to fish for trout, even were these fish present in the water they angle in. It seems only just and fair that those who contribute very largely towards paying the piper should at the least have a voice in calling for some part of the tune. . . . I have had some experience in re-stocking depleted waters, and feel sure that the introduction of carp, tench, rudd, and other fish in many of our rivers on the same lines that are adopted in the Thames and other waters would be attended with much satisfaction, not only to the coarse fishermen but also to the Fishery Board."

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

GRAYLING EAT TROUT EGGS.

DEAR SIR,—My letter of the 4th inst., with the above heading, has been copied by several Yorkshire and other newspapers, and, from comments made on it, some angling correspondents have evidently conceived the idea that I would banish grayling from trout streams. Nothing could be further from my thoughts or intentions. There is no more enthusiastic grayling fisherman, or has there been, for the last thirty-three years a greater admirer of this game and beautiful fish, either for sport or the table, than J. E. M. Perhaps in a great measure owing to the fact that I have more opportunities for following my only sport or recreation, viz., angling, during the autumn and winter than I have in spring or summer, grayling fishing is such a fascinating sport to me that were I the happy possessor of an estate through which a river ran, and the water equally adapted for the cultivation of *S. fario* and *S. thymallus*, I should sacrifice the one for the other. By affording the two fish equal protection, I am certain that the grayling would supplant the trout, and in a very short time any of my friends wishing to enjoy a few days' trout fishing in my waters would soon have to seek "fresh fields and pastures new." The knowledge that grayling fed on trout spawn I acquired soon after leaving school, but what has struck me forcibly of late years is the great number of trout eggs that they do swallow—hence my distribution of dishes of grayling to you and other gentlemen likely to be interested in the matter with the request that the stomachs of the fish should be examined, and to prove that every fish caught had fed extensively on trout ova. I have often had an invitation from riparian owners to "come and kill some grayling." Some of these gentlemen are not always as anxious to offer a few days' trout fishing in their private waters, they knowing that if grayling are given too much encouragement then good-bye to the trout. Grayling, like coarse fish, are "left out in the cold" by the Yorkshire Fishery Board, who, in answer to complaints of the illegal capture of any fish scheduled in the Mundella Act, practically say, oh, we cannot bother with them; in fact "we have no funds allowed for that purpose." Few angling clubs extend the legal close time for grayling, and in open waters they are taken by some anglers when fly fishing for trout at the end of March and in April. I remember once fishing one Good Friday, and I could raise any amount of grayling, but few trout. After fishing a couple of miles I came up to two piscators sitting down on the bank smoking. Angler like, I inquired "what sport?" "Oh, we've filled our panniers!" "Strange," says I, "I have only four fish! Let's look at your catch." The creels were opened, and, to my astonishment, were full of grayling. "Why," says I, "they are grayling, and out of season, and neither fit to catch or eat." The answer I got was, "Rot! Sir Humphrey Davy says grayling are always in season, and he's right." In spite of the scant protection, if any protection at all, the grayling have had, they are not decreasing in numbers, in fact they increase and get higher up our streams than they did formerly; that is, of course, in waters that are free from sewage pollution or lead washings, to which *S. thymallus* is far more susceptible than *S. fario*; but, on the other hand, the stock of trout is only kept up by carefully watching the breeding fish in the brooks; by seeing that the spawn when washed out with the gravel by floods is returned to its native bed; by artificial propagation; or by stocking with yearling trout; and by other protections which angling associations afford them.

Under certain conditions we may have, in fact have, very fair grayling and trout fishing combined, but I need not tell you, Mr. Editor, that the best trout streams are those in which there are no grayling, and the Kilsney Club, whose trout fishing is admitted to be the best on the Wharfe, will not allow a single grayling, to remain in their water if they know it. In your footnote to my letter you say, "Doubtless the trout take their revenge in April, when the grayling spawn, and I read with much interest the communication of "F. S. P." in your issue of last Saturday. Of course, the trout may take their revenge to some extent on the grayling spawn in April, but they do not feed on the ova of the grayling so voraciously as the grayling do on that of the trout, for the simple reason it is more out of their way, as the grayling deposit it in very shallow places, and at a time there is any amount of insect life, in the shape of creepers, larvae, and flies, more the taste of *S. fario* than bottom food of any description. To prove this, if I have the opportunity, I will send for your acceptance, and to the other gentlemen I have forwarded grayling to, a dish of trout, each taken from the same water after the grayling have spawned. "F. S. P." says, "the miller's thumb, &c., prey on ova. No doubt they do, but at the time *S. thymallus* spawns these fish are in our rivers dormant, or next door to it. When the Yore was frequented by the "lordly" salmon in large numbers the grayling fed largely on salmon ova. Now salmon have all but deserted our rivers, they are evidently going in for that of the trout in place of it. "F. S. P." seems to think that the trout ova deposited in the tributary rills is out of the way of *S. thymallus*; but it is after a flood, when the trout eggs are washed down the numerous tributary beds, in which the trout breed, into the main river that *S. thymallus* can, and does, fill himself to his heart's content. The angling editor of the *Yorkshire Weekly Post* goes as far as to say that he thinks that, "given the opportunity, that grayling have no marked disinclination to vary the menu by the addition of a few dainty trout fry." This is not, however, the teaching of my experience. I have examined the stomachs of hundreds of grayling in my time, both caught in

the summer and winter months, and never in any single instance have I ever found the remains of fish in them. On the other hand, I have often found young grayling in the stomachs of the trout, and on one occasion I caught a small trout with minnow with a grayling, perhaps a year old, whose tail was hanging out of its mouth. We know that where one angler fishes for grayling regularly in the winter months, there are twenty fishing for trout in the spring, summer, and autumn; that in a great measure will help to sustain the balance more evenly.

I have received a communication from Mr. John Willis (of Carperhy), who regularly fishes the Yore from Redmire up to the Hawes Association water. He says: "I am decidedly of opinion that grayling have very much increased, and are increasing, and that trout have decreased in both size and numbers in this district. The finest trout I get, both in size and quality, are those caught about Aysgarth Falls, where there are only few grayling." Yours truly, J. E. MILLER.

Northern Anglers' Depot,
19, New Station-street, Leeds.

FLAT FISH AND WIRE LINES.

DEAR SIR,—I once heard a sermon on an abstruse theological point described as "a man preaching about what he didn't understand to a lot of people who didn't understand what he was preaching about." This phrase seems to fit your correspondent "Smear Dab's" letter exactly. Although he lays down the law with a considerable amount of "cocksureness," he does not favour us with his signature, and therefore it is permissible to speak more strongly of a nebulous anonymity than it would be polite to do while mentioning a correspondent by name. He appears to be one of those curious products of *fin de siècle* civilisation, the man who has such an overwhelming confidence in himself that he will take on any job that offers, give Lord Salisbury a few hints as to the proper policy to pursue with France, accept a mount on the favourite for the Derby, or the Archbishopric of Canterbury with equal composure, take command of the Channel Fleet, or edit the *Fishing Gazette* as part of the day's work. But a man really cannot know everything, as your correspondent appears to think he does. With calmness he has given Dr. Patterson, of all people, a lecture on marine biology; has told us the law on flat fish, in which, by the way, he was utterly wrong; then our mutual and respected friend, Mr. Parker, comes in for a lecture on specific gravity; and now your readers are told that Messrs. Patterson, Mignot, and Parker know nothing at all about what they write. I am not concerned to defend these gentlemen on the wire line question, for two reasons—firstly, they are each and all perfectly capable of taking care of themselves and their opinions; and, secondly, I have not yet sufficient experience of the advantages or otherwise of wire lines to pronounce an opinion one way or the other, and until I have, I shall "shut my head" on the subject. But your correspondent, speaking as the self-elected mouth-piece of the flat fish, says, "A flax line properly made is undoubtedly the very best for sea fishing"; and he adds, "and so say all of us." Who the "us," are we are not informed. Why, too, he has dragged his "dear sister" into the controversy is rather puzzling. And another unsolved riddle is, why, when his sister is allowed "to take the flure," his cousins and his aunts have not been brought on in the same act. But, as usual, poor "Smear Dab" is hopelessly out of it. A fine silk line, such as that specially made by Hardy Brothers, is streets in front of hemp. I have tried both repeatedly, so I know; and I am sure practical, as opposed to "armchair," sea anglers will agree with me. Then comes a cheap sneer at "sea anglers" (landsmen). Well, I will give "Smear Dab" a challenge. I will find in this town (Southend) half a dozen, perhaps more, "sea anglers" (landsmen)—if I go to the B.S.A.S. I can get ten times as many—who will take him on at any, or all, of the following things: Fishing with rod or hand-line, managing a boat, either under sail or rowing, shooting a taw, picking up a dandy bridle, or any other duty of a practical fisherman; man and any reasonable amount of money ready at the *Sporting Life* office on any day convenient to your correspondent.

It is to the "sea anglers (landsmen)" that the professional fishermen, who have no time for experiment, look for improvement in sea fishing methods. They are grateful for what has been done in this direction, and look to us for still further advances. With regard to his remarks about Southend and its flat fish, as usual your correspondent is entirely wrong. During the past twenty-five years I have caught and eaten as many dabs and other flat fish as here and there one, and I can assure you, sir, and your readers that the fish here feed principally on shrimps and whitebait, and not as he suggests; that they do not "partake of a mnddy flavour"; that people come here to catch flat fish because good flat fish are to be caught if you only know where and how to catch them; but there's the rub. "There is not the slightest need for a Mundella Act or anything of the sort, not even for nets." Indeed! I assure you I thought there was, and what is of infinitely more importance, the North Sea Fisheries Conference, held at Fishmongers' Hall last summer, thought the same. No one who has not actually shared the sea fisherman's work on the deep sea, miles away from land (I have frequently), can realise how very urgently a legislative measure to stop the wholesale destruction of immature fish is required, and if I err in my view I prefer to err in the company of a body of thoroughly practical men like the members of the conference above alluded to, rather than to accept unquestioningly the *ipse dixit* of an anonymous correspondent, just as I accept without hesitation the opinions of my brother members of the B.S.A.S., Messrs. Patterson, Parker, and Mignot, on the wire line question, because

I know they understand it, rather than those of "Smear Dab," who does not even "say" that he has given the new system a trial.—Yours faithfully,

CHARLES HUSSEY (B.S.A.S.).

SEA PATERNOSTER BOOMS.

DEAR MARSTON,—In the course of a long career as an angler and angling writer, I have generally contrived to steer clear of controversy. It takes two to make a quarrel, and I have none with Mr. Kirby, nor am I inclined to prolong argument with a gentleman who admits his *penchant* for "putting all and sundry to rights." So I am quite content to continue using the little wire booms when I use a sea paternoster, as I do not find that the demerits suggested by Mr. Kirby really exist in them, and I rather think my experience will be corroborated by any sea anglers who get them properly made.—Yours very faithfully, CHAS. A. PATTON.

LOUGH DERG QUERIES.

DEAR SIR,—I should be very sorry to advise, as "Oirmuhan" has done, no doubt with the best intentions, "Blatherwyck" to travel to Lough Derg via Ballyhrophy, Nenagh, and Drominer. The shortest and most direct route to the lake is by rail from King's Bridge, Dublin, to Limerick, via the Junction, and on to Killaloe by first train. Could any gentleman or lady, say, in London, desire a more rapid journey than that between Euston and Killaloe? By leaving Euston by the evening mail train to Holyhead, and crossing over either to Kingstown or Dublin, one could arrive at Killaloe at 11.30 a.m., and go on to fish on the river or lake at noon.

Killaloe is *par excellence* the best angling station on Lough Derg, whether as regards the splendid variety of fish that abound here or the excellent accommodation obtainable in the hotels and private fishing quarters.

As to fish, beginning with salmon and grise, the former range in weight from 12lb. to 20lb., 30lb., 40lb., 45lb., and 46½lb., and the latter from 3lb. to 10lb.; trout from 1lb. to 14lb.; pike, all weights from 3lb. to 15lb., 20lb., and 26lb. *Vide* my reports for many years in the *Fishing Gazette*, and more especially my notes concerning the grand sport realised by Mr. and Mrs. Hope, of Maidenhead, England, during their recent sojourn of three weeks here at Killaloe.

I need not say that it will at all times be a great pleasure to me to give our English angling friends every information about the fishing, &c., here.—Yours faithfully, Abbey View, Killaloe. S. J. HURLEY.

THAMES RIVER AND LOCK KEEPERS' DINNER.

SIR,—The executive of this society has decided to hold the above in the "Connaught" room of the Criterion Restaurant on Thursday, March 23 next. The rendezvous has been fixed in town owing to the difficulty of making suitable country railway arrangements for the greater number of our guests.

May I once more appeal, through your columns, for subscriptions on behalf of the dinner fund from clubs, anglers, and others who use the Thames between Staines and Kew?

All amounts will be gratefully received and duly acknowledged.—Yours faithfully,

H. WHITMORE HIGGINS

(Hon. Sec. and Hon. Treas. T.A.P.S.).

34, Windsor-road, Holloway, London, N.

NETTING THE CHICHESTER CANAL.

DEAR SIR,—Your Sussex correspondent, Mr. G. Salter, hails, no doubt, from the district of the Ouse. His suggestion to net a public water, the Chichester Canal, to replenish a private one (or partially so), the Ouse, is rather cool; and further, his remarks in last Saturday's *Gazette* (Feb. 11) as to the myriads of roach, bream, pike, &c., is not borne out by his statements in previous reports as to the depletion of the first named water.

Only a short time ago, according to Mr. Salter, the building of the Chichester and Selsea railway bridge over the canal was the cause of the destruction of tons of fish, and yet he suggests further netting.

I should suggest that the authorities at Chichester refuse all such requests, if only in the interests of their own townspeople.—Yours truly, F. G. ARPLETT.

FISHING IN NEW ZEALAND.

DEAR SIR,—I am going out to New Zealand for fishing and shooting, and shall be greatly obliged if one of your numerous correspondents will inform me the best time to go for that purpose. Also good accommodation for myself, wife, and her companion near to Leighurst, Inglewood, Turanachi, New Zealand.—Yours truly, JOHN BEWLEY.

BAIT FOR AMERICAN WHITEFISH.

DEAR SIR,—I strongly advise "Emigrant" to try the fly paternoster described by me in the *Fishing Gazette* some five or six years ago. I feel quite sure he will have good sport if he knows the whereabouts of the fish. The tackle called Hegene is universally in use on some of the big lakes in the northern and eastern part of Switzerland, principally for coregoni, of which it takes are sometimes made. But other fish bite freely at it, especially perch, of which two or three are not unfrequently hooked at a time, followed up to the very side of the boat by quite an army of their brethren eager to have their share of the flies. I saw on one occasion some big bream which succumbed to this tackle, and char, rudd, and roach are frequently taken.

I had very good results with sparsely dressed hackle flies

with soft fibres, to which the sink and draw motion gives wonderful lifelike appearance. The flies must be mounted on very fine and clear hair to stand well out from the main cast. Wet gut is too limp. It is a pity that this tackle is not more universally known. I consider it by far the best lure for deep lake fishing.—Yours very truly, LYONS. W. WIESMANN.

ABOUT BREAM, BLEAK, AND PEARLS.

DEAR SIR,—I have read and followed the description of fishing the Lower and Mid Thames by Mr. Amplett with much pleasure, as I used to visit the places mentioned some thirty years since. Bream were abundant at Walton then. Aug. 16 was considered the best day, then the villagers and others make a day of it—their punts were fixed in the deep close together the evening previous, some anglers slept in them all night to prevent others from taking their pitch. They commenced at daybreak, and left off at 8 a.m., for shore and breakfast, leaving their punts under the care of some boys. After 8 a.m. the bream are off, too, and don't come on again till the evening. This is the case everywhere on the Thames. I remember once fishing there with my late friend, Mr. Klaffenberger. He was too strong in the wrist, for he broke his ledger tackle several times with large fish. We caught ninety-nine, and bought a thin sack of a grocer to take them to the Piscatorial Society. Mr. Amplett recommends the tail of a lob worm for bait, a maiden-dew lob is preferable generally. We were attended by the late old George Hone. Since the introduction of so many stram launches the bream have been scattered away, and the annual outing for him, as Hone used to call them, gone "to the Ewigkeit," or less disturbed waters.

The Piscatorial Society were good to George Hone, as, having ruptured himself, he was obliged to be taken to St. Bartholomew's Hospital, and as he had a wife and young family, we subscribed £16 for their use during the time he was in hospital. His eldest son, the well-known Otter Hone, was then about fourteen years of age. The bream are now fished for under some willows, out of the rush of steam lanchettes, with float tackle, but the sport is not what it used to be.

Old George Hone showed me one day a white bottle full of bleak scales he expected a Frenchman to call for, who came every year to collect them from the Thames puntmen. The French now use the scales of a similar fish, d'ablette, from their own waters for the purpose. It takes 7lb. of bleak scales to produce 1lb. of the so-called *Essence de Orient*; after the scales are rubbed off through a sieve into a basin, the residue is used to line the white glass beads made for the purpose. But the reader should study Frank Buckland's last book, "The Natural History of British Fishes," 1880, as at page 15 is a long article I wrote for Frank Buckland, at his request, about the manufacture of artificial pearls, counterfeits of the real oriental pearl.—Yours truly,

T. R. SACHS (P.P.S.).

LAKELAND NOTES.

SIR,—I was exceedingly interested in the article under the above heading in last week's issue. I fish the waters in question as often as most men, and am therefore keenly alive to the importance of using the correct fly or presenting it in the most deadly manner, but I am totally ignorant of any practical knowledge of the use of the dry fly, and should be glad if "B. E. F." will let us know whether he tried the wet fly at all, and, if so, which? I have observed the same partiality for the March Brown of which he speaks, but even more so for one of Cholmondeley Pennell's hackle flies—No. 3 in Hardy's list—which is exceedingly killing (fished wet, of course).

As to the spinning, will he also inform us what bait he used, whether artificial or natural; and, if the latter, whether live or dead?

I may say that the fly is extensively used up to the end of the May Fly season, but most local fishermen never think of trying it afterwards.—Yours sincerely, WM. H. PEARSALL.

LANDSCAPE AND FISHING.

SIR,—Could any of your readers very kindly inform me of any healthy old thatched village with surrounding open scenery suitable for landscape painting, where I could get comfortable apartments, or rent a small house within two hours train from London, and where a little trout fishing might be obtainable?—Yours truly, F. W.

FISHING BAG WANTED.

DEAR SIR,—I will require a bag for trout for the coming season, and I would be obliged if you or any of your readers would recommend one.

I have a basket of English wicker, but it dries up the fish badly; also another of French wicker that I bought a year or two ago, but it is quite worn out, having been too slight for rough usage; besides, baskets are dreadfully in the way when tanning. Is there any bag on the market fitted with a facile strap, and simple in its construction? Most of those advertised have as many straps and buckles as a double-breasted portmanteau.—Yours, &c., WRENTAIL.

NORTH AND SOUTH ESKE, NEAR BRECHIN.

SIR,—Can you or any of your readers kindly give me some information regarding the early salmon fishing in above rivers?

What are the favourite flies, and are other lures allowed—minnow, prawn, worm, and spoon?

About what number of fish might be expected in a week's fishing under favourable circumstances?

Is the trout fishing good?—Yours, &c., F. M. LESLIE.

Several letters unavoidably held over.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

The Fishing Gazette

WITH WHICH IS INCORPORATED

ANGLING AND CLUB GOSSIP.

SATURDAY, FEBRUARY 25TH, 1899.

A GOOD START.

The salmon angling season is now in full swing in Scotland. The first week on the great bulk of Scotch waters—which opened on the 11th inst.—has come and gone, and although the opening days were handicapped with too much water, yet the results on the whole were eminently successful, and the sport since then highly satisfactory.

The opening day may not be of much importance in itself, but the opening week, under anything like fair angling conditions, gives a good idea of what like the season as a whole may be expected to turn out, as far as the early spring fishing is concerned.

There were many blanks on the opening day, and no wonder.

It was a bit of promiscuous angling all over, and a sheer bit of promiscuous luck to bag a clean fish, so unrecognisable were the regular pools and favourite lies. It would have been difficult to tell where even a "kelt" might be booked had one been on the look out for any such "beauty," so swollen were the rivers and streams all over from Dee to Ness.

On Monday, the second day of the season on

the rivers referred to, matters began to mend, and right on throughout the succeeding days cheering and more cheering reports came steadily to hand, until Saturday, when, as far as the Dee is concerned, the first week of the season was pronounced to have proved the best experienced for at least the past five or six years. As the volume of the river decreased the pools were better covered, and sport accordingly became brisker and brisker.

It was somewhat late in the week before the Spey, Ness, and Deveron were in trim, if they may be said to have been even that, but at least some of the pools were "come-at-able," and the first fruits of the season culled enough to indicate that under normal conditions there is every chance of more than average sport. First blood on the Deveron was somewhat late in being drawn, but only a day behind that of last year, and since then there is good reason to classify that salmon stream among those of which good hopes of a successful spring season are confidently entertained.

Up till Thursday only one clean fish had been reported from the Don, got on the burgh of Kintore water, which may be fished by all and sundry at a nominal charge. At Inverurie some twelve kelts were hooked and returned, but no clean fish. There may have been more sport on the Don than the solitary fin that has been mentioned, although such a state of matters would not be surprising to anyone who knew how this once famous salmon stream has been abused. Of course it may be that the fish are not into the middle waters, and that the lower waters are still too big, but certainly it stands to reason that where twelve kelts were pulled out clean fish could also have been got at were they there. The North and South Esk opened badly on Thursday, the 16th, but owing to the state of the pools sport was not rife on either stream, although the prospects on both are brighter than for years past.

The first day's returns from the netting stations along the east coast were meagre in the extreme; and the worst features were put upon the aspect of matters by the prophets of evil, who are ever ready to croak forth their alarmist views as to the speedy extinction of *Salmo salar* whenever there is the slightest pretext for getting a word in. Happily their prognostications are not seemingly to be readily verified on this occasion at least. "Good supplies" have been the order of the day, and falling prices the rule of the market, from almost every centre where conditions have been in the least favourable for netting operations being carried on. We do not grudge the netter a fair share of the season's spoil, but we confess an inward satisfaction in the fact that the big waters have considerably reduced his results; and that what has escaped the meshes of his net are now stocking the pools for the present and future sport of the salmon angler.

As regards the distribution of the bead of fish over the lengths of our longest rivers, matters could not have been better arranged. We much doubt, that had a committee of lessees been appointed for the job they would have succeeded half as well. We are certain there would have been much more grumbling, on the Dee for instance, among anglers than there is to-day.

While fresh fish are being found well into the higher waters, it is evident from results that the strong bead of the spring migration are not more than a dozen or twenty miles into the main streams. Of course with every semi-spate and daily flood—for the snows are not all off the far hills yet—they will move forward, and it is a very gratifying thought that while the pioneers of the spring migration are affording just as much sport as will keep the angler from wearying, or chucking his fishery up in disgust, the red-letter days have yet to come, and the records to be made when he gets into the thick of the shoal proper. He has something to look forward to compared with the knowledge that the strength of the migration has gone through his beats before the season opened, on account of the abnormally mild winter, as was the case last spring and the spring before.

Although not a single fish was got on the lower half of the Dee during the opening days, on account of the very high state of the river, since then some phenomenal baskets have been made. On the Durrus lower beat, for instance, Davie

Rae and a friend took eleven out of one pool on Tuesday, the 14th inst., seven on Wednesday, and six on Thursday, all fine spring beauties, ranging from 6½lb. to 12lb., the average of the two dozen spring salmon being about 8lb. On the Park waters three and four have been got daily since the opening by Mr. George Davidson and Capt. McNeil, who share the fishery; while two, four, and six fish are being got daily on the sections below this. This on the lower Dee, which, it may be mentioned, is more favourable for autumn than spring angling. It shows that the thick of the spring migration just got into the river in the nick of time to escape the netter, and that there is a good time coming to those on the waters above, i.e., the middle and upper pools. As the season advances, what is true of the Dee is more or less applicable to the majority of Scotch salmon waters in general. Of course, they are not nurtured like the Dee, and may not share in like heavy shoals of spring fish, but theirs will be in proportion as they have been similarly treated or otherwise.

The quality of the early spring fish are described as of the best. Lanky fish are conspicuous by their absence this season, and while the average weight may not be more than 7lb. or 7½lb., fish of 16lb., 18lb., 20lb., and up to 25lb. have been by no means rare. There is little sign of disease even on spent fish, and none at all, as yet reported, on any spring fish that have been killed, while those which have been killed on such far inland fisheries as the Invercauld and Balmoral Dee waters must have been travelling since Christmas at least.

The number of kelts, as usual, have been strongly *en evidence* during the opening days, and especially on the far inland reaches. They are a nuisance the spring angler has to deal with more or less, according to the distance his water is from the sea. If far inland then he will be rid of them all the sooner, while his neighbour on the netter pools may be pestered right on to the end of his spring lease. The autumn angler has nothing to do with the kelt. I am tempted to mention this obvious fact on account of an amusing incident which came to my knowledge last fall. An English sportsman, of undoubted prowess in his own country and among his own fish on the Thames, had a reach of the Dee placed at his disposal during September. He disdained the attentions of the ubiquitous gillie, and went to enjoy his sport alone. He returned in the evening with a goodly basket of trout, also with the information that he had hooked and played a salmon, which he had carefully returned to the river again as it was a kelt. "That is impossible," said his host, "at this season of the year. Earlier or later you might get them by the round dozen, but not just now. All last year's fish have gone down to the sea, and the present season's stock have not yet commenced to spawn; so you must be mistaken."

"Well, it was red in the colour, and, to avoid trouble, I put it back," was the excuse proffered. At this the north countryman rudely laughed; and related at dinner how his English friend had come all the way north to kill a salmon, and that when he was lucky enough to get one, he carefully put it back. It was a "potted" salmon, i.e., some time from the sea. But for the life of him the Englishman could not see what his Scotch friends had got to laugh at.

The fly has been the lure *par excellence* this season. Of some hundreds of fish killed on the Dee during the first ten days the fly has accounted for ninety per cent. of these at least. From all accounts, I bear of plenty kelts being pulled out on the phantom and kindred lures, but only in one case that I know of has a clean fish been got to anything but the fly. Of course, there may be a few that have not been reported, but, making the most liberal allowance, I am very confident that nine out of every ten fish have been got to the fly. Probably the high rate of temperature prevailing (from 38° to 45°) during the first days of the season may have something to do with it, but the fact remains that this season's spring beauties will as yet look at nothing but the fly.

The best taking lures have been the Gordon, Akroyd, and Black Doctor, running from 2½in. to 3½in. irons, and of the larger sizes rather than the smaller. Other patterns have also been requisitioned, but these three have been the most in

demand, especially since the waters began to subside, and sport became rife.

On the whole, from the fine head of fish forward, from the distribution of the earlier pioneers of the spring migration well into the middle and upper waters, from the success which has been already met with almost on every pool where a fly has been got out, there is no doubt about the fact that the season has at least commenced with a good start.

G. M.

"NORWEGIAN ANGLINGS AND SPORTINGS."

THERE can be no doubt that the demand for fishing and shooting in Norway increases every year, and we are glad to find that such a first rate English firm of sporting agents as Messrs. J. A. Lumley and Co., of "Lumley House," 34, St. James's-street, London, S.W., have taken up the matter in good earnest.

They have recently published a very neatly got up guide to the fishings and shootings they have to let, and have kindly lent us a couple of interesting illustrations from it, which we reproduce this week—one is a scene on the Evanger river, and the other a photographic reproduction of a 50lb. salmon killed on the Namsen in 1897.

There has been such a demand for this list that a second edition has been printed, and we advise all who are interested in sport in Norway who have not yet got a copy to secure one by writing to Mr. James Dowell, 34, St. James's-street, London, S.W. Mr. Dowell called on us recently, and we are convinced from the conversation we had with him that anglers who want to rent salmon fishing on some of the best water in Norway will do well to consult him. Mr. Dowell is managing this part of Messrs. Lumley's business, and has been out in Norway making arrangements for his firm with the different leaseholders. Messrs. Lumley and Co's list of "Norwegian Anglings and Sportings" contains also much useful information as to routes, seasons, sporting licences, &c., as well as of the beats they have secured.

The following particulars which we quote from the list will show what a great enterprise Messrs. Lumley have taken in hand, and we only hope that they may be so encouraged by the success of their action in buying up the netting rights on the Mandal river in Norway, to do the same on the Spey and some other of our terribly abused salmon rivers in this country.

THE MANDAL RIVER, NEAR CHRISTIANSAND, SOUTH NORWAY.

"This river has hitherto ranked as the second in importance in Norway as regards the total catch of fish by the farmers and others using nets, traps, and other implements or engines for the capture of salmon. And from the Norwegian Government's statistics we find that an average annual catch of about 40,000lb. of fish are taken by these means at Holme, Halså, Hartmark, and several other netting stations, extending over a distance of seven kilometres, near the mouth of the river. On the upper waters, at Foss Foss, the farmer had to pay a governmental "land tax" of twelve barrels of salted salmon yearly. Fortunately, this latter tax has been cancelled, thus affording salmon better protection on the natural spawning grounds.

"The above, of course, does not by any means represent the total take of fish, but these figures are simply quoted to show the immense amount of damage—from an angler's point of view—these nets and traps do every year.

"Messrs. J. A. Lumley and Co. have pleasure to announce that they, in conjunction with the leaseholders, have arranged for the entire buying up of the whole of these destructive netting, trapping, and other rights, hitherto held by the farmers, cottars, and others in the valley; and on a personal inspection at the end of the angling season of 1898, Messrs. J. A. Lumley and Co. have divided the river into suitable beats, and now offer these to anglers for such periods as may be desired.

"The salmon have access to about fifty-five kilometres of this river, and further ascent is barred by the top falls known as Foss Foss. The total length of the Mandal proper is 136 kilometres, and it has a basin of 1760 square kilometres. The Mandal itself has its source on the Haskjeld, a large plateau generally retaining the winter's snow well on till July or August, and the tributaries of the river flow out of or through countless lakes or mountain tarns, these collectively forming one of the best reservoirs for the purpose of maintaining the river at a good level. The river falls into the sea near Mandal Bridge and above this for about seven kilometres there is a stretch of even water affording excellent opportunities for harling. Above this the rapids commence at Noddings Foss, and from there to Manflo Lake the beats into which the angling is divided afford a variety of bold and rapid pools, choice streams, and excellent holding water. This river has been in the hands of an English gentleman for the last twenty-seven years, and he only gives it up this year in consequence of the lease being out. This gentle-

ON THE EVANGER RIVER.
(See "Norwegian Anglings and Sportings.")

man has a large extent of the fishings from Noddings Foss upwards, but through having such a large extent of attractive fishing ground, it is impossible to give records from any given beat, and it must be remembered that all the destructive nettings, &c., were carried on regularly during his occupancy, yet he obtained splendid sport.

"The buying-up of the nets and traps, &c., especially on the lower portion of the river, has this gentleman's highest approval, and he considers, with us, that it will make the river, in a very short time, 'one of the most prolific angling preserves in Norway.'

"The scenery throughout the whole of the Mandal valley is exceedingly charming, the hills being well covered with pine, birch, and oak trees, interspersed with heather patches. The valley on both banks is rich pasture land. The farmers and inhabitants of the valley are of an exceptionally well-to-do and respectable class, and the houses exceedingly well built and comfortable.

"The residences for each of the tenants have been carefully selected with a view to the comfort and convenience of the anglers as well as the best situations for the favourite parts of their respective beats.

"Separate schedules detailing the individual particulars of the respective beats may be had on application to the sole agents, Messrs. J. A. Lumley and Co., 34, St. James's-street, London, S.W."

Herr A. Landmark, the well-known Fishery Inspector to the Norwegian Government, and one of the greatest living authorities on salmon and salmon rivers, after a recent visit reports:

"The Mandal river has for a period of many years, and probably for centuries, been the most productive salmon river in Norway, which undoubtedly, first and foremost, is due to the fact that the river has a favourable geographical situation, running directly into the sea, without an intermediate fjord, and is altogether naturally well adapted as a salmon river, and abundantly provided with

fish to the well or basket. The only chance has been with the roach, and, with the exception of a few good takes here and there, sport has been exceptionally bad; at least, that has been my experience in the waters near Weybridge. When the first autumnal rains came, the Thames took a long while to rise, as every ditch was empty and every spring was low after the long continued spring and summer drought. However, when the river really filled, it seemed as if the water could not run itself away, notwithstanding the extra care taken at the weirs.

The water has dropped slowly and risen suddenly; the fish have had no time to settle themselves properly, there has been such continual alteration in the eddies and stream. Nor do I remember such a long-continued thick water for many years; the earlier floods brought down all the accumulated scum and filth of innumerable ditches. This was naturally to be expected, an equally natural supposition was that the water would soon clear when the first push of *débris* and weeds had been swept away; but it has been exceptionally thick during and after each fresh rise. Two theories are promulgated. One, that the wash of the launches breaks away the banks during the summer months, and the loosened or fallen earth is so thoroughly stirred up in a "spate" that a longer period must elapse before the river clears again than heretofore; another, that greatly increased drainage pours more dirty land water into the river, which land water has

not approached the magnitude of the 1894 flood, which was, I believe, a record one. Those who know the river near Shepperton Lock will judge the height of the latest push of water from the photographs, recently taken, of the entrance to the lane leading to Walton, and of the towing-path at Shepperton, nearly opposite Dunton's boathouse. It will be noticed the water is almost into the lane, while the other "snap-shot" gives some idea of the tremendous rush of water in the main river. The water was just commencing to recede when I took the photographs, another foot of water would have meant a very serious flood.

It is a doubtful question whether the Shepperton water will clear sufficiently for successful chubbing before the season ends. A stray chub or two may be picked up with a lob worm; but that is not chubbing in the true sense of the word. It is getting too late for pike or perch, so, for my own part, I think I shall see the season out with the roach, or perhaps bream, unless a wonderful change takes place.

CHARLES H. WHEELEY.

ROVING FOR ROACH.

THE break up of the last frost, happening after many rivers had been in flood and had commenced to clear, was a grievous disappointment to skaters and fishermen alike. The former had

TOWING-PATH AT SHEPPERTON, OPPOSITE DUNTON'S BOATHOUSE.

ENTRANCE TO LANE LEADING TO WALTON.

spawning beds. I therefore entertain the firm belief that when the different implements, partly fixed and partly moving, have been removed from the lower part of the river, thereby allowing an increased number of fish to reach the vast and excellent spawning beds above, and the accessible part of the river solely devoted to sport, to which it is splendidly adapted, the stock of fish will be greatly increased."

In addition to the Mandal, Mr. Dowell has beats to let on the Sundal or Driva river, and on many other good salmon and trout streams. We told him we hoped that he would be able to arrange to let good sea trout and brown trout fishings as well as for salmon and grilse, and he promised to consider the matter.

There can be no doubt of the advantage of dealing with a responsible London firm in taking a fishery in Norway, and we wish Messrs. J. A. Lumley and Co. all success.

FLOOD AND MUD.

THIS title may not be elegant, but it is uncommonly concise, and fully describes the condition of the lower Thames, Wey, and Bourn during many weeks past. So thick has the water been that I have not troubled to put my spinning rod together during the last month, and the chub tackle has been equally idle.

Not once during the winter have we had that greeny-clear water, so conducive to sport with pith, macaroni, or cheese, when the chub seem to fight for the bait, and almost every swim adds a

had time to partly purify itself by more or less filtering.

The steam launch question certainly affects the lower Thames considerably. It is common to see the lap-lap of the wash disturb many a pellet of earth. These pellets, though small in themselves, aggregately form a vast quantity of mud. The delicate looking electric launch, infinitely more picturesque than her steaming, puffing sister, appears to do far less harm to the banks, gliding over the water rather than cutting through it. In the sharp bend of the river, some half mile below Chertsey Bridge, two or three fast following launches raise a tremendous "pothor," as they have to keep fairly close to the towing-path to avoid the shoal on the other side of the river, and I have many times had my punt set a-dancing in a miniature sea, the chief offenders being the rowdy hirers for the day of that antiquated tin-pot-in-a-barrel style of launch so well known and well-beloved by the would-be peaceful angler. The gentlemen (?) who venture abroad in these fearsome craft, quite 6ft. from the Surrey (or Middlesex) shore at times, seem to prefer very small launches with plenty of beam, that throw a bigger wash than one of Tom Taylor's (Windsor Castle) liners! However, joking apart, there may be something in the launch idea to account for the extra thick water, though it would not appreciably affect the Wey, where there are very few launches to be seen. Here the "increased drainage" theorist ought to score.

Although the floods have been high, they have

looked forward to donning their Acme's and cutting all sorts of intricate figures—grape vines, loops, flower-pots and what not, on the ice—to the delight of their sweethearts or wives, whilst the latter counted upon the streams being sufficiently bright to enable them to make an onslaught on the chub, which, thanks either to low or high and thick water, they had been debarred from doing throughout the greater part of the winter months. But it was not to be. The wind suddenly veered to the southward. A thaw naturally resulted, and, what was infinitely worse, Jupiter Pluvius became once more strongly in evidence, and the expectations of the rod men were, to their great grief, unrealised.

Now, I held an order to inspect in a practical manner a private part of one of the most famed tributaries of the Thames—the Colne, to wit—and as my opportunities for angling are hardly as plentiful as blackberries in the autumn, I resolved that the first spare day I had, let the wind blow from the north or south, east or west, and the water in what is termed fair ply or the reverse, I would go a-fishing.

I freely confess that I do not care to hear the rain steadily patter against the bedroom windows several times during the night preceding a piscatorial excursion. I have a too vivid recollection of a tempest of wind and rain I had to face when not long since I hied to another part of the same river. A glorious sunset on the eve of this outing made me opine that I was really going to have an enjoyable trip, but before daybreak there was a

Scotch mist falling. This rapidly developed into moderate showers; then the universal sprinkler, to vary the monotony of a continuous downpour, removed the rose from his all too large watering can, and treated me to a regular deluge. The rain ran off the well-seasoned mackintosh, into my boots, got, alas! into the baccy pouch, and ruined the companionable and consoling weed, my "grub" was rendered decidedly moist eating, and, in fine, the only item in my provender which kept at all dry was, as Pat would say, the "cold tay" in the bottle.

Would history repeat itself on the occasion under notice? I fervently prayed not, although the odds seemed greatly in favour of another wet holiday being added to my already longish list of uncomfortable expeditions. For from the moment I ventured forth from home until I reached the very edge of the river—a journey of nearly three hours—the pitiless rain descended. The wind, however, was in the quarter whence it is said to "blow the bait into the fishes' mouth," and the forecast prophesied the weather to be "rainy to fair." This for once in a way proved to be correct.

At 11 a.m. I was by the waterside. There was a good deal of ice about in the ditches which discharged themselves into the river, and I was not altogether sanguine that I should find *Rutilus* in a mood to cross swords with me, knowing how low temperatures adversely affect the appetites of their roachships. But I had with me a spinning rod, so that if the red fins were "off" the wagtail or sprat would, I thought, in all probability enable me to reel a brace or two of pike.

Before I had time to put together a long light rod the sky cleared a bit, and the rain stopped, for which I had much cause to be thankful, for to fish in the fascinating Nottingham style when the rain comes down in big or little drops is practically impossible.

The first swim I worked was a shallow one—2ft. 6in. in depth. A little loose ground-bait was pitched in, and the tell tale despatched on its maiden voyage. I naturally employed crust for the hook bait, because in the first place it is, as a rule, a most deadly lure in the winter; and secondly, because fewer bites are missed than is the case when maggot fishing, provided always that the cubes are not too large. For half a dozen swims the float sailed complacently downstream, not a touch ruffling it. I could not believe that the roach were not there, as the holt was generally a fairly productive one. I concluded, therefore, that *croûte de pain* was not on their *menu* for the day, and accordingly reverted to a bunch of gentles. Off went the *bonne bouche*, but 15yds. were traversed without effect. A few yards further on, however, the quill gave a sudden dip, and ere long I had a nice roach of 1lb. on the greensward to admire. Two smaller ones followed in quick succession, and were returned. A fourth fish I hooked, and felt it to be a good one, but unfortunately the crystal came unstuck, and the roach lived to fight another day. Thereafter, not a bite rewarded me for a quarter of an hour. I deemed a move imperative, and, wandering upstream, alighted upon a most attractive-looking spot; a somewhat difficult one, however, to tackle by reason of there being on either side of it an old willow which sadly required pollarding, for the branches met almost in the centre. Still, I could not refrain from giving the place a trial. Encasing the plummet in a ball of ground-bait, I dropped it quietly in, and found the depth to be 4ft. I brought a camp stool into requisition here, seated myself upon it well back from the edge of the stream, and commenced with gentles. By holding the point of the rod low down, in fact, almost touching the water, I was able to command a run of 12ft. under and beyond the boughs aforesaid. I soon found that the roach were there, for in half an hour I had seven by my side, one a handsome fellow of 1lb. 3oz., the remainder being well over ½lb. each. By way of experiment, while the fish were feeding freely, I discarded gentles, and gave crust a chance. I used cubes of various shades of colour, but could not attract the attention of a single roach. I accordingly resumed with gentles, the first cast giving me a ¾-pounder, a clear proof that on that day the justly valued crust was completely out of the running.

The sun appeared soon after 1 p.m., but the roach refused everything I could offer them. I moved again, and roamed about, trying swim

after swim, picking up a roach here and a dace there, until the church clock chimed the hour of three. Then the wind shifted round to the north-east, and the water fell a couple of feet, which upset the fishing for the rest of the day. I laboured hard until five, but had only one solitary ½lb. roach for my patience and perseverance.

I did, however, meet with an adventure to close the day with. At the end of a 30yd. run down, the float went under with a bang. I naturally imagined that one of the heavy chub with which the river abounds had had something to do with its unlooked for dive. I struck the fish, whereupon it bolted down stream for all it was worth, taking line off the Ariel winch in an astonishing fashion. I knew then that I had to deal with a large trout. I was forced to let it gang its ain gait, for the all sufficient reason that I was using a very fine running line and a length of gossamer gut. With this frail tackle, however, I managed to turn the fish, and outmanoeuvre two other bursts it made into the bargain, but in the end the speckled beauty and I parted company, the former making off with the bottom and its appurtenances. I had, nevertheless, the consolation of knowing that had I landed the prize I could not have retained it, and the additional gratification of feeling that I had left it for some brother piscator to catch when the glorious First of April arrives, and the trout fisher may, after six months of masterly, albeit compulsory, inactivity as far as most southern rivers are concerned, once more be up and doing. H. A. ROLT.

TO AN OLIVE DUN.

[Alighting near Burnside, Bromley, Kent.]

BY SOME MEMBERS OF THE FLY FISHERS' CLUB.

STAY, graceful goddess of our gentle art,
And cease the flutt'ring of those gauzy wings,
Till we some angling lore to thee impart,
And tell the joy that thine accession brings.
We deftly weave thy likeness round a hook
With silk and feather and transparent quill,
Until it quite deceives a casual look,
Though thy full beauty must elude us still.
Then humbly kneeling at thy silv'ry shrine,
We note a dimple on its placid face;
But wait (nor care to cast a random line)
To see another in the self-same place.
It comes—the moment shadowed in our dreams—
And now to cast with speed but not with haste
Thy counterfeit presentment, and it seems
A morsel tempting to the nicest taste.
Crisis of fate—as cocked and dry it floats—
The ponderous trout absorbs the flimsy cheat.
Our practised wrist the motion sharply notes,
And a tight line proclaims our joy complete.
Farewell, frail insect, wing thy wilful way,
And seek thy love by river or by brook.
Bask in the sunshine. Dance thy little day!
Then peaceful die in some sequestered nook.
J. P. T.

MESSRS. J. BERNARD AND SON'S NEW CATALOGUE.

THE old-established West-end fishing rod and tackle manufacturers, Messrs. J. Bernard and Son, of 5, Church Place, Piccadilly, have just brought out their new catalogue, neatly got up and illustrated. It contains lists of all the tackle required in first-class fishing, from artificial baits to waterproofs and waders. We are often asked where amateurs can get lessons in salmon and trout fly-making; Messrs. Bernard advertise that they teach fly making, and, not only that, but how to catch salmon and trout with flies of your own make. Messrs. Bernard give great attention to the wants of dry-fly anglers, their tapered reel lines, eyed flies, and special dry-fly boxes being particularly good. For pike as well as salmon fishing we have found their London made telescopic gaff answer admirably, it has a metal point protector and spring for keeping gaff closed when not in use.

To look down the lists of favourite salmon and trout flies is as refreshing as the buds now showing on the lilacs in our dingy London squares.

THE WEATHER BALANCE.

LAST September, in an article recording some dry-weather reflections of mine in these pages, the following paragraph occurred:

"From observation of some years I have found that abnormally dry weather is eventually balanced by some of the other sort, although, perhaps, not within the short period that some of us could desire."

It is some satisfaction to find that events have justified my opinion; but it is far from my desire or intention to take up an "I told you so" attitude, or to pose for one moment as a weather prophet, just because the rain which was due in July and September last has come now in February, and not only in sufficient quantity to atone for the shortage of those months, but to leave a fair balance of moisture in hand to meet ordinary summer dryness.

This latter fact embodies a great element of hope for anglers in the south of England, for it was the extreme dryness of last winter and spring which made the ensuing summer's drought so disastrous to our sport.

In the article before referred to it was pointed out that "even fishless days at the waterside may easily provide lessons to be profited from in the future under different conditions," and that "the clear shrunken stream, while disclosing perhaps a disheartening growth of weeds, also makes plain to the observant angler those places which always seem to remain clear of weeds under all conditions, and also the few gravelly shallow places close in shore, which the fish frequent towards dusk, and which are particularly good places in a flood at any part of the year."

An opportunity of practically verifying these views occurred to me just lately, when, having to be on Colne side to see some young trout planted, the remainder of that day and the whole of the next day was spent in trying to catch other fish. And it really was trying, in more senses than one; for the river had only just ceased rising, and was higher than it had been for nearly two years; its colour was just a good match for coffee and milk, while the wind was a real hurricane; first from south west, and later with sufficient of north with the west to make the holding of a rod a finger numbing operation.

The question then arose, Where is the best and most likely place to fish? As I walked upstream the wind blew across the river, leaving quiet water on my side wherever the banks were fairly high. I passed the deep, swirling hole, with a fine stream running through it from a shallow above. That was one of the few places which yielded fish during the drought, because of the stream, which to-day made it, under the altered conditions of height and colour, one of the most unlikely places for sport. The stretch above being narrow, shallow, and consequently fast running, was equally unpromising; and the weeds which there, in spite of floods, showed green and thick, were strong evidence of the general mildness of the winter.

The most quiet and deep portion of the river, say 10ft. or so, was next arrived at; but that, too, for all its tempting appearance, was passed by, in the knowledge that fish do not frequent such depths of flood-swollen water, although they come back to them in winter as soon as the water fines down.

In this search for a swim it was pleasant to note that most of the willows had been pollarded since my last visit, and that thus access had been made to many a swim and cast hitherto unapproachable. The cut branches, however, which still lay strewn about the banks, or tied up in bundles, would, if still growing on the trunks, have afforded some shelter from the searching wind. But future advantage must be counted as a fair set off against present discomfort, for I took note of a few excellent spots for Nottingham long line fishing, which previously were only fairly accessible to tight line fishing with a roach pole, and afforded many an anxious moment to the angler as to the means of landing a fish, and liberty to many a fish after it had been hooked.

At last I arrived at a nook which, on due consideration, I do not think could have been bettered for my purpose by any other swim in the fishery. It is a small bay under a fairly high bank, its downstream end being bounded by a submerged willow, through the branches of which

the mid-stream current flowed strongly. In the bay itself, however, its barely 4ft. of depth was sluggish enough to be easily fished with a tackle carrying the lightest of Lea porcupine floats. A place slow enough, in fact, to be famous among the fishery subscribers for its tench, and, above all, as the plummet disclosed, a place well cleared from obstructions by the flood.

Old associations induced me to commence fishing here with the Lea tight line, and very soon a roach of 12oz. or so, and four others, somewhat smaller, fell victims to amber-coloured cubes of bread floated down about an inch from the bottom. Without disturbing the swim these fish were returned to the water, for what is the satisfaction in keeping such fish from a water which produces numbers of 1lb. each, many of 1½lb., and not a few of 2lb. and over? The biting continued at fair intervals, but nothing large resulted. I then became restless, and thought that better fish might be obtained by float ledgering; that perhaps in the thick water they might appreciate a worm, a bait which might also tempt one of the swim's portly tench. Then, reflecting that perhaps the same bait might also attract one of the 8lb. bream known to inhabit the water, I made a very unorthodox, but still quite sound, change in my tackle by taking off the butt of my roach pole, fixing a reel on the next joint, running a fine plaited silk line through the rings, which in a moment of caution I had fixed to the pole, and added a fine gut line with a slightly heavier float and two hooks, one baited with a piece of paste the size of a Spanish nut, the other with a bright marsh worm, then started float ledgering with a tough piece of ground-bait on the shots.

This style of fishing was much more comfortable in the high wind, for I could place the rod on the bank within reach of my right hand, instead of vainly trying to hold it steady against every gust. My hands being thus freed, it occurred to me that my umbrella would keep some of the wind off myself and the swim. By the way, many good Lea anglers always carry an umbrella with their tackle; but they cannot claim originality for the idea, for that reverend and literary Lea angler, James Martin, in his "Angler's Guide," published 1854, recommended the use of the harmless necessary gamp for much the same purposes.

But where is my float? Out of sight; and before the umbrella can be lowered something very much alive, and apparently well under the sunken willow, tugs sharply at the rod top. There is no need to strike, and after a good fight a shapely roach of 1lb. 2oz. lies in the net, having bolted the worm. Another good 12oz. fish soon after takes the paste, the quick succession of bites encouraging me to hope for a really good bag by the end of the day.

The wind, however, gradually veered round, and now blew straight upstream, harder, if possible, than before, spoiling that yard width of glassy surface nearest the bank which had hitherto seemed to harbour the fish. No more bites came, a changing wind being always bad for roach fishing, therefore the arrival of my friends in charge of the trout gave me a good excuse for packing up for the rest of the day.

Yet, when I should have taken train back to town that evening, I turned aside at the local telegraph office to let my people at home know that they need not expect me for another twenty-four hours, and within a very few minutes I take mine ease at mine inn, hoping the while that no more rain will fall, and that the wind will abate, when, indeed, the much desired big bag of big fish will surely be mine.

At seven the next morning my first anxious glance at the sky is anything but reassuring, for past the bright blue white masses of cloud are scurrying along at a great pace, telling yesterday's tale of strong wind, although this time from the north-west. Early risers tell me also that rain has fallen heavily during the night.

However, after fortifying my inner man with wholesome solids, I sally forth, at same time drawing a big cheque on my store of hope. In company with five brother anglers I fish the same stretch of water as before, being driven from swim to swim by the wind. At last, about noon, there is a lull, the sun strikes really warm. Off goes the float, and I manage to land the only fish among the party, a handsome roach of 1lb. 6oz., lured by a pellet of paste. Soon after a terrific

hailstorm marked the re-commencement of a hurricane which gained strength as the day advanced, and the uselessness of further trying was admitted by all.

I feel convinced, nevertheless, that with the water just the colour we were hoping for all last autumn, the wind alone was responsible for spoiling what would otherwise have been record days; and, as usual, the following day, when none of us could fish, the wind, weather, and water were just perfection.

CLAYE KENWAL.

FISH CULTURE AT THE WESTON FISHERY, NEAR NORWICH.

THE following extracts are from Colonel Custance's last prospectus. The Weston Fishery is one of the finest and most extensive in the country, and we advise all interested in fish culture to consult Colonel Custance's price list when they are thinking of re-stocking.

"The Weston Fishery has for many years steadily maintained its reputation for producing the best of fish, and each succeeding year brings with it an increasing demand for them. This growth has necessitated a corresponding expansion of the fishery, and still further additions to its equipment.

"A powerful pumping engine affords an inexhaustible extra supply of brook water whenever desirable, so that the Weston Fishery cannot suffer as do many others from the effects of drought, so fatal to the growth and development of good fish.

"This year a supplementary series of specially constructed yearling ponds has been added. Favourably situated in a locality in which fly is very plentiful, these ponds are served from an independent source with an unflinching supply of the best class of brook water, teeming with freshwater shrimps and other forms of natural food.

"Systematic attention is of course given to artificial feeding. But it is to the very fine supply of brook waters and the abundance of natural food they contain that I chiefly attribute the growth and condition of the Weston fish, which, for their age, are much finer than those grown in Scotland and the North of England.

"This season my stock of yearlings and two-year-olds is very large.

"The two-year-olds are deservedly popular, and I highly recommend them for stocking lakes and rivers. My yearlings, too, being particularly strong, are also suitable for this purpose.

"*Fario* are recommended for streams and rivers. Rainbow trout thrive splendidly in lakes, reservoirs, and ponds. Under favourable conditions their rate of growth is surprising, and instances are not wanting of yearlings, sent out in January, attaining to 1lb. weight before the end of July. Bold in rising, and full of fighting mettle, the rainbow, as a sporting fish, is unsurpassed.

"To those interested in fish culture I shall be happy to give assistance and advice in laying out and improving rivers, fish ways, hatcheries, ponds, &c."

In addition to *S. fario*, *S. levenensis*, *S. irideus*, &c., Col. Custance can also supply various kinds of coarse fish.

MR. S. HAYNES, CORK.

WE are glad to hear that in consequence of increase of business Mr. S. Haynes, of Cork, has had to move from Sunday's Well Road to larger premises, and his address now is Mardyke, Cork. Mr. S. Haynes has a great reputation among fly dressers as a dyer of materials for making salmon and sea trout flies, &c.

LOBSTER FISHING ON THE EAST COAST, NEAR FELIXSTOWE.

It may perhaps be interesting to some people to know how lobsters are caught on this part of the coast as differing from the most usual way, namely, of taking them in "pots." The method adopted is as follows: The "lobstering gear," as it is called, consists of twelve vertically flat hoops about 2½ft. in diameter, and to each of these is attached a shallow net about 2ft. deep, in a

similar way to which the netting is attached to the frame of an ordinary landing net. Across the iron hoop a string is tied somewhat loosely, and in the centre is attached the bait, which consists generally of small dabs dried in the sun, but whiting or herring, dried in the same manner, is often used as well. The "hoops" are attached to a rope line, having four ends for that purpose, and to the line itself are secured oval or round pieces of cork all the way along at quite short intervals, in the first place, as far as the upper end of the line is concerned, for the purpose of showing the whereabouts on the surface of the water of the "hoops" below; and in the second place, with regard to the other portion under water, sunk by the weight of the iron hoop, to lighten it to some extent whilst it is being drawn up from the bottom, the corks, of course, having an elevating tendency, and considering the weight of the iron with a net attached, which latter naturally causes a good deal of resistance to the water, the submerged corks are of considerable use in this respect. Each "hoop" is dropped into the water from the boat (an ordinary open sea one, which can either be rowed or sailed according to the state of the wind and tide) at regular distances apart, the whole twelve hoops extending for a distance of about half a mile, "just to give them (the lobsters) a chance," as the fishermen say, meaning a chance to smell the bait and get into the hoops. The reason they are placed so far apart is that the bait, having been dried in the way above stated, emits, as may easily be imagined, a very strong aroma, this being for the purpose of attracting the lobsters and crabs (the latter are caught in the same way as the former), as there is no doubt they have the power of scent at very long distances, as in the case of sharks, whose odoriferous powers are enormous, and in this respect it may incidentally be mentioned that it has been brought to the knowledge of the writer of this article that the reason why sharks are now more numerous in the channel than in former years is that the cattle traffic between Newhaven and Dieppe has so much increased of late, and consequently many carcasses of dead cattle are frequently thrown overboard, the smell of which attracts the sharks in the extraordinary way above mentioned. From a naturalist's point of view it would be interesting to consult works of authority on the subject. The "hoops" are left in the water for about forty minutes at a time, but not longer, as lobsters are rather fond of having a feed, and then crawling or swimming away again before being caught, and then in turn pulled up, which process in itself takes some time. The boat is rowed for this purpose with the tide, and has to be carefully steered in order that the fisher may carefully and gently take hold of the part of the line remaining floating above water, and then commence to haul it up with all possible speed, after having given a very sharp and long pull in the first instance, in order to suddenly send the lobster or crab into the bottom of the rather shallow net, the creature being thus taken quite by surprise, which is most material, as while feeding it has been lying on the net while quite flat, with the iron hoop on the top. The reason the line has to be "hauled up" so quickly is that the resistance given by the water keeps the shell fish in the bottom of the net, and the most exciting time is just when the "hoop" leaves the surface of the water and is being lifted into the boat. At this moment, the resistance of the water having ceased, great quickness is required, and the least blundering, such as letting the hoop strike the side of the boat, will probably lose the fish, and with every care and skill a lobster may be lost just at this crucial time, as they possess considerable leaping powers with their tail. It may be asked, "Why is the net so shallow?" and the answer is that if it were of greater depth it would be likely to become entangled in the rocks and with the iron hoop to which it is attached, and thus prevent the catch from arriving safely at the bottom of it, as intended, and as above explained. A whiting or codling is now and again caught in this way, but this seldom happens. The kind of fishing just described can only be entertained in calm weather, and when the tide is slack.

E. MILLIKEN.

ON A FINMARKEN SALMON RIVER.

Not many people make the journey to that region lying between Tromsø and Vadsø, which is known as Finmarken. Those visiting Norway seldom go beyond the North Cape, although some do travel on by mail steamer from Hammerfest to Vadsø, but these on their return generally express the opinion that there is nothing to go for or to see, and that the odours of Vardø and Vadsø scarcely compensate you for the extra sea passage. But those who go in this way do not really see Finmarken, only the outer fringe of it, and that is the least interesting and picturesque part.

They know nothing of the country, of its magnificent salmon rivers, the Tana and Alten, besides several others smaller, but nevertheless good; and it is to one of these latter, between the above mentioned rivers, that this account alludes.

Few beyond those on fishing or other sport bent have penetrated into the interior, and know how beautiful the country is, and what a wealth of flowers exist during the all too brief summer months.

The mountains, as a rule, are not of great height or fantastic shape, having a glaciated surface, but they are beautifully wooded on the lower slopes with the hardy birch, whilst in the upper parts of the valley the pine flourishes.

There is not much bird life, although the field-fare abounds, and hawks are far too numerous, as they do a vast amount of damage both to the fish and also to young birds, and as a result the Government sets a price upon their heads. Their plaintive cry can be heard a long distance off as they circle and circle on the look out for prey. One large one became a perfect nuisance to whichever of our party was fishing up the river, as his favourite hunting ground was on a plateau about 100ft. above the river, and across which runs the track. Whether he was afraid the pedestrian would scare his prey I do not know, but on sighting him he invariably began a series of swoops over his head, descending to a very slight height above him, so that he almost seemed to be intending an attack. My men were delighted when I presented them one day with the body, doubtless in anticipation of the crown reward.

For anyone to thoroughly enjoy the delights of salmon fishing in Finmarken he must possess an abundant supply of two excellent qualities, viz., nerve and patience, the former being indispensable for the boat work which is necessary, while the latter is an invaluable help where mosquitos abound. "To suffer and be still."

Nearly all the casting is done from the Lapp built river boats, which, while admirably adapted for the purpose of ascending and descending these rapid northern rivers, afford to the novice but little firm footing, especially when they are being held up in broken water for a cast, when there is of course a large amount of vibration through the boat; balancing oneself at such times, particularly if the boat be wet, is a matter of difficulty. I have found a stout felt sole the best thing to use, this giving a good grip even on wet slippery rocks. It is, however, a very bad material for wear.

The Lapps themselves use "Komager," which I may explain are a sort of heel-less boot, the sole and sides being made of toughened walrus skin, and the uppers, in some cases continued up as wading stockings, composed of dried reindeer hide. Before use they are filled with dried senna grass, a regular nest being made for the foot, which thus encased is kept perfectly dry, while there is no feeling of weight at all. These are made by the Lapp women and children, and exceedingly well made too. Those on sale at the stores in Tromsø and Hammerfest are for the most part of the wrong material, and consequently unserviceable.

The boats are all built on the river, of pine, well bolted together, varying from 18ft. to 25ft. in length, and 3ft. to 4ft. in breadth, and have very graceful lines. They are propelled by long poles at either end; they draw but little water, and can thus be used even when the river is at its lowest, although then much additional labour is thrown on the men, and the feelings of a passenger sitting in the bottom of the boat, on birch cuttings for a seat, are not of the pleasantest, as the narrow craft rolls and jumps about as she comes in contact with the bottom. It is coming down

stream with plenty of water in the river which is the pleasure.

The Lapps, I mean of course the settled ones who live quietly on their farms, not the nomadic tribes which wander with the reindeer over the high fjeld, are capital fellows. Living all their lives on the river, they become first rate boatmen, hardy and strong, apparently knowing every rock in the stream from source to sea.

It is a curious fact that none of them can swim, nor did they evince any desire to learn when we offered to teach them. Every day they carry their lives in their hands, and yet are neglectful of this simple safeguard. Still, such good watermen are they that an accident is practically unknown. Once last year my boat, indeed, capsized, but then the men were trying to show off coming down the worst foss on the river—that shown in plate I. Not content with doing that when in flood, but must needs choose the middle of the stream, with the result that a big wave caught them. The next thing I saw was the upturned boat with my men, Rasmus and Hansen, clinging to the keel, and all the baggage being carried away downstream. Luckily no damage was done, but I was very glad I had chosen to walk round by land instead of going in the boat, as I was pressed to do.

Owing to the great amount of bright sunshine which often prevails during the day, the best plan

Moreover, we noticed that the majority of the salmon caught of about 17lb. to 20lb. were hen fish, while those of 10lb. to 15lb. were cocks, which seems to be accounted for by the hen fish remaining in the sea, and not running up the river as grilse, thus putting on weight to a much greater amount than those spending the same time in the fresh water, with its consequent loss of condition and weight. I should very much like to know the actual cause of these proceedings on the part of the hen grilse.

The Lapp men make useful gillies, gaffing a fish fairly well, although they are at times prone to excitement, and, consequently, are erratic. Nevertheless, they do their best, and take great interest in the use of the fly as a lure for salmon, having been converted from the opinion that nothing but a "sluk" or minnow would do. There is generally a healthy rivalry between the men in the different boats as to the respective catches, and this is a good sign.

Nothing but the stoutest and best tackle should be used, as the fish average big, and must often be followed down from pool to pool. The sizes of flies used varies from the largest Tay standard at the end of June down to No. 4 late in July, and these latter should, I think, be dressed on double hooks. A bright body and red wing would be what I should call a favourite combination for dressing.

SHOOTING A FOSS.

is to rest during that time and fish through the night hours and early morning. One is thus enabled to have the sun off the water, and, moreover, to be free, to a certain extent, from the attentions of the mosquitos, which seem to dislike the slight chill which comes on as the sun gets near the horizon.

This night fishing is possible for some weeks after arrival; but towards the end of July, when the sun once more dips from sight, a nasty, cold, white fog rises over the water, rendering any effort useless while it lasts, which is until the sunrise. When these mists begin, it is as well to abandon night work.

It is a very strange fact, and one that up to the present I have not heard satisfactorily explained, that hen grilse do not run up the rivers in these Arctic parts. Why this should be so I cannot understand, unless it is that the coldness of the water may affect them in some way or other. I did not believe it when told for the first time by a Norwegian living on the river, the postmaster to wit, and was decidedly sceptical. He, however, assured me, from long personal investigation, that it was true, saying, if you catch a thousand grilse in this river, and cut them open, you will not find a hen fish amongst the lot. There happened to be but a small run of them that year, but those we tested were all cock fish.

Of many good days during the past season, one stands out as unique.

I was the last home, having been far up the river, and found the other two waiting for me on the edge of the home pool. In reply to my query as to the day's sport, E. replied, "Oh! two little ones;" and then, catching sight of something glittering in the boat, said, "Hallo! You've got a nice fish there." "Yes," I said; "28lb. to an ounce." So we walked up to the hut.

What was my surprise to see lying outside two fine clean fish the identical size of my own, and try as we would we could not do otherwise than enter them as each weighing exactly 28lb. These three, together with two of 18lb. and 17lb. respectively, captured by the third rod, made as handsome a basket as one could wish to see.

There is but little animal life to be seen in the valley, but E. had rather a curious experience on two occasions. While fishing a favourite piece of water, which had been called "The Long Run," hearing a rustling in the growth on the bank, he looked up, and was surprised to see a hare bound out, run along the bank, and finally disappear in the bushes. "Strange," he said to himself, "I've never seen a hare up here before," and, lo! a second emerged, ran along for all he was worth, and vanished in the same way. A third followed

close upon his heels, and last of all came a wily old fox in hot pursuit. One would like to know how it all ended.

This was the only occasion that any of us sighted ground game, the reason being that they kept to the high field during the summer, and no doubt the hunt above described had originated there.

On another day the same angler, who seemed destined to get all the exciting incidents, was disturbed by the bellowing of a bull in the vicinity of the pool he was fishing. Presently he was answered by one on the opposite bank. They stood giving vent to loud utterances of defiance for some time, and then one entered the river, and coolly swam across the cream of the pool, after which he made vigorous but futile efforts to scale the steep and yielding bank on the other side. E., disgusted at having his water thus rudely disturbed, made down stream in order to try a lower pool, and, looking back, saw the one above sliding down the declivity on his haunches to meet the enemy, while his antagonist awaited the assault from below. From marks in the locality, seen later on, there must have been trouble.

Living is somewhat rough up in this remote district, the accommodation being but scanty, consisting of roughly constructed log huts, and those not always watertight. Still, we were very snug in our headquarters, with our men living in an adjoining shanty always on hand willing to help in cooking or any other way. They took turn and turn about in going to their own homes from Saturday night till Monday morning.

All provisions must either be taken out from England, which is the best plan, in spite of the customs, or purchased in Thondjem or Tromsø, as practically nothing beyond coffee and sugar can be had at the little store kept by the postmaster, near the church, which is situated near the mouth of the river.

It is surprising how high the duty is on dried fruits and marmalade imported into Norway. Last year 25 kroner, or about 27s. 6d., went in duty on 35lb. of marmalade, which is simply monstrous. Moreover, you cannot well do without it, as it is impossible to get any green food.

Undoubtedly, the great drawback to complete pleasure whilst in Finmarken is the profusion of numerous varieties of insect life. Foremost of all, especially in point of numbers, is, of course, the mosquito, which thrives abundantly; and it detracts a great deal from the delights of fishing to have these pests continually feeding on you, and this is what happens unless one wears a veil. This obscures the vision considerably, and consequently I hardly ever use one, using, instead, various applications to the skin, which help to keep the creatures off, but which must be applied frequently to be of any avail. Stockholm tar and castor oil mixed, and oil of wintergreen are preparations which have proved fairly successful.

Last year was a good mosquito year, that is, from an angler's point of view, there being fewer than usual. As a set off against this, however, there were an unusual number of "margarer" (this is spelt phonetically), which is a small biting fly, which never fails to draw blood. I have seen the Lappmen's faces badly marked by them, one of my henchmen having an eye almost closed for two days. Mosquitos, on the other hand, do not seem to trouble them so much, preferring a Britisher when they can get the chance. Many other species of insects are to be had without the asking, but it is just as well not to dwell on these little worries.

Better is it, during these long winter evenings, to light your pipe before a good fire, and fight, in imagination, the battle with the ideal 50-pounder, which you always hope will come next season—but which never comes. S. O. M.

JOHN W. ALEXANDER, the portrait painter, whose best work is illustrated in the March *Scribner's*, is the son-in-law of James W. Alexander, the vice-president of the Equitable, whose portrait is one of the artist's best achievements. Two of Mr. Alexander's pictures have been purchased by the French government, and are in the Luxembourg; another has recently been bought by Vienna; still another is owned in St. Petersburg. No American portrait painter except Sargent has received more recognition abroad than Mr. Alexander.

PISCATORIAL SOCIETY.

"THE best smoker we have had for a very long time," was the verdict unanimously pronounced upon the concert given on Monday last in the Piscatorial Salon, and Mr. Robt. C. Blundell, who was responsible for the whole affair, must be congratulated upon the unqualified success which attended his untiring efforts to provide a capital entertainment for the members and friends who supported him on the occasion in question. There was a large company present, a list of capable and first class artists, and a programme which left nothing to be desired in point of variety. The comic element was supplied by Messrs. Wallis Arthur (a host in himself) and Thorpe, and it goes without saying that the lovers of amusing ditties had everything they could wish for. Sentimental songs were rendered by Messrs. Cockburn and Herbert Linwood, than whom a better choice could hardly have been made, whilst as instrumentalists one would have had to go very far away to find better executants on the piano, zither, and cornet than Mr. Sinclair Mantel, Herr C. Schultz, and Alex. Edwards. To add to the enjoyment of the evening, Mr. Ridgway volunteered as a reciter in a piece entitled "The Last Fisherman," and Mr. Blackmore appeared in the double rôle of reciter and comic singer, in each of which characters he showed conspicuous ability. Encores were of frequent occurrence, and the applause genuine and spontaneous. In fact, the audience expressed their views at the close of the concert in the words with which I have opened this brief report. Certain it was that the last smoker of the Piscatorial Society has never been previously excelled, if, indeed, equalled, as far as merit goes, and the exceptionally hearty vote of thanks which went forth to the chairman (Mr. Robt. C. Blundell) testified, if any such demonstration were necessary, to the high appreciation on the part of the assembly of the admirable musical treat which had been so thoughtfully initiated and so ably carried out.

Mr. C. H. O'Dowd and Mr. A. R. Matthews exhibited some fine roach from the Thames and society's new water at Uxbridge, which were much admired by members and visitors during the evening. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE annual general meeting of the members of the society was held at the Cannon Street Hotel on Wednesday, the 22nd February, at 7.30 p.m. Present: Mr. Edward McFee in the chair, and between ninety and 100 members.

The minutes of the last annual meeting having been read and adopted, the hon. secretary read the report of the committee during the past year, and, after some general remarks, invited criticism on the society's policy, evoking flattering comment on the economical management shown in the two items of expenditure, clerical assistance and postage.

Mr. C. W. Glassington suggested that a boat tariff be put up at some of the society's headquarters, so that all members should understand the fair price to be paid for hiring boats.

Replying to Mr. Ricketts, the hon. secretary said that the chief loss in connection with the dinner last year was owing to his having had to guarantee a number of dinner tickets, and it was through the small attendance that the guarantee had to be paid for. He expected to have at least 150 members at this year's annual dinner.

Mr. Grant threw out a suggestion as to one evening in the year being reserved for the ladies, and the chairman said, that although he could not promise, the matter had been, and would be, considered by the committee.

The Chairman then moved the adoption of the committee's report and statement of accounts, which was carried unanimously.

A suggestion was made that the society should start a small library. Mr. Minchin deprecated adding to the burdens the hon. secretary was already called upon to bear on the society's behalf, but thought that certain members might support the idea who took an interest in the more scientific side of sea fishing. Perhaps if the Cannon-street Hotel continued to be their headquarters the offer of a cupboard might be forthcoming where the books could be kept, and some member of the committee might be found who would act as librarian. He thought, however, that any precipitate purchase of scientifically-written piscatorial works would be indiscreet.

Mr. Parker heartily supported the suggestion, volunteering to donate the first volume, and naming Mr. F. W. Norman as a suitable librarian.

The Hon. Secretary said that the chief obstacle to the creation of a library was that the society had at present no fixed habitation, and that if Mr. Minchin had an eye on his office he could assure him that it was already too full. He considered, however, that casts of important captures of fish, and specimens of notable or rare tackle, could be hung on the walls of their meeting-room when the society's *habitat* became less volatile, and that then a library might also follow. Dearth of cash was not the impediment to a library, as £397 odd stood to the society's credit in the bank, and it would doubtless be over £400 by now if only subscribers would kindly remember that the annual subscription was 10s. 6d., and not 5s. 6d.

The Chairman argued well for the prospects of a fixed habitation from the financial progress shown by the balance of 1898 compared with 1897.

The Hon. Secretary announced that Mr. C. O. Minchin would lecture on crabs, lobsters and shrimps that day fortnight, and the chairman hoped that as it would be interesting to boys, members would bring their sons.

The Hon. Secretary intimated that the Fishing Exhibition at the Aquarium would open on the 8th March, and close April 5 next, and that the authorities would supply members of the B.S.A.S. with tickets at four shillings a

dozen. Applicants for tickets should send in their stamped addressed envelopes at an early date in anticipation of a rush.

The chairman then declared the president and vice-presidents re-elected; and the new committee elected to be Messrs. A. E. Litchfield, Edward McFee, C. O. Minchin, G. Read Clarke, F. W. Norman, A. W. Parker, H. W. Lane, Edwin Linfoot, Croft Handley, E. H. Bramley, J. N. Hearn, J. W. Zaehnsdorf, C. Preston Gardner, and F. Simmons.

The hon. treasurer, the hon. solicitor, and the hon. secretary were all re-elected.

It was moved, seconded, and carried that the retiring auditors, Mr. Harry Barker, F.C.A., and Mr. Alexander Wright, A.S.A.A., be re-elected.

The Hon. Secretary, in acknowledging the honour of re-election, regretted his inability to pledge himself to retain the office, not that he intended to abandon the society, but it was a growing concern, and it might become necessary for the executive to take other steps for the dispatch of the secretarial work.

A vote of thanks to the outgoing committee was moved by the hon. secretary, seconded by Mr. Hill, carried unanimously, and acknowledged on behalf of the committee by Mr. Clarke.

The Chairman announced Wednesday, March 1 next, at 6.30 p.m., as the date of the ensuing committee meeting.

The proceedings then terminated with a vote of thanks to the chairman. CHAS. S. PATTERSON, Hon. Sec.

GRESHAM ANGLING SOCIETY.

AT our ordinary meeting on Feb. 21 Mr. Marshall occupied the chair. A new member was elected, and a gentleman proposed for membership. Mr. J. Jeffery has kindly consented to read a paper before the society in June, and his offer has been accepted. Mr. Hicks reported taking some large roach at Kelvedon. Mr. Zerfass, at Kelvedon, nine roach, largest 14lb. Mr. Gray, roach from Bury St. Edmunds, Messrs. Marshall and Allen reported pike and perch from the Ivel. Another gentleman was proposed for membership, making two during the evening. The Bohemian concert held last Tuesday was very successful, and one of the best events of the kind the society have ever had. The arrangements were admirably carried out by Mr. F. A. Gray. The usual toasts and a vote of thanks to the chair concluded the proceedings. ALEX. WRIGHT.

DARLINGTON ANGLERS' CLUB.

THE twelfth annual dinner of the above club was held recently at the King's Head Hotel, Darlington. The president (Mr. H. Gawan Taylor) occupied the chair, and Mr. H. Robinson the vice-chair. After a capital repast the chairman gave "The Queen." This was loyally honoured. Mr. G. Clarke proposed "The Army and Navy." Mr. R. Thornton responded. "Success to Darlington Anglers' Association" was given by the president, who said, amid applause, that the club, he was glad to say, had become an important one. As regarded standing well with the landowners of the district, he thought everything was what could be desired. As regarded the sport, well, they were trying to get the fishing in the district to what it should be. After mentioning what the club had done to make the Tees a better fishing ground, the speaker remarked that they were glad to see that the Tees Fishery Board had done a great deal in this direction by making the fishing commence a month later than it used to do, and also, to his mind, by the very salutary form of increasing the amount of annual subscription for trout fishers. If the club, continued the president, continued its present course of management, he thought they would present to the district the spectacle of a club carried on in sportsmanlike way, with rigid observance of rules, and continue to be as they were at present, on good terms with the riparian owners, and said that the satisfactory statement of accounts rendered it unnecessary for him to say much more than that the balance at the bank had increased, and now amounted to £24 5s. 9d., and that all the income, less necessary expenses, such as printing &c., went entirely in renting water for fishing. Their membership continued to keep up to the number they considered sufficient. They had elected more than made up the number of those who had resigned. He considered the club, from the number of miles of fishing rented, was one of the cheapest in point of subscription of any he knew of. Personally his ambition was to see it become a credit to any gentleman to belong to. (Hear, hear.) It had been usual for many years now, in responding to the toast, for him to say a few words respecting the fishing of the past season, which had proved somewhat better in March, April, and May, salmon being caught weighing 9lb., 18lb., 12lb., 14lb., and 20lb., most of them about Blackwell and Neasham. One of 23lb. was caught in the net below Dinsdale. A good many were caught in the upper reaches in May, thus showing spring fishing was improving. Later on the drought proved disastrous, and the back-end was spoilt by floods. Trout fishing was poor owing to the same cause, and although the fishery board put into the fees and tributaries 50,000 trout fry they saw but little improvement. He did not believe they could until they changed their ways and put in yearlings instead of fry. Mr. Hutchinson also responded. Mr. J. H. McDermid proposed "The Mayor and Corporation." The Mayor replied. Councillor Marshall also responded, saying that he thought the members of the Waterworks Committee would listen attentively to any fair suggestion on the part of the association. Songs were rendered during the evening by Messrs. P. Hutchinson, G. Clarke, W. G. Chilton, J. H. McDermid, W. T. McDermid, and J. Coverdale.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

20 min. for Chelsea.	55 min. for Kew.
Add 40 " Putney.	75 " Richmond.
45 " Hammersmith.	80 " Twickenham.
50 " Barnes.	85 " Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Feb. 25	2.9	2.25
Sunday, " 26	2.37	2.52
Monday, " 27	3.7	3.21
Tuesday, " 28	3.36	3.51
Wednesday, March 1	4.5	4.21
Thursday, " 2	4.37	4.53
Friday, " 3	5.9	5.25

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, Feb. 25	2.49	3.3
Sunday, " 26	3.17	3.32
Monday, " 27	3.47	4.1

These times show high water at Houghton Bridge, Amberley Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—I hope the appeal which is now before the anglers of the Thames towards the annual dinner to the river and lock keepers will meet with a most liberal response. It is now some years since this entertainment was first instituted, and it was always a great pleasure to me to meet my fellow workers on that happy occasion. It was intended to benefit the men, and to make it a strictly riverside gathering at one of the hotels where the worthy host was a member of the society; and I cannot help thinking the class of dinner there provided was more suited to the men, who are the real guests, and far more enjoyable to them. Besides, it was more of an "At Home" dinner, with a menu of roast beef and boiled legs of mutton, than the *table d'hôte* style of a London banquet. During my official period it was only once brought to London, and included an afternoon performance at the Royal Aquarium, for which the then manager, Major Hobson, gave me free admission to the building and reserved seats, and a memorable day it was, with a fearfully heavy fall of snow. The dinner, provided by the prince of caterers, Mr. T. J. Hamp, at the Holborn Restaurant, was of a specially arranged character, similar to the riverside houses, and gave great satisfaction to the men. The return home will be fresh in the recollection of those still living who were present on that occasion, not only in getting to Waterloo station, but in the uncertainty of the trains. I am still wedded to the riverside class of entertainment, and a support to those hostesses where the proprietor is a subscriber to the society; and the remark I heard last year from some of the men, "give me a dinner nearer home, such as we have had at the Castle, East Molesley, and the Mitre at Hampton Court," made me feel then it would be more enjoyable and close to their home, which is the river itself. I am not referring to this in any spirit of dictation, but simply an expression of my own opinion, and will close these remarks by urging upon one and all of the anglers to give the appeal an earnest and hearty support, and no one will rejoice more than myself at a brilliant and successful result.—B.

—(Datchet).—John Keene writes the water has got into good condition again, and the fish are feeding fairly well. One day, with Mr. Phipps and Mr. K. Cannon, who creeled 103 roach, the largest 1lb. 6oz.; and another day, in a few hours, with Mr. O'Dowd, two dozen of roach, the largest 1lb.—B.

—(Datchet).—The river is getting into first rate order, and by the time this is in print it will be good enough for anything. I was out this afternoon, and caught six dozen roach and perch.—G. LUMSDEN.

—(Eton).—The river is now clearing, and will be in first class order in the course of the next two or three days. Bank anglers have been taking a fair number of barbel and roach. A few jack have been creeled. The best fish I have heard of was taken by Mr. Morrer, of Windsor, on Feb. 21, and weighed just over 6½lb. I was out on Feb. 20 with the genial and enthusiastic chairman of the Windsor and Eton Preservation Association (Mr. A. Brown), and with the assistance of James Burce succeeded in netting several jack from a piece of water where they had been left after the flood had subsided. They were all returned to the river in first class condition, swimming off in a style that intimated their thorough appreciation of their new quarters.—CECIL HOWLETT.

—(Henley).—Feb. 23.—The river is getting into splendid condition, although a strong stream is still running at a good level. Several perch and jack up to 4lb. have been taken, but the best bags have been made among the roach, ledgering with job worms accounting for most of these fish. As the stream slackens, sport should improve, and with a continuance of the present weather there should be a good finish to what has been a very bad season.—STANLEY MEAD.

—(Hampton Court).—William Milbourne reports the water is now falling fast, and by the end of the week, if there is no further disturbance, it will be in good order. The bank anglers have been catching a few roach and

perch. Owing to the high water it has brought a good many dace to Hampton Court, which are biting well.—B.

—(Kingston).—The only fisherman reported to have been out is John Johnson, who has been getting some bream and roach during the week. Mr. F. H. Amplett, the active secretary of the Kingston Piscatorial Society, has succeeded in adding another fine roach to his previous captures. It was taken at Thames Ditton, and weighed 1lb. 15½oz., for which he has my hearty congratulation.—B.

—(Lechlade, &c.).—The heavy rains last week put angling out of the question in this district, the floods being out. They are, however, now gone down considerably, and the water has fined nicely. Some good sport should be had with jack during the remainder of the season, which closes on March 15. Several trout have been caught during the winter and returned, and from their number at the mouth of the Leach and Coln during the spawning time there should be some good ones taken this season, as the water is bound to be in better condition far than last season. Hear of some splendid sport in the Estcourt Lakes by Mr. Wm. Warn and friends.—RAMBLER.

—(Shepperton).—I have just received a few lines from George Rosewell, who, I am pleased to find, has about recovered from his long and painful illness, and is fit again to be on the warpath. He also adds: "The water is falling and fining down, and by the end of the week, without there is a lot more rain, there will be a good chance of sport, although there will be a strong stream, but plenty of places to catch fish."—B.

—(Sunbury).—In this district, like other places, nothing appears to have been done. Messrs. T. and A. Stroud report they have not had a customer all the week.—B.

—(Twickenham).—The report as to the annihilation of some thousands of small fry in the meadows which, though somewhat exaggerated, is not to be attributed to the want of watchfulness on the part of the T.A.P.S., or its excellent head river-keeper. The river has always been subject to this on the decadence of a flood, and would require constant attention to prevent the loss of the youngsters which are left in the grass to perish, and it cannot be done by one keeper. It is one of those occasions when the fishermen would be of service in time to remove them before their little life has passed away, and I feel certain any of the fishermen if he saw the small fry thus left would willingly lend a helping hand in turning them into their native stream, and this is the opinion of my friend, Mr. Spong, the practical host of the Two Sawyers. Head river-keeper W. Douglas, who I met at Twickenham on Tuesday last, is most anxious about them, but it is impossible for him to be in more than one place at the same time, and he has received a letter from Mr. Higgins in reference to the newspaper reports, but his duties require his presence on other portions of the river, and he has quite enough to do without assistance in the work he does so well, and I feel sure during the present flood he has faithfully done his duty, and in consequence is suffering from a severe cold. I called with him on Mr. F. J. Ogden Smith, and in course of my inquiry as to the sport of the bank anglers, he told me that Mr. Simmonds during the past week had made a total of twenty-one dozen of roach and dace, two bream and three perch. And as to punt fishing, he was out with a friend on 19th inst., and creeled 12lb of roach, a couple of bream, and two perch, the latter weighing respectively 1½lb. and 1lb., and found the river very heavy. The Bermondsey Brothers had a competition on the same day, and, considering the state of the water, were not altogether unsuccessful. Mr. John Spong was engaged to supply five punts, which made a total of twenty silver bream and a fair quantity of roach and dace, and the punt plotted by his son Robert secured the first prize. John Spong, in two days, with one of his clients, had secured a good take of some fine roach in a portion of the Crane. I found the water on Tuesday in very good condition, and quite ready for the anglers, and it will be their own fault if they do not embrace the earliest opportunity of getting amongst the finny tribe. A line from Mr. Ogden Smith to inform me Mr. Gardner, one of his customers, on Tuesday afternoon caught a nice pike of 9½lb. in the deeps opposite Pope's Villa on fine p-r-och tackle.—B.

—(Anchorage District).—The Market Rasen Trout Club have just run off their rearing ponds at Willingham, and found an excellent crop of fish. The top pond contained between 2000 and 3000 yearlings, which ran well up to 8in. or 9in., which speaks volumes for the natural feeding. They have had no artificial food whatever. In this pond were also found ten or twelve large trout of about 2lb. each which had been left in from last season. This proves that trout are not such cannibals after all when there is plenty of other food. A fine otter was shot about a fortnight ago near the ponds. It is a generation since one was seen before. Trout licences are now in the hands of the usual agents for sale. The season nominally begins on March 1, but that is too soon. Rainbow trout are being spawned at the Manor Fishery, Caistor, this week. Coarse fishing is very quiet, but the waters are in capital trim. The Anchole Commissioners purpose turning out 500 to 1000 rudd in a few days' time.—THOMAS FORD (Caistor).

—(Arun (Pulborough)).—Only a few anglers visited here on the 19th, who found the river very fall and thick owing to recent floods. Mr. Bent, Silver Trout, took 7lb. roach, three over 1lb. each; Mr. Sanfield, same club, 4lb. roach; and Mr. Wigley, Bermondsey Brothers, 4lb. bream. The water from the lower parts is fast disappearing (Tuesday night), and, given fine weather, the river should be in good order by the 26th.—W. G. HOLLMAN.

—(Bottisham Locks (Waterbeach)).—Plenty of pike had up to 3½lb. and 4lb. each. Ten pike to one rod a day, spinning with sprat. The banks are very clean. Feb. 22 seems like April. Roach fishing quiet. We have a few baited swins. Ask lock keeper for them. Live baits with him; unless applied for, scarce.—J. O. GEORGE.

Dart (Totnes and District).—Fishing in the Dart commences on Wednesday next, and if the anticipations of the keepers are realised the coming season should prove a successful one, it being reported that fish are very plentiful. The question of fishing at Totnes Weir has again been discussed, and it is proposed to put the rule prohibiting any bait except artificial flies within 100yds. of the weir out of operation for a month. Nursery Pool is still reserved for fly fishing only.—DEVONIAN.

Derwent (Malton, Yorks).—We have had any amount of flood water down with the recent heavy rainfall, but the water is now in splendid order for fishing, and anglers should have good sport with grayling, roach, and jack.—H.

Devonshire Streams.—The streams will soon get into condition now that the rains have ceased, and there will be plenty of water for the streams opening on March 1st. Owing to the great volume of water, very little has been done on the rivers already open, but salmon have had exceptional opportunities for ascending to the higher reaches. From most of the streams, however, the reports show that fish are numerous, so that a good season may be looked forward to.—DEVONIAN.

East and West Cleddau (Pembrokeshire).—The rivers have been more or less in a state of flood for the past two or three weeks. A few salmon have been taken at Treffgarne.—H.

Eden (Carlisle).—Considering he very bad start the nets have had all the way from the month of the river to Armathwaite, salmon anglers have not much reason to grumble at the sport they have had since the opening day, Feb. 16, though, of course, it is a long way short of last year. The river was not in order till the 17th, when Mr. Liddell, of Warwick Hall, opened the season with a nice fish of 17lb. On the 18th, Lord Newtown Butler had one, 8lb., in the Crown Hotel waters; Mr. W. Smith, one, 2½lb., at Low House; T. Robinson, one, 18lb., at Syke Foot; and Simon Bell, two, 15lb. each, in the Armathwaite Hall water. On Monday, the 20th, Lord Newtown Butler killed one, 7lb.; and Mr. F. Sandeman one, 16lb., in the Low House water. Fish are showing very little in the estuary. It is the same in the Tweed and other Scotch rivers. If the supply does not shortly improve some drastic measures will have to be taken to check the gradual falling off year after year.—SILVER GREY.

Esk (Whitby).—This river at present is in fine condition for angling, but subsequent upon the opening of the salmon season on Feb. 2nd practically nothing has been done in the direction of angling. On Friday last the Fishery Board turned 3000 yearling trout into the river at Gathland Sleights, Egton, Grosmont, Lealholm, Danby, and Casleton. They arrived from the Howieton hatchery, Stirling, in the pink of condition, and were deposited in the river without the slightest loss. The prospects for the coming angling season are exceedingly favourable.—J. JACKSON.

Exe and Canal (Exeter).—Several good baskets of trout have been made, among them being Mr. G. G. Snell a dozen, some up to 1lb. each; Mr. A. J. Roberts, five and a half brace; Mr. Theeuwissen, four brace; and Mr. Roberts has been among the pike again, scoring in two outings seven fish, weights as follows: 17lb., 8lb., 8lb., 7½lb., 7lb., 5lb., and 4lb. February Red has proved a taking fly during last day or two. Water now in pink of condition after floods.—RED PALMER.

Fen District (South Lincs. and Cambs.).—The floods have been clearing away nicely during the last few days, but reports of the diegats at the week-end are very meagre. The pursuit of pike on the Forty-foot has been resumed, but it seems likely that the season is getting over for this sport. Roach fishing is still reported from the Cambridgeshire side. About Surfleet there have been some captures. The Wisbech authorities are about dredging the river, and it is to be hoped that the work will be completed before the commencement of next season.—LIMPET.

Isle District (North Notts).—There is little or no information to hand as to the sport obtainable in this district. Water in the streams is mostly running high, and work has been limited largely to the canal. About Clayworth some roach have been taken. Some anglers have gone to the Foss Dyke, between Torksey and Lincoln. A few sizeable roach have been obtained from the former end, and also about Saxilby. Pike fishing has been possible in Brayford Pool, and fish up to 5lb. have been caught.—L.

Lake Corron (Bodorgan, Anglesey).—Fair sport has been obtained fly fishing considering the very changeable weather. Mr. Curtler, Llandudno, had six one afternoon, six another, and ten another day, all good sized and very fair conditioned fish. Mr. Edwards, Holyhead, took nine one afternoon; and Mr. Dew, Bangor, six. On Saturday a thick fog set in, and the writer and other anglers had few fish. To-day (Wednesday) frost has set in, and the prospects are poor.—W. H.

Lake Vyrnwy.—Owing to the exceptionally mild winter we have had, the trout in this lake and streams have fared well, and are now in splendid condition. In the hatchery there are now 8,000 fry, and nearly 2000 two-year-olds have just been turned into the lake from the breeding ponds. The weather is bright and mild, and the fish are rising briskly to the February Red, which is now on the water. From the register it appears that last year's take was considerably better than that of previous years. The records are as follows: 1895, 1773 fish, weighing 1131lb.; 1896, 2093 fish, weighing 1312lb.; 1897, 2767 fish, weighing 1916lb.; 1898, 3343 fish, weighing 2397lb. It is a healthy sign that, in addition to the increase in the number of fish year by year, the average weight of the fish is increasing also. The season opens on March 1, and there is every indication of good sport. The

lake is ten miles from Llanfyllin Station, and is within easy access of all parts of the country.—LONG DRIFT.

Langford Fisher (Maldon, Essex).—There has been some good sport with roach during the past week from the Langford waters. Three London anglers have fished the preserved waters and have been very successful, several roach over 1lb have been captured. Mr. Ben Bevers and T. Springett exhibited some nice roach taken on the 18th. The presentation of the cup won by S. Vince took place on Saturday evening, and a smoking concert followed. Mr. H. Mills sang some excellent songs, and Messrs. Hunt, sen., Hunt, jun., B. Bevers, Miller, S. Vince, and others contributed to the evening's harmony. Several of the subscribers were fishing the Langford waters on the 19th, and a good number of fish were taken altogether. Messrs. Millers, Dugate, Briggs, Horner, Hawkins, jun., were most successful.—F. KEENE.

Lark (Lackford and Flempton).—The river has been in full flood again during the past fortnight, but today (Tuesday) is in grand order. The stress of water has cleared the river bed from weeds, &c. A few anglers have been out, meeting with very fair sport. The roach have been feeding well during the past week. Mr. W. G. King was again successful on Thursday, the 16th, securing seven roach weighing 4½lb., best fish 1½lb. I was out on the 17th, and killed one chub 2½lb., and some roach, best fish 1lb. 2oz. Gentles and brandings proved the best bait.—A. E. KEMP.

Lea.—The water is now in good all-round condition, and anglers should meet with sport among roach, pike, and perch. The Stort, which has been very full, is also falling down, and should be right by Saturday. Since the Lea assumed a fishable colour anglers have been able to get some nice lots of roach, the best takes being reported from the Hoddesdon district. Here, in the Dobb's Weir Fishery, two 10lb. baskets are recorded, and pike up to 6lb. 12oz. have also been caught. A trout of between 5lb. and 6lb. has been landed there and returned, being out of season. At Enfield Lock some nice perch have been taken, and roach up to 1lb. 3oz. are notified from the Sewardstone water. At Ware the river is in prime order for the operations of the roach angler. Some nice roach have been basketed in the Burnt Mill and Sawbridge-worth reaches of the Stort, but owing to the thick water sport has been far from general. At the time of writing prospects are promising on both rivers. For perch minnows should kill best.—ISAAC WALTON.

Lugg and Arrow (Leominster).—These streams have both been in flood and out over the fields for miles, and the district has been more like a lake up to Friday last; but the weather turning fine, they quickly lowered and cleared, and are now getting into order for fishing once again. There has been no angling for weeks, and grayling have practically gone off, and anglers are now preparing for the opening of the trout season on March 2, and should the weather hold fine as at present, there is every prospect of some good sport being had in both streams. The Pinsley is gone down and cleared.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers sink but slowly, their springs being now fully replenished. If present fine weather holds, fishing will be possible for trout on the opening day, March 2, but waters will be on the big side. Blue Dnn, Red Palmer, February Red, and Cowdung Fly should be the best flies to start with.—R. T. WILLIAMS.

Nene (Peterborough).—Precariousness is the term that may very well be still applied to the condition of things in connection with the vocation of the angler in this district, for the river is yet too full of water for general participation in sport. Those who have been out have had fair sport with the roach, and Mr. A. Wilson, Peterborough, fishing near the batyard, had the good luck to capture a bream which scaled close upon 5lb.; this is the second best specimen taken this season. To-day (Wednesday) the height of the water at Peterborough Bridge registers close upon 12ft., but it has been up to 14ft. within the past fortnight, although it fell about a foot in one day.—E. A. S.

Otter (Budleigh Salterton).—The river is now (Feb. 22) in perfect order for the fly, but trout are not taking well. This is rather strange, as at this time of year, under theoretically worse conditions, the Otter trout often take fly greedily. One rod to-day (Wednesday), at Tipton, took two brace between 1 and 2 p.m. A few Duns came on the water at that time. For flies, February Red and Blue Upright are the favorites.—HERON.

Ouse (Great Paxton, St. Neot's).—The jack fishermen are missing a treat, as the fish are well on the feed, and some good baskets are being made daily. The water is in fine condition.—W. DUCKER.

Ouse (Holywell Ferry).—By TELEGRAPH.—Water in really grand condition; jack feeding well.—SCARD.

Ouse (St. Ives, Hunts).—River rising down nicely; by Saturday ought to be in perfect trim for all kinds of fishing. We do not weigh any pike after the last day of February, so members please note. We thereby give the fish fifteen days' grace at a time they require it, closing up a week to-day. A fine night to-night, and looks like a continuation of fine weather, which ought to give a good finish to the season 1898-9.—E. COLLINSON (Feb. 21).

Ouse (St. Neot's).—Jack appear to be hungry, for although the water of late has been very cloudy, the few anglers who have been out have had fair sport, though I have heard of nothing over 6lb. since November last. The water is now clearing very nicely, and will no doubt be in good condition by Friday or Saturday.—WM. NASH.

Plymouth.—The rivers are running down more to their normal state, and I have good reports from my correspondents in all districts. It is true that at some places pools and runs have been altered, still, I do not expect we shall find very much difference. I hear there are a lot of peal in the Meavy, but I expect those are back

fish; of course they cannot go further up the river than Burrator now on account of the dam. The lake above, which is over 60ft. deep in some places, will eventually afford some good sport. I can always tell when the trout sea-on is about to commence by the amount of rods we get to repair and to touch up. All our fishermen are eagerly looking forward to March 1.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymyneon).—All these streams are now in very good condition for angling, and with the weather more like June than February it is not surprising to find this neighbourhood crowded with anglers, principally from Lancashire, who have enjoyed splendid sport with perch, roach, and pike. The last named fish are now getting quite out of condition, and if we could get them out of our rivers, there would be more chance for the game fish to survive.—VYRNWY.

Sussex Rivers and Chichester Canal.—Fine weather has favoured us during the past week. The tidal rivers have righted themselves, and are now in excellent order for pike fishing. The Ouse is at present giving very poor sport, but the Cuckmere has favoured bream anglers—bags of 8lb., 9lb., and 11lb. have been taken by members of the Brighton Anglers' Association. Live baiting has been successful in obtaining small pike. The Rother is now in order. A day on Tuesday by three anglers resulted in a nice pike of 7lb., a brace of 4lb. fish, and a brace of perch weighing together 3½lb. A few small pike have been taken from the upper waters of the Adur, but nothing exceeding 3½lb. Chichester Canal is in good order, and pike seem as plentiful as ever. A pot-hunter with three hand-lines or trimmers and one rod recently secured four fish in a few hours with live gorse, the heaviest weighed but 3lb. It is quite time this poaching should be stopped, or the water will soon be decimated.—GEORGE F. SALTER.

Teifi (Lampeter, Cardiganshire).—The river has been so flooded during the past few weeks that only one salmon has been taken, but there is every prospect so far of our having a very good fishing season for salmon and trout.—H.

Teme (Ludlow).—The Teme in this part has been running very high and muddy for some weeks, and quite out of order for fishing. It has now gone down, and there has been a welcome change in the weather, and since Saturday we have had no rain, and the river is beginning to get into good order again, and is clearing quickly, and by Saturday should be in order for fishing again. At present it will suit worm, but there will be little fishing done before trout come in on March 2, as grayling have been off sporting for some time, and only roach and dace have been landed. A few of these may be taken this week with the worm. When trout come in it is expected the fish will not be in the condition they were this time last year, as they have had a rough time with the floods and snow-broth, and they will not have had time to get into condition; but there is every prospect of some good sport being had in this part, and a successful season is looked forward to. The Ony, Corve, Clun, and Ledwyche are gone down and cleared, and are getting in order.—S. LUDLOW.

Teme (Tenbury).—In this part the water has been very high and muddy for some weeks, but the weather took up time at the end of last week, and the water has gone down quickly, and is now clearing, and should be in fair order for fishing by the end of the week. The floods will have done good in one way, as they will clear all the rubbish accumulated in the bed of the river during the dry summer, and they will also have moved the fish, and anglers are now looking forward to March 2, when trout fishing begins, when good sport is expected in this district.—WORCESTER.

Trent (Newark).—Pike and roach have produced most sport, and best results have been obtained from the free waters. From the Devon a lot of the former have been taken during the week, best brace weighing 9lb. 6oz. and 8lb., caught by Mr. W. Garrard and Mr. H. Sharpe. Amongst the roach, Mr. J. Gill has excelled, showing some fine fish at the Piscatorial Club-room, several over 1lb., and heaviest 1lb. 7½oz. 8 shots. The ragged tail-end of a maiden dew worm has proved most attractive bait. The Trent is fishing down, and chub fishermen are hoping to obtain sport ere the close of the season, this branch of the art being a great failure throughout the winter.—TRENT-SIDER.

Upper Co'n, Bibury (East Gloucestershire).—It has up to the present time been a splendid spawning season throughout the district, and on the Swan water the big spawners have shown up well. The season opens in this county on the 1st of April (now but five weeks), and the following artificials will be found to kill well on the opening, viz., March Brown, Pale Winged Olive Dnn, and Quill Gnat, Whirling Blue Dnn, and gold ribbed Hare's Lug. The Iron Blue will also kill well hereabouts, and although early for the Red Spinners, I have known some good creels got on this fly during April. A red tag March Brown and red caterpillar will also kill well on rough rippling water, and on rough days. Most useful rods for this district are from 10ft. to 11ft., but nine-footers are frequently used on the narrow lengths. Weather fine.—SHERRY SPINNER.

Witham, &c. (Mid-Lincolnshire).—Sport has been resumed in this district. Several captures of pike are reported from the lower lengths, and one local "hand" is reported with a fish of 15lb., one of the best captured this season. Some good pike have been obtained at Chapel Hill, a Leeds party having as many as they could take back with them up to 6lb. Capital sport is also reported from Cunningsby. Among the best baskets was one of 21lb., made by two Grimby anglers from near the mill. Some good perch have been taken hereabout, and also some chub, both up to 2½lb. Village anglers have been taking pike up to 5lb. About Bardney sport has been good on the Sincil Dyke. Some good baskets have also been made at Five Mile House.—LUCI.

Wye (Builth Wells).—River in good order for salmon fishing. Mr. A. G. Vaughan caught six pike on Saturday last. Salmon and pike anglers should do well the next few days. Weather fine.—W. B. ROBERTS.

The Yore swale, Wharfe Nidd, &c. (Yorkshire).—Angling has fallen off a bit in these rivers during the past week, the grayling in the Yore &c., have risen fairly well to Little Needle, February Red, Little Brown, and Willow Fly, and the natural flies begin to show themselves in greater numbers, but few anglers are out, and no fly fishing of any moment will be attempted with us until after the opening of the trout fishing season. A few pike have been caught in the deep pools of the Yore, both live baiting and spinning, and I hear of fair sport amongst the same fish in the neighbourhood of Boroughbridge. Roach fishing has been good in this river. Few anglers have been out up the Wharfe, and the takes of roach, &c., have not been large in any instance that has come to my knowledge; this remark will apply to the Swale, Nidd, Derwent, &c., but I hear pike fishing has been followed in the latter river with very fair success, and some nice pike have been caught in the Pocklington Canal, with small roach for bait. All our rivers are in capital trim for pike fishing to-day, and as we are evidently in for a little sharp weather, we may anticipate good sport for next week. As I write prospects could not be better, and this is the time of year to declare war against the pike that make their homes in close proximity to our trout and grayling streams.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAM.—The weather is again gloriously fine, but sharp, and pike and grayling fishing very enjoyable. Prospects for sport continue good in the Yore. Yesterday a party of three anglers from Harrogate caught twenty-nine grayling at Masham. On Friday, Mr. Dent caught fifteen grayling; and on Saturday Mr. Riley Fortune, thirteen good fish at Ripon, the largest weighing 1½lb.—a large fish for this river. Prospects for sport on the Harrogate Association water, on the Nidd, are good. On Saturday, Mr. Calvert, of Leeds, had 8lb. of perch and roach. At Hunsingore the Knaresborough Angling Club held their meeting on Tuesday, and the secretary reported a most successful year. The club preserve some of the most charming and picturesque water in Yorkshire, which is also well stocked with fish. Since its formation the association have turned into their water in the Nidd about half a million trout. The club have gone in extensively for rainbows, and up to now the experiment of its introduction has proved successful. This year 1000 of this variety and 500 brown trout have been added. The officers and committee were all re-elected: President, the Earl of Harewood; vice-presidents, the Hon. H. E. Butler and the Hon. and Rev. Canon Lascelles; secretaries, Messrs. Brown and Wolstenholme; treasurer, Mr. A. Walton.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Carron (Easter Ross, Ardgay, N.B.).—So far as known not a fish has yet been caught on any of the beats. Messrs. W. Burrow, Simmonds, and J. A. Young, Balnagown Arms, were out on Monday and Tuesday, but without success. The weather has been very changeable. On Wednesday keen frost, with bright sunshine. The water is mostly composed of "snow brea."—B.

Deveron (Banffshire).—The result of the opening week on this river has been rather disappointing to anglers, the atmospheric conditions being very changeable. Towards the close of last week the water was settling down into fine condition, when rain commenced on Friday evening, and on Saturday the river was again in flood and discoloured. On Thursday, Feb. 16, Mr. William Walker, gamekeeper on the Corniehaugh section, killed a fine fresh run salmon of 6½lb. He hooked another fish in the same pool, but lost it. A day earlier last season, on the same water, three salmon were killed. We hear of a few more fish grassed in the lower waters. Little success was recorded by the net fishermen on the river in the latter half of last week and the beginning of the present. Four fish was the most netted on any one day, of an average weight of 8lb., the heaviest scaling 16lb. On the coast the nets nearest the entrance to the river have remained almost blank, but at the stations furthest east several fish have been got daily. Owing to the swell on the sea, caused by a stiff breeze on Saturday night, the leaders had to remain over Sunday, and on Monday the total yield from all stations was eleven fish. A box was consigned to the market on Monday, and another on Wednesday of this week.—H. W.

Loch Ness (Foyers Hotel), N.B.—The fishing on Loch Ness during the past week has been fairly satisfactory, although on two days it was too stormy for boats to remain out. On Feb. 13, Mr. James Sheriff, Ceylon, killed a nice salmon, 16lb., and one trout, 4lb. On the 14th, Mr. R. Thom, Annan, killed one salmon, 26lb., and one 9lb. 16th, Mr. R. Thom, Annan, killed one salmon, 16lb. 17th, Mr. W. Walker, Perth, killed one salmon, 10½lb.; and Mr. James Sheriff, one of 9lb. 18th, Mr. R. Thom, Annan, killed a fine salmon, 23lb. There is no doubt the loch is well stocked with fish, and with favourable fishing weather very good sport will be got.—S. TILSTON.

Loch Tay (Kenmore, Perthshire, N.B.).—On the hotel water, on the 17th, Mr. J. C. Daniels killed salmon, 15lb.; on the reserve water, Macdiarmid killed one, 20lb. 21st, on the reserve water, Macdiarmid killed a salmon, 22lb.; on the hotel water, Mr. D. Carson killed salmon, 18lb. Loch in good ply.—W. KNIGHT.

Loch Tay (Killin, N.B.).—Feb. 15, Mr. Smith, of Glasgow, had a salmon of 16lb. 16th, Mr. P. N. Midwood had one of 19lb.; Mr. Kessler, one, 16lb., and one, 10lb. 17th, Mr. P. N. Midwood, one, 18lb.; Mr. G. N. Midwood, one, 16lb. 18th, Mr. G. N. Midwood, one,

19lb. 21, Mrs. Midwood, two, 20lb. and 16lb.; Mr. G. N. Midwood, one of 17lb.—H. J. MAISEY.

North-East of Scotland.—The Dee, although not in wading trim for many of the best waters, has yielded unprecedented sport during the past week; in fact, the brightest opening in the middle and lower reaches yet experienced during the past decade. On the Glentana waters, Mr. Merry and Mr. Brickman (Proffit's Hotel) have had two and three fish daily, scaling from 6lb. to 8lb. Col. Eddis, Mr. C. B. Lucas, and Col. Ind. on South Cambus O'May waters, have had one and two daily, ranging from 6lb. to 18lb. On the Huntly Arms Aboyn water, Mr. Crawshaw had one of 7lb., one of 7lb., three of 6lb., 6lb., and 20lb.; Mr. Borwick, one of 7½lb., two of 8lb. and 5½lb., and one of 7lb.; Mr. Kemp, two of 6lb. and 20lb., one, 22lb., and one of 6lb.; while Mr. Hepburn creel two, of 6lb. and 6lb., one, 17½lb., and one, 6lb.; and Gregson, one of 14lb. On Aboyn Castle water, Lord Huntly creel one, 13lb. On the Kincardine O'Neil section, Mr. E. Drummond, on Ballogie water, creel three, of 6lb., 9lb., and 10lb., one 6½lb., one 6lb., one 6½lb., one 7lb.; Mrs. Leslie had one 6½lb.; and Mr. Corbet had one 6½lb. On the Lodge water, Mr. J. C. Deverell landed two, of 10lb. and 8lb., one 11lb., one 8½lb., and one 6lb. On Carlogie, Dunn, keeper, had one 14lb., and one 6lb. On Borrowstone, Nicoll, keeper for Lord Garrioch, creel two, 6½lb. and 7lb.; two, 7lb. and 8½lb.; two, 7lb.; and one 7½lb. On Desswater, Col. Chas. Leith Hay landed two, of 13lb. and 14lb., and two of 7lb. and 14lb.; while Major D. F. Davidson creel one of 7lb., one of 9lb., one of 9½lb., and one of 6lb.; while Lieut. Stewart Farquhar, on same water, had three, 7lb., 7lb., 7½lb.; and Mr. Mowbray Farquhar, two, of 6lb. and 6½lb. On the Commonty and Blackhall sections, Sir John Gladstone, Bart., creel six, scaling from 6lb. to 18lb., one of 8½lb., five ranging from 6lb. to 13lb., and two, of 6lb. and 8lb.; five from 6lb. to 10lb., and two, of 7lb. and 8lb.; in all, twenty-one fish for the week. On the Sluie water, Mr. Duncan Davidson had two, of 6½lb. and 7½lb. On the Blackhall Castle water, the Hon. A. Powlett had one of 6lb., two, of 11lb. and 6½lb., one of 9lb.; while Major Duncan Gordon creel one of 6lb.; Capt. Mitchell, one of 6lb., and one of 8lb.; and Col. Wade Dalton, one of 9lb. On Inverly water, Major Gen. Hills had three, of 7lb., 8lb., and 9lb.; four, of 7lb., 7lb., 8lb., and 9lb.; and one of 8lb. On the Cairnton water, Mr. T. Turner Farley has had five, six, and seven fish daily, of average weights. On the Durris section, Mr. Mekin had two fish daily on an average during week. On the Lower Dorris, D. Rae, keeper, landed eleven on Tuesday, seven on Wednesday, and six on Thursday (twenty-four in three days), ranging from 6lb. to 9½lb., and two and three every day since. On the Drum waters, Mr. Perry has had two fish on an average daily since the season opened. On the Park waters, Mr. Geo. Davidson and Capt. McNeil have had three and four fish daily, averaging from 6lb. to 8lb. On Sir Duff Gordon's Mary Culter water, six were got on Monday, two on Tuesday, three on Wednesday, and similar results since, while like sport has been experienced on the Kingcausie and nether reaches all over. The fly has been conspicuously the taking lure, the favourite patterns being the Gordon, Akroyd, and Black Doctor, dressed on 2½in., 3in., and 3½in. irons. Few clean fish have been got on the Don. The Ythan and Ugie open on Saturday. The North and South Esks are not doing well. On Monday, on Ballogie, Mr. Edward Drummond creel one of 6½lb.; Mr. Corbett, one of 9lb.; and Mr. L. H. Crake, one of 8lb. On Tuesday, Mr. Drummond had two, of 7lb. and 7lb., and similar sport on Wednesday. On the Borrowstone waters, Nicoll had one of 6lb., and one of 7lb.; and Mr. J. C. Deverell, one of 10lb. On Tuesday, on Dess water, Major D. F. Davidson had four, of 6lb., 6½lb., 7lb., and 8lb.; while Mr. Deverell had one of 7lb. on the Lodge section; while Dunn, Carlogie, had two, of 7lb. and 8lb. On Glentana section, Lieut. Col. Brinkman had two, of 21lb. and 9½lb., on Tuesday; while Mr. Merry had also two, of 7½lb. and 8lb. respectively. On the Ballater section fish are not yet plentiful, the pioneers only being met with, and sport is not so life as on the sections below. On Monday, Mr. Grandville had one of 7lb. on Cambus O'May section. On Tuesday, Mr. Frances and Mr. J. Miller creel two on M'naltrie, of 23lb. and 8lb.; and J. B. Miller a beauty of 20½lb., on the same day, on the hotel water; while Cameron, keeper, had one of 10lb. on Glenmuick water.—G. M.

Shin (Inveran, N.B.).—The angling tenant has been out more or less during the past ten days, but so far as can be ascertained only one salmon, weighing 9lb., has been landed. Conditions are unfavourable in every respect, and, besides, it is not supposed that only a few fish are in the river as yet. It is, however, expected that with a clearance of snow and change of weather, good sport will begin.—B.

South of Scotland.—The weather this week has been more settled, and the rivers have run down to their normal level. The Annan, Nith, and one or two other rivers of the district open for angling on Saturday (to-day). Should the weather continue fine, the prospects are slightly more hopeful than that of a week ago. None of the salmon rivers, however, afford good spring fishing. A few spring fish are caught here and there by the rods, and your correspondent has known several instances in which well-mended kelts have done duty for new run fish. The Esk opened last week, but fishing is confined to the lower reaches, and up to Canonbie glebe. The most of the lochs will be open next week for the rods, but yellow trout should not be killed before the beginning of April. On Saturday morning the whole of the Solway nets will be in fishing order for the season. In some of the rivers the salmon disease has made its appearance, but fortunately the disease is nothing like that of last year. It is said to be worst on the Esk. In the Annan less

than half a dozen salmon have been seen attacked with the fungus this winter.—HEATHERBELL.

IRISH REPORTS.

Ballinderry (Coagh, co. Tyrone).—Angling opens on Wednesday next, March 1. Just at present the river is in flood, and should no more rain fall the river will be in fine order for the opening day. In the past close time the river was well watched by the special bailiffs of the Foyle and Bann Fishery Company. Notwithstanding this, the pike are slowly but surely clearing out the trout, yet the Board of Conservators has refused to allow anglers of known integrity to fish during the close season for them. The well known Farmer's Hotel is now on the market for disposal.—J. A. B.

Bancom River (co. Cork).—Since the opening day (15th inst.) sport has been indifferent, chiefly owing to the unfavourable weather. Salmon anglers have done little or nothing, with the exception of Mr. J. A. Allman, who on the opening day had two very handsome fish of 16lb. and 12lb., and on the 16th inst. one of 12lb.—W. HAYNES AND SON.

Blackwater (co. Cork).—The river is still very high, yet a fair number of fish have been taken at Careysville, Mocollop, and other fisheries. Mr. A. Browning Priestley, on Thursday, 16th inst., landed three very handsome fish, 30lb., 22lb., 10lb.—W. HAYNES AND SON.

Bundrowes River (co. Donegal).—Owing to the almost incessant rainfall here during the past ten days no fishing of any consequence could be done on this river, as the water has been bank high and greatly discoloured, and continues so at present. Mr. James Johnston, on 20th inst., hooked and played several kelts, which are now returning seaward in great numbers from Lough Melvin and its tributaries. Fresh run salmon are reported passing through the river constantly in fair numbers to Lough Melvin since last report. On this fine lake some excellent sport should be had any time after 15th prox. should the weather then be favourable for angling.—M. ROGAN AND SONS.

Cork Rivers.—Sport was generally poor on all the Cork rivers open for angling, though the weather on the whole has been favourable enough, and the waters in better order.—T. J. D.

Corrib (Galway).—Last week this stream was practically unfishable from the rush of heavy, discoloured water—so heavy that the cribs could not be set till the end of the week. Spring fish are reported running in the estuary.—J. A. B.

Kerry Rivers.—Sport has been poor on all the Kerry rivers open for angling, though spring salmon were supposed to be numerous.—T. J. D.

Killarney.—Sport has shown an improvement, but not as much as justified the hopes of anglers.—T. J. D.

Lee (co. Cork).—There has been a good increase in the number of salmon anglers out and fish killed since last report. The river is in excellent order, but fish are sulky, owing to the amount of snow water in river. On Lee Mount Fishery, Mr. W. T. Crawshaw, two, 12½lb., 11½lb.; and A. C. Bonning, one, 5½lb. On Warren's Court, Mr. J. A. Jameson, two, 8lb. and 3½lb., the latter an extraordinary small fish. On Lord Bantry's water, Mr. G. Jevors, three, 9lb., 10lb., 10lb.; and Mr. H. E. Stanley, three, 18lb., 8½lb., 10lb. On Upper Nettleville, Col. Broderick, one, 22lb. On Farns, Capt. Douglas Pennant, 60th Rifles, two, 10lb., 5½lb. On Ballineadig, Mr. S. Haynes, one, 8lb. On other portions of the river, Mr. Ned Murphy, one, 7lb.; Mr. Maurice Lyons, one, 6lb.; Mr. M. Riely, one, 10lb.; Mr. J. O'Brien, one, 10lb. Trout anglers are doing well, some good sized fish being taken. Mr. W. Haynes, on the 17th, in two hours' fishing, had seven beauties, from 1½lb. to 3½lb., taken with the March Brown, in the tidal water at Sundays Well.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—Sport continues very bad, though the weather has been, on the whole, favourable enough, and the water in fair order for angling. Only three salmon have been had since last report, of about the usual weight.—T. J. D.

Lough Neagh.—With the improvement in the weather the pollen fishing has improved somewhat. The demand from London and other English markets is good. I hear that several big consignments of poached salmon and trout failed to reach their destinations owing to the vigilance of the police. A candidate or two under the new fangled L.G. Act are going in for the abolition of certain fisheries monopolies of the lough and the Bann river.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—The above waters are now all in good order, and sport has been good all round.—T. J. D.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River now in good order, and weather looking favourable, and a fair number of spring fish in the pools. On the 21st the manager of the Imperial Hotel drew first blood for the season by landing a good salmon, weighing 22lb., after an hour and a quarter's hard play. The fly that enticed this beauty is one of my new inventions, namely, the Kitchener.—PAT HEARNES.

SEA FISHING.

Baltimore.—Sea angling here has been suspended for a long time, owing to wild weather. At time of writing, however, the weather is fine and fish of different kinds numerous, and anglers have opened the campaign with good results.—T. J. D.

Darrynane.—Pollack anglers are now getting good sport in the Coomacaulane direction, red rubber eels being the best lures. Spring mackerel are now coming in in big numbers.—T. J. D.

Deal (The Pier).—Local fishing is still abnormally bad, the prevailing east wind marring sport of all kind. The pier has been but poorly patronised during the last

week, and the few attempts that have been made have proved almost fruitless. On Saturday last, Messrs. Gareau, Browne, Cooper, Bushnell, and Norman, all fished for several hours in the afternoon, the resultant catch being only three dabs, two pouting, and a small codling. The water had fished down considerably on Sunday, but Mr. Bowles and Mr. Gray only took two small dabs. Messrs. Gareau, Upton, and Smith had some sport in a boat, and brought ashore twenty-five whiting and three codling—the best catch lately recorded. Mr. Bowles did a little pier fishing on Monday morning, but without any result. A strong north-east wind prevailed on Tuesday, and the pier was without a single patron. The wind had somewhat abated on Wednesday, but Mr. Taylor, of London, who tried for the greater part of the afternoon, met with no success.—J. RICHARDSON (B.S.A.S.).

Deal.—Saturday brought a few anglers here, and nothing of importance was done however. On 19th Mr. H. Kent put out about 9 a.m. and returned about 6 p.m., and landed twenty-four codling, some fine ones amongst them, sixteen pouting and whiting, fishing mostly off Old Stairs Bay; To-day (Wednesday) a fresh breeze, easterly, and no prospects of fishing.—EDWARD HANGER (Agent B.S.A.S.).

Dingle.—Pollacking is now giving good sport on favourable days. On Saturday four local anglers took three dozen in about four hours with rubbers.—T. J. D.

Eastbourne.—Feb. 20.—The worst time for sea fishing is now upon us, and for the next two months at least it will be very little use for anglers to try this resort. But very few fish, I hear, are now being had by the professional fishermen, so anglers had better wait until the time for the deep sea fishing off the Sovereign Rocks commences, say, about the beginning of May. Pier fishing is very poor, only a few dabs, &c., being had. High water, Saturday, Feb. 25, at 10.50 and 11.30.—J. W. SODDY (B.S.A.S.).

Plymouth.—We are in hopes that all storms have passed, at least for the time, so that our fishermen can get to work. They have had a hard time of it for the last month or two, and if it had not been for friends giving them a little help I do not know what they would have done. There is very little doing now on the piers, as there is so much fresh water coming down the rivers that the fish get away in deeper water. Our trammels have been having fine sport with the red mullet, but they have not been fetching good prices. It is to be hoped that we get fine weather during Lent, or we shall have fish at a fabulous price. Hake and soles have been very scarce, but cod and ling fairly plentiful. We shall now commence to get our boats out and put in order so as to be ready for Easter.—WILLIAM HEARDER (B.S.A.S.).

Scarborough.—Fish are scarce at present, but during November and December last good sport was had with cod, both on the piers and from the rocks—north and south—two rods landing from 30lb. to 40lb. of cod by fishing off the piers in the course of a few hours.—H.

THE following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, March 3. Spring tides. Highest on Tuesday.

" 25.—Lynchobite: Benefit concert at the Champion Hotel.
" 26.—Amicable Excelsior: Match at Egham.
" 26.—Amicable Waltonians: Lapsed prize outing.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—This flourishing association held its February delegate meeting on Monday night at Foresters' Hall, Clerkenwell, when there was a crowded attendance, representatives from forty affiliated clubs being present. Mr. W. H. Beckett, the vice-president of the association, was in the chair, and stated that, with reference to the case of one of its members being interfered with on the association's fishery at Bures, the secretary (Mr. R. Ghurney) had made inquiries, and it now appeared that a mistake had been made on the side of the Merry Anglers. The secretary of that club wrote stating that to be the case, and tendering an apology to the member in question, and also to the association. He stated that that club's water adjoined the association's, and that was how the mistake arose. He added that the Merry Anglers had just placed a large number of trout fry in their water, which might, if they thrived, be of some benefit to the association, and also that he often during his visits to the club fishery saw that all was right on the L.A.A.S. water. He sincerely hoped that the good feeling between his club and the association would continue. The chairman characterised the letter as a very handsome apology, and it was unanimously agreed to accept and acknowledge the same. The association is very "down" on those who take undersized fish from its rented waters; hence, in consequence of a Grand Junction Canal bailiff's report, a member who had a jack of 15½ in. in his creel has been called upon for an explanation at the next meeting. A delegate reported that he had heard on good authority that while the Wey Navigation, near Byfleet (rented by the association), was recently drawn down for a brief period poachers secured a large number of fish, which were afterwards sold about the streets. It was decided at once to institute inquiries into the matter, the chairman remarking that that portion of the Wey had

always been a deal of trouble and anxiety to the association. The application for a railway privilege ticket to Maidstone is to be further reported upon, anglers who visited Tovil, on the Medway, stating that they could get back to town in time to weigh-in on Sunday night by walking to Maidstone and catching a certain train there. As visiting officers, Messrs. Harris, Abrahams, and Rowles made their usual reports, and a new club (the Limehouse Piscatorials) was stated to have been enrolled. —HON. REPORTER.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £1 8s., Prince of Wales; £5 10s. 6d., Queen's Piscatorials; £1 13s. 6d., Queen's; £1 6s. 3d., West Ham Brothers, from their donation boxes; also £3 1s. from the Hoxton Brothers A.S., proceeds of their smoker on 14th inst. as follows: £3 4s. from the box, and donations—£1 1s., Messrs. G. H. Wood; 10s. 6d., J. Bartlett; 10s. 6d., J. Abrahams; 10s. 6d., A. Abrahams; 10s. 6d., Josh Cosnett; 10s. 6d., G. Leader; 10s. 6d., G. Stephens; 10s. 6d., C. Bramley; 2s. 6d., T. Dickson. —R. GHURNEY.

Anglers' Association (WESTERN DISTRICT) Visiting List.—On Feb. 16 a most enjoyable return visit was held at the Queen's A.S. On the roll call, eight clubs were well represented. The A.B.S. box contained £1 13s. 6d. The next visit will go to the Royal George A.S., Bateman-street, Soho; date later in the F.G. —J. HARRIS.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On Feb. 19 eight of our members fished at Coventry's waters for Mr. Coventry's 10s. and two prizes given by our members. All were crowned with success, the first and a special being won by Mr. C. Osborne with chub, perch, roach, and dace. Messrs. A. Skilleter, with perch and roach; A. Carey, A. Bowyer, and J. Alwright, perch; J. Jagot, sen., chub; and C. J. King, roach, dace, and perch, all weighed-in for yearlings. Several other members had fish, but were too late to weigh-in. We have a return visit on March 13. It was decided to go where you please for Mr. Allwright's prize on the 26th, for gross (bar jack). Also prize given by Mr. Sparrow, to be fished off at Coventry's, for gross weight of roach. Mr. Coventry has given another 10s. (all class of fish) for the 26th; one rod only. Please note all our fish are to be at the clubhouse before ten for special prizes. —C. J. KING.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—Mr. Barker had a good show of Thames roach on Feb. 19, largest over 1lb. Mr. Turner a 4oz. dace from Colne, at Staines. We anticipate more takes on 26th. —BEN ABRAHAM.

Alma Angling Society, Coach and Horses, Portsmouth Place, Lincoln's Inn Fields.—On Feb. 19 the following weighed-in: Mr. Drew, perch and roach, 11lb. 0½oz.; Messrs. Seymour, Hopping, and Montgomery, smaller catches. Messrs. Johns and Habbijam have each given a prize for our outing on 26th, making, in all, six to compete for. Mr. Garrett has been elected a honorary member. —J. CHAMBERS.

Amicable Excelsior Angling Society, Prince Arthur, Arthur-street, Battersea.—On Feb. 26 we fish our next match at Egham, from the Varnish Works to the Bells of Ouseley; towpath only; jack barred; two rods. All to start first train, Clapham Junction, on morning. Since my last report several of our members have weighed-in. —J. R.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—The outing to Boxmoor was a failure, not one of the members getting the required weight, although several weighed-in. The six prizes will be fished for on the 26th; go where you like. Will members please show up next week to decide how the remaining prizes are to be fished for? —G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—On Feb. 19 the following weighed-in: Messrs. J. Jones, roach, 4lb. 11½oz.; T. Bowling, 2lb. 9½oz.; H. Mallett and T. Pope also having roach; all from the Thames. The members decided on Wednesday to hold the annual dinner at the Thomas a'Becket, Old Kent Road, on Thursday, April 20. Our usual donation was voted for the river-keepers' dinner. —F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—On Feb. 19 Messrs. G. Mead, W. Thomas, and S. Aplin weighed-in. A roving match is fixed for Feb. 26, at Reading; bank only; jack barred. Trains, L.S.W. Railway, 8.30 Clapham Junction; return 7.30 from Reading. Five good prizes. A consolation match is also arranged for members who have not won a prize during season; match to be fished on March 5; open roving; overnight optional. Four substantial prizes. —A. JENKINS.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—Mr. J. Hobbs was the only member to weigh-in on 19th, saving the club from a blank with 6lb. of roach. Members are particularly requested to attend on Wednesday next, March 1, as there are still seven or eight prizes to be fished for. —A. CONN.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Feb. 19 Messrs. J. Taylor weighed-in perch, bream, roach, and dace, 7lb. 6½oz., one perch weighing 1lb. 1½oz.; J. Roach, roach, 6lb. 10½oz.; W. Bray, roach, 2lb. 8½oz.; C. Davis, perch and perch, 2lb. 5½oz., the perch weighing 1lb. 11½oz.; F. S. Pavett, H. Davis, and R. Lummes, roach. —T. PATEROSTER.

Bomere Angling Society, The Britannia, Clarendon-road, Notting Hill, W.—Our concert on behalf of the A.B.S. takes place on March 7. Messrs. J. Harris and Ben. Abrahams have kindly consented to take the chairs

respectively. There will be plenty of talent. Secretaries of clubs please notice change of clubhouse. —H. DAWORTHY.

Cambridge Friendly Angling Society, Fountains Abbey, Praed-street, W.—On Feb. 19 Messrs. Scutt and Fitzgibbon had roach from the Thames, the latter winning one of the prizes left over from outing. On Feb. 22 Mr. Warop had pike over 30lb., largest fish 21lb.; Mr. Hutchins 10lb. of nice roach from Thames. —W. SUTTON.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On Feb. 19 Mr. Jones took the remaining consolation prize with roach and perch. Also weighed-in: Mr. Yeo, jack; J. Golding, jack; R. Hubbard, roach and perch; Nursey, roach; Fairbairn, roach (heaviest 1lb. 4½oz.); H. Ward, one jack, 4lb. 15oz.; T. Benny, roach; Davis, roach; Millward, roach; being a pretty show of over 60lb. of fish. Our concert on behalf of the A.B.S. was a success, the box containing 13s. 7½d. —P. E. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—Our outing to Broxbourne was very successful, the following members taking prizes in the order named: Messrs. Marshall, Fuller, Cook, Taylor, Carr. Roving match on Feb. 26. Hope the committee will come next Wednesday early, as we have some important business to discuss. —E. BOXALL.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—We fish a match at Bourne End on March 5; towpath only; usual conditions. Signal to be given at the Railway Hotel. Next Wednesday, March 1, being quarter night, I hope members will turn up and clear the books, and make date for our distribution. —A. C. QUICK.

Canning Town Angling Society, Marquis of Salisbury, Hermit-road, E.—Our last outing this season will take place on Feb. 26 at Hatfield Peveril. Dinner at the "Sportsman" at 5 o'clock. Hoping to see a good muster. —M. W. BROWNIE.

Central Association Visiting List.—The next return visit will be to the Peckham Brothers A.S., held at the Windsor Castle, Cator Street, Sumner Road, Camberwell, on Tuesday, Feb. 28, and being the first visit at their new headquarters, it is hoped anglers and their friends will muster in force. —W.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—On Feb. 19 Mr. J. Thorne weighed-in a nice show of roach, 10lb. 13 z., largest fish 1lb. 2½oz. (four fish 3lb. 11oz.). Members are requested not to forget our next match at Windsor on the 26th inst. A consolation match will take place on March 5 for members who have not taken a prize during the season. Locale to be settled next meeting night. We have voted 3s. 6d. towards the Thames river and lock keepers' dinner. —G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Result of our last match was not very successful, the first prize only being taken by Mr. Down, with bream and dace. Messrs. J. Pasmore, H. Crowther, and H. Stanley also weighed-in. We have an open roving fixed for Feb. 26. —T. PASMORE.

Clerkenwell and District United Visiting List.—The next visit on the above will be to the Queen's Piscatorials, at the Queen's Arms, Chapel-street, Marylebone-road, on Tuesday next, Feb. 28. A good entertainment will be provided. —F. CASTELL.

Clissold Angling Society, The Cricketers, North-wold-road, Stoke Newington, N.—On Feb. 19 five members weighed-in, Osment and Eastwood being to the front with two good shows of roach. Our A.B.S. smoker has to be postponed on account of structural alterations to our clubhouse. —T. FAULKNER.

Cobden Angling Society, Kensal-road, W.—On the 19th Messrs. E. Baxter, A. Howland, J. Barnfather, T. Marsh, and W. Walker weighed-in roach. On the 26th a roving match will be fished from Henley Bridge to Hambleton Lock; two rods; all fish to weigh; each member to catch his own live bait; to go down by the 9.3 from Westbourne Park; to register fish at Ye Lion (corner of Queen-street and Friday-street) not later than 7.15. —T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Mr. W. Beames had a nice show of roach from the Lea. Our monthly outing takes place at Woking on Feb. 26; all start from Waterloo by the 8.30 a.m. train, return 8.6 p.m.; roving; minnows and gudgeon can be carried. —W. H. STAFFORD.

Convivial Angling Society, City of London, Sidney-street, City-road.—On Feb. 19, at Rye House, our outing took place, two prizes being taken by the following members: Mr. H. Humphreys, first, jack; and Mr. G. Pratt, second, roach. The other three prizes were not taken, being consolation prizes. We have arranged to have an outing on March 12; place to be named at our next meeting night. —PHIL.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On Feb. 19 Messrs. Massey and Cnt-bush had a good show of roach and dace (all specimens). On Tuesday Mr. Curtis weighed-in roach and dace. —W. MASSEY.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On Feb. 19 a few of the members were out. Messrs. H. Poore, T. Thompson, and G. Davies were the only gentlemen to weigh-in, they having a fine show of jack, roach, and dace. Members are requested to attend on Tuesday, the 28th; important business. —S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Some members out last Friday weighed-in fish: Messrs. W. Elton, roach and bream; M. Brothers, bream. Sunday, members out to Twickenham, Slough,

and Uxbridge: Messrs. D. Ansell, jack; R. Bennett, jack; J. Edwards, bream; J. Colman, roach. Wednesday's meeting, delegate's report from Anglers' Association read, and vote of thanks passed for same. We visit the Queen's Piscatorials on Tuesday next.—JOHNNY EDWARDS.

Drayton Park Piscatorials. Stanley Arms, Landseer-road, Holloway-road, N.—Outing on April 5. On the 1st, special. Will gentlemen of other clubs requiring information please apply to the hon. secretary, as above, any Wednesday evening.—GREG.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—On Feb. 19 most of our members out, and weighed some nice roach and dace. On March 5 our last match of the season takes place.—W. JINKINS.

Eagle Angling Society, Red Lion, Tottenham.—On Feb. 21, Mr. T. F. Barlow had a fine show of roach and dace, weighing 12lb.; on the 22nd inst., Mr. T. F. Barlow had 11lb.; Mr. F. Reed had about 9lb. of good fish.—W. S. PRICE.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—Our outing takes place on Feb. 26 at the club water at Byfleet; Park Bridge to Wisley Bridge; all fish to weigh. Members leave by usual train, 8.40 from Clapham Junction, returning from Weybridge 8.25 p.m. We have arranged to hold a supper, to be followed by a smoking concert, on Tuesday, March 7.—A. T.

Elgin Angling Society, Blenheim Arms, Blenheim-crescent, Notting Hill, W.—Messrs. Ryell and Billett weighed in roach and dace, and Mr. Bayless jack, on the 19th. Our concert on the 21st was a great success, our large room being crowded. The Allason, Bomore, Camden, Islington Brothers, Queen's, and several other clubs were well represented. Messrs. Clark, Linton, Shepherd, Nolan, Pett, Hoad, Adams, and Drury were among those who contributed to the harmony. I should like to again thank all those who were present for their kind support.—G. KING.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—On Feb. 19 the following members weighed in: Messrs. Wells, 5lb. 14oz. dace and roach, one specimen dace 9oz.; one specimen roach 1lb. 14oz.; Phaesey, roach and dace, 3lb.; Horne, roach and perch, 1lb. 11oz.; one specimen perch 1lb. 2oz. Other members were on the warpath. On Wednesday, March 1, we hold our return visit.—W. LEFEVRE.

Forest Gate Piscatorials, Forest Gate Hotel, Godwin-road, Forest Gate.—On Feb. 19 the following weighed in: Messrs. Inman, Mendham, Durrell, and Creeke. We fish a match at Bures on March 11 and 12 for three prizes.—H. F. C.

Forest Piscatorial Society, Rose and Crown, Hoe-street, Walthamstow.—On Feb. 19 Mr. T. W. Marshall weighed in jack; and Messrs. H. Tisley and G. Beaumont roach, Mr. G. Beaumont's show of roach being a very fine one, all good-sized fish, the best weighing 1lb. 5oz.—H. TISLEY.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, W.—Mr. Ellins had a very nice show of fish on the 19th inst., and Mr. James also had roach. On the 21st Mr. King brought up some nice pike, the largest weighing just under 14lb.—J. E. LAWFORD.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Messrs. Maybury and Thompson brought in roach and perch on the 20th. Mr. A. Coker brought in jack, one handsome fish 19lb., from Littleport, which has been sent to be put up by Cooper. It is the best fed fish I have seen for a long time. Our members will fish a peg-down match at St. Margaret's on March 5, for thirteen prizes, to wind up the season; all to start by the 9.8 a.m. train.—R. MURPHY.

Great Yarmouth Piscatorial Society.—At the pike match, held at Barton, on Feb. 16, sport was again slow, only three sizeable fish being taken. Owing to a paucity of entries only one of the prizes offered by the society was taken, and this by Mr. Arthur Williams. Mr. J. A. Williams was the umpire, assisted by Mr. R. B. Thompson.

Greenwich Angling Society, Morden Arms, Circus-street, Greenwich.—Our last smoking concert of the season will take place on March 8, at 7.30 p.m. prompt, Mr. G. H. Dowsett in the chair. A splendid programme is prepared by Mr. Gorton, who has charge of the musical arrangements, and we anticipate a full attendance of members and friends. Several members out last week, but only a few successful. Mr. Freak, a perch of 1lb. 3oz.; and myself, a roach of 1lb. 11oz. The number of members now on the books of the club is 106.—J. DRYDEN.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had a fine show of roach and perch on Feb. 19, but there is still five prizes to be fished for at Shiplake, and I hope, weather permitting, they will be taken.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Mr. Jeffries and Mr. W. Ford had a show of roach. Our last prize outing was a blank. Members to fish for remaining prizes; to go where they like, on Feb. 26; all members to sign on Saturday evening at six o'clock or after; all members not signing will not be eligible.—C. SMITH.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—Our meeting on Wednesday, Feb. 22, was well attended. Several members were out on Feb. 19, and had fair takes. Messrs. Stevens, Alec. McGaw, T. Johnson, and F. Clay, fishing with the McBrides at Teddington, had several bream, perch, and one tench. Mr. A. Clayton had a fair show of roach and perch. Messrs. Jones and Henniker, fishing from the bank at Teddington, on Monday, had a good show of roach and dace (best dace, 7oz.).—A. CLAYTON.

Highbury Angling Society, Globe Hotel, Upper Tollington-road, N.—Our outing at Sandy, on the 19th,

was most enjoyable. Takes were small, Mr. J. Parsons being first with four roach, weighing 3½lb. Mr. T. A. Shaw has also had a nice tray of roach, ten fish scaling 10lb. (largest, 1lb. 9oz.).—E. W.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On Feb. 19 Messrs. F. Newton, roach; T. Sowerbutts, jack; J. Huntley, jack. Members will compete for special prizes on the 26th inst. at Ware. Messrs. T. Stephens and C. Bramley have given a donation of 10s. 6d. each to the A.B.S., which now makes a total of £8 1s collected by our smoker. A grand Bohemian concert will take place on Tuesday, March 7; chairman, G. H. Shepherd; vice, G. Armstrong. Ladies cordially invited.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—The following weighed in on Feb. 19: Mr. Croker, roach and dace; Mr. Burwash, roach and dace; Mr. Wilkes, roach and dace.—J. H. HERBERT.

Isaac Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—The members will compete for three special prizes on Feb. 26 on any part of the Lea or Thames (private waters barred). There are also two "specials" to be fished for on Wednesday next.—C. H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since my last report we have had two shows of fish weighed in. Mr. Moody, jack from the Welsh Harp; Mr. Gilder, roach and perch from the Thames.—I hope members will try and attend next meeting night.—G. BENCE.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville, N.—On Feb. 19 the following showed some nice fish: W. Watling, A. Holmes, R. Watling, T. More, G. Johnson, C. Biggs, W. Bowdrey, J. Cook, W. Clark, and W. Bowley. On Feb. 26 next we fish our last match of the season at Sunbury, all to start by first train (7.50) on the morning from Waterloo Station, and return by the 8.10 from Sunbury at night. At our last meeting it was unanimously agreed that we forward 5s. to the River-Keepers' Dinner Fund.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—Only a few members took part in the competition on the 16th, and though the Dee had run down considerably, fish did not feed at all well. Unfortunately, the top weight, Mr. White, exceeded the time for weighing-in, and a protest was lodged against his catch being registered. This has been left to the committee, but it is really better for everyone to abide by the conditions. Mr. White had a nice lot of dace, and two trout (rather backward in condition), 1lb. Mr. J. Pennington takes second prize. The superintendent of the parks informs me that 800 perch and roach will be placed in Stanley Park Lake (No. 2) this (Wednesday) afternoon, and courteously invites my opinion. Angling very slow, bar ponds and canals, at present.—RD. WOOLFALL.

North-East Brothers' Angling Society, Star and Garter, Green-street.—Result of match on the 19th inst. in rotation: H. Collins, W. Richards, sen., E. Lamb, W. Smith, Auvache, J. Bedwell. Members may go where they choose for prizes left from last outing. Start Feb. 26, and fish from bank only.—A. LEWIS.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On the 19th inst. S. Orrow weighed in 5lb. 13oz. roach; G. Barra, jack; R. Brockett, roach; T. Javans, dace. Our Bohemian concert in aid of the A.B. fund will take place at the above on Feb. 28, Mr. S. Cole (Hoxton Brothers) in the chair. Ladies cordially invited.—J. BROCKETT.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—On Feb. 19 Mr. C. Widmer had a nice show of roach and perch; Mr. Davison, jack; Mr. Abbott, some fine roach; Mr. Beckett, roach. Mr. Isaacs had roach, but was too late to weigh in.—A. HILL.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Several of the members of the above were out on the 19th; the following had fish: Messrs. Thompson, Reitz, Carter, Coldwell, Tracy, Hopton, jun., Vylle, Lewis, Skeggs.—W. S.

Phoenix Angling Society, The Tavistock, Stibbing-ton-street, N.W.—On Feb. 19 we had a good show of roach by Messrs. Austin, Shaw, Carter, Carr, Reed, Sherlock, and Mares. The last two prizes of the season were taken by Messrs. Shaw and Carter.—R. C.

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Sumner-road, Peckham, S.E.—The return visit on the Central S.L.U.V. List comes to the above club on Tuesday next, Feb. 28. Mr. G. H. Shepherd, of the Bermondsey Brothers, will take the chair. Visitors from over the water would do well to get down at the Nelson, Old Kent-road, walk up Trafalgar-road and Sumner-road to Cator-street. Messrs. Stone and Childs won the prizes left over from last series.—GEO. ETHEINGTON.

Prince Albert Angling Society, Prince Albert Hotel, Woodfield-road, Harrow-road, W.—Members are requested to attend on Thursday next, which is our yearly night, for important business. Several of our members were out on Feb. 19, but only one, Mr. Derry, had any sport, he having a good show of roach.—W. B. F.

Queen's Angling Society, Latimer Arms, Walmer-road, Notting Hill, W.—Our return visit on Feb. 16 proved a great success. During the evening the following members of different clubs kindly assisted towards the harmony: Messrs. F. Steptoe, J. Hoad, Mew, Jones, Morgan, H. Hamilton, Adams, G. Love, H. Parker, G. Parebrother, J. Weeks, J. Jackson, G. Blades, H. Smith, Edgar Curren, J. Underwood, W. Kewell, &c. Our box was found to contain £1 13s. 6d.—C. DRAKE.

Queen's Piscatorials, Queen's Arms, 1A Chapel Street, Edgware Road, N.W.—On the 19th inst. the following weighed in: C. Brett, C. Shepherd, W. Brind, W. Shepherd, J. Winsby, and J. Taylor, a very good show of fish altogether. On the 12th March the club has its last outing of the season, an ordinary day's fishing; boundary from the Spade Oak Ferry at Burne End to the top ferry at Marlow, get out at either station, all fish to weigh.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—On Feb. 19 most of our members were out, and the following weighed in: Messrs. Webber, Pope, Holder, Davis, and Spielman. We take a visit on the Western Visiting List on March 9, and wish all clubs to take this as an invitation, as we can guarantee them an excellent evening's entertainment on that occasion. A general meeting is called for Wednesday, March 1, when I hope to see every member attend.—J. GIBBONS.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow.—On Feb. 19 the following weighed in: Messrs. G. Williams, dace and roach; Stanley, roach; F. Pignatelli, roach; J. Payne, perch; W. Tishaw, perch. We fish a roving match on March 5; all fish to weigh; three prizes; first train.—F. PIGNATELLI.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington.—We fished a roving match on the 19th inst. Mr. J. Lewis, first, with roach and perch; Mr. Beatlestone, second; Mr. Goodacre, third; Mr. W. E. Page, fourth. Messrs. Every, Sands, F. Page, J. Leighton, and E. Leighton also weighed in. A roving match for all eligible members for seven consolation prizes will take place on Feb. 26; gross in rotation.—H. ALLAN.

Second Surrey Angling Society, The Sun, Boniface-street, Westminster Bridge-road.—On the 26th we fish for a series of prizes at Datchet, from the bridge to the lock; tow-path only.—W. ANSTEV.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—On Feb. 26 outing at Hertford. Train leaves Liverpool-street 8.5 a.m., return 7 p.m.; all fish to weigh bar eels; two rods; three prizes. Messrs. Smith and Duckworth had a nice show of roach Feb. 19.—PELICAN.

South London United Anglers' Visiting List.—The next visit on the above list takes place on Tuesday next at the Peckham Brothers A.S., Windsor Castle, Cator-street, Peckham, when I should like to see a good muster.—ALF. PAINTER.

Stockwell Angling Socie'y, Old Queen's Head, Stockwell.—Two of our new members, Messrs. H. Payne, sen., and H. Payne, jun., had a nice lot of roach and dace from Hampton on Feb. 19, Payne the younger taking a 3lb. barbel, ledgering. At our last meeting, seven active and five hon. members were proposed, and will be elected next meeting night. I trust that brother anglers will turn up in force at Mr. Wade's lantern lecture, entitled "Fishing and Holiday Trips by S.E. Railway," on March 2. Our old friend Mr. Shepherd, Bermondsey Brothers, has promised to attend; it will be taken as a kindness by our members that they hope to reciprocate.—THOS. LUCAS.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—The members of the above club fished a match at Hatfield Peverel on the 19th. Mr. F. Bates was first, with a few roach; and J. Grand second, with roach, there being two prizes only taken. F. Humphres weighed roach and dace from other waters; J. Friend also weighed jack and tench.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On Feb. 19 Mr. Hall weighed in roach, dace, and gudgeon, 2lb. 4oz. Mr. Barber, Brompton A.S., visited us on meeting night, and invited our members to a smoking concert on Wednesday, March 8, when the private prizes won in the outing between the two clubs on Feb. 5 will be given to winners. I hope to see a good muster of Sundial members.—C. E. LOCK.

True Caledonian Angling Society, 23, Caledonian-road, N.—On Feb. 16 eleven of our members fished for some prizes at Bourne End. All the prizes were taken, Mr. Mills being first with 10lb. 6oz. of fish. Mr. Miller on Friday, the 17th inst., took twenty-six roach, weighing 20lb. Mr. Mills on Saturday last weighed in a roach of 1lb. 9oz. from the Lea.—THOS. F. WARD.

Twickenham Piscatorial Society.—At the weekly meeting on Tuesday evening last Dr. W. Marston Clarke, a descendant of one of the founders of the T.A.P.S., was unanimously elected as President of the Society. The meeting was presided over by Mr. Hibblethwaite, and two additional members were elected. The weighing-in of fish has not yet commenced, but the following members reported their results: Mr. O. Smith and Mr. Simons, one day, 12lb. of roach, some fine bream, and a brace of perch weighing 2½lb.; Mr. Barrow, on Thursday, nine fine roach; Mr. Simons, on Friday, nine nice bream; and Mr. Cross, some bream and perch.—J. M. BROUGHAM.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—Several members of the above were out on Feb. 19, Mr. C. Wilderspin, roach, and Mr. S. Drage, roach and dace. We fish a roving match on March 12 for several prizes.—H. TYLER.

Victoria Brothers Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—On Feb. 12 Mr. Bouffler, first prize. Feb. 19, Messrs. J. Toothill, second; W. Bond, third; F. Griffith, fourth; W. Toothill, fifth prizes. A very good show. I hope to see every member next Wednesday—important business.—W. H. B.

Waggoners' Angling Society, White Lion, Albert Embankment.—Since my last report the following have had fish: Feb. 12, Messrs. Clegg, roach; Allan, roach and dace; G. Clayton, dace. Feb. 19, Messrs. Allan, jack; Clegg, roach and dace. Our usual weekly meeting took

place on Tuesday last, with a good attendance. I hope to see a good muster on next Tuesday, when I have some important business to bring forward.—H. C.

Walham Green and Chelsea Angling Society. Black Bull, Fulham-road, S.W.—On Feb. 19 Mr. Glass weighed-in roach and perch, 4lb. 4oz.; Mr. Templeman, perch, 3lb. 5½oz., large 1lb. ½oz.; Mr. Dungate, barbel and perch, 2lb. 7½oz. I regret to report that our chairman is still very ill with rheumatics. Mr. Coombs brought his prize up to the clubroom—a splendid fly rod, to be fished for at our roving match on March 12.—W. H. BATCH.

Walton and Cotton Angling Association. Crown and Woolpack, 162, St. John-street-road, N.—We held our annual winter dinner at the Manchester Hotel, Aldersgate-street, on Feb. 16, at which fifty members and friends attended. Mr. U. B. Ladler, chairman; Mr. F. Symonds, vice-chair. The usual toasts were proposed, and heartily responded to. Mr. Isaac, replying for the Walton and Cotton, and Mr. John Crowley for the officers, congratulated the members on the flourishing state of the association, pointing with pardonable pride to its antiquity, claiming it to be the oldest in England. During the evening the company listened to some very excellent songs, music, and recitations from the following gentlemen: Messrs. Bateman, Clay, Komlosy, Allan, Milton, Davis, Bronghton, Musgrave, jun., Smith. We have had the following fish weighed-in during last week: Mr. Winter, twenty-seven roach, 16lb. 6oz.; other members, two roach 1lb. 8oz., one jack 3lb. 9oz., eight roach 2lb. 11oz., three jack 11lb. 3oz.—M. CUDDON.

Walworth Waltonians Angling Society. St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—Result of last competition: Mr. W. Sparrow first, with roach and bream; Mr. W. L. Griffin, second, with roach. Only Mr. C. Pearson weighed-in, taking first prize. The lapsed prizes will be fished for on Feb. 26. Open (bank or punt).—W. WRAY.

West Green Angling Society. Black Boy Hotel, West Green, Tottenham.—Mr. James Taylor (Red Palmer), president of the Junior Fly Fishers', and ex-secretary of the Gresham, will on March 8, at 8.30 prompt, favour us with a reading on "Rain and Rivers." All clubs fishing the Lea are invited to send representatives.—ALFRED G. HILL.

Westminster Angling Society. The Telegraph, Regency-street, S.W.—On Feb. 19 Mr. A. Beck weighed-in barbel, roach, and dace. The February match will be fished on Feb. 26, from Molesey Bridge to the intake at Hnrst Park. Leave Vauxhall 8.20; return from Hampton Court, 7.20. Two rods; all fish to weigh except jack; all fish to be shown at station.—S. M.

White Hart Angling Society. The Volunteer, Chesnut-road, Tottenham.—On Feb. 19 the following weighed-in: S. Claridge, perch (heaviest fish, 1lb. 3½oz.); A. Langton, jack and dace; W. E. Beaumont, roach (heaviest fish, 16½oz.); Bastock, roach; W. Butler, roach and perch; H. Walton, roach and jack.—W. E. BEAUMONT.

Wimbledon Piscatorial Society. 28, Alexandra-road.—Mr. H. A. Rolt had a splendid show of roach and chub on Tuesday, the heaviest roach weighing 1lb. 3½oz. Mr. Bovie reported the capture of several good Thames perch and a 3lb. bream. The usual fortnightly outing comes off on the 26th inst. on club water, and members are reminded that the final competition for the silver challenge cup has been fixed for March 12 at Weybridge. There will be a "high tea" after the match, at the Mitre, at 7 p.m.—S. PESKETT.

Ye Olde Clapham Rovers' Angling Club. The Windmill, Clapham Park-road.—Several of our members were out on Feb. 19, Mr. Mrs. Gloster and Piper with dace. Our next prize outing will take place at Amberley on Feb. 26; three prizes; 6.55 train, London Bridge; all members are requested to attend club next Tuesday to arrange for the last prize outing this season.—N. LINDEN.

KINGSTON PISCATORIAL SOCIETY.

A MEETING of this society was held at the Sun Hotel, Kingston, on Monday, Mr. Arthur presiding, and there being a large attendance of members. Mr. Brough, of Clarence-street, Kingston, was elected a member, and Mr. R. Salt was proposed as a member. It was arranged that the club competition for Feb. 26th and 27th should be confined to the Thames. About thirty members gave in their names for the annual dinner on March 20. It was also decided to invite representatives of the *Fishing Gazette* and the *Angler*. A vote of thanks to Mr. A. E. Hobbs and Dr. Brownfield Bateman for the prizes they had given the society was carried unanimously, as was a vote of sympathy with Mr. and Mrs. Richardson in their recent illness. A roach competition will be held on the Thames on March 5th and 6th.

MONSTERS OF THE PAST.

THE *lias* is an English provincial name given to an argillaceous limestone, which, with marl and clay, forms the base of the Jurassic formation. *Zoophytes*, mollusca, and fishes of a peculiar organisation, and reptiles of an extraordinary size and structure are found in the *lias* clay. Cuvier exclaimed, when the drawings of the *Plesiosaurus* were sent him, "Truly, this is altogether the most monstrous animal that has yet been dug out of the ruins of a former world!" The *Plesiosaurus* belongs, as its name indicates, to the lizard family. A description of this animal reads as follows: "The *Plesiosaurus* was a marine, air-breathing, carnivorous reptile, combining the characters of the head of a lizard, the teeth of a crocodile, a neck of excessive length, resembling that of a swan, the ribs of a chameleon, a body of moderate size, a very short tail, and, finally, four paddles, like those of a whale. Its enormous long neck comprises a greater number of

vertebrae than the neck of either the camel, the giraffe, or even the swan. The body is cylindrical and rounded, like that of the great marine turtles. It was, doubtless, naked—i.e., not protected with the scales or carapace with which some authors have invested it, for no traces of such coverings have been found near any of the skeletons which have been hitherto discovered."

In England, in the quarries of Lyme Regis, have been found numerous remains of the *Ichthyosaurus*, another marine monster of ancient times. We are told that "in 1811 a country girl, who made her precarious living by picking up fossils, for which the neighbourhood was famous, was pursuing her avocation, hammer in hand, when she perceived some bones projecting a little out of the cliff." These bones, when they were carefully excavated, proved to be those of "a monster some 30ft. long, with jaws nearly a fathom in length, and huge saucer eyes, which have since been found so perfect that the petrified lenses have been split off and used as magnifiers." This was the complete skeleton of an *Ichthyosaurus*. These dragons of the sea had jaws 8ft. in length, and 160 teeth. Whenever a tooth was lost in the monster's head by contests with other animals, or in any other manner, Nature soon replaced it; for at the inner side of the base of every old tooth there is the bony germ of a new one. The eyes of this monster were larger than those of any animal now living, their size frequently exceeding that of the human head, and were an optical apparatus of wonderful power and singular perfection, capable of performing the office of microscope and telescope at pleasure. Its food was fish and smaller individuals of its own race, which it swallowed without masticating. It was essentially voracious and destructive.

The *Pterodactyl* was a still more wonderful creature of this period. In size and general form, and in the character of its wings, this genus resembled our modern bat and vampires, but it had a beak elongated like the bill of a woodcock, and armed with teeth like the snout of a crocodile; its vertebrae, ribs, pelvis, legs, and feet resembled those of a lizard, while it was partly covered with naked skin. "It was, in short," says a writer, "a monster resembling nothing that has ever been heard of upon earth except the dragons of romance and heraldry. With flocks of such-like creatures flying in the air, and shoals of *Ichthyosauri* and *Plesiosauri* swarming in the ocean, and gigantic crocodiles and tortoises crawling on the shores of primeval lakes and rivers—air, sea, and land must have been strangely tenanted in these early periods of our infant world."

The vegetation of the Jurassic period was peculiarly rich and abundant. The tree ferns of the carboniferous period had lost their enormous dimensions, but were still beautiful in form. The *Cycads* now appeared for the first time, and seem to be forerunners of the palms, which appeared in the next epoch. In the next, or Oolitic sub-period, mammals began to make frequent appearances. Hitherto, they had been limited to a single species. These early mammals exhibited the peculiar characteristic of the kangaroo and the opossum, in that the young were transferred in a half-developed state to an external pouch upon the abdomen of the mother, and there remained until they became perfected. During the Oolitic period bees, butterflies, and dragon-flies appear on the earth for the first time. The *Ceteosaurus*, the bones of which have been discovered in England, was a species of crocodile, and probably the largest creature that ever walked upon the earth. We are told by a modern writer that "a full-grown *Ceteosaurus* must have been at least 50ft. long, 10ft. high, and of proportionate bulk. In its habits it was probably a marsh-loving or river-side animal," and was not apparently carnivorous, which was certainly a great blessing to the smaller animals with which it was surrounded. The *Ramphorynchus* was a creature similar to the *Pterodactyl*, already described, except that it had a very long tail. The *Teleosaurus* was another formidable-looking reptile, about 30ft. in length, resembling a crocodile, and coated with a cuirass both on the back and belly. Corals appear in great abundance during this epoch. In the last formation of the Jurassic period we notice the first bird—the remains of a bird, with feet and feathers, having been discovered, but without a head.—*The Argosy*.

THE BOTTLE AND THE MESSAGE.

A FORM of ocean drift of special human interest is the bottle bearing its message from the shipwrecked, or about-to-be shipwrecked mariner. And of these, perhaps, the most remarkable is that which told of the burning of the *Kent* in mid-ocean. The ship was on fire, the end was approaching, there seemed no hope of rescue. An officer on board wrote a message to this effect and committed it to the sea in a bottle. Some months afterward the bottle was picked up near the shore by a fisherman, and the message it contained was sent to the very man who wrote it. He had been rescued at the last moment, and soon after received promotion in India.

But the bottle thrown overboard has also been used in the scientific study of ocean currents. Many such bottles have had remarkable voyages, and greatly increased our knowledge of the movements of the ocean. Sir James Ross, in his famous Antarctic voyage, threw overboard a number of bottles in latitude 51 degrees south to learn something of the great currents which run in that little known region in an easterly direction all round the globe. One of these bottles actually traversed the greater part of the earth's circumference, having come ashore off Cape Liptrap, in South Australia.—*Gentleman's Magazine*.

THE creatures known as ocean hydræ have no heart, no lungs, no liver, no brains, no nervous system; no organs save mouth and skin.

THE FLY FISHERS' CLUB.

At the adjourned annual general meeting of the Fly Fishers' Club, held on Thursday evening last, Mr. C. H. Cook ("John Bickerdike") was unanimously elected president for the year 1899-1900. A very hearty vote of thanks was given to Mr. Wm. Senior, the out-going president of the club, for his services during his year of office. A resolution was passed approving of the proposed experiment of stocking the Thames with salmon, which is to be made by the Thames Salmon Association, and a sum of 10 guineas for the fund being raised for the experiment was subscribed by individual members of the club.

Stoffings by the Way.

Too late for insertion last week came an account of the annual dinner of the Southampton Piscatorial Society from the hon. sec., Mr. D. K. Bridger: "Close on seventy sat down to a good menu, well served, and thoroughly enjoyed. After dinner the usual toasts were gone through, interspersed with music and songs, under the guidance of the chairman, Mr. J. Russell, in the unavoidable absence of the Mayor. A novelty was introduced by Mr. C. McPherson, who gave a bagpipe selection. The room was tastefully decorated by Mr. Davies and the afore-said Mac with fish (stuffed) in cases and (alive) in globes, rods, nets, &c. The proceedings closed at twelve o'clock with the National Anthem. Mr. W. Newman (of 'Ours') caught a 24lb. pike in the Itchen on Saturday on snaptackle and a small roach. Female fish; length, 44in.; width, 21½in." I note that on the menu there was a novelty (for an angler's dinner)—"Ananias pudding!" Wish I could have tasted it. Mine are all "Washingtons!"

MR. SAM THOMPSON, writing from Derby, says: "On Monday last, whilst pike fishing in the Black Pool at Weston-on-Trent, I took, amongst others, a grand female pike that scaled, when caught, 20½lb.; length, 3ft. 3½in.; girth, 23½in."

"A BIG pike," says Mr. R. Fortune, of Harrogate, "was sold by auction here last week, and it may not be uninteresting to record particulars. The fish is well cased and stuffed, and in excellent preservation. A label inside the case informs the curious that the fish was 'caught by Mr. C. Curtis in the West India Docks on Sept. 26, 1850, weight 20lb.' The fish measures 40in. in length. In one of the top corners of the case is fastened a small gorge hook, with which I presume the fish was captured. The hook seems to be fastened to fine wire, but this is corroded, so that it makes it difficult to determine without taking the front glass out."

THE first three volumes of Messrs. Dent's Haddon Library, which is under the editorship of the Marquis of Granby and Mr. George A. B. Dewar, will be (1) Sir Edward Grey's book on angling, (2) Dean Hole's on gardening, (3) Mr. Dewar's on wild life and sport in Hampshire. Sir Edward Grey's book is expected in March. The edition de luxe will be limited to 150 copies.

TRUTHFUL TOMMY writes: "Dear 'Drag,'—You will be sorry to hear that distinct coolness has arisen between the worthy chairman and the equally worthy hon. sec. of the United Cock Robin Brothers' Angling Club, which, as all the world knows, is held at the Frog and Frying Pan, Trotter-street, Q.C. The chairman is a self-made man, all honour to him, and lacking, through no fault of his own, the inestimable benefits of education, has a habit of pronouncing the Queen's English in a manner which is not usually accepted in circles ironically called 'polite.' At the recent annual dinner of the club it fell to the chairman's lot to carve a very fine boiled leg of mutton. Poising his carving knife and fork aloft, he looked round the table at the assembled guests, and inquired in persuasive tones, 'Does any gentleman say mutting?' The hon. sec., who is a bit of a wag, promptly replied, 'No; no gentleman says mutting.' There was a sarcastic emphasis on the two words in italics which roused the presidential ire. *Hinc illæ lachrymæ!*

If you want to get your tongue in a "kink" try this:—

"There was a young fellow named Tate,
Who dined with his girl at 8.8;
But I cannot relate
What that fellow called Tate,
And his tête-à-tête ate at 8.8."

A CORRESPONDENT sends the following: "A most singular event in pig breeding took place on Monday afternoon at Paddock Wood Farm, belonging to Mr. William Harris, of West Smithfield, when a sow of the Tamworth breed gave birth to nine little ones, amongst which was one with two perfect heads on what appeared to be one perfect body. This strange and doubtless unique freak of nature did not live long, and when dissected two entire sets of ribs were found growing together. The carcass, it is understood, is to be preserved by Mr. Harris."

A "COUNTRYMAN IN LONDON" writes to inform me that having a spare evening at his disposal, he is anxious to read a paper before some angling society. But before doing so, I should advise him to insure his life, make his will (remember me in it), and face the audience not only with a mailed fist, but a coat of mail and trousers to match. His paper will be headed: "On the extraordinary elongation and expansion of the truth as developed in the tale—not tail—of an angler, with suggestions as to the best method of treatment." The only perfect cure is to cut it short, and perhaps this treatment might cure my correspondent of reading papers.

He is also willing to give a lecture before the members of some learned society. The lecture will be "On the unusually unequal distribution of bald heads, red noses, and common sense amongst the inhabitants of the county of Middlesex in general, and the city and suburbs of London in particular, and the best remedy." I should advise him to borrow a balloon to study the subject properly, and then deliver his lecture before the Balloon Society, unless he gets lost up in a balloon. More ambitious or daring still, he would engage Exeter Hall, and lecture there "On the immortality of our ancestors, and the best method to convince them of the error of their ways." I should advise him not to do so at present, but if he really wishes to be "run in," he might attempt to deliver his lecture at one of the May meetings.

It was at a "club" which is not a hundred miles from Fetter-lane that two or three well-known anglers were discussing the prospects of sport, the state of the rivers—and other things. In the court outside a gentleman, evidently of foreign extraction, was performing a fantasia on one of those ear-splitting, nerve-torturing abominations called a piano-organ. A gorgeously attired female, dressed in the Roman fashion, with all the wealth of colour in her head-dress beloved of Italian women, entered the room. Approaching the group she held out her tambourine. "Un penny pliz, signor, por una povr' Italiana," she pleaded. "Good old Whitechapel!" was the not altogether polite comment of one of the anglers. "Right you are, gov'nor, you've guessed it in once; now give us a brown," was the astounding reply, but the reflections caused by this incident are not altogether comforting. These people have been sharp enough to find out that we English will give money to them if they masquerade as foreigners, while if they approach us as our fellow subjects they have to go without. The girl's smart reply in this instance caused much laughter, and a rich vein of copper rewarded her ready answer.

MR. G. ETHERINGTON, hon. sec. of the Peckham Brothers A.S., announces that a visit on the Central and S.L.U.V. Lists will take place on Tuesday, Feb. 28, at the Windsor Castle, Cator-street, Sumner-road, Peckham. Some talented artists will appear, and he hopes to see a good monster. Wal Gray will be the pianist. [Sorry I cannot attend, George; perhaps next time.]

MR. JAMES GIBSON, 81, Michael's-grove, Bolton-le-Sands, Lancashire, writes on Feb. 13: "Perhaps it might interest you to know that spinning in the backwater of the Lune on Wednesday (Feb. 8), above Lancaster, I ran and landed nineteen pike in four bours with Bartleet and Sons' Abbey Mills Spinner and preserved sprats. My success with this spinner since I exclusively adopted it prompts this testimonial to its merits."

MR. A. E. HOBBS, the honorary secretary of the Henley-on-Thames and District Fishery Preservation Society, sends us a copy of the table of fish placed in the Thames by that society from 1883 up to the present time. Altogether they have put nearly 200,000 fish and ova in, including 725 two-year-old Loch Leven, 700 one-year-old Loch Leven, 11,000 Loch Leven fry, 140,000 Loch Leven ova, 2276 two-year-old *Salmo fario*, 1750 one-year-old *Salmo fario*, 28 722 *Salmo fario* ova, 527 trout of various weights and kinds, 10,000 grayling fry, 210 bream (some of large size), 400 carp, 400 tench, and 300 roach, perch, and tench. The society is doing a good work, and is worthy of support. It may be well to mention that no inconsiderable portion of the funds is devoted to preservation, which is, without doubt, as useful and necessary as restocking.

Mrs. PAULA, the plucky reptile conqueror, who gives a sensational performance at the Royal Aquarium, having lost one of her alligators through pleurisy, procured a huge Zambesi one from the Zoological Gardens on Wednesday, and performed with it the same day. The Yachting Exhibition finishes on Thursday next, and will be succeeded by the eighth annual Fisheries Exhibition on the 8th proximo.

MR. F. H. AMPHLETT, of the Kingston Piscatorial Society, announces that the club competition on Feb. 26 and 27 is confined to the Thames. Also that the annual dinner will be held at the Sun Hotel on Monday, March 20. Tickets 5s. each.

"THE pollution of rivers," says the *Morning Post*, "is attracting a considerable amount of attention at the present time, and as a Rivers Pollution Prevention Bill is among the measures which will be brought forward during the present session of Parliament, there is some prospect of improvement in the near future. This question of pollution has often been referred to as being the most prolific cause of the deterioration of salmon rivers. It would probably be impossible entirely to depopulate a

river by the nets alone, however persistently they were employed, but the waste products from a single factory may suffice to render it uninhabitable for salmon. Neither does the evil end here. Health must suffer from such flagrant neglect of sanitary precautions, for in certain districts many people are accustomed to obtain their water supply from the rivers."

CURIOUS coincidences come about occasionally, even in the angling world. Displayed in the current number of the *Fishing Gazette*, says Mr. Carter Platts in the *Yorkshire Weekly Post*, in the advertisement of J. E. Miller, Station-street, Leeds, is a very clever fanciful drawing of a pike by Harry B. Neilson, of which the accompanying is a

sketch. Whether the drawing is quite new or not I do not know. Certainly it has never come under my eyes before, and yet here are my very words in describing it in the *Fishing Gazette* five years ago. After alluding to certain traits in the pike's character, which seem to fit him in some respects for a p'leecaman, I go on—

"But looking at the jack in this fanciful way he doesn't seem very consistent. His character shows too many phases. There appears to be too much of the 'all things to all men' business about it. The professional house-breaker is the very antithesis to the guardian of the law, and yet in the pike the two are to some extent combined. The overshot underjaw, the low forehead, and the savage gleam of the close-set eyes, all indicate the coarse brutality of a Bill Sikes. The policy of his daily life, too, is identical with that of the vulgar crib-cracker. Whatever he can lay his teeth on is his."

And then I go on, introducing this hasty sketch—

"KNOCKED 'EM IN THE OLD KENT ROAD!"

"While on this question of physiognomy there is another thing I should like to point out. I have noticed occasionally—oftenest in old pike—in the features of *Esoc lucius* a sort of raffish, roty grin. It is difficult to sketch the exact expression from memory, and I am afraid I have not succeeded very well; but I daresay you will remember having noticed it now that I mention it. It gives the wearer of it a certain "ikey" look—the air of a "chickaleary bloke" from the purlieus of Whitechapel or the Old Kent-road. All I can do is to offer my sincere apologies to Mr. Neilson for having unwittingly stolen the idea of his clever drawing some years before seeing it."

A CONSIDERABLE sensation, says the *Westminster Gazette*, has been excited in the Deeside district of Aberdeenshire by a report, which is generally believed to be correct, that the Queen has given up the seven miles of salmon fishing along the right bank of the Dee, from Invercauld Bridge down to Balmoral Bridge, which she has leased from the Earquhasons of Invercauld for more than forty years. The left bank belongs to the Balmoral estate, but the Queen wished to have both sides in her own hands. Her Majesty, however, has no idea of wasting money, and it is said that she positively declined the proposals of the managers of the Invercauld estate for a new lease, the objection being to a clause by which the rent was to be advanced from £900 a year to £1500, which

certainly appears to be a big rise. The Queen does not really require the Invercauld water, as the Balmoral and Abergeldie stretches extend for fourteen miles along the left bank, and the Duke of York is now the only member of the Royal Family who cares for salmon fishing.

"PERPLEXED" says the fish in his aquarium are dying off, and he does not know the cause. He has been feeding them on bread! There are close on a hundred fish in my little aquarium—carp, tench, roach, dace, minnows, gudgeon, and gold fish. The grand secret is to have running water; a small fountain is sufficient to keep fish healthy. Then, for food, we give them a change, such as gentles, chopped beef, small red worms, ants' eggs, and Thomas Ford's meat food. For one shilling, Mr. Ford, of Caistor, Lincs., will send enough food to last six months. The only objection I have to this fattening fodder is that it deposits a kind of greasy substance on the glass tank. Feed the fish regularly—say ten o'clock every night. Feed them sparingly, that is, do not give them all they can eat. Keep a plant or two growing. Gee, of 19, St. Andrew-street, St. Martin's-lane, London, keeps some fine "soldier plants"—and—there you are.

I HEAR that Mr. F. H. Amphlett, the hon. sec. of the K.P.S., has caught a roach of 1lb. 15oz. at Thames Ditton. This is, I believe, the largest roach taken in this district for some considerable time.

MR. HARRY N. CAMPBELL, of big pike fame, was fishing recently in a private pond with a friend, and in a few hours landed fourteen pike. The largest was only 10½lb., but they were all good fish.

MOST anglers are born bald, and other die so. A good remedy for that complaint would be much appreciated. Baldness breaks out in two forms—outwardly and inwardly. For outward baldness a new remedy has been discovered, and which is thus described: "A certain M. Menahem Hodara has communicated to the Constantinople Medical Society a new remedy for baldness. After much study and many experiments he has evolved the following process: He bores a hole in the scalp and inserts a hair, which sometimes takes root and grows. The worst of the system is that M. Hodara has to dig a hole for every hair that he plants." It is worthy of trial, and if the roots of the hair were watered with "Tatcho" they would be more likely to flourish. Hairs for this purpose may be very easily obtained from the head of any friend who has a good crop of hair and a hasty tempered wife. Tell him in her presence of some escapade he was the hero of, and a very pretty barmaid the heroine. In a marvellously short time she will extract from his head more than the quantity of hair you require. Inward baldness is much more difficult to cure, or perhaps the remedy employed by "Truthful Tommy," viz., drinking "Tatcho," might be of service. It must be an inward application, frequently applied. Dnnrrippe whisky might be given a trial, but not in too large doses, as it is apt to increase the complaint which is generally to be found in people with flourishing heads of hair.

A LITTLE brook, some twine, a hook,
A hazel stick for rod:
The bait some worms which Teddy turns
From underneath a sod,
And Neddy, lank, upon the bank
Sits waiting for the fishes.
While Teddy sees, in dreamful ease,
'Em smoking on the dishes.

Two brothers they nigh every day
Come trespassing a-fishing,
And once or twice from Farmer Joyce
Have "caught" a decent "swishing."

Joyce twigs 'em now, and wonders how
Their little game to finish;
He doesn't like to see his pike,
Etcetera, diminish.

So calls his dog, and off doth jog,
With business in his noddle;
His whip he takes—in brace of shakes
He to the brook doth toddle.

Ned's got a bite—oh what delight!
But Towzer he has got 'em!
Poor Ted and Ned limped home to bed
With breeches minus bottom.

SEA SHELLS are not very attractive looking objects when first picked up. They are dull, rough, and the exterior is usually of a uniform tint. The exquisite prismatic colours seen in the shells that are sold for decorative purposes are brought out by applying hydrochloric acid with a small mop. The work is easily carried out, and when the collector has once learned the process, he will find shell cleaning and polishing one of the most charming hobbies imaginable.

A SHORT time since I was riding down Oxford-street on an omnibus, and in front of us was a Great Western goods-van, laden with fish-boxes from Billingsgate, which gave forth anything but a pleasant odour. After several unsuccessful attempts to pass the van by the driver of the 'bus (the street was crowded with traffic at the time), the conductor appeared on the top with this exclamation: "Oi say, Bul, keep behind her as long as yer can. It makes me think I am having a week at Yarmouth!"

DRAGNET

Notes from the North.

THOSE anglers who have not yet put in an appearance at their spring angling quarters should lose no time now in doing so if they are within hail. The prospects have seldom been brighter, for the early months at least, during the past decade.

Every day last week sport was rife on every beat of the Dee, from the lower reaches at Culter and Kingcaussie right along the valley to the royal waters at Balmoral—a stretch of some sixty miles. The thick of the fish, however, are in the lower waters, which is all the better for months to come.

The Ythau and Ugie open to-day (Saturday), and the prospects on the tidal reaches are reported to be exceedingly gratifying.

Several important improvements are being carried out in the Ugie by those interested, among which may be mentioned the stocking of the river with some 10,000 sea trout ova, which was obtained from the Howietoun hatcheries last fall. Mr. Andrew Murray, advocate, the king of sea trout anglers, and a sportsman of the first water, has been working vigorously at the improvements for some time back.

The best fish yet got on the Dee was a beauty of 25lb., away up in the Glentana waters. Mr. Merry creelied it on the opening day, and almost at the first cast. Duncan, on the Elchies Spey water, had one of 24lb.; and Mr. Kemp one of 23lb. on the Aboyne Dee waters. These are the best fish up to date.

The favourite flies, and nothing is being accepted by the fish but the fly, are the Gordon, Akroyd, and Black Doctor, or kindred combinations. They are dressed on 2½in., 2½in., 3in., and up to 3½in. irons—mostly the larger sizes. Long may the fly reign.

The Nairn is yielding good results, although the opening was spoiled by the universal flood. A friend writes: "The prospects of the season are very good—better than for years back."

That was a lucky hole on the Lower Durris Dee water, where eleven clean fish were pulled out on Tuesday last week, six on Wednesday, and seven on Thursday—twenty-four in three days, all from one spot, averaging 8lb. each. Had this appeared in a sporting article, or been told at an anglers' dinner, it would have been deemed worthy of the kettle by some sceptic. Yet it's a fact, kettle or no kettle.

The Spey pollution case has advanced into the practical stage. An engineer or scientist of approved competency has to be agreed upon by the two parties concerned. Should they fail within a reasonable time, Lord Kyllachie will make the appointment himself. The party selected will have to examine the remedial works executed by the defender and report.

Mr. Smith, Fenghside Inn, Banchoy, N.B., writes: "Good sport is being had all over. Fish plump and good; average weights. I have let the second week in May, and am on the eve of letting the remainder of the month. June and July still open." It's a far cry to the month of June; but if I was asked to name one spot where an angling holiday may be had with a certainty of sport, if sport is a-going anywhere, being enjoyed, and comfortable quarters to boot at the minimum of reasonable cost, I would say Fenghside.

Sixty fish were killed on the Kincaidine O'Neil beats, including the Dess, Lodge, Borrowstone, Snie, Carlogie, Ballogie, and Commonty waters, and covering only about three miles of the river. It has been the best opening week for twenty years, and many of the pools were not got at till Wednesday and Thursday after the opening.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The monthly meeting of the committee of the Birmingham Anglers' Benevolent Society was held at the headquarters on Thursday evening last, Feb. 16. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The meeting was well attended. The minutes of the previous meeting were read and confirmed, after which the secretary reported the death of a member of the Bell-barn Society, and the claim of £4 10s. had been paid out to the deceased member's relatives. The secretary also reported that the profit on the late *soirée* amounted to close upon £8. The whole of the committee were appointed to the four divisions, and the four chairmen were elected by them. It was also resolved to visit all the new societies affiliated with the Birmingham Association as early as possible. With this in view it was decided to visit the Canadian, Seymour, and St. John's clubs prior to the next committee meeting. A number of new members have lately been enrolled, and the present committee intend doing all in their power to augment the present number of members. The T.P.A. Society, I believe, have some forty members to be enrolled. Other clubs are also increasing their membership on the A.B.S. New clubs are being formed in all parts of the city of Birmingham, and all making application to the general

secretary for the necessary information with a view of joining the association. Visits are being paid by the members of the visiting committee, and reports will be presented on March 2 next. New clubs are being formed at the King's Head, Brearley-street, and at the White Hart, Warstone-lane. These will make six new clubs that have been formed this year, and will mean an addition of 240 members to the Birmingham and Provincial Angling Associations. Several new clubs outside Birmingham have applied for information to join the Provincial Angling Association, the chief amongst which are the Nene Association at Northampton and the Dart Association at Totnes, Devon. The new Bloxwick Association will be visited this day (Saturday) by Mr. T. Coles, the president of the association. In due course a number of new stations will be asked for for Banbury, Liverpool, and Warrington, independent of the privileges for the new associations. The Aston Britannia Society have decided to re-stock the Longmore pool, Sutton Park, which is rented by the society, and 1500 large roach, all over 6in. in length, and some up to 1lb. each, have been purchased by the society. The pool is very much patronised by the society, as it is only some five miles from the clubhouse, and easy to get at. No fishing will be allowed on the water until the 16th of June next. A large number of new members will, no doubt, join the society for the purpose of fishing this splendid sheet of water, which contains all kinds of coarse fish. Several of our clubs are making arrangements to fish contests prior to the close season coming in. The Lamp Society, which numbers some 200 members, have arranged to fish a contest in the canal at Rugely on March 12th next, no fish under 6in. to be weighed-in; and the Mermaid Society have arranged to fish a contest at Bidford in the river Avon on March 6th next, when prizes to the value of £7 will be competed for. No fish under 2oz. to be weighed-in. The Queen's Head Club concert in aid of their prize fund, was a great success, as over 350 tickets were sold. No doubt it will be fresh in the memories of the readers of the *Fishing Gazette* that a member of the Shrewsbury Angling Association was summoned last November for fishing in their portion of the river Severn for coarse fish without one of their special 5s. licences; the case was tried at Shrewsbury before a full bench of magistrates and dismissed. A case has now been made out for the Court of Queen's Bench, and will be tried on Monday next in London. We are having a change in the weather, as it has been bright and sunny during mid-day, with frosts at night; if this will only continue we shall have a chance of having some decent sport before the close time comes in.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

It is a long time since winter anglers had such a good time of it as they have had during the present winter, with the exception of an occasional flood there has scarcely been any interruption to sport. The waters just now are in excellent condition, and fishermen are taking every advantage of the present fine weather. Although roach fishing is proving very remunerative on most waters, pike are claiming by far the greater share of attention, and since Saturday the trolling rod has accounted for some heavy baskets. The middle reaches of the Witham, and the lengths between Kirkstead and Boston have furnished remarkably good sport, and individual rods have captured as many as five brace in a single day. Forty-foot subscribers are also having a successful time of it. This week bags of pike weighing 27lb. (three and a half brace), 23lb. (three brace), and 19½lb. (two and a half brace), have been reported on the middle reaches, in addition to several nice dishes of roach. At the time of writing (Feb. 21) the weather was very settled, and there was every prospect of a continuation of the present successful sport.

FROM HULL AND DISTRICT.

We are still experiencing splendid weather for the time of the year in this district, causing angling to be a very pleasurable occupation; and as there is only about three weeks before the fence time commences, our local roach fishers are making the best use of their time. But all our local waters are more or less flooded and out of condition for successful operations, yet several good specimen fish have been taken in the top stretches of the river Hull, and odd fish of fair size have been met with in the tidal waters below Hempholme, and even as low down as Dunswell. On Monday last Mr. J. Chessman secured a nice roach that scaled 1lb. 3½oz. But the best fish recorded for the past week or so was from the neighbourhood of Brigham; it turned the scale at 1lb. 5½oz., and was caught by Mr. A. Marshall, a member of the Victoria Angling Society, which society will hold the first big event this season on the river, viz., an open angling match, which will take place at Dunswell on April 29, although a few smaller events will take place even earlier than that, for on the 26th inst. the Osborne Angling Association fish a sweepstakes at Hull Bridge; and on March 2 the Holderness A.A. will open their season at Wansford, near Driffield, the members leaving the Paragon Station at 1.10 p.m.; whilst on March 4 the Brunswick A.S. will fish their first match at Snakeholme. The committee of the Hull Amalgamated Anglers' Association were appointed to net the Stoneferry reservoirs succeeded in transferring several thousand small roach into the river at that place, also a few nice sized perch, but not the quantity of this species as had been anticipated; nevertheless it is a step in the right direction, and they should have the thanks of the Hull anglers for their persevering endeavours to benefit the river. The Yorkshire Fishery Board are again giving our local anglers some return for the outlay of the shilling trout licence. They have granted 500 yearling trout each to the Hull Angling and Preservation Society and the Driffield Hearts of Oak A.S. to be turned into the river at the different districts, so that our local river should soon become as noted for trout as it is

for large roach; at all events, their endeavours should encourage our local anglers to take out the licence without so much grumbling. A large company of about 150 anglers assembled together at the White Horse Hotel, in Carr-lane, on Tuesday evening (Feb. 14), to celebrate the second anniversary of the Central Hull Angling Society; the president, Mr. George Dixon, occupied the chair, and during the evening Mr. Fred Phillippson was presented with the society's gold medal for most points during the past season; and Mr. J. Woodhall, of the Navigation Angling Society, was also presented with that society's gold medal for the past season, but the most interesting part of the programme was the presenting of the annual prizes given by the proprietors of *Hull News* for specimen fish caught in the river Hull during the season of 1898. Mr. R. H. Barlow, of the North Myton A.S., was the recipient of a valuable marble timepiece for most points; and Mr. Mark Darby, of the same society, also a timepiece for the best sample of specimen fish, amongst which were dace up to 10½oz.; bream, 2lb. 2½oz.; chub, 2lb. 8½oz.; roach, 1lb. 10½oz.; and perch, 12½oz. Several other presentations were made, and the secretary's balance-sheet showed a balance of over £11 in hand to commence the season with. The proceedings were much enlivened at intervals with some first-class vocal and instrumental music.

FROM THE LAKE DISTRICT.

Trout fishing has commenced on two or three rivers in this district, which are presumably earlier than others in the same localities, and the opening of the season may thus far be pronounced satisfactory. There was a fair turn out of rods on the first day, and subsequently on the Petterell, Caldew, Bela, &c. On the 15th inst., on the first-named stream, trout were seen in large numbers, but they obstinately refused to look at a fly until about two o'clock in the afternoon. Then they began to feed, and for about two hours sport was very good. Mr. Steele in that time secured 6lb. of trout, and five other rods had ten, twelve, fourteen, eighteen, and nineteen fish respectively, all with fly. Worm has been the favourite lure on the upper portion of the Bela, and has proved fairly effective. Amongst local anglers, Messrs. G. Bland, Thompson, Jackson, and others have had from half a dozen trout upwards. The Kendal Angling Association on Wednesday placed a further consignment of 1000 yearling trout at various parts of the river Kent, in the neighbourhood of Kendal. The fish were obtained from the Wyresdale Hatchery, and all were found to be alive and in good condition upon arrival. The Kent Angling Association will hold their annual meeting on Tuesday next, at Kendal, and a quarterly meeting of conservators is fixed for the following Thursday.

FROM LANCASHIRE.

The Moss Side Socials have been noted for a very important meeting on the 27th at their new headquarters, the Alexandra Hotel, and the secretary urgently desires a good muster. Five of their members fishing a Cheshire mere last week-end met with fair sport, Mr. J. Lund secured two nice pike, 6lb. each, and Messrs. W. Taylor, John Fisher, D. Lattimer, and W. A. Leigh each obtained fair baskets. The County Palatine Angling Association have added two more clubs to their strength, viz., the Gorton Angling Society and the Brothers' Well Met Angling Society, Heaton Norris. Evidently this association is gaining in popularity, for each week recruits are being added to the roll-call. The premier association at Warrington is also progressing, and rapidly consolidating the fishermen of the district. Mr. S. Hall, Manchester, has kindly consented to officiate as referee in the Seventh Annual Shield Competition, promoted by the Worsley Canal Fishery. This year the competition will be on slightly different lines, as clubs can send one or more teams, a concession granted in response to urgent pressure made by several well wishers of the fishery. This concession will enable more season ticket holders to participate, and obviate the heartburnings of previous seasons. Arrangements are being made for organising plenty of fishing matches at Leigh and Astley. At both places events are arranged—two at each. At the former place Mr. Dawson is the moving spirit, and at the latter Messrs. Unsworth. There will be in each case a match and a sweepstakes. The annual dinner of the St. Helen's Association was held recently, and the report says it is a record in every way. The viands were excellent, the harmony far above the average, the report very acceptable, and the balance-sheet satisfactory; in fact, the best they have had so far. These results are only what was to be expected from such a body of men and such an enthusiastic and capable executive. Success always follows the efforts of such officials.

FROM MANCHESTER.

A very important and interesting discussion took place at the Grand Hotel on the 21st, when the members of the Manchester Anglers' Association considered an article by Sir Herbert Maxwell, Bart., M.P., entitled "Do Salmon Feed in Fresh Water?" This is not the first time that important questions have been discussed in this club-room, and it seems a pity that such a great educational function cannot be enjoyed by the rank and file; it would do a lot of good. The South-West Manchester Angling Society had a good meeting on the 21st, every member being present, so they were enabled to negotiate a lot of business. They arranged a match for March 12, for which there are a lot of valuable prizes, and decided to fish the match at Irlam; Mr. S. Hall will officiate as referee. Mr. J. H. Hall was appointed to represent the club at all general and other important meetings. The second annual dinner of the Horseshoe A.S. will be held on March 4 in their new palatial headquarters at Pendleton. Mr. Leigh, Buckland Anglers, Ardwick, fishing the canal at Poynton last week-end, caught a nice lot of fish, including seven perch, one of which was 1lb. 5½oz., and a bream of 11oz. A great deal of expectation, not to say curiosity, is in evidence at Loughsight re the lecture to be given on a

ANGLERS' HOTELS, FISHING QUARTERS, &C.

FORTINGALL HOTEL, GLENLYON, PERTSHIRE.

8½ miles from Aberfeldy Railway Station and 2½ miles from Fearnan Pier, Loch Tay. This new First-class Hotel is beautifully situated near the "Famous Pass of Glenlyon, with Mineral Well." Good spring salmon fishing on the River Lyon opens Jan. 15. Trout fishing free. Posting. Post and Telegraph Office two minutes' walk.

CROOM, Co. LIMERICK.

The Mague, Comogue, Morning Star and Luby, Lough Gur, and Tory Hill Lake.

TWENTY miles of the best free Salmon and Trout fishing in Ireland to be got on the above rivers. The lakes are teeming with coarse fish—Pike, Roach, and Perch—and are also free. CROOM HOTEL, which is now one of the prettiest and best laid out in the country, with sanitary arrangements perfect, is built on the Mague, and stands central to all the others, viz., Comogue (half mile), Morning Star (four miles), Luby (seven miles), Tory Hill Lake (one mile), Lough Gur (five miles). Cars are supplied at the hotel at special low rates. BOATS FREE. Tariff very moderate.

T. D. MCCARTHY, Proprietor

ROSSES WHITE AND BROWN TROUT FISHERY.

Crolly and Longbanure Salmon Fishery.

HAVING obtained a lease of above excellent SALMON FISHERY, and the sole rights of fishing, anglers can now fish the Crolly and Longbanure. Splendid salmon and sea trout fishing can be had on the Crolly and Owenatorr rivers as well as on Longbanure lake, three miles in length, and three miles from Dungloe. There are over 100 lakes in the Rosses Fishery alone, with about twenty boats and first class gillies. Sea trout run to 6lb. and brown trout to 4lb. Large numbers of Loch Leven and Rainbow trout turned out of hatchery every season. Dungloe, in the Highlands of Donegal, is centre of fishery, ten miles from Fintown railway station (Donegal Railway Company). Best fishing lakes within easy reach of the three hotels in Dungloe, where excellent accommodation can be had. Travellers can leave London at 8.30 p.m. and reach Dungloe at three o'clock next day. Mail and day car to and from Fintown station. Good sea fishing, rock pigeon and seal shooting. Telegraph office, bank, post office, &c. Fishing terms: Rosses Fishery, April 1 to June 30, 2s. 6d. daily; 12s. 6d. weekly; 30s. monthly. July 1 to Oct. 31, 3s. 6d. daily; 16s. weekly; 40s. monthly. Crolly and Longbanure, March 1 to Oct. 31, 5s. daily; 20s. weekly; 50s. monthly; and 5s. per day man and boat, which holds two anglers. All information can be had from

S. HANLON, C.P.S.,

Manager and Salmon Licence Distributor.

HANLON'S PRIVATE HOTEL, DUNGLOE, CO. DONEGAL.

S. HANLON,
Manager of Rosses Fishery.

ROSAPENNA HOTEL, CARRIGART (Co. DONEGAL).

THIS Hotel, built in 1892 by the late Earl of Leitrim, is situated on the Rossall Peninsula, midway between Sheephaven and Mulroy Bay. Tourists and Anglers will find superior accommodation at the above Hotel. It contains over sixty bedrooms, spacious billiard, drawing, and public rooms. Salmon fishing in the famous Glen Lough, Owencarrow and Lackagh Rivers, is free to Hotel visitors from Feb. 15 to end of July. Salmon licences can be had at the Hotel. Free access to numerous lakes and rivers on the estate for white and brown trout fishing. No charge for boats. Excellent sea bathing. Golf links, eighteen holes in a circuit of 3½ miles, encircle the Hotel. For terms and further information apply to the Manager.

FREE SALMON AND TROUT FISHING.

Commencing: Salmon, February; Trout, March.

GENTLEMEN staying at the PORTH HOTEL, LLANDYSSIL, SOUTH WALES, have two and a half miles of the Teifi for Salmon and Trout (large) fishing, strictly reserved. Also about ten miles of other trout fishing can be had in the neighbourhood. Splendid scenery. Fourteen miles from the sea. Vide, "Across England in a Dogcart," pp. 230. A. E. SMITH, Proprietor.

LAKE VYRNWY.

Splendid trout fishing in the lake and rivers; fish average 3½ lb., and give grand sport. Easy of access. Every comfort and luxury provided in the Hotel. Good boats and steady boatmen. Splendid cycle track (twelve miles). Bracing climate, and magnificent scenery. Season begins on March 1. First-class Grouse Moors and Rough Shootings to Let. Railway station, Llanfyllin.

visit to Ireland and the capture of large sea trout of 8lb. to 10lb. Many would like to know such a piscatorial El Dorado, and make immediate arrangements for a lengthy visit to catch some. The Welcomb Angling Society, Hnlme, at their last meeting elected three new members, and decided on fishing a match to wind-up the season now almost at an end. The Sun at their last meeting got through a lot of business, although the attendance was poor; they resolved on one or two steps which are bound to do the Society good. Money is to be spent on private waters, &c., and as the entrance fee has been reduced no difficulty is expected in completing the complement of members.

FROM NOTTINGHAM.

There has been more doing amongst our anglers, who have benefited by an agreeable change in the weather. Roach have shown improved sport to the cockspar worm at Holme Pierrepont, Radcliffe Bend, Colwick Park, Clifton, and Wilford, Beeston Bend, Barton, and Trent Lock. Most of the fish taken were got by tight-floating, and some of those brought in from Clifton weighed above 1lb. 5oz. each. One of 1½lb. was captured in the Colwick Park stretch. Roach are now in the pink of condition, and there is no mistaking their gameness when hooked on light tackle. Derby anglers have been amongst the pike at Weston Cliff (Black-pool), and a big catch was reported from the Thrumpton district on Monday. Few rods appear to have patronised the Shardlow waters, which last year yielded splendidly as regards big roach, and not much has been passing in the reach adjoining. Members of the Shoulder of Mutton Association have been trying to pick up a trout or two in the circling pool formed by the outflow of the Greet into the Trent at Fiskeiton, and a few fish have been creelred with the worm in the Dover Beck, below Lowdham. It is believed that salmon (fresh run fish) have already reached Sawley weirs. Chub have been creelred at Wilford with bread paste, and in a day or two the river will be right for the use of pith and brains and greaves.

FROM SHEFFIELD.

With the continuance of the fine weather, which has fortunately lasted all the past week, anglers have had a much better time of it, and as there has been no rain for several days, the rivers have had a chance of getting rid of some of the flood water, and they are now running almost at their normal level. The improvement in the weather has been warmly welcomed by the patrons of the Wye and the Derwent, as very little fishing has been carried on in these two streams of late. The upper portions of the latter stream have yielded several nice grayling and dace, whilst the members of the Darley Dale Club have met with some satisfactory sport. Anglers have been out almost daily in the Matlock district, with varying success, but the sport is improving. Several nice Loch Leven trout have been taken. Bottom anglers have fared very well at Ambergate, Whatstandwell, and Holmesford, where roach and perch have fallen victims to the luring effects of worms, whilst a few heavy trout have also helped to swell the total weight. Trout are reported to be rapidly getting into condition, and soon rodsters will begin to devote more attention to them. Visitors to the Chatsworth Club waters will regret to hear of the death of Mr. Harry Harrison, of the Chatsworth Hotel, Edensor. Recent sport in the Trent has showed a decided advance on what was obtained a few weeks ago, and the river is now running in much better trim. Roach have provided plenty of sport, anglers having done very well with cockspar worm as bait. Pike fishing can now be looked upon as being at an end, and, taking everything into consideration, the season has not been a bad one. The floods appear to have wrought a marvellous change in the waters in the Lincoln district, and in the middle Witbam, between Lincoln and Bardney, some capital fishing has been obtained by rodsters hailing from the cathedral city, their numbers having been reinforced from Saffield and Leeds. Worms have been chiefly relied upon as bait, and with gratifying results, some very heavy baskets having been secured. Pike anglers have also done remarkably well near Chapel Hill, where a large number of very heavy fish have been landed, whilst a not inconsiderable number of perch, many of them weighing over 2lb. each, have also been taken. The condition of the Bain has lately been all that could be desired, and special attention has been paid to it. Maggots and worms were found to be very attractive to roach, and the anglers have had the satisfaction of getting well filled baskets of roach in fine condition, in addition to a lot of nice chub. Trout anglers will regret to hear that in consequence of the running off of the large dam near Beauchief Station, a large number of trout have been killed in it, and also lower down the Sheaf towards Sheffield.

FROM WORCESTER AND DISTRICT.

We have a nice change in the weather, and it looks as if we were in for a spell of dry weather; the wind is in the E. to N.E., which makes the mornings and evenings chilly, but the general sunshine in the middle part of the day has been most enjoyable. The heavy water has run off very rapidly indeed, and the rivers are again in good condition for angling. A good few fishermen have been out on Severn, Teme, and Avon, some fair sized pike were taken and some nice roach, but sport has been anything but brisk; but with the weather we are having, with the wind in
